It is useless for me to attempt to enumerate all the benefits that

would have resulted from such action on the part of the Secretary of the Treasury, but it would have satisfied all classes, the creditor as well as the debtor, the producer as well as the consumer, and the manufacturer as well as the laborer. This was not done, and now the demand has come before us in such form that it must be recognized, and this Congress must give to the people the legislation on this subject that is imperatively demanded. I will read from resolutions passed by the National Silver Convention held in November 1889.

That the demonetization of silver worked a practical violation of every contract then existing in the United States, entailed uncounted losses, reduced prices more than 30 per cent., and its effect is practically to make debts perpetual, as it takes from the debtor ability to pay; that it causes contraction in the currency, which reduces values until there is no profit left to the farmer, planter, or men of small capital who depend upon the sale of their products for returns for their labor; that we believe the certificates of the Government, backed dollar for dollar by gold and silver coin on deposit in the Treasury of the United States, are a safe and sound currency and have been approved by the people; that, considering the contraction caused by the surrender of national-bank notes during the past three years, and the vast sums that must be collected by the cancellation of Government bonds during the next three years, the necessity of restoring silver is as manifest as is the justice of such a policy; that the gold and silver of the West pouring in a steady stream upon the East for forty years vitalized every form of business and steadied and upheld the credit of the nation through the great war and made resumption possible; and that what we now demand is as much more to the interest of the East than of the West as the productions of the East exceed in value the productions of the West; that we believe in equal rights of gold and silver and free coinage for both, and that no nation ever had or will have too much gold and silver coin: Now, therefore,

Be it resolved, That the Fifty-first Congress be requested by this convention to provide at its first session for opening the mints of the United States to the free and unlimited coinage of standard silver dollars of the present weight and fineness, to be a legal tender for all debts, public and private, equally with gold, and that until such provision is made the Secretary of the Treasury be required to coin the maximum of $4,000,000 worth of silver per month, as now authorized by law.

This resolution reflects fully the feelings, the desires, and the wishes of the people that I have the honor to represent upon this floor, and, recognizing my duty as their representative, and voicing their sentiments, I offered the following resolution in this House:

Be it resolved by the House of Representatives (the Senate concurring), That the Secretary of the Treasury be, and is hereby, directed to increase the Treasury purchase and coinage of silver bullion to the maximum amount authorized by "An act to authorize the coinage of the standard silver dollar and to restore its legal tender character," which act was passed over the veto of the President and became a law February 28, 1878.

This resolution was referred to the Committee on Ways and Means, but no action was taken, though petitions were pouring in upon us, the press of the country was advocating and the people were demanding an increase in our circulating medium. Favorable action by the committee would have been hailed with delight by the country.

Mr. Speaker, there is a cause for this demand, and especially from those engaged in agricultural pursuits. I take the liberty of quoting from the very able speech delivered in the Senate by Mr. MITCHELL, of Oregon. Mr. MITCHELL says:

And in this connection I must be permitted to say that that man's mind must be obtuse indeed who, viewing the history of the decline of prices in this country within the past few years, fails to realize that the great central, controlling cause for all this is to be found in the contraction of the volume of our circulating medium; in the lack of a sufficient amount of money to meet the wants of all the people, of a volume of money that will meet the wants of the farmer as well as the banker, of the great tired masses in their varied field of industries, as well as the wants of the special few whose interests are best subserved by a contraction of the currency, in order that the value of money may be appreciated and prices of commodities generally depressed.

The financial statistics upon this subject tell a tale which ought to, and will, when properly understood, startle the producers of wheat, oats, corn, cotton, butter, and cheese, and many other products in this country, to say nothing of those engaged in raising cattle, sheep, and hogs. Take any of the five or six years between 1858 and 1873, even the half decade immediately preceding the year 1873, and compare the average price per year for any such period of wheat, oats, corn, cotton, and dairy products with the prices of the same productions in this country for each of the years 1885, 1886, 1887, 1888, and 1889, and it will be seen there has been a loss to the producer on the articles named of not less than $450,000,000 for each of the years last named, while the loss has been four times that amount, or nearly $2,000,000,000 when compared with the average prices during the years of the war, when our volume of money was at high tide.

In 1881 the corn product in the United States was 1,194,916,000 bushels and the home value was $759,482,170, while in 1888 the crop was 1,987,790,000 bushels, or 792,874,000 bushels more than were raised in 1881, and yet the home value of the crop in 1888 was but $677,561,580, or $81,920,590 less than that of the crop of 1881. But not only so. We take the average annual crop of corn in the United States for the six years immediately prior to the demonetization of silver in this country in 1873, and we find it amounted to 954,706,500 bushels, and that the average home value of this annual average crop for these six years was $559,042,956, while taking the average crop for the six years immediately following the demonetization of silver in 1873, that is, the years 1874 to 1879, both inclusive, we find the average yield per annum of these six years was 1,288,953,923 bushels, or an average of 334,247,423 bushels more than the six years preceding 1873, and yet we find the average home value to the producers of corn for these six years was but $513,877,207, or $45,165,749 less than the average value for six years prior to 1873, the whole product of corn for the first series of six years being but 5,723,289,000 bushels and of the total home value of $3,354,257,740, while the total production of the last series of six years was 7,733,723,540 bushels, while the total value to the producers of this crop was but $3,083,263,242. And yet the increase in production of corn did not reach a greater ratio or annual percentage than did the increase of population, business, and consumption, both at home and abroad.

In other words, the average price of corn in the United States, home value, for the six years preceding the demonetization of silver, was 60.1 cents per bushel, while the average price for the six years subsequent to 1873 was but 40.4 cents per bushel, or a decline of about 34 per cent.

Putting it still in another form, the statistics show that the average yield of corn in dollars per acre in the United States in the six years preceding 1873 was $15.86, whereas for the six years subsequent it was but $9.91 per acre. And still the price of corn recedes until in many sections it has, in the past year, been cheaper than cord-wood, less valuable than coal, and is now being used as fuel, selling, so it has been recently stated, in some of the Western States as low as 12½ and 13 cents a bushel.

And I am glad to say that the price of corn has advanced in Nebraska, and it is now worth 25 cents per bushel.

Mr. ALLEN, of Mississippi. Upon the prospect of free coinage?

Mr. DORSEY. Upon the prospect, as I believe, of the passage of a silver bill that will give to the people what they demand, the coinage of all the silver produced in our country.

Mr. PICKLER. We ought not to disappoint them.

Mr. DORSEY. We will not do it.

These eloquent words of the distinguished Senator are pregnant with truth, and no one can study the statistics he has presented without feeling that the farmers of the West have just cause for complaint, and today they are organizing and preparing to break loose from both political parties. I repeat, for the benefit of my friend from Mississippi, in all sections of the country the farmers are organizing and preparing to go into politics on their own account——

Mr. ALLEN, of Mississippi. In Mississippi we are sticking to the Democratic party as the only hope of the country.

Mr. DORSEY. Feeling that to neither can they look with any hope for relief and claiming that all promises and pledges made in the national platforms of both the Republican and Democratic parties have been ignored, violated, and nullified. [Applause.]

I present a table showing the amount of circulation per capita on certain dates, also giving the amount in coin, and the amount of paper money:

Date.	Coin per capita.				Paper per capita.						Total per capita.
	Gold.	Silver dollars.	Fractional silver.	Total.	Legal tenders.	Legal-tender certificates.	Bank-notes.	Certificates. Gold.	Certificates. Silver.	Total.	
January 1, 1879	$2.04	$0.12	$1.42	$3.58	$5.75	$0.72	$6.52	$0.44	$0.01	$13.44	$17.02

July 1, 1889	5.77	.83	.79	7.39	4.61	.27	3.18	1.79	3.94	13.79	21.18
November 1, 1889	5.72	.92	.82	7.46	4.82	.19	2.99	1.84	4.22	14.06	21.52
January 1, 1890	5.69	.93	.83	7.45	5.02	.13	2.92	1.86	4.28	14.21	21.66

The total volume of money of all kinds in circulation in this country March 1, 1890, was:

Gold coin	$373,507,203
Standard silver dollars	58,850,380
Subsidiary silver	53,950,362
Gold certificates	130,604,804
Silver certificates	284,176,282
United States notes	337,087,151
National-bank notes	187,928,229
Total	1,426,104,391

The following table gives us the wonderful increase in wealth that the United States has experinced since 1850.

The assessed value of taxed property and our actual wealth at different decades has been:

Years.	Assessed value	Actual wealth.
1850	$5,297,613,148	$13,652,499,730
1860	12,084,500,005	31,201,310,676
1870	11,342,789,366	30,068,518,507
1880	16,902,993,543	43,642,000,000
1889	23,719,000,000	61,469,000,000

And in the following table we can see how each State and Territory has prospered:

States and Territories.	Assessed valuation in 1880.	Assessed valuation in 1889.	Per cent. of wealth.	True valuation in 1889.	True valuation in 1889.
Alabama	$123,000,000	$232,000,000	32.50	$378,000,000	$745,000,000
Arkansas	86,000,000	171,000,000	35.13	246,000,000	486,000,000
California	585,000,000	1,115,000,000	40.86	1,430,000,000	
Colorado	74,000,000	195,000,000	48.96	149,000,000	390,000,000
Illinois	787,000,000	792,000,000	25.44	3,092,000,000	3,112,000,000
Indiana	728,000,000	770,000,000	48.56	1,499,000,000	1,595,000,000
Iowa	309,000,000	523,000,000	28.17	1,413,000,000	1,856,000,000
Kansas	161,000,000	361,000,000	27.96	275,000,000	1,290,000,000
Kentucky	351,000,000	577,000,000	39.83	880,000,000	1,448,000,000

States and Territories.	Assessed valuation in 1880.	Assessed valuation in 1889.	Per cent. of wealth.	True valuation in 1880.	True valuation in 1889.
Louisiana	$160,000,000	$266,000,000	37.99	$322,000,000	$596,000,000
Massachusetts	1,595,000,000	2,400,000,000	56.70	2,759,000,000	4,233,000,000

New York	2,652,000,000	3,567,000,000	34.81	7,619,000,000	10,247,000,000
Ohio	1,534,000,000	1,732,000,000	46.48	3,301,000,000	3,726,000,000
Oregon	53,000,000	86,000,000	41.08	126,000,000	216,000,000
Pennsylvania	1,663,000,000	2,550,000,000	31.22	5,393,000,000	8,232,000,000
Tennessee	212,000,000	325,000,000	31.80	666,000,000	1,022,000,000
Texas	320,000,000	710,000,000	44.19	725,000,000	1,607,000,000
West Virginia	140,000,000	164,000,000	45.48	307,000,000	361,000,000
Wisconsin	439,000,000	577,000,000	45.30	969,000,000	1,273,000,000
Idaho	6,000,000	24,000,000	53.67	12,000,000	45,000,000
New Mexico	11,000,000	49,000,000	37.88	30,000,000	132,000,000
Utah	25,000,000	41,000,000	35.98	67,000,000	111,000,000
Washington	24,000,000	125,000,000	49.61	48,000,000	252,000,000
Wyoming	13,000,000	31,000,000	68.11	20,000,000	46,000,000

Mr. Speaker, the increase in our circulating medium has not kept pace with our increase in population, and when we consider this fact that the national banks of the country retired over $37,000,000 of their circulation during the year 1889 and that retirement will continue until the banks hold in circulation the minimum amount allowed by law we feel the necessity for such legislation as will tend to make good this great decrease in the money of the country. This bill will give us an increase of $2,500,000 per month of legal-tender notes based upon silver bullion.

There is one section of this bill to which I give my most hearty support. Section 7 provides that all balances standing with the Treasurer of the United States to the respective credits of national banks for deposits made to redeem circulating notes, and all such deposits hereafter made shall be covered into the Treasury, and provides for the payment of said notes by the Government if ever presented.

During the present session I offered the following bill:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the money required to be deposited with the Treasurer of the United States for the redemption of national-bank circulation by section 5222 of the Revised Statutes and under section 4 of an act approved June 20, 1874, entitled "An act fixing the amount of United States notes, providing for a redistribution of the national-bank currency, and for other purposes," shall be covered into the Treasury and treated as funds available for the reduction of the public debt and for current expenditures of the Government. And all funds held in the Treasury for the payment of matured debt and interest due and unpaid on the public debt shall be similarly treated, and hereafter no funds available for the reduction of the public debt, for the payment of the current expenses, or for the redemption of the United States notes, above the sum of $110,000,000, shall be retained in the Treasury.

This bill is now pending, and in case the House shall pass the bill now before us there will be no need to consider the bill I introduced. According to the May statement of the Secretary of the Treasury there is now in the Treasury, held as the national-bank-note redemption fund, $63,597,907.21. This vast sum of money has been deposited by national banks that have failed, retired from business, or extended their charter, and is held to pay the notes of such banks that have been issued. There is no need to hold this money as a separate fund, thus locking up and taking out of circulation so much of the currency that is needed for the business of the country. Millions of dollars represented by this sum have been lost or destroyed by fire and will never be presented for redemption, and there is no reason why the Government should not have the active use and benefit of this fund. Mr. Speaker, there is yet another fund now held in the Treasury, a portion of which we could safely put into active use. I refer to the $100,000,000 of gold coin held for the redemption of the United States notes; but I will discuss that later.

Mr. Speaker, we have been for many weeks considering a silver bill, and there is now before us for discussion a substitute for the bill reported from the Committee on Coinage, Weights, and Measures. This substitute does not provide for the free and unlimited coinage of silver. Under its provisions the Secretary of the Treasury is authorized and directed to purchase each month silver bullion to the value of $4,500,000, and issue in payment therefor United States Treasury notes. These notes are made a legal tender for all debts, public and private. The purchase of this silver by the Secretary will practically consume all that is produced at present from the mines of our country. These notes are made a legal tender, and this is right and proper. Why should not a Treasury note, issued by the wealthiest Government upon the face of the earth, and which is secured by a deposit of silver in the Treasury worth in gold at the day of the issue the face of the note—why, I ask, should it not be a legal tender for all debts, public and private? On this question of making the notes a legal tender our side of the House was for many weeks divided. These notes, Mr. Speaker, should be redeemable in gold or silver coin, and it is to that section of the bill that provides for the redemption of these notes in silver bullion I do most emphatically object. Why should a man holding $1,000 in Treasury notes be compelled to take $1,000 in silver bullion, when at the time this bullion was deposited, upon which these notes were issued, that bullion could have been sold in New York or San Francisco for the amount in gold that these notes represent?

Some of my friends on this side of the Chamber fear that we will drive gold out of the country if we eliminate this section from the bill, saying that this is a safety-valve. There is no need of such a section, for if the silver bullion is in the Treasury and can be sold for the gold coin necessary to redeem the notes, no man would ever desire to have his notes redeemed. For instance, take the $346,000,000 in Treasury notes that have been issued by the Government. In 1880 we sold bonds and placed in the vaults of the Treasury $100,000,000 of gold coin to secure the redemption of these notes. We have been paying 4 per cent. interest upon these bonds since that time. The gold has been held for the redemption of these United States notes, and during these eleven years, Mr. Speaker, how many of these United States notes have been presented to the Secretary of the Treasury for redemption? Barely $28,000,000, and the gold coin is still in the Treasury. The people have the notes and they are doing service as a part of our circulating medium. We are paying interest at the rate of four millions per year in all we have paid more than $40,000,000 for the privilege of holding this gold coin in the Treasury. Perhaps you will say that if the gold coin was not in the Treasury the holders of these notes would desire their redemption and present them for payment. Would it not be better to cover this $100,000,000 into the Treasury and put it into use as a part of our circulating medium, thus adding so much to increase the volume of the currency and provide that in case the United States notes were presented for redemption and there was no money in the Treasury to meet the demand the Secretary might then sell bonds (and he could to-day float a bond at 2 per cent.) and apply the proceeds for the redemption of these notes?

The fact is, Mr. Speaker, that this Government can float $346,000,000 of its promises to pay without one dollar in the Treasury set apart as a special fund for their redemption. The people have confidence that this nation will pay its debts. They want this money to use as a part of the circulating medium, and each year, as shown on the books of the Treasury Department, a smaller per cent. of these notes is presented for redemption. Considering the experience that we have had with the United States notes that are now in actual use, is it not fair to presume that the notes issued in payment for silver bullion and based upon this bullion will be held by the people, and not be presented to the Treasury for redemption?

I think, Mr. Speaker, that we should strike out the bullion-redemption clause of this bill and insert in place thereof that the notes issued under the provisions of this act may be redeemed upon demand at the Treasury in gold or silver coin, especially as the bill provides for the coinage of the silver for the purpose of meeting the notes so issued. So amended the bill would receive my support, feeling that it is impossible to get from Congress a bill that is entirely satisfactory to all sections. This would be a fair compromise. I appeal to this side of the House. Allow us to have a vote on that proposition, and let us strike from the bill the bullion-redemption section and insert in lieu thereof that the notes shall be redeemed in coin. Then we who on this floor represent constituencies who are demanding the free coinage of silver can say to our people that, while we did not obtain all that they desire, great concessions have been made by this Congress and we have provided for using as money practically all the silver that is the product of American mines. This would be a step in the right direction and would gladden the hearts of millions of the toilers in this country. They would feel that a Republican Congress was friendly to the laboring man and that the pledges made to the people had been redeemed, and when we again appeal for their support it would be given with gladness and enthusiasm. [Long-continued applause.]

Silver-Bullion Certificates.

SPEECH
OF
HON. WILLIAM ELLIOTT,
OF SOUTH CAROLINA,
IN THE HOUSE OF REPRESENTATIVES,

Friday, June 6, 1890,

On the bill (H. R. 5991) authorizing the issue of Treasury notes on deposits of silver bullion.

Mr. ELLIOTT said:

Mr. SPEAKER: The first three sections of the pending bill, in substance, direct the Secretary of the Treasury to purchase monthly $4,500,000 worth of silver bullion, at the market price thereof, not exceeding $1 for 371.25 grains of pure silver, and to issue in payment

thereof Treasury notes of the United States, which shall be redeemable on demand in coin and shall be legal tender in payment of all debts, public and private, except when otherwise agreed upon, and shall be receivable for customs, taxes, and all public dues, and a sufficient amount of the bullion shall be coined to redeem the Treasury notes.

This will give to the people as good a currency as they could have, the note of the Government, convenient for use, good for every public or private debt, and redeemable at any time in gold or silver coin. I believe it will be sufficient to supply the loss of currency resulting from the retirement of national-bank notes and to meet all wants caused by increasing population. The amount is not left to the discretion of the Secretary, but is fixed by law, as it should be. All these provisions I would be glad to see enacted into law.

But, sir, I can not support the proviso to the second section which authorizes the Secretary of the Treasury in his discretion to exchange on demand of the holder silver bullion at its market price for Treasury notes. My objections are these:

1. Because it is a one-sided arrangement which will enable speculators to make enormous profits out of the Government through the fluctuations in the price of silver.

2. Because it will place the Secretary of the Treasury under a degree of temptation to act in collusion with speculators, to which no man should be subjected.

3. Because it makes of silver a commodity to be dealt in by the Government.

4. And, more than all, because it gives to the Secretary discretion to contract the currency at his pleasure. It is against the principles of free institutions that one man should have this power. I am not willing to give it to any one.

I see nothing to prevent the Secretary from paying out each month in exchange for Treasury notes the whole $4,500,000 of bullion purchased during the month. In addition to all other considerations this enormous power would constantly subject the Secretary to criticism and suspicion, sufficient not only to ruin him, but the party responsible for him. I will gladly support the provisions of section 6 for the free coinage of silver whenever it shall reach $1 for 371.25 grains of pure gold, and I would vote for the bill were it not for the proviso to section 2. Because of that I must vote against it.

Neither will I vote for the motion to recommit the bill with instructions to report a measure providing now for free coinage of silver. To-day our silver dollar is in fact worth only 72 cents. Free coinage of it under these conditions means simply that the owner of silver may take 72 cents of it to the Treasury and get a dollar from the Government. Who can doubt that the silver of the world would be at once brought here and that gold would be driven out?

It is claimed by the advocates of free coinage of silver that the prices of all articles will be increased because there is an increase of money. Grant that this will be so, and I fail to see that there will be any ultimate benefit to any class except to the speculator. If the producer of one article gets a higher price for it he must pay a correspondingly higher price for whatever he buys, and, in the end, is no better off. Especially will it operate against the farmer, who can not combine to fix the price of his produce, while nearly everything he buys is controlled by a trust.

These remarks apply to the cotton farmer as well as to the producer of all the other great staples of the country but in another respect; free coinage of silver under present conditions would be most disastrous to that splendid body of men who last year exported 5,390,926 bales of cotton, worth $264,806,905. Where did this enormous product go? To Great Britain and Ireland, 3,213,260 bales, worth $158,214,227; to Germany, 843,290 bales, worth $10,787,868; and to all European countries, 5,287,193 bales, worth $259,745,597.

Great Britain and Germany are both gold countries, having discarded silver, and the same may be said in general of Europe. It is claimed for free coinage that it will especially increase the price of farm produce. How can it increase the price of cotton, which is fixed, as every one knows, at Liverpool, and not in this country? Free coinage of silver can not affect it there, and hence the cotton-planter will pay increased prices for everything he buys in this country and will get not a fraction of a cent more for his cotton.

Mr. CARLISLE, in a recent letter to the cotton-planters of Alabama, said:

> About two-thirds of your cotton crop is exported and sold in foreign countries and its price fixed there. I presume no one will seriously contend that prices can be increased abroad by inflating the currency at home.

And yet this very thing must be contended for or no benefit can be claimed for the cotton-planter.

This is a fatal objection to the measure, in my judgment, and should condemn it with Representatives from the cotton States. Moreover, Mr. Speaker, free coinage will, as I am convinced, produce serious financial disturbances between the United States and such countries as Great Britain and Germany, where at least two-thirds of our cotton crop goes, and consequent embarrassment in trade, which will inevitably react against the cotton-farmer.

I append an official table of the exports of cotton to European countries in 1889:

Quantities and values of domestic cotton exported from the United States to foreign countries during the year ending December 31, 1889.

Countries.	Sea Island.			Other cotton.			Per cent.
	Bales.	*Pounds.*	*Value.*	*Bales.*	*Pounds.*	*Value.*	
Great Britain and Ireland	18,745	7,035,351	$1,653,616	3,213,260	1,581,598,960	$158,214,227	59.96
Germany	255	93,78	14,850	843,290	414,414,998	40,787,868	15.30
France	1,862	707,60	173,914	526,631	260,332,641	25,956,268	9.80
Other countries in Europe	.....	.....	.....	704,012	340,859,120	34,787,234	13.04
Total Europe	20,862	7,836,737	1,842,380	5,287,193	2,597,205,719	259,745,597	98.10

Silver-Bullion Certificates.

SPEECH

OF

HON. WILLIAM J. STONE,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 6, 1890.

The House having under consideration the bill (H. R. 5391) authorizing the issue of Treasury notes on deposits of silver bullion—

Mr. STONE, of Kentucky, said:

Mr. SPEAKER: The claim of those who favor this bill is that it will increase the amount of money in circulation $54,000,000 per year. I deny it. No man has attempted to explain or can explain how it can possibly do so. The Government can only put money in circulation by paying it out for its expenses. Already the Government buys or may buy enough bullion to coin $4,000,000 per month. This bill only provides for purchase of $4,500,000 per month; so that, to give it the utmost credit to which it is entitled for good, it can only increase the amount of circulation $6,000,000 annually.

Does any one pretend that an increase of $6,000,000 annually is any fair proportion of increase of money—the representative of values—to the increase in population, to the increase of labor and production in this country? How, then, can an increase in the money in circulation be brought about so far as silver is concerned? Simply by allowing it to be coined free. Allow every man who owns silver bullion to take it to the Government mints and have it coined into dollars as he pleases. He will take the coined money and put it into circulation. No trouble to get it into circulation. He will pay for food and labor and all the necessaries of life with it.

The man who works in the mines and shops will take it and buy the necessaries of life from those who produce them. They in turn will buy what they need, pay taxes, etc., with it. Thus the money goes into all the branches of trade and commerce, and the expense to the Government is avoided of shipping the bullion to the mints, and then shipping the coined money to Washington and building large and expensive vaults to store it in, and keeping a strong guard of armed men to watch over it. All this costs money, and the money is raised by taxation, and taxes are paid principally by those who perform manual labor; and everything should be done in this nominally free land of ours to make the burdens of the tax-payer as light as possible.

But, say the monometallists, silver is worth less by 20 per cent. than gold proportionately. So it is in the market, but what and who made it so? The act of Congress that struck down silver in 1873, and it was done by the representatives of the Republican party who were legislating in favor of Wall street and the holders of United States bonds as against the tax-payers. I have here the testimony of Hon. JOHN SHERMAN, who was chairman of the Committee on Finance in the Senate when this crime against humanity was committed, backed by a large number of officials high in public life and by, as he says, all the experts in the country, that silver was then worth about 3 per cent. more than gold.

It had equal debt-paying power. It paid taxes as well. It paid for as much of the necessaries of life and purchased an equal amount of the luxuries as the gold dollar. What, then, was the reason for this dark deed against all the laborers and producers of America? Why was it necessary to decrease the ability to pay of every man who owed anything or had to buy the necessaries of life? The reason was that the grasp of the money-shark was being made to weaken. The masses were rapidly building up their homes and fortunes. The manipulators of the money centers were losing their power to control the entire finan-

cial system of the country. Silver being in the greatest abundance and our mines seeming to be inexhaustible, that metal was selected to be stricken down.

Only a few years before this same class of financiers tried to strip gold of its debt-paying power. That was when gold was being mined in abundance. But in 1873 they succeeded in debasing silver by law. Then it was that Congress robbed the people of one-third of their power to pay debts and earn a living. Why not now restore to them by law a part of that power? What good reason can there be for not restoring, as far as we can, the property taken from the people then? The wonder is that silver has held so high a market value as it has when all the power of law and ridicule and sneers has been used to degrade and belittle it before the world.

But it is said that other countries have demonetized silver, and, consequently, we must do so. There is absolutely nothing in this argument. This Government is able to fix its value upon a coin and that coin will pass current among all its people and upon as good a basis as the currency of any country on earth. There is a fiat feature attaching to every sort of money. The reason why a gold dollar passes as a dollar is because the Government says it shall. There is no standard of values of coin except as fixed by law, and, that being true, all this clamor about a silver dollar being worth only 70 cents is simply noise made to keep silver in disgrace. How is it in the case of the greenback circulation?

There is in circulation $346,000,000. There is held now in the United States Treasury $100,000,000 of gold to guaranty that this greenback money is good for its face value. Now, everybody knows that if you present $100,000,000 of greenbacks for redemption it will take every dollar of that guaranty fund and leave $2,406,000,000 that there is no gold to redeem. What makes that $2,406,000,000 pass current among our people and even among the people of many foreign cities? It is simply and alone the faith the people have in the Government, and that faith is so strong in the stability of the Government and its ability to make good its promises that this same greenback circulates on an equal footing with gold and silver certificates, every dollar of which has a gold or silver dollar deposited in the Treasury to guaranty its being redeemed when presented.

This proves beyond question that it is the stamp of the Government that fixes the debt-paying power of money. What is necessary and what the country demands is that silver be restored to its full privileges with gold. Make its coinage free and you relieve the people of a vast amount of unnecessary taxation and also increase the amount of money in circulation, thus doing that much in supplying the demands of the people for an increased amount of circulation. But there is no increase of circulation under this bill. It provides that the bullion shall be paid for in certificates based on the bullion purchased. Why not pay for it in the money already lying as a surplus in the Treasury, collected from the people by overtaxation?

If you pay for the bullion in certificates you leave idle in the Treasury sufficient money already there to buy it all. Then where is the increase in circulation? If you withhold $54,000,000 already issued and send out $54,000,000 of a new issue, where is the increase? But why argue this question. The bill is not intended to relieve the people in answer to their demand for more money. It is prepared in the interest of those already in control of the finances of the country. We are told, too, that if we make the coinage of silver free all the silver bullion in the world will be poured in on us to be coined. Well, suppose it is. Let it come! It will only be a further and stronger evidence of the faith of the world in the stability of our Government and our ability to make every dollar we issue worth 100 cents.

Money in any shape is only a representative of values, and to insure the greatest prosperity to any people these representatives of value must bear a correct ratio to the actual values and population of the country. What that exact ratio is can not be definitely stated, but certain it is that as the amount of money comparatively has decreased the people have become harder pressed for necessaries of life, prices of products have decreased, and the purchasing power of money has increased, and those who hold control of the money have gradually but rapidly brought the masses into dependence on them.

Whenever the money of any country has been reasonably plentiful there has always been prosperity attending the efforts of the people, all business enterprises have flourished, agriculture has prospered, and the greatest happiness and comfort have attended every effort to succeed. On the other hand, when money has been scarce among the people on account of the limited amount in circulation, "hard times" have prevailed, distress has been common among the masses, the earnings of the many have been absorbed by the few, the number of unemployed people has largely increased, and the cry for relief has been heard in every quarter.

While we can not tell exactly how many dollars would make this ratio between population and actual values and those representatives of values produce the greatest prosperity, certainly we have had enough experience to lead us to a reasonably correct conclusion. Without going further back than the memory of the present generation runs, what has been our own history? In 1866, just at the close of the civil war, there was $1,863,409,216 practically in circulation outside the thirteen States of the South. This made about $70 per capita outside those States, but counting all the people of all the States it was above $50 per capita. Then all branches of business were prosperous, labor was in demand and well paid, the products of the farm were in demand at good prices, and a general prosperity was coming to all our people.

But the evidence is that the money in circulation was too great in amount to permit those who were anxious to control the finances of the country to do so with ease. Then it was that a contraction of the currency began, and under an act of Congress passed at the instance of the Secretary of the Treasury there were taken up and burned $77,018,837 of greenbacks, and bonds were issued in their stead bearing 6 per cent. interest, thus replacing this large volume of money, that was being used by the people without interest for all the purposes to which money is applied, by bonds bearing 6 per cent. interest. These bonds have not yet been paid, but have been refunded and are now worth a premium of 28 per cent. There has been paid in interest on them $154,000,000, and the principal yet unpaid. Consequently this $77,018,837 of money, of equal value and merit with any like sum of the $346,000,000 now in circulation, was taken from the people and a burden placed on them that has amounted up to this time to $231,018,837; and so has this same policy been followed from then till now. While it has not been all the time by the same means still the spirit has been the same, and from $52 in 1866 the circulation per capita has fallen to a fraction less than $8. But the amount in circulation is really less than that, for the scarcer money becomes the harder people try to hoard it, and I am convinced that there can be no more than $5 per capita in actual circulation among the people to-day. In 1866, with $52 per capita in circulation, there was 485 failures in all the country. In 1889, with less than $8, there were 14,000. In 1866 money was plenty, business was prosperous from one end of the land to the other, tramps were not known, and labor riots were not seen. Now, after twenty-four years of contraction, business is demoralized, the land is filled with people out of work, and strikes are the order of the day. Not satisfied with this steady and sure process of enslaving the masses, the Congress of the United States passed an act in 1873 stripping silver of its debt-paying quality. This act was a crime against humanity unsurpassed in cruelty by any legislation known to civilized and enlightened nations. It added to the debts owed by individuals, towns, counties, and States very nearly 50 per cent. in that it reduced the power of the people to pay by fully that amount. A panic came. The people were oppressed. Fortunes that were comfortable melted away. Competency disappeared from those who felt that they were financially secure from want. The products of labor became hardly sufficient to maintain the producer. Stagnation and want of employment became the order of the day. Who can estimate the misery and woe resulting from that act? Who can tell how many homes were wrecked and how many hearts were broken over the failure of a lifelong effort to acquire comfortable homes for wives and children? Who can tell in how many hearthstones the fire has gone out or how many lives have been spent in a long, tiresome, hopeless effort to redeem the promises made based on the condition of things existing before that fatal day? Other nations have been plundered and impoverished by their rulers for personal pomp and self-aggrandizement, but never has a people been so robbed, so infamously cheated, of their hard earnings under the guise of statesmanship before.

In 1878 the situation had become so grave that Congress, in answer to the general demand for relief, passed an act partially restoring silver to its former power, but taking the control of its circulation out of the hands of the people. Instead of putting the limited amount coined by law on the same basis and granting the same privileges it had once had, the law required the Government to purchase the bullion, coin the money, and thus keep it under control of those opposed to its circulation. The American people are a people of stronger hopes and faith than any other, and when the Bland act was passed the word went out that silver was remonetized. The people, remembering their former prosperity, went to work with an energy and will that had never been surpassed to rebuild their shattered fortunes and fulfill to the letter all their contracts and obligations.

But a steady contraction of the currency went on, and when renewed effort brought no corresponding return, when prices gradually declined, when debts increased, when interest went unpaid, when labor failed of its just reward, and all classes commenced to demand to know the cause, they were told that the tariff was not high enough, that they produced too much by their labor, and a lot of "four by six" statesmen informed them that all that was needed was more diversified industries, and the farmer was informed by men who thought "pumpkins grew on trees" that they must produce less and diversify their crops. The man who was begging piteously for work to enable him to earn something to buy food for his children and to keep the cold blasts of winter from freezing them was told that all he needed was more taxes on the wool of which the cross-threads of his scanty clothing was made.

But at last the people are looking into the situation. They are going to the bottom of things in a way they have never done before, and are studying ways and means and remedies themselves. They have been a long time becoming aroused, but they are in earnest and will succeed in forcing from the law-making power a granting of their demands. Have they any hope from this Congress? No, a thousand

times no. They demand that silver shall be coined free. What is offered them? Following in the footsteps of former Republican legislation the Committee on Coinage, Weights, and Measures, under instructions from the President and his Secretary of the Treasury, have brought in here this bill that is intended to and will stop the coinage of silver, repeals all silver coinage laws now existing, and, under the pretense of increasing circulation, puts it in the power of Wall street to control completely all the silver in the country, to inflate the currency when they please, and contract it when it is to their interest to do so. The Republican members of this House who have spoken have nearly all advocated free coinage, but have closed their speeches by announcing that they would vote for this bill, which in reality stops the coinage entirely. Why do they do it? We are informed that word has gone out from the White House that the President will not sign a free-coinage act. Then a caucus of the Republican party has been held, and the party lash has been applied and nearly all the members of that party here have been whipped into line. Then the Committee on Rules, fearing that under their outrageous rules already adopted the advocates of free silver would be able to offer such amendments to the bill as would force some Republicans to break away from the orders of the caucus, have brought in here a rule attempting to "gag" every friend of free silver.

To further add to this insult to the minority and outrage upon the people, the Speaker, finding that one loop-hole has been left where friends of silver can get in some work, refuses to recognize any member favoring silver to move an amendment. Thus this bill is to be passed and the people have the shackles more firmly riveted on them. Suppose this bill becomes a law—and it will unless the hope expressed by the gentleman from Illinois [Mr. PAYSON] is realized that the Senate will so amend it as to leave out the bullion-redemption clause—what is the situation? The present law under which we have a limited coinage is repealed and the circulation of silver or silver certificates is placed entirely in the power of the monometallists.

The bill provides for the purchase of $4,500,000 bullion per month and that when the price of silver reaches the point of the price of gold bullion, as 16 to 1, then silver shall be coined free. What a glaring attempt to deceive the people! What is easier than for the enemies of silver to purchase the $4,500,000 of bullion, sell it to the Government for certificates, and before the month has ended demand that the certificates be redeemed in bullion, then resell the bullion to the Government for the next month and before the month had expired demand redemption again, thus preventing the actual circulation of a single certificate. Would they do it? Who doubts it? They would only lose the interest on the $4,500,000, and that would be a small sum compared to what it would enable them to make by being able to control the financial system of the Government.

With this bill a law and the monometallists in control, when will silver bullion reach the price of gold bullion? The only answer is, never. But advocates of this bill say free coinage means inflation of the currency and a consequent wild speculation among the people and a lowering of the high standard of our national credit, because we make an inferior metal pay as much as gold. Mr. Speaker, we now have six kinds of currency, all equally good and all on a different basis. There is the gold dollar and its representative, the gold certificate; and the silver dollar and its representative, the silver certificate; the greenback, and the national-bank note. Now, if the greenback circulates on a par with gold with less than 30 cents of gold to guaranty it, who will say our national credit can not sustain the circulation of all the silver dollars that can be produced, even if the bullion in a silver dollar is worth only 70 cents?

There is no danger of inflation by free coinage of silver, because our own production of silver is not sufficient to give us enough circulating medium, and foreign countries are not going to bring money here except to purchase what we have to sell; and that is just what we want. We want to sell our produce of every kind and we want to sell at such prices as will bring comfort and plenty into every household in the land. It is also said free coinage will increase the value of mining property. Well, that can only be a blessing, for it will give more work and better pay to the people; make more and better markets for everything produced in the country.

This House has already passed a tariff bill that will increase the burdens of the tax-payers many millions of dollars. Now, pass this bill and make it a law and you will have completed a system that will continue to rob labor of its just reward and bring ruin to the hearthstones of a once prosperous and happy people. But I warn you now that the people are looking into these matters and will turn again on the heel that oppresses them. Many men who favor free coinage and a reduction of taxation in their hearts, yet voted against these demands of the people under the party lash, will soon leave this Hall to return no more forever. The hypocritical tears that have been shed here over the woes of the farmers and laborers of this country will not avail. Real work and action looking to a relief of the masses must be done now or others will be sent here to do what you have left undone.

These people do not mean to form new political parties, but they do mean to find men in some party whose hearts are with the toiling millions and who will not be controlled by those who would oppress them. What party in this country has always been, as a party, with the people? The question is easily answered. The great Democratic party has been and is the friend of the masses. Its principles mean sovereignty of the people. They mean individual liberty. They mean that every man shall have an equal chance in the battle of life with his neighbor. They mean no class legislation. They mean equal rights and equal privileges to all. That party opposes unequal and unnecessary taxation. It opposes monopoly of every kind. A full triumph of its principles means universal prosperity, and that every man shall enjoy all the fruits of his labor, and that no man shall be made to pay tribute to any other man.

Silver-Bullion Certificates vs. Free Coinage.

SPEECH
OF
HON. JOHN T. HEARD,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,

Friday, June 6, 1890.

The House having under consideration the bill (H. R. 5391) authorizing the issue of Treasury notes on deposits of silver bullion—

Mr. HEARD said:

Mr. SPEAKER: After listening to the excellent speech of my friend from Ohio [Mr. WICKHAM], who has just addressed the House in support of the pending bill, I would say that I adopt the whole of his clear and forcible reasoning in favor of the remonetization of silver; but I fail to understand how, in view of all the good reasons he has so ably presented why that desirable end should be accomplished, he can logically give his vote for this measure. I am sure that he, as well as many others who will vote with him on this question, earnestly and sincerely desires to see silver re-established in its just and proper power and dignity in the money circulation of our country, and that while they do not fully approve the bill before us they are reconciled to its support by the belief that they will thus contribute to the bringing about of that good end; that they think it is a step in the right direction. I can not hope, Mr. Speaker, to be able to present to this body more cogent reasons than have been offered by these gentlemen why silver should be remonetized; but to such as really desire by their action here to contribute to that result I desire to submit some reasons for my refusal to accept, with their reasoning on the general proposition, their example in this instance as a guide for my vote.

It is to such of the supporters of the bill as I have referred to, and to those only, that I would address anything in the way of argument why they should abandon their present position, because I fully realize that to that other element of its supporters, who approve its provisions because they do not believe that its passage will improve the condition of silver as a money metal of the country, nothing need be said in criticism of the measure from my standpoint, since they embrace it for what I conceive to be its worst vices. I am sure I do not misrepresent the case in this statement. While few, perhaps, of its friends would adopt the frank utterances of the gentleman from Massachusetts [Mr. WALKER], who zealously advocates the passage of the bill while he declares that we do not need any increase in the volume of our money; that there is plenty of money in the country to do the business thereof; that scarcity of money has nothing to do with the depression of business or the lowering of prices; and, finally, that "more money means more misery," yet, Mr. Speaker, the fact remains that the bill is supported with equal zeal and enthusiasm by those who understand and admit the need for more money and the necessity for the equality of it according to the standard now fixed in our laws, and by those who deny both propositions and who insist that an increase of lawful silver dollars means a dishonest inflation of our currency.

It has always been contended by our great financiers that an essential quality of a good system of money is "elasticity," and it would seem, Mr. Speaker, that if the money to be issued under authority of this bill, if it becomes a law, should partake in any measure of the character of the act originating it, it ought at least to possess that virtue; for I can conceive of nothing more "elastic" than a bill which at once accommodates itself to the conflicting demands of those who insist upon free coinage of silver at the present standard of value, and to those who bitterly oppose it and insist upon a single standard, and that of gold. While I am confident that some of those who will vote for this bill would not support it did they not hope that its effect would be to increase the volume of our circulating medium and tend also to bring silver and gold nearer together in commercial value, and thus, as they think, help on to the free and unlimited coinage of both, I am also equally certain that a large proportion if not a majority of its supporters would not give it their approval if they did not entertain a very different belief.

Where, then, in this bill lies that peculiar quality which so completely reconciles it to the diametrically opposite views of its different ele-

ments of supporters? I think, Mr. Speaker, that it will be found in those provisions which invest the Secretary of the Treasury with discretion to do or not to do certain things relating to its execution, the doing of which will give satisfaction and security to the one element, while in their not being done exists the only basis of hope to the other.

Now let us examine the bill and see whether or not I am justified in opposing its passage upon the ground that the law which we have now upon our statute-book and which this bill proposes to repeal, if fairly enforced, is a better and more liberal law than this will be if enacted. As the law now stands, the Secretary of the Treasury must coin into standard silver dollars $2,000,000 worth of bullion per month and he may coin $4,000,000 worth. Then, sir, if the Secretary of the Treasury (either the present or any future Secretary) is friendly to an increase of the currency of the country such as we desire, why should he not exercise the discretion which the existing law gives him and increase the volume of our currency, not $4,500,000 per month, but about five and a quarter million dollars per month, as he can do under the existing law? Four million dollars' worth of silver bullion at its present commercial value will, as was stated by my colleague [Mr. BLAND] this morning, make about five and a quarter millions of the standard silver dollars.

Under the provisions of this bill, should it become a law, the maximum increase in the volume of circulation which the Secretary of the Treasury could make by issuing Treasury notes in exchange for bullion would be $4,500,000 per month, or $54,000,000 annually, while under existing law he could, if he would, increase it to the amount of $5,200,000 per month, or over $62,000,000 per year. If the Secretary of the Treasury had been friendly to the increase of silver money in the country, would he not have exceeded the minimum limit of his power in that direction, even if he did not reach the maximum limit? Is he more friendly to such increase now than in the past? Judging by his official expressions and actions we are forced to conclude that he is not. From the late report of that official I quote the following:

> The continued coinage of silver dollars at a constantly increasing monthly quota is a disturbing element in the otherwise excellent financial condition of the country, and a positive hinderance to any international agreement looking to the free coinage of both metals.

It is a peculiarity of view always entertained by the enemies of silver that we can do nothing to exalt its present condition without an international agreement, which they know we never can get.

For the last year the increase in the amount of silver coinage of the country is stated by the Treasury officials to have been $35,496,683, when the law authorized about double that amount, notwithstanding the fact that by reason of the shrinkage of the total volume of our circulation from various causes the above-named new coinage only increased the total stock of our money $8,000,000. Why was not the shrinkage here referred to at least provided for by increased coinage of silver above the minimum limit of the law, so that the intent of the law of 1878, which was to add at least $2,000,000 per month to our circulation, would have been carried out?

Now, my friend from Iowa [Mr. CONGER], chairman of the committee reporting this bill, says that the people of this country do not take kindly to the silver dollar. On this point I beg to differ from the gentleman. The fact is that the people of this country are friendly to the silver dollar and have always been so, but unfortunately for them it is the Secretary of the Treasury who is unfriendly to the circulation of the silver dollar, as have been all his predecessors since 1873. For proof of the correctness of his statement, that the people are not friendly to silver money, my friend says that there are only 60,000,000 standard silver dollars in circulation, while there are 290,000,000 in the Treasury. The gentleman admits, however, that for all said latter sum silver certificates are in circulation to-day. Then, I submit, Mr. Speaker, that by his own showing the whole amount mentioned is in circulation. The fact is, sir, that out of a total coinage of over 350,000,000 standard silver dollars there were in the Treasury on the 1st day of March last less than three and one-half millions for which certificates were not outstanding. Less than 1 per cent., then, of all this coinage was idle. Can the gentleman make as good a showing for gold when tried by the same test? How much more friendly do the facts prove the people to feel towards gold? In this country, as in every other, gold is more hoarded than silver, and the conduct of the fiscal affairs of this nation by Treasury officials, who in every possible way discriminate against silver so as to make gold coin the dearer money, will continue it so.

Mr. CONGER. Will the gentleman permit a question?

Mr. HEARD. Certainly.

Mr. CONGER. Is it not true that the Treasury Department will pay the express charges upon the silver dollars to any part of the United States where they are wanted or demanded?

Mr. HEARD. Such I understand to be the case.

Mr. CONGER. Then, if out of 350,000,000 silver dollars there has been a demand for only 57,000,000, does that not prove that the people do not want the silver dollars, but prefer the certificates?

Mr. HEARD. It does not prove that they do not want silver coined. They want it coined in order that it may furnish a predicate for the certificates, and in as great a volume as possible. Let me ask my friend this question: How much of the six hundred-odd millions of gold coin alleged by the Treasury officials to be in circulation in this country is in the pockets of the people?

Mr. CONGER. We can not get into the pockets of the people to obtain that information.

Mr. HEARD. How much of it is actually in circulation, making the money exchanges of the people?

Mr. CONGER. About six hundred and eighteen millions.

Mr. HEARD. Oh, Mr. Speaker——

Mr. CONGER. The statements and books of the Treasury Department show it.

Mr. HEARD. Well, Mr. Speaker, those books show, among other things, that there is in the Treasury about one hundred and thirty-five millions of gold coin for which certificates are in circulation, and in my humble opinion that is about all the gold coin in the country that is of any great value to the people as money.

It is true that said books show that there are two hundred and forty-six millions in coin tied up there in various redemption funds (besides sixty-seven millions in gold bullion), one hundred millions of which coin is held for the redemption of greenbacks, when not one dollar of it is needed. Since that fund was established it is stated that only about fifteen or twenty millions have ever been used for such redemption, while the interest on the bonds sold to raise the fund amounts to more than $46,000,000. The books also show that the amount of gold coin held in the national banks is forty-nine millions; that there are thirty-one millions held in banks other than national banks reporting, and three hundred and eighteen millions in banks not reporting, and in private hands.

As for the last item, Mr. Speaker, one has only to examine the data furnished by the Director of the Mint to see that the amount stated is only estimated and that it is but a guess, instead of a computation from reliable data.

It is thus, Mr. Speaker, that the Treasury officials figure to arrive at the conclusion that we have $618,000,000 of gold coin in "circulation." With the exception of the $130,000,000 for which certificates have been issued, is it not a perversion of language to say that it is in "circulation?" Outside of the Treasury officials and the bank clerks who ever sees a dollar of it? For the uses of the people as money it might almost as well be in the mines from which it came. Practically, then, Mr. Speaker, the actual money uses of the people are supplied by the greenbacks, the national-bank notes, the subsidiary silver coin (something over seventy-six millions), about sixty-one and a half million standard silver dollars, and that portion of the other silver and gold coin for which certificates are outstanding and which certificates aggregate less than $425,000,000. It is needless to explain that the silver as well as the gold coin is deposited in exchange for certificates, which circulate instead of the coin itself, because of the greater convenience in handling. But, Mr. Chairman, with what accuracy or fairness can it be said that this coin is not in circulation when its representative, the certificate, is? And since the certificates answer all the uses of coin, is it not as well for the people that the certificates should be in their pockets instead of the coin?

Mr. CONGER. Is that not what I said in my report and my speech?

Mr. HEARD. Oh, yes, and that part of your argument is sound; but I want to show you now why your bill would not accomplish what you claim for it and what you say you desire, because it is not calculated to put the certificates in circulation.

Mr. CONGER. You acknowledge the truth of my statement?

Mr. HEARD. Well, wait till I get through with my statement. I anticipated your appropriation of my language to the support of your position, but I insist that you can not make it answer your purpose nor my objection. I agree with you that the certificates, when in circulation, are just as good as the coin and more convenient, otherwise nobody would exchange coin for them; but I wish now in presenting my criticisms on this bill to point out to you as my first but not most serious objection the fact that under the operation of this bill, should it become a law, even with a Secretary of the Treasury friendly to silver coinage, it will not be practicable to issue as great an amount in certificates as is authorized by existing law. By the present law the Secretary of the Treasury is compelled to buy and coin into standard silver dollars $2,000,000 worth of silver bullion monthly, and he is authorized to buy and coin $4,000,000 worth per month. At the present commercial price of bullion (72 cents on the dollar, gold value) $4,000,000 worth of it will coin over 5,200,000 standard silver dollars, and therefore if that official were to execute the present law in a spirit of friendliness to silver coinage there is nothing to prevent his coining, at the present price of silver bullion, over $5,200,000 per month. Under this bill he could not issue Treasury notes for over $4,500,000 monthly. Therefore, if our aim is to get silver certificates issued, to become permanently a part of our circulating medium on a par with the money we now have, it will be seen that the present law, if fully executed, is better for our purposes than the one proposed by about three-quarters of a million dollars monthly, or eight millions annually.

It may be said that we have no reason to believe that the present Secretary of the Treasury will execute the existing law in a way differ-

ent from that which he and his predecessors have executed it in the past, and I admit it. Unfortunately, at this time there is, I repeat, no hope that he will do so, unless compelled thereto by a change in the law. But how easy it would be to amend the law so as to compel the coinage of the maximum limit instead of the minimum. Again, if the Secretary will only execute the existing law so as to make only the least possible addition to the volume of our money, why is it reasonable to suppose that he would execute the proposed law in a spirit of greater liberality towards silver. Would he not have great latitude for his discretion in the execution of the proposed law? Yes; and in my opinion that furnishes the explanation why he and those who like him oppose the use of silver money desire the substitution of that bill for the existing law, by the terms of which there is compulsory coinage for half the amount possible to be coined under the law.

I desire to emphasize the point that under existing law there is a certainty of our getting about $35,000,000 increase annually; and this bill proposes to repeal that law, substituting for that compulsory provision one making it the duty of the Secretary of the Treasury to coin so much only of the bullion as will do what? Pay for such bullion? Oh, no, that would make a permanent addition to the volume of silver money in the country; but to coin so much as may be necessary to redeem such of the Treasury notes as may be presented for redemption in coin. Who will ever present one of those notes for redemption in silver coin when the note is clothed with all the money power of gold coin? No, Mr. Speaker, none will be presented for redemption, and therefore, so far as relates to the standard dollar, silver coinage will cease. Under existing law every dollar in the form of silver certificates issued on a deposit of coin makes, in so much, a permanent addition to the volume of circulation in the country; for, once issued, it can only be redeemed in coin of its class, and such exchange is useless save in exceptional cases and for small amounts.

Let those who denounce the demonetizing act of 1873 understand that in voting for this bill they vote to re-establish the condition, as to the coinage of the legal-tender silver dollar, which that act brought about, and that he does more, and, in my judgment, infinitely worse, in this, that he votes to establish, by declaration of law, the destruction of the coinage value of silver, making it a commodity only.

The act of 1873 did not go that far, and until now all efforts of the enemies of silver have been powerless to give silver that fatal blow.

In my opinion, Mr. Speaker, there will be little or no appreciable increase in the volume of our circulating medium under this bill on account of Treasury notes to be issued in payment for silver bullion, for the reason that the Secretary of the Treasury will, by the proviso to the second section of the bill, be authorized "at his discretion" and under such "regulations as he may prescribe" to exchange for such notes silver bullion; and it will not be too much to predict that the bankers and money-holders generally, being interested in keeping the supply of money in the country as small as possible, will, in great measure at least, control the output of the notes by selling the bullion to the Secretary, and perhaps in the same month that they are issued present them for redemption in bullion, thus completely nullifying the spirit of the act, if its design be to relieve the people by furnishing more money for circulation.

If the Secretary of the Treasury be so inclined, what is to hinder the four and a half millions of bullion bought and notes issued therefor during the first month from changing places every month, and by such round of manipulation prevent any increase in the volume of circulation beyond the amount involved in that one transaction? The friends of the bill of course argue that no Secretary of the Treasury will dare do that, even if he desire to; but the result of my observations of the acts of the officials who have filled that place since 1873—and the present Secretary is no exception to the rule—inclines me to guard against the necessity for permitting the exercise on the part of anybody who may get into that place of a discretion (certain to be more or less influenced by the conviction which seems always to be present with them, that any increase of money among the people is an unmixed evil), to do or not to do such things as the law could just as well, and in my judgment should, either explicitly direct or prohibit.

Suppose, for purpose of illustration, the Bland act of 1878 had in express terms commanded the coinage of $4,000,000 worth of bullion into standard silver dollars monthly instead of leaving half that amount to be coined or not coined at the discretion of the Secretary of the Treasury; we would to-day have the full benefit of that act instead of only half of it. Would that increase in the volume of money in the country have been an injury or would it have been a benefit? If we think it would have been an injury then we should now repeal, absolutely, the Bland law; and if a benefit we should not repeat the folly of first deciding what should be done by Congress in the interests of the people and then giving to an executive officer of the Government, whom we know to be opposed to our view, discretion to do or not to do it.

Mr. Speaker, no one who has examined the recent official utterances of President Harrison on this subject will attribute to him any great partiality for silver money; but in the same message in which he, speaking of the free coinage of silver, says, "We should not tread the dangerous edge of such a peril," he is compelled by the facts to say with reference to the effect of the coinage of standard silver dollars that—

> The evil anticipations which have accompanied the coinage and the use of the silver dollar have not been realized. As a coin it has not had general use, and the public Treasury has been compelled to store it. But this is manifestly owing to the fact that its paper representative is more convenient. The general acceptance and use of the silver certificate show that silver has not otherwise been discredited.

No, Mr. Speaker, silver has not been discredited; and the only discredit which the result of this increased silver coinage has cast on anything or anybody has fallen on those prophets of evil to whom the President alludes as having indulged in gloomy anticipations of the wreck and ruin that were to come upon the country as a result of the operations of the Bland act. But however much discredited as prophets, the individuals of that class still continue to prophesy falsely.

Let me ask, Mr. Speaker, whence comes the demand for a bill like that before us? The people have not asked it, nor do they want it. They have asked for a bill authorizing free coinage; and in response to that petition you propose to give them one repealing the act which alone gives them any silver coinage. What influence demands the passage of a law striking down silver as a money metal? Certainly not the masses of the people, who demand more money for circulation and the preservation of the present legal ratio between the gold and silver money of the country. Where and when have the people demanded that bullion should be bought by the Government for the purpose of putting into circulation Treasury notes, and yet providing that, at the discretion of an official who does not claim friendship for such proposition, such notes may be redeemed or received in exchange for this same bullion? Who is it that demands that our Federal Treasury shall be converted into a pawnbroker's shop or made the basis of gigantic jobbery in buying and selling the bullion of the country?

Will any intelligent man contend that this bill does not furnish opportunities for speculation should the Secretary be dishonest enough to avail himself of it? Hear what the present Secretary himself says about the character of this feature of the bill. In a letter the authenticity of which is not denied, and in an authorized interview sent through the Associated Press, referring to the provision in the Senate bill which compels the purchase of so much silver monthly, etc., he says:

> This compulsory purchase of so great an amount will make the Treasury the largest operator in the most gigantic corner ever organized.

And further, comparing the Senate bill, which he was criticising, with his own bill (substantially the one before us), he says:

> Is it not enough that we take one half of the world's silver product and lock it up in order to increase the value of the other half; that we join the silver-producers in the most gigantic silver corner ever organized?

Yes, Mr. Speaker, I would answer, quite enough. But in my humble opinion that is just what is proposed. And yet we are told by some of those who favor the bill that those who want free coinage are working under the influence of the "silver lobby." The chairman of the committee reporting this bill said in his speech to-day:

> All winter long, Mr. Speaker, a powerful silver lobby has been operating about this city, a lobby paid for and supported by the bonanza mine and bullion owners.
>
> They have been faithful to their trust. They have been persistent in season and out of season; they have plied their vocation at Capitol, hotel, and private residence.

This may be true, Mr. Speaker, and I can only say that while I will not question the correctness of a statement which seems to have been made with all the positiveness that comes from personal knowledge, I would say that, judging from the character of this bill, which is generally supposed to have emanated from the Secretary of the Treasury, said lobby, in addition to the other places which the gentleman says it infested, has not wholly slighted the Treasury Department; at least, Mr. Speaker, and I say it without design to reflect on anybody, that official is generally credited with being the progenitor of a bill which, according to his own statement, proposes "that we join the silver-producers in the most gigantic corner ever organized." For myself, Mr. Speaker, I do not propose to join in this "corner." The silver lobby has had no effect on me. Seriously, Mr. Speaker, my constituents have no silver mines or bullion, and their Representative is uninfluenced by the lobby, either the "silver lobby" or the "gold lobby;" and if there be such lobbies here I shall try to be certain that their influence is not reflected in my vote.

Mr. Speaker, why pass a bill obnoxious to such serious criticisms as have been quoted from the Secretary of the Treasury even if it had no other faults? Why pass a bill so complicated in form and of so uncertain operative results that it claims alike the support of those who desire and those who oppose the rehabilitation of silver money? Why not give the people what they ask for, and that is the removal of the unjust restrictions placed on the coinage of silver by the act of 1873, which act no one now has the hardihood to defend? In fact no one has ever defended it, but every one connected with that legislation is to-day on the defensive before the bar of public opinion. The act of demonetization was never asked for nor desired by any one save those who engineered that colossal scheme of legislative robbery which has

been fitly named by Senator INGALLS "the great economic crime of the age." That act, of which the great body of the people knew nothing until too late, was passed so stealthily that Senators and Representatives voted for the bill without knowledge of its nature, and it was signed by the President, as he afterwards declared, without the slightest intimation or suspicion of its real purpose. Since this has recently been denied by a prominent Senator, conspicuous now as he has always been in his opposition to the correction of the great wrong done by the act of 1873, I quote the statements of some of the leading Senators and Representatives who were in Congress at the date of the passage of the act, and were therefore in a position to know the facts in the case.

Mr. HOLMAN, in a speech delivered in the House of Representatives July 13, 1876, said:

I have before me the record of the proceedings of this House on the passage of that measure, a record which no man can read without being convinced that the measure and the method of its passage through this House was a "colossal swindle." I assert that the measure never had the sanction of this House, and it does not possess the moral force of law.—*Congressional Record*, volume 4, part 6, Forty-fourth Congress, first session, appendix, page 193.

Again on August 5, 1876, he said:

The original bill was simply a bill to organize a bureau of mints and coinage. The bill which finally passed the House and which ultimately became a law was certainly not read in this House. * * *

It was never considered before the House as it was passed. Up to the time the bill came before this House for final passage the measure had simply been one to establish a bureau of mines; I believe I use the term correctly now. It came from the Committee on Coinage, Weights, and Measures. The substitute which finally became a law was never read, and is subject to the charge made against it by the gentleman from Missouri [Mr. BLAND], that it was passed by the House without a knowledge of its provisions, especially upon that of coinage.

I myself asked the question of Mr. Hooper, who stood near where I am now standing, whether it changed the law in regard to coinage. And the answer of Mr. Hooper certainly left the impression upon the whole House that the subject of the coinage was not affected by that bill.—*Congressional Record*, volume 4, part 5, Forty-fourth Congress, first session, page 5237.

Mr. CANNON, of Illinois, in a speech made in the House on July 13, 1876, said:

This legislation was had in the Forty-second Congress, February 12, 1873, by a bill to regulate the mints of the United States, and practically abolished silver as money by failing to provide for the coinage of the silver dollar. It was not discussed, as shown by the RECORD, and neither members of Congress nor the people understood the scope of the legislation—*Congressional Record*, volume 4, part 6, Forty-fourth Congress, first session, appendix, page 197.

Mr. Burchard, of Illinois, in a speech made in the House of Representatives on July 13, 1876, said:

The coinage act of 1873, unaccompanied by any written report upon the subject from any committee and unknown to the members of Congress, who without opposition allowed it to pass under the belief, if not assurance, that it made no alteration in the value of the current coins, changed the unit of value from silver to gold.—*Congressional Record*, volume 4, part 6, Forty-forth Congress, first session, page 4560.

Senator Conkling, in the Senate on March 30, 1876, during the remarks of Senator Bogy on the bill (S. 263) to amend the laws relating to legal tender of silver coin, in surprise, inquired:

Will the Senator allow me to ask him or some other Senator a question? Is it true that there is now by law no American dollar? And, if so, is it true that the effect of this bill is to be to make half-dollars and quarter-dollars the only silver coin which can be used as a legal tender?—*Congressional Record*, volume 4, part 3, Forty-fourth Congress, first session, page 2062.

General Garfield, in a speech made at Springfield, Ohio, during the fall of 1877, said:

Perhaps I ought to be ashamed to say so, but it is the truth to say that, at that time being chairman of the Committee on Appropriations and having my hands overfull during all that time with work, I never read the bill. I took it upon the faith of a prominent Democrat and a prominent Republican, and I do not know that I voted at all. There was no call of the yeas and nays, and nobody opposed that bill that I know of. It was put through as dozens of bills are, as my friend and I know, in Congress, on the faith of the report of the chairman of the committee; therefore I tell you, because it is the truth, that I have no knowledge about it.—*Congressional Record*, volume 7, part 1, Forty-fifth Congress, second session, page 989.

Senator ALLISON, on February 15, 1878, when the bill (H. R. 1093) to authorize the free coinage of the standard silver dollar and to restore its legal-tender character was under consideration, observed:

But when the secret history of this bill of 1873 comes to be told, it will disclose the fact that the House of Representatives intended to coin both gold and silver and intended to place both metals upon the French relation instead of on our own, which was the true scientific position with reference to this subject in 1873, but that the bill afterward was doctored, if I may use that term, and I use it in no offensive sense of course——

Mr. Sargent interrupted him and asked him what he meant by the word "doctored."

Mr. ALLISON said:

I said I used the word in no offensive sense. It was changed after discussion, and the dollar of 420 grains was substituted for it.—*Congressional Record*, volume 7, part 2, Forty-fifth Congress, second session, page 1058.

On February 15, 1878, during the consideration of the bill above referred to, the following colloquy between Senator Blaine and Senator VOORHEES took place:

Mr. VOORHEES. I want to ask my friend from Maine, whom I am glad to designate in that way, whether I may call him as one more witness to the fact that it was not generally known whether silver was demonetized. Did he know, as Speaker of the House, presiding at that time, that the silver dollar was demonetized in the bill to which he alludes?

Mr. BLAINE. I did not know anything that was in the bill at all. As I have before said, little was known or cared on the subject. [Laughter.] And now I should like to exchange questions with the Senator from Indiana, who was then on the floor and whose business it was, far more than mine, to know, because by the designation of the House I was to put questions; the Senator from Indiana, then on the floor of the House, with his power as a debater, was to unfold them to the House. Did he know?

Mr. VOORHEES. I very frankly say that I did not.

(*Ibid.*, page 1053.)

Senator Beck, in a speech made in the Senate January 10, 1878, said:

It [the bill demonetizing silver] never was understood by either House of Congress, I say that with full knowledge of the facts. No newspaper reporter—and they are the most vigilant men I ever saw in obtaining information—discovered that it had been done.—*Congressional Record*, volume 7, part 1, Forty-fifth Congress, second session, page 260.

Senator Hereford, in the Senate, on February 13, 1878, in discussing the demonetization of silver, said:

So that I say that beyond the possibility of a doubt (and there is no disputing it) that bill which demonetized silver, as it passed, never was read, never was discussed, and that the chairman of the committee who reported it, who offerred the substitute, said to Mr. HOLMAN, when inquired of, that it did not affect the coinage in any way whatever.—*Congressional Record*, volume 7, part 1, Forty-fifth Congress, second session, page 982.

Mr. Kelley, of Pennsylvania, who was chairman of the committee having charge of the bill, in a speech made in the House of Representatives on March 9, 1878, said:

In connection with the charge that I advocated the bill which demonetized the standard silver dollar, I say that, though the chairman of the Committee on Coinage, I was as ignorant of the fact that it would demonetize the silver dollar or of its dropping the silver dollar from our system of coins as were those distinguished Senators Messrs. Blaine and VOORHEES, who were then members of the House, and each of whom a few days since interrogated the other: "Did you know it was dropped when the bill passed?" "No," said Mr. Blaine; "did you?" "No," said Mr. VOORHEES. I do not think that there were three members in the House that knew it. I doubt whether Mr. Hooper, who, in my absence from the Committee on Coinage and attendance on the Committee of Ways and Means, managed the bill, knew it. I say this in justice to him.—*Congressional Record*, volume 7, part 2, Forty-fifth Congress, second session, page 1605.

Again on May 10, 1879, Mr. Kelley said:

All I can say is that the Committee on Coinage, Weights, and Measures, who reported the original bill, were faithful and able, and scanned its provisions closely; that as their organ I reported it; that it contained provision for both the standard silver dollar and the trade-dollar. Never having heard until a long time after its enactment into law of the substitution in the Senate of the section which dropped the standard dollar, I profess to know nothing of its history; but I am prepared to say that in all the legislation of this country there is no mystery equal to the demonetization of the standard silver dollar of the United States. I have never found a man who could tell just how it came about or why.—*Congressional Record*, volume 9, part 1, Forty-sixth Congress, first session, page 1231.

It will be observed, Mr. Speaker, that Judge Kelley, in referring to the want of knowledge on the part of his committee as to the demonetizing feature being in the bill which they reported, stated that he did not believe that there were three members of the House who knew it, and further that he doubted if Mr. Hooper, who reported the bill, knew it. I think, Mr. Speaker, that in the latter opinion Mr. Kelley was probably mistaken, and that Mr. Hooper did know it; and in support of my view I quote an extract from the speech of the Hon. JOHN W. DANIEL, delivered, May 22, 1890, on the silver-coinage bill now pending in the Senate.

Mr. DANIEL says:

I take from the Bankers' Magazine of August, 1873, a little extract. It says: "In 1873, silver being demonetized in Germany, England, and Holland, a capital of 100,000*l.* ($500,000) was raised, and Ernest Seyd, of London, was sent to this country with this fund as the agent of foreign bondholders to effect the same object."

This is from one of the most respectable organs of the money interest of the United States, and it announces the fact that England and Holland furnished a fund of half a million dollars and sent an emissary over to America to procure a result which was effected in the manner stated.

Mr. SHERMAN. What date does he fix?

Mr. DANIEL. It is the Bankers' Magazine of August, 1873.

Mr. SHERMAN. But what was the date fixed when Seyd was sent here? When was Seyd sent here, according to that statement?

Mr. DANIEL. There is no statement of that. I have only the paragraph before me.

The CONGRESSIONAL RECORD of April 9, 1872, contains the report of a bill presented to the House by Mr. Hooper, of Massachusetts, the chairman of the Committee on Coinage, in which the following language occurs as coming from Mr. Hooper's own lips, and refers to the act which was passed dropping the silver dollar from our coinage laws, where it had been recognised as the unit of value since 1789:

"The bill was prepared two years ago and has been submitted to careful and deliberate examination. It has the approval of nearly all the mint experts of the country and the sanction of the Secretary of the Treasury. Ernest Seyd, of London, a distinguished writer and bullionist, is now here and has given great attention to the subject of mints and coinage, after examining the first draughts of this bill made various sensible suggestions which the committee accepted and embodied in the bill. While the committee take no credit to themselves for the original preparation of this bill, they have given it the most careful consideration and have no hesitation in unanimously recommending its passage as necessary and expedient."

It is perhaps fortunate that Mr. Hooper disclaimed the paternity of the bill, since a few months since, at a convention of national bankers held in Kansas City, Mo., Hon. John J. Knox claimed the authorship of it.

I refer to this, Mr. Speaker, not to reflect in any manner upon the

conduct of Mr. Hooper, any further than to connect him with the knowledge of the purpose of his work. He may have been ignorant of the motives of Mr. Seyd and of the half-million-dollar syndicate of the English and Holland bankers who sent him here; but he acknowledges in his report to the House his indebtedness to Mr. Seyd for his "various sensible suggestions," etc. Then it is not fair to Mr. Hooper's intelligence to suppose that he was so far imposed upon that he did not understand the nature of the work being done by him. It is but justice to him, however, to state that it has been openly charged by Senator ALLISON and others that the bill was changed so as to drop out the silver dollar after it left the Senate. While I am not aware that Senator SHERMAN, who, on January 17, 1873, asked for the consideration of the House bill in the Senate, has ever stated that he was unaware of its full purpose, I think the following extract, which I quote from the CONGRESSIONAL RECORD of that date, fails to show that his statement of the nature of the bill upon presenting it was such as would advise the Senate that such measure contemplated the demonetization of silver, or related to anything other than the regulation of the mints, assay offices, and coinage of the United States, and during whatever of debate ensued on the bill, or amendments discussed, not one word was said which disclosed a purpose to prohibit the coinage of a legal-tender silver dollar. The extract referred to reads as follows:

MINT LAWS.

The PRESIDING OFFICER. The Calendar under the Anthony rule is now in order.

Mr. SHERMAN. I rise for the purpose of moving that the Senate proceed to the consideration of the Mint bill. I will state that this bill will not probably consume any more time than the time consumed in reading it. It passed the Senate two years ago after full debate. It was taken up again in the House during the present Congress and passed there. It is a matter of vital interest to the Government, and I am informed by officers of the Government it is important it should pass promptly. The amendments reported by the Committee on Finance present the points of difference between the two Houses, and they can go to a committee of conference without having a controversy here in the Senate about them.

Mr. ANTHONY. I hope the Calendar will be laid aside informally, not postponed.

Mr. SHERMAN. Let it be passed over informally until we finish the reading of the Mint bill and dispose of it. The reading is about half through, I am informed by the Secretary.

Mr. CRAGIN. I shall not oppose this motion, but I wish to give notice that as soon as the Mint bill is disposed of I shall move to call up the bill (H. R. No. 309) for the construction of six steam-vessels of war, and for other purposes, which was reported from the Committee on Naval Affairs. I hope that bill will be left as the unfinished business this evening.

The PRESIDING OFFICER. The Chair is informed that it is proposed that the Calendar be informally passed over.

Mr. SHERMAN. I am perfectly willing that that should be done.

The PRESIDING OFFICER. That will be regarded as the sense of the Senate, if there is no objection, and the bill referred to by the Senator from Ohio is now before the Senate.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. No. 2634) revising and amending the laws relative to the mints, assay offices, and coinage of the United States.

The Chief Clerk resumed and concluded the reading of the bill.

The PRESIDING OFFICER. The Committee on Finance report the bill with amendments, which will now be read.

Mr. SHERMAN. I send to the clerk some amendments of a formal character from the Committee on Finance, adopted since the amendments first reported were printed. I will ask that they be acted upon with the others in their order.

Whatever knowledge of the scheme may have been possessed by those engineering it, Mr. Speaker, it can not be claimed that the masses of our people had any notice of the true intention of the bill or that the coinage of the legal-tender dollar was to be interfered with at all. No man connected with that work has ever attempted to give a reason for it. During the present Congress we have witnessed the labored efforts of a distinguished Senator to show that the act was not passed wholly without notice to the Senate; but it yet remains for him, or any of his associates in the work, to assign a reason justifying the act. For any one not bound to apologize for the origin of the law it is easy to discover the motive. It was the desire and purpose to destroy one of the money metals in order to increase the value of the other. A brief reference to history discloses the fact that the device was not a new or untried one, for it had been frequently resorted to by those who owned the money and held the credits of the world in other countries. Nor has the metal demonetized always been silver. Sometimes it has been gold, but always that metal which by its greater abundance, present or prospective, most threatened to resist the oppressive power of the money-owner as against the poor and the indebted.

Up to the year 1819 every civilized nation used both gold and silver equally as money. At that date England, having become a creditor nation, demonetized silver by declaring that all contracts for the payment of money should be discharged in gold only. We will take occasion hereafter to note the effects of that act upon the people of that country. After the discovery of the gold mines of California and Australia the European countries which still retained the use of both metals, becoming alarmed at the sudden increase in gold money, set about the demonetization of that metal. In 1850 Belgium made silver her single standard, and in 1857 her example was followed by the German States and Austria; and to the opposition of France alone was due the fact that the demonetization of gold did not obtain throughout the whole of Europe. But less than twenty years thereafter the great increase in the product of silver completely changed the status of the two metals; and the change which began with the formation of the Latin Union, in which Belgium, Italy, and Switzerland joined in 1865, was followed in 1873 by Germany and the United States, and later by the Scandinavian States, France, Holland, and Spain, and the mints of all these countries were closed against silver. The result has been fitly described by Hon. ROGER Q. MILLS, when he declared that thus—

The labor of the world was paralyzed in order to raise the price of gold to the small but powerful class who live on incomes.

Thus it will be observed, Mr. Speaker, that it is always the metal that is or promises to become the most useful to the people for money purposes that is singled out by the law-making power as the victim for the time being of demonetization. The effect of such legislation being much the same in all countries, it may not be surprising to us in the light of our own experience, yet interesting to note the result of the original demonetization of silver in England in 1819. The historian of that day informs us that "by reason of the contraction of the currency prices rapidly fell, cotton sinking in three months to half its former value; that in six months all prices had fallen half and "showed no signs of improvement for the next three years." By reason of the contraction of the currency the industry of the nation was paralyzed, etc.:

Alarm became universal, confidence and activity ceased, bankruptcy increased in 1819 more than 50 per cent. of the number of the previous year. Meetings were held throughout England in which the people called on the Government to devise some means of redressing the situation. So universal was the distress that the owners of land in England, who in 1819 numbered 160,000, were in seven years, by forced sales and the foreclosures of mortgages on the smaller farms, reduced to 30,000, and one in every seven of the population lived on organized charity.

Mr. Speaker, this is indeed a dark picture of distress, but one which millions of our people will recognize as having been presented to their gaze by the act of 1873. Let us see what was the effect of the same policy applied to Germany. In 1873 that nation joined in the war against silver money, and the effects of such action was immediately reflected in the distress of her people, which is aptly described by Mr. Laveleye, who seven years later wrote as follows:

At the sitting of the Reichstag, of the 18th June, 1879, the governor of the Imperial Bank, Herr Von Decherd, declared, in reply to a question by ex-Minister Delbrück, that the sale of demonetized silver had already involved a loss of 96,500,000 marks ($23,100,000), and that for the sale of the remaining 500,000,000 of marks ($120,000,000) a rather higher loss must be calculated upon. (A mark is worth 24 cents.) It was then that Prince Bismarck interposed and declared that he would no longer bear the responsibility of such an operation. Germany is a considerable producer of silver, and her present production is worth less by $5,000,000 per annum from the depreciation of silver. Germany owns at least $400,000,000 of investments, whose interest, payable in silver, now yields $2,500,000 a year less than if that metal was at par.

EFFECT UPON THE GERMAN FARMERS.

He thus describes the effect upon the German farmers:

"This direct loss, important as it is, is nothing, however," says Herr Von Bär, "compared with the indirect loss resulting from the fall of prices." Himself a large land-owner, he first speaks of agriculture: "It is cruelly suffering from the reduced value of all produce. The farmers are paying their rents irregularly or not at all; their stock in trade has often to be distrained to recover arrears of rent. The land-owners are overwhelmed with mortgages. When at last, in order to extricate themselves, they try to sell their estates, they find no purchasers or have to be satisfied with a price one-third below former estimates. The discouragement is universal. No more agricultural improvements are being effected; employment is, consequently, lacking, and there is great indigence. Hence that increasing emigration, for which special trains and steamers have to be arranged. It is a veritable exodus. What remedy for so much suffering? The agriculturists, perceiving at length the real cause of the evil, demand the abandonment of the gold standard.

The extraordinary emigration from Germany referred to by this distinguished authority aggregated, in the sixteen years from 1873 to 1889, 1,546,000 persons, nearly 100,000 per annum. People do not emigrate when they are prosperous; and this hegira of Germans, as it has been termed, declared the condition of that country.

But, Mr. Speaker, unfortunately for our country, we are not compelled to go abroad for illustrations of the evil effect of this character of legislation. It will not be denied that the demonetization of silver in 1873 has depreciated all values in this country about one-third. The magnitude of that destruction of values can scarcely be conceived, much less accurately stated; but it may not be unprofitable to refer in this connection to the opinions of well informed statesmen and financiers of this, as well as of other countries, on the subject. Senator TELLER says it added more than a thousand millions to the public debt of this country alone, and, great as that sum appears, it is but a trifle when compared to the increase of burden added to the private and other debts of the people. While no man can even approximately state the weight of that burden, every debtor and laboring man in this country from 1873 to this day has felt its oppressive effects.

In a recent speech delivered in the United States Senate by Hon. JOHN P. JONES he presents irrefragable proofs that the depreciation of silver caused by its demonetization has been shared by every other species of property except gold alone; or, in other words, that silver has held its ratio of value as compared with every thing except gold and therefore the correct way to state the change of relative values of silver and gold is, not that silver has declined, but that gold has been advanced in value. The effect upon the people of this rise in gold can not perhaps be more forcibly presented than in the illustrations used by Senator JONES, as follows:

If a cotton-planter in 1873 owed $10,000 he could then have paid it with 60,975 pounds of cotton. To-day, by reason of the increased command which gold has

over commodities, it would take 101,010 pounds of cotton to pay that $10,000, notwithstanding that the money in which the debtor has paid the interest has each year become more valuable than it was at the time he contracted to pay it.

The cotton manufacturer of the East who in 1873 owed $10,000 could then have paid it with 70,422 yards of unpolored cotton cloth; to-day, owing to the rise in the value of gold, it would require 147,059 yards to pay that debt, without taking into account the amount lost by the debtor in the greater sacrifice he had year by year to make to pay the interest.

The farmer of the North and West who in 1873 owed $10,000 could then have paid it with 8,733 bushels of wheat; to-day it would require 11,446 bushels of wheat to liquidate that debt, though he, too, has year by year been "cinched" through the progressive increase in the value of the money in which the interest has been paid. Or he could, in 1873, have paid his debt with 1,514 barrels of flour; to-day it would take 2,126 barrels of flour to pay the same debt.

Showing the continual decline in prices, and the consequent increasing distress of our agriculturists, I quote the following from one of the leading agricultural journals of the country. Referring to the official crop report this writer says:

By taking the corn crop for 1888 we find by this report that there were raised in the United States 1,987,790,000 bushels of corn, valued at $677,[illegible]580, and by the report of 1889 we find there was raised the enormous crop of 2,112,892,000 bushels valued at only $597,918,820. In fact, the corn crop of 1889 exceeded that of 1888 by 125,102,000 bushels, and is valued at less money by $79,542,760.

The wheat crop of 1888 was 415,868,000 bushels, valued at $385,248,030, while the wheat crop of 1889 was 490,560,000 bushels, valued at only $349,491,707. It will be seen that the wheat crop of 1889 was greater than that of 1888 by 74,693,000 bushels and sold for less money by $42,756,223.

The oat crop of 1888 was 701,735,000 bushels, valued at $195,424,240, and the oat crop for 1889 was 751,575,000 bushels, valued at $171,781,008, or the oat crop was greater in 1889 than in 1888 by 49,780,000 bushels, and is valued for less by $23,643,232.

In other words, the farmers have raised of these cereals 249,664,000 bushels more in 1889 than in 1888, and the entire crop has sold for $145,942,215 less money than last year.

As evidence that this condition is recognized and appreciated by financiers and economic writers of accepted ability and character in Europe as well as in this country, I quote from Mr. Frewen, of London, in his late work entitled The Economic Crisis, which relates, not peculiarly, to financial causes and effects in the United States, but in the whole civilized world. His incidental allusion, however, to a state of facts which we all know exists in this country, makes his illustration appropriate to this discussion, while his acknowledged ability and fairness as an author on financial and economic subjects give great weight to his observations. Mr. Frewen says:

It may, indeed, be affirmed, without fear of contradiction, that legislation arranged in the interest of a certain class, first by Lord Liverpool in this country and again by Sir Robert Peel at the instigation of Mr. Jones Loyd and other wealthy bankers, which was supplemented recently by simultaneous anti-silver legislation in Berlin and Washington at the instance of the great financial houses—this legislation has about doubled the burden of all national debts by an artificial enhancement of the value of money.

The fall of all prices induced by this cause has been on such a scale that while in twenty years the national debt of the United States quoted in dollars has been reduced by nearly two-thirds, yet the value of the remaining one-third, measured in wheat, in bar iron, or bales of cotton, is considerably greater—is a greater demand draft on the labor and industry of the nation than was the whole debt at the time it was contracted. The aggravation of the burdens of taxation induced by this so-called "appreciation of gold," which is no natural appreciation, but has been brought about by class legislation to increase the value of the gold which is in a few hands, requires but to be explained to an enfranchised democracy, which will know how to protect itself against further attempts to contract the currency and to force down prices to the confusion of every existing contract.

Senator JONES, of Nevada, presents some facts and figures to prove what the losses have been, by reason of this shrinkage in value of some of the staple crops of the country. On the cotton crops alone, in those seventeen years, he states, upon a computation based on the reports of the Bureau of Statistics in the Treasury and Agricultural Departments, that the loss has been $1,411,000,000; on the wheat crop, by data derived from the same sources, he estimates the loss to have been $1,700,000,000; or an aggregate on those two crops alone of over $3,000,000,000. When we apply the same percentage of shrinkage to the other crops and property of the country which have been produced and handled at constantly declining prices during this long and hideous night of financial horror, we can get an approximate realization of the losses sustained by the decline in price of property; but in order to more fully appreciate the grievous burden which that act placed upon the masses we must note its effect on the laborers whom it deprived of work—over two millions in number—who had neither crops to sell nor money with which to buy, except as they earned it by daily toil. Quoting further from the distinguished Senator, I present his estimate of the almost immeasurable loss inflicted upon the laboring element of our people. He says:

The census report of 1880 states the number of persons employed in all occupations as 17,392,099 out of a population of 50,155,783, or a percentage of 34.68 of the entire population. Our present population being not less than 65,000,000, if we assume, as we are warranted in doing, that a like proportion of the population is engaged in occupations of all sorts, it is clear that we have to-day a working population of 22,254,000 persons.

Accepting as correct the careful deductions from the reports of the Massachusetts bureau of labor that a number equivalent to 10 per cent. of the people are always out of employment, we find that at the present time there are 2,250,000 persons involuntarily idle in this country. How faintly does the term "the army of the unemployed" describe this vast number of eager and willing men seeking in vain the opportunity to earn a livelihood for themselves and families.

Were the business of the country in the active condition in which it could not avoid being if our money system were perfectly adjusted to industry and if employers were competing for laborers with the same degree of eagerness that laborers are competing for employment, the average wage of a day for a workingman would not be less than $2. This would make but the moderate sum of $60 a month for each workman, which, under the most thrifty system of household economy, can not be considered more than enough for the support of an American family.

WAGE LOSS FROM INVOLUNTARY IDLENESS.

By multiplying the number of persons thus shown to be idle by this moderate average wage we arrive at the amount of $4,500,000 as the daily sum which is lost to the wage-earners of the United States by the non-employment of labor. This is a money loss of $27,000,000 a week, $117,000,000 a month, or the amazing sum of $1,404,000,000 a year. A saving of this sum for a year and three months would pay our entire national debt. This being the loss in a single year, we can imagine (making due allowance for difference in the numbers of the population) how stupendous has been the loss to the nation during the past seventeen years, a loss exceeding incomparably all other losses whatsoever.

If a crop of wheat be lost, it is appropriately noted as a public misfortune; if a city be burned down or swept away by flood, it is properly regarded as a great national calamity, and the sympathies of all the people go out in unstinted measure to the sufferers. But here is a loss as real and as deplorable as any ever caused by flood or fire, a loss whose consequences, while not so apparent, are as destructive to national prosperity as the burning of ten cities or the occurrence of one hundred and forty Johnstown disasters every year, and always to the people who can least afford it. Yet it passes almost wholly unheeded except by the sufferers.

A war that would take a million of men from industry and deprive the country of the production which would result from their labors would be regarded as a calamity of unsurpassable magnitude, yet a shrinkage in the volume of money relatively to population withdraws much more than that number from productive pursuits and, without the salutary discipline and restraints of military life, subjects them to conditions of which the unavoidable results are poverty and crime.

Imagine, Mr. President, the unhappiness, discontent, and even despair implied in the mere statement that two million men are constantly out of employment (or, what amounts to the same thing, that three times that number are idle for four months in the year). Imagine what it means to the working-people of this country to be deprived of the enormous sum of $1,400,000,000 a year.

In contemplation of the loss and suffering wrought by the act of 1873, well may the eloquent Senator from Kansas [Mr. INGALLS] denounce it as "the great economic crime of the age," and its paternity and office are properly described by the honored Senator from Nevada [Mr. JONES] when he declares that—

It was the child of ignorance and avarice, and is already the prolific parent of enforced idleness, poverty, and misery.

Such has been the effect, Mr. Speaker, of this legislation of 1873, and why shall we not now correct the great evil by removing the cause that produced it? This we can speedily and effectually do by restoring to silver the rights it had from the foundation of our Government down to 1873.

For four thousand years gold and silver have served side by side, and with equal efficiency, as the money metals of all civilized peoples, save and except when the greed and avarice of those who controlled the making of laws have arbitrarily interfered with that natural arrangement. In the Bible it is written that nearly four thousand years ago Abraham weighed to Ephron the Hittite 400 shekels of silver, "current money with the merchant," and through all the intervening ages from that time down that metal was in use as money and good enough for such purposes till, in 1819, England seemed to discover that through all time the whole world had been mistaken and by law declared that gold should be the only basis for money contracts in that country.

There has never been an hour in the life of this Government when the people did not regard silver as highly as gold, if both were uninterfered with by our own laws, and never until 1873 did the lawmakers dare try to discriminate against it. Once having robbed silver of part of its privileges and value, its enemies, in order to continue its legal degradation, said all manner of false things against its good character. When the people discovered that they had been robbed by Congress and began clamoring for the restitution of their property and the restoration of their money rights, the class at whose prompting the wrong had been done became fruitful in reasons why it should not be undone. Many of the reasons then given have since been exploded by the results of our experience, but some that are still relied on I will briefly consider.

When the act of 1878 for the remonetization of silver was being discussed in the Senate, Senator Wadleigh, of New Hampshire, in opposing it, gave expression to the views of the monometallists in relation to the danger of silver driving out the gold money of the country in the following language:

The passage of this measure will result in driving all the gold from this country and giving us the single standard of silver.

The cheaper metal will drive away the dearer.

Two hundred millions of gold now in the country would, without this pernicious agitation, ere now have crossed the frail barrier of 1½ per cent. which separated it from paper currency and gone into our circulation to restore hope and confidence and give strength and vigor to all business operations.

The success of this measure will drive it to other enlightened and commercial nations, and leave to us the debased and bulky money which nearly every progressive nation in Europe has ceased to coin and which supplies the few and degraded wants of the poor and ignorant millions of Russia, China, India, and Mexico.

Even now there come from all parts of the country complaints of the burdensome accumulations of subsidiary silver coin, which refuses to circulate.

At that time this apprehension had some lodgment in the minds of our people and the argument was not without force. But, Mr. Speaker, the experience test has completely discredited it. At that time we had about $65,000,000 of silver coin of all kinds. Now we have $426,000,000. The subsidiary silver coin about the "burdensome accumulation" of which the people were then said to be "com-

plaining," and which would not circulate, has been augmented in volume until it exceeds $76,000,000, and no complaints are now heard about its not circulating, notwithstanding there are also in circulation with it over 350,000,000 of legal-tender dollars in coin or certificates, all of which is just as good as gold. In the mean time what has happened to our gold coin that was to be driven out of the country? At the date of that prophecy of evil we had gold coin $167,000,000, and now the Treasury officials state that we have $689,000,000, or more than four times as much. The $200,000,000 which was spoken of "has crossed the frail barrier of 1½ per cent." which separated it from paper money and has gone into circulation as far as that metal will circulate under the present management of our fiscal affairs, which tends to the locking of it up.

Another war cry of the monometallists in their crusade against silver money is that the standard silver dollar is a "dishonest dollar," notwithstanding that it contains all the silver, of the requisite fineness, ever required by the law, and that, as compared with the silver coin of other countries, it is 3 per cent. above par. In order to discredit it and exclude it from use it is falsely called a "dishonest dollar," although at the time it was demonetized it was worth a premium of 3 per cent. above gold, and is yet just as good.

Mr. Speaker, it will be remembered that the Bland bill of 1878, as it left the House, provided for the full restoration of silver to all its rights and privileges in the mints of the country and to its full parity with gold in every respect; but the Senate mutilated it by striking out the provision for free coinage and substituted the principle that silver could only be coined when owned by the Government, and then in the amount limited therein. When the bill, thus shorn of its greatest strength and virtue, but still relieving to some extent against the absolute inhibition then existing against silver coinage, went to President Hayes for his signature, that official vetoed it, and in the closing of his veto message used the following language:

> It is my firm conviction that if the country is to be benefited by a silver coinage it can be done only by the issue of silver dollars of full value, which will defraud no man. A currency worth less than it purports to be worth will in the end defraud not only creditors, but all who are engaged in legitimate business, and none more surely than those who are dependent on their daily labor for their daily bread.

This was the first official declaration that the lawful silver dollar was a "dishonest" one, and, as usual with that class of silver-haters who are so solicitous about the honesty of our money, he based this expression of his solicitude upon his great concern for the business interests of the people, and especially "those who are dependent on their daily labor for their daily bread." We have already had occasion to examine how these classes and interests were affected by the destruction of silver money, and I will only say in this connection that this conduct on the part of that Executive was fitly supplemented at a later day by his veto, at the dictation of the national banks, of the Carlisle refunding bill, which Executive act robbed our people of millions of dollars. I feel that, taken in connection with the reference already made to what has been our experience with this "dishonest dollar" (?), over 350,000,000 of which are to-day in circulation on a parity with gold, I can not better emphasize the emptiness if not absolute dishonesty of said declaration than by again quoting the last Executive communication on the effect of silver coinage under the Bland law, in which President Harrison says:

> The evil anticipations which have accompanied the coinage and the use of the silver dollar have not been realized. As a coin it has not had general use and the public Treasury has been compelled to store it. But this is manifestly owing to the fact that its paper representative is more convenient. The general acceptance and use of the silver certificate show that silver has not been otherwise discredited.

No, Mr. Speaker, it has not been and will never be discredited by the people. That is only done by the financial prophets, who, were the old Jewish laws in force in this country, would have long since been "stoned to death" as the penalty for their false prophecies. Notwithstanding the admitted fact that experience has shown that silver has not been depreciated by the increased coinage thereof, the present Executive, after officially announcing that fact, permits himself to become a financial Jeremiah also and in sad prophetic strain to bewail our prospective condition in case we give further contradiction to what he calls the "evil anticipations which have accompanied the coinage and use of silver," by removing the existing legal discrimination against it and giving it better opportunity for maintaining an existence which its enemies have been unable to destroy. The President further says:

> I think it is clear that if we should make the coinage of silver at the present ratio free we must expect that the difference in the bullion values of the gold and silver dollars will be taken account of in commercial transactions, and I fear the same result would follow any considerable increase of the present rate of coinage. Such a result would be discreditable to our financial management and disastrous to all business interests. We should not tread the dangerous edge of such a peril. And, indeed, nothing more harmful could happen to the silver interests. Any safe legislation upon this subject must secure the equality of the two coins in their commercial uses.

Thus we have the President declaring the necessity for the establishment of commercial equality of the two kinds of coin, when he has just stated that such equality exists, and yet the bill recommended for our adoption by his Secretary of the Treasury, and to which the President says he has "only been able to give hasty examination," but to which he gives his assent, is designed to prevent the commercial equality of the two metals before the law, by making the one a commodity and the other a money for measuring its value. The President further says:

> I have always been an advocate of the use of silver in our currency. We are large producers of that metal and should not discredit it.

Turning from this declaration of his favor of silver for use as money to his commendation of the plan of his Secretary of the Treasury, which is now before us, I think the people who are now clamoring for free coinage of silver will conclude that the latter will be received as the stronger evidence of what he desires, and that his real position on the question is much the same as that of the individual who, on the subject of prohibition, declared he was "in favor of the law, but against its enforcement."

Had we not already been assured by the President that silver money had "not been discredited" and that its equality with gold coin was thoroughly established, it might not be amiss to refer to the fact that in spite of the Treasury Department and all the financial influence of the Government silver has obtained and still preserves its perfect interchangeability with gold in this country, and even in the Treasury Department itself. The fact is that since the silver dollar is just as good as the gold one nobody ever wants to exchange it for gold to use in this country. The records of the Treasury Department show, however, that millions of dollars in gold have gone into the Treasury Department in exchange for silver at par.

In 1880, Mr. Sherman, as Secretary of the Treasury, made an order allowing silver and silver certificates in the Treasury Department to be exchanged for gold, and over $80,000,000 of gold went into the Treasury in such exchanges within a single year, when for some reason the order was suspended. Why was it suspended? Why not let the people have the money, which was just as good and more convenient for their use, in exchange for their gold? But at present, under a rule of the Department, the Treasury exchanges silver and silver certificates for any other kind of money, and, as is shown by the books of the Department, exchanges of that kind aggregating more than $52,000,000 were made in the three years of 1887, 1888, and 1889. Of the money thus exchanged for silver and silver certificates, about $22,000,000 was of gold coin and gold certificates. And yet we are told that this silver dollar, for which all these millions of gold is being voluntarily exchanged, is a "dishonest dollar" and that its use imperils the business interests of the country.

It may not be inappropriate to ask in this connection, since the successive Administrations from Hayes to Harrison have been so much afraid that this "dishonest" money would, in the language of President Hayes, "defraud all business men, and none more surely than those who are dependent on their daily labor for their daily bread," why it is that it has been continually paid out by the Government to these classes of the people, while the bondholder was paid in gold. A little more solicitude of that character manifested in action, and less of it in cheap professions, would entitle it to more respect from the public. Since our experience under the operation of the act of 1878, providing for increased coinage, and our actual possession of over $426,000,000 of silver money, and at the same time quadrupling our stock of gold, has destroyed the two arguments that silver would not circulate and that, if it did, it would drive out gold, the scarecrow of a changed "balance of trade" is made to do duty in their stead. The opponents of free coinage say that "It is the credit of the Government that floats the silver dollar, as it does the greenback," and that this keeps it at par in this country; but, say they, "Should the balance of trade turn against us, our gold will leave us and silver alone will remain," etc.

Mr. Speaker, nobody of intelligence contends that with the balance of trade against us we would not have to ship money of some kind, and the kind would depend on what country the balance was in favor of. If it were a country where silver was the preferred money then it would naturally be silver that would go out, while it would be gold if going to a country having the gold standard. But, Mr. Speaker, suppose that it would in every case be gold, would it not have to go until the balance was settled regardless of whether or not we had silver? If we have in such contingency to ship any considerable proportion of gold it would be all the more necessary that we should have silver to make the money exchanges of the country. But, Mr. Speaker, regardless of the suggestion of the unfortunate contingency by the Secretary of the Treasury, as a reason why our silver coinage should not be increased, I do not think that any serious alarm will be felt on this account by any one who will take the trouble to examine the statistics relating to our trade balances in the past.

It is true that on account of the injurious effect of our high tariff, in provoking retaliatory laws against the free exchange of our products, added to the advantage which England derives from the cheapness of our silver bullion, which she buys and sends to India in exchange for wheat that we formerly supplied, our export of cereals has fallen off immensely; yet the fact still obtains that, with the exception of two years out of the last sixteen, the balance has always been in our favor. The aggregate of balances in our favor from 1876 to 1888

amounted to more than $1,000,000,000, while the only two years in which it was against us were 1888, to the amount of $28,000,000, and 1889 for $2,000,000, or a general balance in our favor on the thirteen years of $970,000,000. While there was a balance of $2,000,000 against us last year, our largely increased exports of grain during the present year render it certain that the balance will again be in our favor at its close.

In connection with this point, Mr. Speaker, I wish to direct attention to the fact that, while in 1880 we exported 190,000,000 bushels of wheat, in 1889 we only exported 41,000,000 bushels. In 1880 we exported 53,000,000 bushels of corn and in 1889 only 32,000,000 bushels. On account of the high tariff imposed by our Government on the products of other nations, which exchanged with us for our grain, meat, cotton, and other products—mostly agricultural—those nations have retaliated, and in some cases most severely, on our products, and in the most of the ports on the continent of Europe we are to-day paying import duties on our products (which is the same in effect as an export tax here) in an amount which would be quite sufficient to pay to our producers a fair profit, if they could save it, on products which are in many cases selling at a loss.

Again, referring to the serious disadvantage at which the demonetization of silver and the consequent cheapening of its value as bullion has placed our agriculturists, I would call attention to the fact, stated by economists and denied by no one, that England gets that part of her wheat which comes from India at 30 per cent. less than she could get it before silver was demonetized, because she buys silver bullion in this country at 30 per cent. discount for gold and ships it to India, where it is coined into rupees, which have the same purchasing power that they possessed before silver was outlawed in Europe or America. It is this terrible competition with India, produced by the conditions described, that has prostrated the wheat-growers of this country. Thus it will be seen that the injurious effect of the high tariff, which has materially limited the foreign demand for our grain by cutting off profitable exchange with the countries which formerly furnished us with markets, has been greatly aggravated by the cheapening to our principal customer the product of our mines, so that she uses it in India for the destruction of our greatest agricultural industry.

Passing from the question of trade balances, which need not alarm us, with the remark that, however much they may change against us, the possession of silver can not impair our ability to pay our debts, I wish now to notice the old objection to increased coinage, that "silver will drive out gold," and that "if we open our mints to free coinage we will be flooded with the silver of other countries and all our gold will leave us." There is no amount of argument that a wise man will accept in contradiction of a well established experience.

When the objection now being considered was first made, in 1878, as an argument against the passage of the Bland law, it had more effect upon our people than it now has, because since that time the experience of this country with the two metals as money has completely discredited its truth. It may be well, however, to present some facts which tend to show that our favorable experience in establishing the equality of silver and gold in our circulation and holding and continually increasing both is not in any sense accidental, but that it results from the operation of certain fixed and well known laws, which under like conditions must always give like results. If we are to be flooded with silver, where is the flood to come from? All the coined silver in the world is estimated at $3,337,000,000, and, with the exception of $98,000,000 which is held by Japan and Mexico, not one dollar of it could come here without an absolute loss to the sender of 3 per cent. I can not in any other way so succinctly or forcibly present the facts to support this statement as by quoting from the article of Hon. ROGER Q. MILLS, published in the North American Review for May, 1890, which upon this point states:

> The coined silver of the world, outside the United States, is of the value in our money of $2,337,000,000, of which amount Mexico has $48,000,000; Japan, $49,000,000; Belgium, $48,000,000; Italy, $20,000,000; Switzerland, $14,000,000; Austria-Hungary, $75,000,000; Spain, $63,000,000; France, $646,000,000, and India, $1,352,000,000. This is the supply with which we are threatened if we open our mints to unlimited coinage. This large stock of silver, when it passes the boundary of its own country, ceases to be money and becomes a commodity. It ceases to carry with it the value given to it by law and only retains the value given to it by commerce. It is worth to-day 72 cents in the dollar in the open markets of the world, while it is worth at home more than 100 cents to the dollar. The 371¼ grains of fine silver which are required to coin our standard dollar, and into which the imported silver would be coined, are worth here 23.22 grains of fine gold, which is our gold dollar. That is equal to 15.98 grains of silver to 1 grain of gold.
>
> Now, France has 3,250,000,000 francs in silver, which is worth within her jurisdiction $646,695,000 in gold, at her ratio of 15.50 to 1. If that were sent here and coined at our mints at our ratio of 15.98 to 1 it would be worth $627,250,000, which would be at a loss to her of more than $19,980,000. And if our Government should buy it at the market price for silver, 72 cents in the dollar, France would realize $478,820,000 for her stock worth at home $646,695,000! She would lose, by "flooding" us with her "cheap" silver, $167,000,000. Belgium, Italy, Switzerland, and Spain, which coin at the same ratio, would sustain a corresponding loss on their silver. India, which coins at 15 to 1, has a stock of silver worth at home $1,352,000,000, and worth at our ratio $1,269,000,000. If she should attempt to flood us with her silver it would be at a loss to her of $83,000,000. If we should buy her silver at the market price in gold to-day it would be at a loss to her of $350,000,000. It is evident from this plain statement that no country whose silver is coined at a ratio higher than 15.98 can export it to us. Japan coins at 16.18 and Mexico at 16.50. They have together a stock of silver amounting to $98,000,000, which would be worth in our coin $109,000,000. It is possible that they would get that amount of our gold for their silver. But it is beyond the region of possibility that the coined silver of other countries would come to the United States.

By the above statement it will be seen that the silver of Mexico and Japan is the only stock which could come to this country without loss, and neither of those countries can spare any of their supply, every dollar being needed by them respectively for the business exchanges of their people. But suppose it should all come here to be exchanged for gold, what would be the result? Simply that there would be $98,000,000 more of silver in the country and that much less of gold, and, so far from its affecting injuriously our business or prosperity, nobody but the statistician would ever know of the change. If, then, no country having silver coin can afford to send any of it here, the flood so much talked of must come from the mines.

Let us see what we may expect from that source. The annual yield of silver during the last fifteen years has been about $100,000,000, but for the last year it reached $142,000,000. While we have no reason to assume that the annual product in the future will attain the last-named amount, still suppose it does, how will it probably affect this country? India claims annually for her uses $45,000,000 and never exports a dollar. She is properly called "the silver sink of the world." It matters not how much she gets from other countries it is absorbed by her people and she gives none back to the world. Add to this $45,000,000 the $46,000,000 which is the estimated amount consumed in the arts and manufactures, and there would be left about $50,000,000 for coinage purposes of the whole world. Should that amount be distributed to all the different countries according to their increasing necessities by reason of the natural increase of population and business, the proportion falling to the United States would be quite trifling and far from being a cause for alarm.

It is admitted on all sides that in order to prevent undue contraction of the currency of any country the increase in the volume of money should keep pace with the increase of population. The soundness of that rule admits of no question and its application is universal. Then, in this country, according to the estimate of competent financiers based upon our statistics, about $40,000,000 annual increase in the volume of our currency will be required to keep pace with the growth of our population, which is estimated at 3 per cent. annually. In India, where half the entire silver coinage of the world is found, the ratio between silver and gold is 15 to 1, and in all other countries outside of the United States (excepting only Japan and Mexico) the ratio is 15½ to 1. In this country it is 16 to 1. Hence it will be observed that since all of said countries pay more for their silver than it is worth here it is only fair to assume that they will continue to get their fair proportion of the products of the mines and that we will not get it all. But admitting for the sake of argument that we would get the entire surplus of $50,000,000, it would add to our money circulation only 80 cents per capita annually, or less than 7 cents each per month. We are now coining $28,000,000, and the increase of $22,000,000 annually, if continued indefinitely, would not more than fairly provide for the increased demand by reason of the growth in our population and business.

Mr. Speaker, if we compare our country with France as to the per capita supply of money in circulation among the people we will find that France has $57.56 to our $22.36. With one-fifteenth more paper money per capita and over five times as much of gold as we she has ten times as much silver. That country is admitted to be the most prosperous of all great commercial nations, and it is because she has more than double as much money per capita for her people than any of her rivals. This country produces about $59,000,000 of silver annually, about $8,000,000 of which is needed for the arts and manufactures, leaving about $51,000,000 for coinage or export. That is about the entire surplus of silver in the whole world, and if we were to coin every dollar of it it would require many years for us to get a per capita circulation equal to that of France. Yet France has no silver to spare. The fact is stated by Mr. St. John, upon what he claims is reliable authority, that in December or January last France refused an offer of gold at par for about $59,000,000 of her silver coin. As before stated, that coin is intrinsically worth 3 per cent. less than ours, as is all the European silver coin, and therefore I think we may safely conclude that what France would not sell at home for par she would not transport to this country at her own expense and sell at 3 per cent. less.

If any further assurance is needed that our country is not to be flooded with silver to any damaging extent, I now quote from the present Secretary of the Treasury in a recent communication on this subject. He says:

> There is, in fact, no known accumulation of silver bullion anywhere in the world. Germany long since disposed of her stock of melted silver coins, partly by sale, partly by recoinage into her own new subsidiary coins, and partly by use in coining for Egypt. Only recently it became necessary to purchase silver for the Egyptian coinage executed at the mint at Berlin.

The Secretary continues in his report:

> It is plain, then, that there is no danger that the silver product of past years will be poured into our mints, unless new steps be taken for demonetization, and for this improbable contingency ample safeguards can be provided.
>
> Nor need there be any serious apprehension that any considerable part of the stock of silver coin of Europe would be shipped to the United States for deposit for Treasury notes.

There is much less reason for shipping coin to this country than bullion, for, while the leading nations of Europe have discontinued the coinage of full legal-tender silver pieces, they have provided by law for maintaining their existing stock of silver coins at par.

In England, Portugal, and the states of the Scandinavian Union there is no stock of silver coin except subsidiary coins, required for change purposes, the nominal value of which is far in excess of the bullion value. Germany has in circulation about $100,000,000 in old silver thalers, but ten years have passed since the sales of bullion arising under the anti-silver legislation of 1873 were discontinued. It is safe to say there is no stock of silver coin in Europe which is not needed for business purposes.

The states of the Latin Union and Spain, which has a similar monetary system, are the only countries in Europe which have any large stock of silver coins, and the commercial necessities of these countries are such that they could not afford, without serious financial distress, to withdraw from circulation silver coins which are at par with their gold coins, to deposit them at our mints for payment of the bullion value in notes.

In this statement the Secretary has argued the whole case, and few, I think, will dissent from his conclusion that, there being no stock of accumulated bullion in the world and the silver now being used as money by the various nations being worth more to them to keep than to sell, we need not fear any inundation of money of that class. In the light of past history, of present known facts, and of our own recent experience with silver coinage, I can not see how it can longer be contended that any danger to our interests lurks in the proposition to restore silver to an equality with gold in our mints. The product of that coinage will be in the future, as it was prior to 1873, perfectly safe and convenient. Having the double standard of values, we would be guarded against sudden revulsions in business caused by the withdrawal of one or the other from use. Instead of the possession of both kinds of money reversing the established laws of finance as applied to this country and accomplishing the driving out of one kind by the use of the other, our experience since 1878 demonstrates that they will mutually attract each other and serve harmoniously side by side in the circulation of the country. We will thus utilize the products of our mines not exclusively in the interest of the miner, but to the benefit and use of every industry and of every citizen of the Republic.

By increasing the supply of money for the commerce of the people, we will infuse new life into all kinds of business, and, while the rich would prosper by the general improvement of trade, the life of the poor man would be lightened with the ray of hope and the debtor would see the possibility of escape from bondage under the improved system, which will check falling prices, give increased demand, with improved prices, for the product of his labor, and render it possible for him to meet the obligations which for years have enslaved him.

Should not the results I have anticipated be secured, if possible, for a people that for seventeen years have felt their burdens growing heavier until now their hearts are well-nigh filled with despair? Yes, they need this relief, and in language too plain to admit of misconstruction they have appealed to their representatives to give it. For what have they asked? Not that you give them some strange and experimental legislation, some untried expedient of so-called financiers, which they have not considered and do not understand. No! They simply ask to be restored to the standing which the fathers of the Republic gave them and which they enjoyed in security, prosperity, and contentment until the greed of the money-lenders overcame the patriotism of the people's representatives.

Why does Congress hesitate in making that restitution to the people? Let the party in power here, and which is doubly charged with this duty, make answer. I say that the Republican party is doubly charged with this duty because that party enacted the law which took from the people that for the restoration of which they now appeal. This should not now be a political question, for it equally affects people of all political parties; but that it is being made such increases the responsibility of that party which above all others is now charged with the duty of undoing the wrong for which it, and it alone, is responsible. Unfortunately for the country the question has been given a political character here in order not to enable the party in control to more easily and more fully do what the people demand; but, on the contrary, the caucus has been used and the party lash applied to prevent those members of that organization who know and desire to do what their constituents want and what the country needs from cooperating with a large majority of the Democrats on this floor in the correcting of the flagrant wrong of 1873.

Mr. Speaker, while the Republican party contains many members and some Representatives here who want silver restored to its old place and usefulness as money, unfortunately the majority of those who control its action now, as always in the past, have sympathized with those who had the money; and, applying in their practices in legislation, in a perverted way, that text of Scripture which declares that "to him that hath shall be given," they have neglected the interests of those whose more helpless condition called for the greater protection and steadily pursued that course in legislating which has resulted in making the rich richer and the poor poorer.

The demonetizing act of 1873 was not the initial step in such lawmaking, for in 1869 this party, by means of the act improperly entitled "An act to strengthen the public credit," converted the debt of the country, then payable in lawful money, into a debt payable, principal and interest, in gold, thus without a shadow of justification, and solely and exclusively for the benefit of the bondholders, putting a burden on the people of nearly $500,000,000. As all the world knows, that act was accomplished by a fraudulent pretense, that of strengthening a "public credit" which was daily and hourly improving, and when such an improvement had already been brought about by natural causes, that bonds of the Government had risen over 50 per cent. above the prices originally paid for them in greenbacks.

As to this and the subsequent acts of July 14, 1870, fixing the weight and fineness of the coin required to pay off this debt, contracted to be paid in any lawful money, as well as to the final act of this legislative crusade against the people—the act of 1873—I will quote from high Republican authority, Hon. JOHN P. JONES, of Nevada. In a speech delivered upon the silver question in the Senate on May 13, last, he uses the following pertinent language descriptive of that series of acts which had its completion in the act of 1873. He says:

At the time silver was demonetized it might well have been supposed that a sufficiently large unearned increment had already been realized by the foreign and domestic holders of the United States bonds. The greater portion of the debt of the Government was, when incurred, made payable simply in "lawful money," the interest alone being payable in coin. Yet in March, 1869, the bondholders secured the passage of an act of Congress, entitled "An act to strengthen the public credit," containing a pledge to pay in coin or its equivalent, not merely the interest, but the principal of all national obligations not specially provided to be paid otherwise.

COURSE OF THE CREDITORS.

And again, when in 1870 Congress was about to provide for a refunding of the public debt, these clamorous creditors, not satisfied with having got the bonds at rates much below their face value and not satisfied with the pledge to pay in coin—a pledge made long after the contract was made and the debt incurred—insisted that not only should the new bonds be payable in coin, but, in order to guard against any possible interpretation which might work to their detriment, they did what has rarely been done in the history of monetary legislation, insisted that even the very standard of that coin should be fixed and nominated in the bond. They were willing to take no chances. They were not willing to place confidence in the sense of equity and fair dealing of the people of the United States. They held before Congress the covert threat that, if the new issue of bonds did not provide for payment in "coin," instead of "lawful money," and did not prescribe the precise standard of coin in which they were to be payable, it would be difficult, if not impossible, to place the bonds on the market.

So, by the refunding act of July 14, 1870, Congress provided for the payment in "coin of the present standard value," that is to say, in either gold dollars of 25.8 grains of gold, nine-tenths fine, or in silver dollars of 412½ grains of silver, nine-tenths fine, at the option of the United States. But even this extreme advantage to the creditors over payment in "lawful money" of the United States, in which the bonds were bought and in which they were legally payable, was insufficient. All but the most ingenious would imagine that having thus provided for payment in coin then bearing a considerable premium over the current money of the Republic, and having the very standard of that coin fixed in the act, the highest point of vantage had been reached. One device, however, and only one, remained by which the money of the payment could be still further increased in value, and this device did not escape the watchful eye or cunning hand of the public creditors.

They clearly saw that if by legislative enactment they could secure the rejection of one of the money-metals they would succeed in enormously increasing the value of the metal retained. This they accomplished by the demonetization of silver, and thus, by striking down one-half the automatic money of the world and devolving the money function exclusively on the other half, added thousands of millions of dollars to the burden of the debt. The title of the act should have read, "An act to strengthen the bank account and credit of the holders of United States bonds."

And, again, in 1873, when all the bonds provided for by the refunding act of 1870 had been sold and had passed out of the hands of the Government, another act was passed, intended by the money-lenders again to strengthen the public credit, and again to the disadvantage of the people and to the exclusive and enormous advantage of the bondholders. It bore the innocent title of "An act revising and amending the laws relative to the mints, assay offices, and coinage of the United States." This act, bearing on its face no suggestion of any change more serious than that of regulating the petty details of mint management, has proved to be an act of momentous consequence to the people of this country. This is the act that demonetized the silver dollar, which it did by merely omitting that coin from the enumeration of the coins of the United States.

The author of this criticism is himself a Republican in unquestioned standing in his party; hence he can not be suspected of bias against that political organization. Driven by the increasing clamor of a people who, having discovered the nature and extent of their wrongs, demand in no uncertain terms the restoration of their rights, the Republican party has publicly professed an intention of being just to the people on this subject, and in their party platform at Chicago in 1888 the following plank was inserted:

We, the Republican party, believe in the use of gold and silver as money; and we denounce the present Democratic Administration for its hostility to silver, etc.

Was this another false pretense? Let their conduct here now answer the question. This declaration, if intended to mean anything, meant that that party favored the use of silver and gold equally; else what was it that they condemned in the action of the Democratic party? That party was then using both metals as money, and in exactly the same way that Republicans had used it before and as they are using it now. But while the Democratic Secretary of the Treasury recommended, unwisely, that the coinage of the standard silver dollar should cease, an overwhelming majority of his party and of their Representatives on this floor refused to consent to it; and the latter voted for a bill providing for free coinage during that Administration, which was defeated mainly by Republican votes, the affirmative vote being 96 Democrats to 30 Republicans.

But, Mr. Speaker, that Democratic Administration, whose want of friendship to silver "as money" called for the denunciation of the Republican convention, never proposed to store away silver bullion in

the Treasury as pig-lead in a warehouse, and thus make the Treasury a pawnshop, where tickets, in the form of Treasury notes, would be issued, which in due season might be taken up by the return of the article deposited; nor did it propose by statute law to declare the line of difference between the coinage and bullion of this metal, which, under a correct interpretation of the Federal Constitution and the fair administration of just laws, should hold its money quality and value equally with gold.

It is for a bill that will give us free coinage that we desire to vote to-day, and we will not under any condition vote for this one which proposes to repeal the only law which authorizes coinage at all. I introduced one of the many bills for free coinage which have been sent during the present session of Congress to the committee reporting this bill; but going away from what the people were thus asking for, the committee bring here what they have not asked for and do not desire, and I hope that it may be defeated, and thus meet the fate which I think it richly deserves at the hands of true representatives of the people.

Treasury Notes and Silver.

SPEECH

OF

HON. BISHOP W. PERKINS,

OF KANSAS.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 7, 1890.

The House having under consideration the bill (H. R. 5381) authorizing the issue of Treasury notes on deposit of silver bullion—

Mr. PERKINS said:

Mr. SPEAKER: I have seen many paradoxes in politics as well as in legislation, but it occurs to me that I never saw a greater paradox than the one I witnessed on this floor on Thursday, when we had under consideration the rule which gave us the opportunity to consider this bill. We found every man upon the opposite side of this House voting against this rule and yet professing that he wanted legislation upon this subject.

Mr. ALLEN, of Mississippi. We wanted more time.

Mr. PERKINS. Time was not the objection. It was because you professed that you did not agree to all the provisions of this bill.

Mr. ALLEN, of Mississippi. We did not want to be gagged in a day and a half.

Mr. PERKINS. I am sincere, Mr. Speaker, when I say I want legislation upon this subject and the constituency I have the honor to represent upon the floor of this House are sincere when they express themselves in favor of legislation upon this subject, so important to them and so important to all sections of the country. This bill does not conform to my wishes or to my judgment, but, realizing the vital importance of this proposed legislation to the people who have honored me with their suffrages, I should feel that I was untrue to them and untrue to myself if upon any pretext I had voted against the adoption of the rule which gives us the opportunity to consider this bill and if upon any pretext I should vote down or defeat legislation upon this subject.

Mr. ALLEN, of Mississippi. Does the gentleman think a day and a half time enough to consider that question?

Mr. PERKINS. I think the time is sufficient, and for that reason, Mr. Speaker, I voted for this rule, recognizing the fact that if we were to have legislation upon this important subject it must be under the provisions of this rule, although it would have suited me much better if the rule had been more liberal concerning amendments.

I concur with many gentlemen upon the other side of this House who have expressed objections to this bill. It does not meet my wishes, but if we can not get it recommitted to the committee with instructions to report a free-coinage measure, I may vote for it, because I know, as gentlemen know who have spoken in opposition to it, that in another forum, that in the other wing of this Capitol building, this bill will be amended and converted into a good measure.

Mr BIGGS. You say it will be amended, but how do you know it will be amended in the other end of the Capitol?

Mr. PERKINS. I do not understand my friend from California; but in consequence of my limited time I can not consent to be interrupted. Had I the time I would be glad to answer questions and jointly discuss the matter with my friend, as all know that after this bill is amended in the Senate we will have an opportunity of voting——

Mr. BIGGS. If you think it will be amended there why do you not allow an amendment here?

The SPEAKER. The gentleman from California will be in order.

Mr. BIGGS. I want to know upon what authority the gentleman makes the assertion——

The SPEAKER. The gentleman from California will be in order.

Mr. BIGGS. I am in order.

The SPEAKER. The gentleman from Kansas [Mr. PERKINS] has the floor.

Mr. BIGGS. Mr. Speaker——

The SPEAKER. The Chair thinks the House ought to understand, and he has no doubt every member does understand, that when a gentleman has the floor no one has any right to interrupt him without his permission; and when a member has announced that he does not desire to be interrupted, that ought to be sufficient notice to every member.

Mr. BIGGS. I did not hear the gentleman announce that he did not wish to be interrupted. If I had heard that I would not have interrupted him.

The SPEAKER. The gentleman from Kansas has the floor.

Mr. BIGGS. He makes an assertion, and I want to know why he does it, and I have the right to know.

Mr. PERKINS. Mr. Speaker, I represent a constituency that believes in free coinage. I represent a constituency that believes that a great crime was committed in 1873 when silver was demonetized, and I share in that conviction. I have never yet heard a reason assigned for that legislation that could commend itself to the conscience or to the judgment of the American people. Its only effect was to depreciate and to dishonor silver, and to appreciate and add to the purchasing power of gold. It was to make gold dearer and everything else cheaper. It was to establish a single standard of value and to make that standard as dear to the people as possible. It was legislation in the interest of the bond-owner and creditor class and added to the misfortunes and burdens of those who were in debt. It depreciated the value of farm products and said to the unfortunate debtor that it would impose additional obligations upon him and make his life one of servitude to the creditor class if possible; and, Mr. Speaker, full justice will never be done until the last feature and last vestige of that unfortunate legislation is repealed and driven from the statute-books.

Silver should be recrowned and should be given its honored place as one of the money metals of the world. The mints of the country should be opened to its coinage and its ancient prerogatives and ancient privileges should be reconferred upon it the same as upon gold. The money of Jacob and the money of our fathers should be good enough for the bondholders and bankers of to-day, and in the name of patriotism and a common country, as well as in the name of justice and the common people, we ask for legislation that will give to the people of this country the free and unlimited coinage of the silver metal.

But, Mr. Speaker, I want practical results. I want the best obtainable legislation possible upon this important subject. I am not willing that this Congress should adjourn until we have passed a bill, and the President has given it his executive approval, that will take the entire output of our American mines and put it into circulation as a part of our legal-tender currency, either in standard silver dollars or in United States Treasury notes. If we can not have free coinage, perhaps we can compromise on something a little less. I know there are many sincere bimetallists who do not believe in free coinage with conditions as they are to-day. I know there is much force in the argument that, if 412½ grains of standard silver are worth but 72 cents, the owner ought not to be permitted to have it coined into a standard silver dollar and compel all to take it at 100 cents. I know there is much force in the suggestion that if this is to be done it ought to be done by the Government, as under existing law, so that the people will get the benefit of the difference, the seigniorage, rather than the bullion-producer or mine-owner.

I know, Mr. Speaker that in executing the present law the United States has made in seigniorage over $56,000,000, and this large sum of money has been covered into the Treasury and belongs to the whole people, their common property, and each year it is swelling in volume. I know there are many who believe this is better than it would have been had this large sum of money gone into the pockets of the bullion-owners, to swell their profits in the business. Realizing this, I have believed that, if we could agree upon a bill that would require the Secretary of the Treasury to buy the entire output of American silver each month and pay therefor in United States Treasury notes, that should be full legal tender for all purposes, and should coin the bullion from time to time, as might be necessary to redeem the Treasury notes, it would be reasonably satisfactory to the people whom I have the honor to represent in part upon this floor.

On the 1st day of May of the present year Hon. E. O. Leech, the Director of the Mint, informed me that there was at that time in circulation $297,361,953 in silver certificates. These certificates are not legal tender, and yet we learn from this evidence that for purposes of business, for trade and traffic, the people prefer the silver certificates to the standard dollars. Hence, as before suggested, I have believed that the people would be fairly well pleased if the volume of our currency could be swelled each month by adding thereto legal-tender Treasury notes, based upon silver at its market value, representing the entire output of the American mines, and yet under circumstances that would give to the tax-payers and people generally the seigniorage or profit resulting from the coinage of the bullion into standard dollars. And such a bill ought to be satisfactory to bimetallists, who profess to believe in silver, but who are afraid that the free coinage of silver will drive from the land all the gold that is in circulation.

Mr. Speaker, I do not share in that conviction, nor do I entertain any such fears or forebodings, and it seems to me that our experience during the past twelve years ought to satisfy all that there is no danger to be apprehended from the free and unlimited coinage of silver. Let us find an object lesson in France worth more than all the theorizing or prophesying that Wall street can indulge in or that the advocates of monometallism can suggest for our consideration upon the floor of this House. The Government of France, with 27,000,000 fewer people than we possess and with an area only one-sixteenth as large as ours, has $230,000,000 more of silver in circulation than we as a people, and at the same time $270,000,000 more of gold. These figures will not down at the bidding of those who would compel us to pay homage to gold and to gold alone, and prove conclusively that the large volume of silver in France has not driven gold a fugitive from the land, and in our own country the partial remonetization of silver has had no such effect. Since the recoinage act of 1878 was passed we have exported in gold $234,744,542, while in silver we exported $255,990,881. During the same period we imported in gold $410,532,700, while in silver we received but $150,492,620, so that, instead of the Bland-Allison act driving gold from our country, as was predicted, it has had the opposite effect. The figures I give are for the close of the last fiscal year and show that we are annually sending more silver abroad than gold, while the importation of gold has exceeded the importation of silver almost or quite 170 per cent. This should convince every thinking man and every man who desires to investigate and discuss this question dispassionately and fairly in the interest of the people that we ought to get rid of these evil conjectures and wild speculations in the interest of gold and to the prejudice of silver.

But there is an objection to the pending measure which is almost insuperable, in my judgment. It destroys the merit of the measure and introduces an element of uncertainty into the proposed legislation that ought not under any circumstances to be accepted by Congress. I refer to that provision of the bill which confers upon the holder of these Treasury notes the right to surrender them and with the permission of the Secretary of the Treasury to withdraw their value in silver bullion. We all know that under the existing law we get at least two million dollars added to the volume of our currency each month, and in a period of twelve months we will get at least twenty-four millions, and may get more.

But under the provisions of this bill what will we get? Who can answer that question? We all know that this is left in uncertainty by reason of the bullion-redemption feature of the bill. We know that in the first month $4,500,000 would be purchased, but at the end of that month or in the next month the Treasury notes might be surrendered and the bullion withdrawn and thus the volume of the currency contracted to that extent, and so from month to month, and at the end of the year, instead of having at least $24,000,000 added to our currency, as under existing law, we might not get a dollar; and that, too, without collusion on the part of the Secretary of the Treasury, or conspiracy with the bankers of Wall street or the holders of the Treasury notes, but in the exercise of a legitimate power and privilege that is given to him and to them under the bill.

That, Mr. Speaker, is a serious and unanswerable objection to this bill. That provision ought to be stricken out. No such power should be given to the Secretary of the Treasury, no such power should be given to the bankers of Wall street, and no such power should be given to the men who are inimical to silver and who do not believe in bimetallism.

If this provision is not objectionable, as I have suggested, why is it that every monometallist in the land is so tenacious of it and so persistent that it shall be retained? Why, Mr. Speaker, is it that every bimetallist in every possible way insists that this provision shall not be stricken from the bill? Why is it that every man who thinks that we have got more money than we need, and that if we have more money or to have more money is only to have more misery, is in favor of that provision?

The gentleman from Massachusetts [Mr. WALKER] makes this the condition on which he gives his adherence and support to this bill; and he has suggested that more money means more misery. The gentleman stated that he had made himself rich in prosecuting business enterprises, and to prove his consistency he to-day is prosecuting these enterprises with more vigor and with more energy than ever before, in order that he may get more of this which makes people miserable. It is a misery that we all like and it is a kind of misery we want the people of this country to have more of. I would state to my distinguished friend from Massachusetts that we have no fear in that regard. Why, Mr. Speaker, I have never heard of any people who considered that they had too much money. In my reading or otherwise I have never learned of any people that had too much good money to contribute to their support, to their happiness, and to the comfort of their homes. I have never learned of any people that were so burdened with money that it destroyed the childish glee of the little ones and the substantial comforts and fireside happiness of the elder ones.

But, in answer to the suggestion of the gentleman from Massachusetts that more money means more misery for the people, I will have published as a part of my remarks the evidence of history as briefly reviewed in the report of the Monetary Commission of the Forty-fifth Congress:

At the christian era the metallic money of the Roman Empire amounted to $1,800,000,000. By the end of the fifteenth century it had shrunk to less than $200,000,000. During this period a most extraordinary and baleful change took place in the condition of the world. Population dwindled and commerce, arts, wealth, and freedom all disappeared. The people were reduced by poverty and misery to the most degraded conditions of serfdom and slavery. The disintegration of society was almost complete. The conditions of life were so hard that individual selfishness was the only thing consistent with the instinct of self-preservation. All public spirit, all generous emotions, all the noble aspirations of man shriveled and disappeared as the volume of money shrunk and as prices fell.

History records no such disastrous transition as that from the Roman Empire to the Dark Ages. Various explanations have been given of this entire breaking down of the framework of society, but it was certainly coincident with a shrinkage in the volume of money, which was also without historical parallel. The crumbling of institutions kept even step and pace with the shrinkage in the stock of money and the falling of prices. All other attendant circumstances than these last have occurred in other historical periods unaccompanied and unfollowed by any such mighty disasters. It is a suggestive coincidence that the first glimmer of light only came with the invention of bills of exchange and paper substitutes, through which the scanty stock of the precious metals was increased in efficiency. But not less than the energizing influence of Potosi and all the argosies of treasure from the New World were needed to arouse the Old World from its comatose sleep, to quicken the torpid limbs of industry, and to plume the leaden wings of commerce. It needed the heroic treatment of rising prices to enable society to reunite its shattered links, to shake off the shackles of feudalism, to relight and uplift the almost extinguished torch of civilization. That the disasters of the Dark Ages were caused by decreasing money and falling prices and that the recovery therefrom and the comparative prosperity which followed the discovery of America were due to an increasing supply of the precious metals and rising prices, will not seem surprising or unreasonable when the noble functions of money are considered. Money is the great instrument of association, the very fiber of social organism, the vitalizing force of industry, the protoplasm of civilization, and as essential to its existence as oxygen is to animal life. Without money civilization could not have had a beginning; with a diminishing supply it must languish, and, unless relieved, finally perish.

Symptoms of disasters similar to those which befell society during the Dark Ages were observable on every hand during the first half of this century. In 1809 the revolutionary troubles between Spain and her American colonies broke out. The troubles resulted in a great diminution in the production of the precious metals, which was quickly indicated by a fall in general prices. As already stated in this report, it is estimated that the purchasing power of the precious metals increased between 1809 and 1848 fully 145 per cent., or, in other words, that the general range of prices was 60 per cent. lower in 1848 than it was in 1809. During this period there was no general demonetization of either metal and no important fluctuation in the relative value of the metals, and the supply was sufficient to keep their stock good against losses by accident and abrasion. But it was insufficient to keep the stock up to the proper correspondence with the increasing demand of advancing populations.

The world has rarely passed through a more gloomy period than this one. Again do we find falling prices and misery and destitution inseparable companions. The poverty and distress of the industrial masses were intense and universal, and, since the discovery of the mines of America, without a parallel. In England the suffering of the people found expression in demands upon Parliament for relief, in bread-riots, and in immense Chartist demonstrations. The military arm of the nation had to be strengthened to prevent the all-pervading discontent from ripening into open revolt. On the Continent the fires of revolution smoldered everywhere and blazed out at many points, threatening the overflow of states and the subversion of social institutions.

Mr. Speaker, with the bullion-redemption feature stricken out I could support the bill, although personally I prefer free coinage, and before I take my seat I desire to ask unanimous consent to offer an amendment to the bill. The amendment does not go as far as I would like to go, but it seems to me that it is one which can not be objected to, and I ask unanimous consent that it be considered as pending and that no parliamentary objection shall be made to it. This is the amendment:

Add to section 3 of the proposed substitute the following: "*Provided*, That in no event shall less than 2,000,000 ounces of pure silver be coined each month."

Such an amendment would guaranty to the people as much silver coinage as they get under existing law, if not more, and to that extent would remove the uncertainty and doubt that we find in examining the present bill, and would leave its remaining provisions intact.

Mr. Speaker, as suggested by the gentleman from Illinois [Mr. PAYSON], we have never had in the Treasury Department of the United States, since silver was demonetized, a friend of silver. The Administrations of both parties, Democratic and Republican, have been alike in this particular; but I do not agree with my friend from Illinois that this Administration is as unfriendly to silver as was the late Democratic Administration. I have seen no war made by this Administration upon silver; I have seen no recommendation in opposition to it; I have seen no message or letter addressed to Congress asking that the mints should be closed against the coinage of silver. We all remember the experience of the last Democratic Administration, and we know how mute our friends, who are now so boisterous and vociferous in favor of silver, remained during the time that Mr. Cleveland occupied the Executive chair and said to them, "Keep quiet; I will not have it." We remember how obedient they were then, and therefore it is all the more remarkable that under these changed conditions they express themselves with such zeal and enthusiasm. [Laughter and applause.]

But we are told, Mr. Speaker, that we should use and recognize "the world's money;" that the great Governments of Germany and Great Britain have demonetized silver and established the gold standard, and that we are powerless and can not restore silver to its honored place as a money metal without the co-operation of these Governments. I admit, Mr. Speaker, the commercial importance of these great Govern-

ments, but why should our legislation conform to theirs? Why should this giant Republic of the western hemisphere accept the financial legislation of Germany and Great Britain? Our interests are different, our theory of government is different, and the wants and necessities of our people are different. We believe in the greatest good for the greatest number, and not in the blessings of a privileged few. With England we have but few interests in common. She is our great commercial and manufacturing rival. She believes in free trade; we, in protection. The world owes her $5,000,000,000, while the bonds of our Government are in every money market of the world. Her interests lead her to demand payment in the dearest money of the world; ours should prompt us to make payment in an honest, stable, and sound currency, but not in a dear one. She buys but little from our farmers and almost nothing from our manufacturers. Our interests are with the bimetallic countries of Mexico, Central America, and South America. In this great undeveloped empire south of us is our hope for commercial thrift and prosperity. The Pan-American Congress, recently adjourned, was an important step in the right direction. The trade and commerce of this empire will be worth millions and millions to us when developed, and it should be captured and controlled by us, and their medium of exchange, the silver dollar, should aid us in this glad consummation.

But, Mr. Speaker, why should we speculate or experiment in this important legislation? Why not return to the plain and simple provisions of the law of 1873? For almost a hundred years that law served our people patriotically and well. It was enveloped in no doubt. It called for no compromise. It rested on no conjecture like the new and experimental plan. It was a plain and unequivocal measure for free coinage. A return to that legislation would, in my judgment, be wise legislation for many reasons. It has been said that—

It would immediately add an immense value to all silver bullion.

It would tend to stop the general downward trend of prices.

It would restore part of the loss that the prices of commodities have sustained and which they now suffer.

It would provide a currency more stable in value than any that at present exists.

It might perhaps send some of our gold to Europe, but if so it would tend to raise the price of all our products sold in that market.

It might bring down the price of our 4 per cent. bonds so that they could be bought by the Government at less than 26 per cent. premium.

If gold should be held at a premium over silver that premium would add a new and further form of "protection" in our trade of purchasing manufactured goods from gold-using nations.

It would reduce the strain of the India competition and reduce the incomputable losses that competition every year costs our farmers and planters.

It would raise the prices of wheat and cotton and prevent the enemies of our tariff system from persuading the people that our losses by silver legislation results from our tariff legislation, and thus, by misrepresentation and false reasoning, weakening the patriotic doctrine of American protection.

It would be safe in finance; it would be wise in politics; it would be just to all; it would be the first firm step in securing our manufacturing and commercial leadership among all the American silver-using nations, our chief customers abroad in our selling trade of manufactured goods; it would be the quickest road to the adoption by England of silver as full legal-tender money as a means of retaining her foreign trade and of preventing that trade from slipping from her hands into ours through the silver rift.

It would lead by the shortest route to bimetallism by treaty among all commercial nations, and so end this disastrous money conflict in a union whose benefits would be shared by all and whose burdens would be felt by none.

It would lead to the establishment of a higher justice in international, commercial, and financial affairs on a basis as solid as the mutual interests of all mankind.

Let us in a spirit of patriotism, for these and other reasons, be done with experiments and return to the legislation of our fathers. [Applause.]

Silver-Bullion Certificates.

SPEECH

OF

HON. JOHN A. PICKLER,

OF SOUTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 7, 1890,

On the bill (H. R. 5381) authorizing the issue of Treasury notes on deposit of silver bullion.

Mr. PICKLER said:

Mr. SPEAKER: With the elimination from the substitute of the provision for the redemption of the certificates by silver bullion, I should be quite well satisfied with this bill, for the reason that, as I understand it, it would be practially free coinage, with the gain or seigniorage inuring to the Government, and not to the bullion-owner. And I hope, Mr. Speaker, that opportunity may be offered to amend by striking this provision from the bill.

I know, Mr. Speaker, that gentlemen representing constituencies as much interested as are mine in having silver occupy an equal place with gold as a money metal earnestly contend that this provision will in no way interfere with the working of this bill should it become a law.

I hope this view is correct, should there be a failure to strike out the bullion-redemption clause.

The people whom I in part have the honor to represent are anxious for a greater circulating medium, and under this bill there will be added to the circulation $54,000,000 annually, which must cause all products to appreciably increase in value.

This appreciation in the price of products which we produce will amount to large sums to the producers. Moreover, section 6 of the substitute provides "that whenever the market price of silver, as determined in pursuance of section 1 of this act, is $1 for 371.25 grains of pure silver, then shall come absolutely free coinage," and silver will occupy a place alike honorable with gold, and this goal desired by the friends of silver and the debtor classes of the country will be reached.

So, Mr. Speaker, aside from the provision that the certificates may be redeemed in bullion, I am favorable to the bill, although it does not go as far as I should like. I believe, as do my constituents, that there is perfect safety and that there will come with free coinage added prosperity to the country, and I desire to further this proposition in all ways practicable. The bullion should not be used to redeem the certificates and thus lessen circulation, but should be coined into dollars for redemption, and, so going into the Treasury bullion, it would there remain until it comes out dollars.

Silver-Bullion Certificates.

Let them "dump." Our farmers can stand it, the country can stand it.

SPEECH

OF

HON. CHARLES W. McCLAMMY,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 7, 1890,

On the bill (H. R. 5381) authorizing the issue of Treasury notes on deposit of silver bullion.

Mr. McCLAMMY said:

Mr. SPEAKER: It is said, as an argument against the free coinage of silver, that Europe and other countries will dump their silver upon this country. Listening to this argument, I was induced to reflect that the countries would not dump their silver without consideration therefor; in other words, would not dump for the fun of it. If, then, they do for a consideration, what is that to be, save and except it be for our products outside of silver?

Must it not be the products of our farms, our mines, our manufactories. Then, deferentially, I submit—

For our wheat let them dump.

For our corn let them dump.

Let them dump for our provisions.

Let them dump for our wage-workers, in field and mine and shop.

With this dump we can pay off our mortgages and overcome the influences depressing the energies of our people and absorbing their resources to the point of bankruptcy.

Silver-Bullion Certificates.

SPEECH

OF

HON. JOSEPH B. CHEADLE,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 7, 1890,

On the bill (H. R. 5381) authorizing the issue of Treasury notes on deposits of silver bullion.

Mr. CHEADLE said:

Mr. SPEAKER: I shall give my support to the substitute offered by the gentleman from Iowa [Mr. CONGER] to the pending measure because I consider it an honest and wise settlement of the silver problem. It is honest in this, that it proposes to buy the entire output of silver mined in the United States, at the world's market price for silver, and, having absorbed the silver, it is made the basis of

Treasury notes, to be issued, to which it is proposed to impart the qualities of a full legal tender in payment of debts, public and private, and the further quality that they shall be redeemed in the coin of the country. This will give to these Treasury notes the two essential qualities in which the people are most deeply interested, that is, the full purchasing power of gold and the power of legal tender, when used for the payment of debts.

I want to go upon record as saying that with the single exception of the owners of silver bullion every citizen of the Republic will receive from this measure as much benefit as they would were the precious metals brought together in value under the existing ratio and we now enjoyed the benefits of the free coinage of both metals. We must not forget that in authorizing the use of money Congress must be honest. This is an absolute essential, and every dollar we create must be the equal in purchasing power of every other dollar now authorized and in existence. I do not hesitate to say that he is an unwise counselor in the affairs of state who would consider even for one moment the idea of creating a second unit of value in our financial system.

This is indeed and in truth a commercial age. The question which lies nearest to the hearts of the people is What is its cost? when they consider any proposition. The unit of value upon which is based our whole industrial and commercial system is the dollar of the country, and I say that to change that unit of value would inevitably result in widespread commercial disaster and financial ruin, the greater portion of which would fall upon the farmers and laboring men of the country. Let us not try to deceive ourselves into the belief that if we make a departure the marvelous ingenuity of the American people can avert the disaster. The experience of the past "rises up before us like a dream," saying that nothing could avert the impending danger.

The gentleman from Massachusetts [Mr. WALKER] said yesterday that too much money created misery, and I heard from various parts of the House the sound of laughter and of sneers. I know, from my experience, that the gentleman from Massachusetts spoke the words of truth and soberness. Before the war, when we had one unit of value, I was a child and a youth and knew not what the value of money was. That war made the issuance of paper money a necessity and it was issued in large quantities. One week that money would be of one value and the next it would have another value, greater or smaller, as the chances of that war changed.

When that war ended and I came home and entered the race of life, paper money was the only kind in circulation. I remember now, I did not or could not know then, that when that paper money required 130 cents to equal 100 cents in gold and silver, I borrowed $1,000 and gave my note payable at a certain time in the future. Between the making of that note and the time of its payment the process of shrinking that paper unit of value down to the coin value went on. I had contracted to pay a debt on a cheap money basis and at a cheap money rate of interest, and when I in my ignorance began to realize the existing facts I found to my sorrow that the man who loaned me the money was the only person benefited by that transaction.

The cheap money I borrowed was only worth $769 instead of its face value, $1,000. I know when I paid him a value equal to that which I received I was still in his debt $231. I know it cost me misery to pay it, and if one debt of $1,000 made $231 for the money-lender how many millions did it cost labor to pay its tribute to a cheap unit of value in all the Republic during that cheap-money period? I do not need to theorize, I know that a second unit of value, a cheap unit, is a curse to the debtors, and no word or vote of mine, while I am honored with a seat upon this floor, will ever be expressed in favor of a second unit of value. I want it understood that the money-lender shall give to the money-borrower an equal commercial value for the one the borrower obligates himself to pay, and I venture the opinion that I am the friend of the laboring man and farmer in doing this.

There is a demand for more dollars. This measure will meet that demand fully. It will add thirty millions a year to the money of the country, honest money, equal with every other dollar in commercial value that is now in existence, but I deny that there is any demand from any section outside of present silver-bullion owners for a cheaper dollar. The farmers and laboring men I represent want their dollar to be equal in value with the dollar of the millionaire. The Republican party, in its platforms, in its history, and in its legislation, is solemnly pledged in favor of honest money, so much so that the commercial and industrial interests, vast as they are, rest in perfect serenity while we consider the pending measure, knowing well that so long as the nation is controlled by the Republican party no other kind of money than honest money of equal value with existing money will be authorized.

The pending measure provides that whenever silver and gold shall become equal in value under the existing ratio of 16 to 1, no matter whether it be in a day, a week, a month, or a year, just as soon as they are thus equal, then there shall at once begin the free coinage of silver. To secure the people against any possible loss until such time as free coinage of silver shall begin, the bill provides that there shall be behind every dollar of proposed Treasury notes one dollar's worth of silver at its present market value, and I submit what valid reason can be urged by any honest man against this provision of the pending substitute?

We who sit upon this side of the Chamber must be held responsible for the financial policy of the future. We can not escape it. We must settle the silver problem. Let us not then make the mistake of setting up a second unit of value in our financial system by authorizing the free coinage of two dollars, one of which is worth 28 cents less in commercial value than the other. We can not afford to enter upon such a policy unless we desire to become responsible for the widespread commercial disaster and financial ruin that will surely follow such a departure.

I would if I could amend the substitute. First, I would not authorize the issuing of paper money in less denominations than ten dollars. I would prohibit the issuing of one, two, and five dollar bills. I would limit the coinage of gold to two-and-one-half and five dollar pieces, prohibiting the coinage of ten and twenty dollar gold pieces. This would compel the people to use gold and silver in the small business transactions and would in a brief period of time draw out of the Treasury every silver dollar that is now stored there.

For the purpose of enabling the people to send small balances by mail, I would repeal the fee for postal notes and make them free, so that by paying into any post-office any sum from 1 cent to $5 the person could procure a postal note, thus enabling the people to send small balances through the mails without additional expense to any post-office in the country. If we want silver and gold to come into general use among our people we must enact a financial policy which will create a demand for their use among the people. Take away your one, two, and five dollar bills and you will have solved the problem and the future will take care of the silver and gold of the country.

The unit of value in the United States is our dollar, and every dollar authorized must be made of equal commercial value, whether it be coined of gold or silver or is issued by the Government and based upon its plighted faith to redeem its promise to pay in the legal coin of the country. This is honesty. This is wise legislation; and in my humble judgment the Republican party can not afford to advocate any other financial policy.

Silver-Bullion Certificates.

The demonetization of silver and the collection of taxes exceeding the necessities of Government are the primary cause of the universal depression in the business, productive, and laboring classes of our country.

SPEECH

OF

HON. SILAS HARE,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 7, 1890.

On the bill (H. R. 5881) authorizing the issue of Treasury notes on deposits of silver bullion.

Mr. HARE said:

Mr. SPEAKER: I consider the question before us as one most important, perhaps the most important, that will be acted upon during the existence of the Fifty-first Congress. Viewing it in that light I desire to express my opinions, and they are those of the people who honor me as their Representative in this body.

We want the silver dollar that was provided for in the First Congress of the United States and was the unit of our currency until it was surreptitiously demonetized. It is the people's money, and the people demand it. They were deprived of it in the interests of bankers and money-lenders, and the people's representatives should restore it, even against the protest of Wall Street, whose policy the present Secretary of the Treasury has presented and which has been formulated in a bill by a Republican caucus to prevent the coinage of the silver dollar and make silver a merchandise to be manipulated by the "bulls and bears" who play "pitch and toss" in the stock exchanges of the country.

Mr. Speaker, silver was made money in this country by the act of Congress approved April 2, 1792, which said "that the money of the United States should be expressed in dollars," to be of the value of a Spanish milled dollar, as the same is now coined, and to contain 371¼ grains of silver. The same act fixed the ratio between gold and silver currency at 16 to 1, and, whilst the amount of gold to be used in coins has been changed three times, the amount of silver in the dollar was not altered until the act was passed in 1873 demonetizing the silver dollar.

It has time and again been charged that the clause in that act demonetizing silver was never discussed in Congress. This has been denied by the man who did it; but it is an unquestionable fact that the

majority of the men who voted for that bill and the President who signed it did not know that it contained any such clause. As a proof of this, President Grant, seven months after the passage of the bill, in a letter dated October 3, 1873, used the following language:

I wonder that silver is not already coming into the market to supply the deficiency in the circulating medium. Experience has proved that it takes about $40,000,000 of fractional currency to make the small change necessary for the transaction of the business of the country. Silver will gradually take the place of this currency, and, further, will become the standard of values, which will be hoarded in a small way. I estimate that this will consume from $200,000,000 to $300,000,000, in time, of this species of our circulating medium. * * * I confess to a desire to see a limited hoarding of money. But I want to see a hoarding of something that is a standard of value the world over. Silver is this. * * * Our mines are now producing almost unlimited amounts of silver, and it is becoming a question, "What shall we do with it?" I suggest here a solution which will answer for some years, to put it in circulation, keeping it there until it is fixed, and then we will find other markets.

President Grant would not have written that letter if he had known that months before, on March 3, with hundreds of bills before him to sign, when it was utterly impossible for him even to glance over them and he was compelled to accept them by title, he was misled and betrayed by a false title into signing a bill and making it a law which demonetized silver. The title of that law as it is found in the statute-books is "An act revising and amending the laws relative to the mints, assay offices, and coinage of the United States." There is not a word or an intimation in that title as to any clause preventing or limiting the coinage of the standard silver dollar or taking away its full legal-tender power.

As I said before, it has been often charged that this law was surreptitiously and corruptly passed, and on that point I desire to insert the following from the CONGRESSIONAL RECORD of May 24, page 5438. Senator DANIEL, of Virginia, speaking on the silver bill before that body, said:

So far as this movement to demonetize the silver dollar was concerned, it was a matter unknown to Congress and unknown to the people of the United States when it was done. Speaker Blaine did not know it when the act passed. Senator STEWART, of Nevada, representing that great silver community, who was a member of the body, did not know it. The Senator from Texas [Mr. REAGAN], who has always had an eye on silver, did not know it.

Mr. SHERMAN. He was not here.

Mr. DANIEL. Was he not then a member of the other House?

Several SENATORS. No.

Mr. ALDRICH. Will the Senator allow me to say that the Senator from Nevada, who also has his eye always upon silver, was here and voted for the bill.

Mr. TELLER. He did not know it.

Mr. STEWART. I did not know it, and I will give the Senator, if he wants it, the entire discussion. It was not stated in the discussion that there was any intention to leave the dollar out. On the contrary, the very last thing that was done was an amendment offered by the Senator from Ohio providing for the inscription on the silver dollar. I will get it in a moment and show it. That was adopted.

Mr. SHERMAN. The trade-dollar.

Mr. STEWART. No; the silver dollar and the trade-dollar both.

The New York Sun of May 24 contains the following letter from its Washington correspondent:

WASHINGTON, *May* 23.

The radical silver men on the Senate side of the Capitol think they have unearthed something of a sensation, and they are now almost ready to claim publicly, as some of them have privately for a number of years past, that the provision of the silver bill of 1872 which in effect demonetized silver was never discussed or agreed to in the United States Senate. Ever since that act was passed the silver men have charged, with more or less explicitness, that some sort of sharp practice was indulged in by the enemies of silver to get the provision enacted into the silver law. A dozen times this intimation has cropped out in the debates in the Senate Chamber, and on more than one occasion the charge has been broadly made that the law was never passed in the open light of day, and as many times the so-called gold men have denied the imputation.

Yesterday in his speech, Senator DANIEL referred in an indefinite way to the old charge, but made his intimation so clear that Senator SHERMAN, who was one of the fathers of the law of 1872, felt called upon to defend it and its authors and friends. This, however, did not prevent the silver men from agitating the subject, and to-day Senator STEWART started an investigation which, to his mind, has had a rather startling result. Senator STEWART secured a copy of the bill as it was reported to the Senate from the Finance Committee after having passed the House—a copy of the bill that was used at the clerk's desk when the subject was under consideration—and the bound volume of records containing the engrossed bill itself.

With the aid of some of the clerks in the Secretary's office, the official stenographer, and two or three silver Senators, Mr. STEWART examined the whole matter carefully and found what he regards as evidence of trickery in the passage of the bill. This evidence is the fact that the Congressional Globe containing the official report of the debates and proceedings of the Senate contains no mention whatever of the demonetizing section having been read, debated, or considered in the Senate. The section was added by the Senate Committee on Finance to the House bill, and was printed in italics, as all other amendments were. The pages of the Globe show the progress, step by step, and the debates upon each section until the demonetizing proviso is reached, when there is a break in the record, and when it is again taken up it is at a point further on in the bill. From this record it does not appear that the demonetizing section was ever read to the Senate, voted upon, or agreed to. Senator STEWART was quite excited by his discovery, and said to those about him, in his characteristic vigorous language:

"I have claimed ever since the bill was passed that there had been trickery practiced in inserting the demonetizing section, and I am now more than ever convinced that monkey business was indulged in."

Senator TELLER, who was sent for by Senator STEWART that he might give his opinion, made a thorough examination of the case, and he remarked, in his quiet way:

"Well, there is certainly something wrong. I have looked this matter up before, and I have never been able to straighten it out."

Senator STEWART is not making much of a stir about the matter just at present, because he admits the possibility that he may yet be found to have been mistaken. The matter as it stands has a very suspicious look to him, however, and if he finds upon further investigation that the belief of himself and other silver Senators as to sharp practice in passing the bill is well founded, he will spring the sensation upon the Senate in the shape of a searching investigation that he confidently believes will bring to light some surprisingly interesting and important facts.

These statements, if true, prove that the demonetization of silver was accomplished surreptitiously, if not corruptly.

When the charge is made that anything is done surreptitiously or corruptly, something must be adduced to show a motive for corruption or the charge is considered of no weight. What was the motive in this case? Whose interest was it to demonetize silver? What made it desirable to secure a single instead of a double standard for money? All these questions are easily answered by turning to page CXXI of the report of the Secretary of the Treasury. There it will be found that the public debt of the United States on the 1st day of July, 1872, was $2,253,251,328. The bonds which represented this vast debt were payable "in coin." The "coin" of the United States with full, equal legal-tender value was of both gold and silver. If the silver "coin" could be destroyed, the bonds became payable in gold and their value was vastly increased. There is one motive that shows the parties who were interested in securing this work and what made it desirable for them.

But there is still another. The abundance of money at the close of the war had stimulated all business into activity, and every kind of venture had been pushed to its utmost in the West and South. Of course this rendered the borrowing of money a necessity. During and after the war the money of the country had gravitated to three centers, New York, Pennsylvania, and Massachusetts. This system of Federal taxation through a protective tariff and the war expenditures had favored these localities to the impoverishment of others. This is proven by the following figures. The true valuation of the real and personal property in the United States, as shown by the census of 1860, was $16,159,616,068. In 1870 the valuation was $30,068,518,507, an increase of $13,908,901,439, or 86 per cent. In 1860 the "true valuation" in Massachusetts was $815,237,453; in 1870 it was $2,132,148,741, or 162 per cent. increase. In New York, in 1860, it was $1,843,338,517, and in 1870 it was $6,500,841,244, an increase of $4,659,502,627, or 252 per cent. In the decade from 1850 to 1860 the "true" valuation of the country had increased 126 per cent., whilst Massachusetts had increased 44 per cent. and New York 70 per cent. The following table will show these facts very plainly together:

	1850.	1860.	Valuation.
			Per cent.
United States	$7,135,780,228	$16,159,616,068	126
Massachusetts	573,342,286	815,237,433	44
New York	1,080,309,216	1,843,338,517	70
Pennsylvania	722,486,120	1,416,501,818	96
Total	2,376,137,622	4,075,077,768	71

	1860.	1870.	Valuation.
			Per cent.
United States	$16,159,611,068	$30,068,518,507	86
Massachusetts	815,237,443	2,132,148,741	162
New York	1,843,338,517	6,500,841,264	252
Pennsylvania	1,416,501,881	3,808,340,112	168
Total	4,075,077,768	12,441,330,117	205

In 1850, of the true valuation of the country these three States owned 33 per cent. In 1860, whilst the whole country had increased 126 per cent. in valuation, these States had increased only 71 per cent. and owned 25 per cent. of its property. See what change took place in the next ten years. The wealth of the nation increased 86 per cent., but these States increased 205 per cent. and owned 41 per cent. of the entire property of the country. Of the $13,908,901,439 increase, these States had $8,366,252,349, largely more than half. This was the result of vicious fiscal laws which concentrated capital into the hands of the few and impoverished the many, which operated to favor certain localities as against the whole country.

And these figures give another class who were to be benefited by the single gold standard. That is the wealthy money-lenders of these three great manufacturing States that had been loaning the money they had obtained through tariff robbery to carry on enterprises of the West and South. Any reduction of the currency made their debts more valuable; hence they were in favor of demonetizing silver.

Mr. Speaker, that bill, stolen, as it was, through Congress, added $500,000,000 to the wealth of the creditor class and wrung it from the labor of the poor. That bill was the prime cause of the depression which exists to-day in all the agricultural regions of the country. That bill was the Trojan horse by which the robber Greeks succeeded in mortgaging the West and South, and holding them in subjection as abject and valuable slaves as those of the lamp and ring were to Aladdin. The act of 1878 merely loosened the chains, and now it is proposed to bind them tightly by the passage of the bill before us.

Sir, there never was a greater fraud attempted to be practiced upon any people than is attempted when this bill is proposed as a relief to the currency of the country, when it is claimed that it will add to the currency. The man who made the bill (for it is practically the Windom bill) was looking only after the interests of speculators, stock-jobbers, and money-lenders, not in the interests of the people. I can not imagine what the leaders of the Republican party mean by presenting such a measure after the declaration made in their platform of 1888. They declared while seeking the votes of the people that—

The Republican party is in favor of the use of both gold and silver as money, and condemns the policy of the Democratic Administration in its efforts to demonetize silver.

How will the leaders make this bill which they have presented comport with that declaration? How can the people believe anything these Republicans may say hereafter? Let me indulge in a little political history. In 1884, when the Democratic convention met in Chicago, one plank of its platform read as follows:

We believe in honest money, the gold and silver coinage of the Constitution, and a circulating medium convertible into such money without loss.

The Republican convention, which had adjourned the week before, made no such declaration in favor of silver. Its money plank was as follows:

We have always recommended the best money known to the civilized world, and we urge that an effort be made to unite all commercial nations in the establishment of an international standard which shall fix for all the relative value of gold and silver coinage.

The Democratic declaration was an honest, straight declaration in favor of the free coinage of silver. The Republican plank was as clearly the other way to those who understood conditions and was intended to deceive those who did not. The result was the election of the Democratic candidates. I say it, and I say it with regret, that the Executive we elected did not recommend or attempt to carry out the policy indicated in the platform as quoted above, although he had over forty majority in the House ready to carry out any recommendations of his on that subject. In the next House the Democratic majority was less than fifteen. I have already quoted the explicit declaration of the Republican party in 1888. The Democratic platform of that year says not a word on that subject; and we have a Republican President, with a Republican majority of eight, which has been largely increased by the House itself. In the light of these facts can either of the political parties afford to palter with this question as this bill does?

Mr. Speaker, what would be the condition of this country and its silver products had not the Democratic party forced the passage of the Bland bill in 1878? Since that time the national banks have retired $125,000,000 of their notes. These have been replaced by the issuance into circulation of 312,000,000 silver dollars or certificates representing them, making an increase in the currency of $187,000,000. Since that time population has increased from forty-seven to sixty-six millions, an increase of 40 per cent., whilst the money in circulation, even with the silver increase, has not increased in like proportions. As a fact and notwithstanding the assertion of the Secretary of the Treasury to the contrary, there is not now $10 per capita in circulation in the country, and of this nearly one-half is in silver dollars or silver certificates issued to represent them. It is this scarcity of currency which causes the depression which is admitted on all sides to exist in our agricultural interests.

Think, Mr. Speaker, of the folly of this nation, the greatest silver-producing nation of the earth, discounting its own product, a product that has been money since the earliest dawn of civilization and is still the only money of over two-thirds of the inhabitants of the world. I was not a "folly." It was a crime deliberately done for the benefit of the creditor class, and I honestly believe corruptly achieved. But crime or folly, let it be which it will, this Congress has the power to stop its further progress. It can not, human power can not repair the wrong that has been done, but we can stop the wrongdoing. If we do not, we become responsible for it.

The Secretary of the Treasury, in his report to this Congress (volume I, page 134), shows the production of silver in the last four calendar years in the world and the United States, as follows:

Years.	World.	United States.	Produced in United States.
	Dollars.	*Dollars.*	*Per cent.*
1885	118,445,150	51,600,000	43.0
1886	120,626,800	51,000,000	42.5
1887	125,576,710	53,350,000	42.5
1888	142,437,150	59,195,000	42.0
Total	507,085,810	215,145,000	42.5

During these four years we have produced over two-fifths of all the silver of the world, and yet we depreciate its value. This is shown by the difference in coinage value which I have given and the average value of this silver as bullion in the market. That was for the silver of the world only $389,504,210, a difference of $117,581,600. Apply this difference to our own product and the loss amounts to $50,000,000. In other words, by submitting to the demonetization of silver we have forced the silver-miners of our country, in the last four years, to submit to a loss of $50,000,000 in the value of their product. Is it any wonder that the silver-miners complain? Since 1878, since silver was partially remonetized by the Bland bill, we have produced $825,145,000 silver (coinage value), and the loss to the miners has been $88,865,000.

Mr. Speaker, let us look at another phase of this question. Silver was demonetized in 1873. As soon as the robbery was discovered an outcry was made and there was a determined effort to right the wrong. The monometallists and all their paid organs declared if silver was remonetized the country would become the dumping-ground of all the silver in the world and gold would disappear. In that year the total amount of gold in the country, according to the report of the Secretary of the Treasury, was $135,000,000; in 1888 the total amount was $705,000,000, and in 1889 it was $680,000,000. Our gold product for the years from 1874 to 1889 inclusive has been $535,000,000, showing that up to the last fiscal year we had simply retained what gold we mined in this country.

Now, let us see if this country has become "the dumping-ground for the silver of the world," as it was predicted that it would be if we remonetized silver, or even if the Bland bill passed. Since and including 1874 we have mined $825,000,000 worth of silver; of that we have coined less than $400,000,000 worth and have been compelled to export, over and above all our imports of silver, $175,000,000 worth of our silver to be sold in a market we helped to depreciate, and there be coined to pay Hindoo ryots and Egyptian fellahs from 3 to 8 cents per day to raise wheat and cotton to compete with the wheat and cotton raised by our farmers.

Up to the close of the last fiscal year there have been one hundred and eighty months since the Bland bill went into operation. During all these months there has been no Secretary of the Treasury in sympathy with the provisions of the silver law, and each one has coined just as little silver as the law permits each month. Even that has been a great relief, has in fact prevented universal bankruptcy in the agricultural regions. If there had been during these one hundred and eighty months Secretaries who were not under the domination of Wall street masters, Secretaries who had the interests of the people and the country at heart, instead of those of speculators and money-lenders, there would have been purchased $4,000,000 worth of silver bullion each one of these months, making a total of $720,000,000 worth, which would have been coined into 850,000,000 silver dollars, which, or the certificates representing them, would now be in circulation among the people.

There is still another phase of this subject to which I wish to call attention, to show the effect of the demonetizing of silver and its partial remonetization. A nation's prosperity is always gauged by the excess of the value of its exports over its imports. Now, sir, in the five year from 1873 to 1877, inclusive, during which time silver was entirely demonetized, this was the condition:

Value of exports	$2,765,065,564
Value of imports	2,564,612,304
Excess of exports	110,453,260

Now, take the five succeeding years, from 1878, when the Bland bill passed, to 1882, inclusive, and compare the figures:

Value of exports	$3,893,863,460
Value of imports	2,938,079,255
Excess of exports	955,784,205

During the five years silver was demonetized we only exported $110,453,260 more than we imported. During the succeeding five years the balance in our favor was nearly nine hundred and fifty-six millions. During the one term we paid $110,453,260 of our foreign indebtedness, during the other nearly nine times that much. Now, sir, from whom come the articles which enabled us to do this, to pay this enormous amount of indebtedness? Let us take a single year of the five last named and see. In 1881 we exported of domestic merchandise to the value of $883,925,947. I give a list of most of the articles which come directly from the farmer of this country:

	Value.
Animals	$16,412,398
Breadstuffs	269,556,720
Broom-corn	154,677
Brooms and brushes	152,716
Ashes	141,463
Ginseng	561,545
Cotton, unmanufactured	247,695,746
Fruits	4,439,719
Hay	233,529
Hides and skins	993,464
Honey	198,768
Hops	2,016,970
Meat and dairy products	156,809,840
Seeds	1,062,766
Sugar not refined	550,024
Tobacco, leaf	18,737,043
Vegetables	1,570,834
Total	721,178,222

Everything in that list, except wheat flour and the meat and dairy

products, was sent abroad just as it came from the farm without any process of manipulation applied to it. It is probable that the flour and meat products were increased over the farm values $100,000,000 by the manufacturing processes, leaving $621,000,000 out of the $883,000,000 of domestic products exported as coming from the farms; that is, 70 per cent. of the whole. Besides this, our silver-miners sent abroad $66,000,000 worth of their products in these five years.

Mr. Speaker, why is it, with these facts, and they are all from official sources, that these farmers and the silver-miners are here demanding relief? They ought to be rich and independent. But instead of that they are impoverished, and with their impoverishment comes the impoverishment of the country. Let these figures, showing the value of domestic exports for the fiscal years 1881 to 1889, speak:

1881	$883,945,947
1882	733,239,752
1883	804,223,632
1884	724,964,852
1885	726,686,946
1886	665,965,529
1887	703,022,923
1888	683,862,184
1889	730,282,609

The falling off in the value of our exports ranges from eighty to two hundred and twenty million dollars a year during the entire period. This does not mean that we ship any less agricultural products abroad, but that we get less prices for them. To exemplify this, I give a table showing some of the principal agricultural exports, with prices paid for them in 1881 and in 1888, taken from official reports.

Articles.	1881.			1888.		
	Quantities.	Value.	Price.	Quantities.	Value.	Price.
Cattle.....number...	185,707	$14,304,102	$78.500	140,208	$11,577,208	$82.500

Almost every article the farmer ships abroad is decreased in quantity and value, as is shown by this table. But he does not even get the money these products bring into the country. The railroad syndicates, the speculators who manipulate the price of products, the Armours and "Old Hutch," and such gather one portion of it, and the custom-house officers, standing at every port in the country with their commission as representatives of this Government, secure the balance. The farmer gets nothing. The money of the country has been reduced in quantity by the demonetization of silver until it can be controlled by the bankers and money-lenders, and the Government takes what little these sharks leave the farmers. Practically the Government is in a conspiracy with them.

It gathers in the money and pays it out as premiums upon bonds which ought to be redeemed at par, which the Secretary of the Treasury knows he can so redeem under the law. If Secretary Windom, when he was Secretary of the Treasury under President Garfield and called in and refunded a portion of this debt, did not believe that under the laws of 1869 and 1870 he had the authority to do so, he was guilty of an act for which he should have been impeached. The Forty-seventh Congress when it met believed he had the authority and approved of his actions. Why does he not now pursue a similar course? Perhaps the masters of Wall street can better answer that question.

Mr. Speaker, we are gravely informed that overproduction is what is doing all the harm to the country. In other words, our country is too good and too rich for men to inhabit who obey the Divine principle: "In the sweat of thy face shalt thou eat bread." We must not work so much; we must not cultivate our ground so carefully; we must let the grass grow in the cotton rows, the rust strike the wheat, the cattle roam at will in the fields, and all will be well. The men who talk about "overproduction" are evils, and it would be complimentary to dub them as "cranks;" but they do not rise to that dignity. It is not "overproduction;" it is underconsumption, brought about by the fact that by an "underproduction" of money men are not able to get work at wages that will allow them to buy enough to eat and wear; the refusal of the Government to make money out of the precious metals that the Almighty deposited in abundance in our mountains, and which the labor and capital of the country are daily extracting from its hidden chambers.

Silver has always been money. It is the money of our fathers and of this people, and has been rejected in the interests of the money-sharks who infest this land and are more merciless than Shylock and equally avaricious. Give the country the money it needs, let every man take his silver bullion to the mint or assay office and receive his silver dollars or silver certificates for it; then, sir, you will see prosperity return, and not till then. We are to have "a home market," the gentlemen on the other side say, but we must not overproduce or we will spoil the market. We have provided, they tell us, that the cheap-paid labor of other countries shall not compete in our "home markets," but there is no money to pay dearly or cheaply for our labor on the farms of this country. The Carnegies and other protected people take all the money. They can pay American laborers what they choose, and if not satisfactory they can import Hungarians and Italians to fill their places, but the farmer can not get money enough to pay his State, county, and school taxes without going to the agents of some Eastern money-lender and putting a mortgage on his farm. It is money the people who labor want, not protection. Give them the money and they will protect themselves.

Silver-Bullion Certificates.

SPEECH

OF

HON. HARRISON KELLEY,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 7, 1890,

On the bill (H. R. 5381) authorizing the issue of Treasury notes on deposits of silver bullion.

Mr. KELLEY said:

Mr. SPEAKER: I am in favor of the free coinage of silver. This bill, as I look at it, is a jugglery of words to demonetize what is left of silver coinage. Under the law as we have it the Secretary of the Treasury, at present price of silver, can coin five and a half millions a month; he is compelled to coin two millions a month. Under this bill he is not compelled to coin any, and, as under present law he has never coined any more than he was compelled to, it is likely under this law he never would coin any. This bill is in the interest of the creditor class; it is against the debtor class. It is an abandonment of the pledge made in the Republican platform upon which this Administration came into power.

I shall vote to recommit it to the committee, with instructions in favor of free coinage; if that proposition fails I shall vote against the bill, and I shall do it with the full knowledge that a majority of this House would, if opportunity were given it, vote for free coinage; and I shall do it with the hope that opportunity will be given it. I shall do it with the knowledge that the common people of this country understand this question and with the further knowledge that they demand free coinage of silver. I shall do it with the full knowledge that the time in this country has passed that any Congress can, by jugglery of words, fool the people on a financial bill or when they can be fooled with impunity in any other way. Time was when the pulpit dictated theology to the pews; now the pews dictate it to the pulpit. The time has also come when the people dictate to the legislators what kind of money the Government shall issue and how much it shall issue, and it is folly to try to ignore their demands.

Mr. Speaker, from the foundation of this Government up to 1873, the coinage of silver and gold as money in the ratio of 1 to 16 stood on an exact equality. The coinage of both was free and unlimited, and when coined by the Government was money and a legal tender for debts. In 1873, when silver was demonetized, the sil-

ver in a silver dollar before being coined was worth a trifle more than the gold in a gold dollar before being coined. No one asked that it be demonetized; no one has since been found who knew it was going to be; no one has since been found who, when he voted for the act demonetizing silver, knew that the act contained any such provision; the President who approved the act did not know it.

After the silver dollar was demonetized, emasculated, the silver in it began to decline in value compared with gold; the gold dollar increased in value in the same ratio, and because silver had been degraded; thenceforth the man or woman who owed a dollar, or a thousand dollars, when he paid it, paid it with a dollar or dollars that were worth more than the same dollar was worth when he contracted the debt, if contracted before silver was demonetized. The man to whom he paid the debt or the interest on the debt got more value in the money paid than he contracted to get. The advantage to the creditor was obtained and the disadvantage and hardship to the debtor were occasioned by the act demonetizing silver; most of the debts contracted before 1873 are yet unpaid; the interest has been paid, but the principal in most cases has been funded, renewed.

Has any one ever heard of or imagined any reason for the demonetizing of silver, except that the creditor class might be benefited at the expense of the debtor class? Does not every sensible man know that the motive that incorporated that feature in the bill was the interest of the creditor? Does he not know that every debtor was wronged by that act? Saying nothing about where the criminal negligence or intent of that act rests, the time has now fully come to right the great wrong so far as it lies in the power of this Congress to do so.

Mr. Speaker, I know not how well the people of the East have considered, discussed, and studied this question, but, as to the people of the great State that I have the honor in part to humbly represent on this floor, there is scarcely a school-house out of the ten thousand within her borders that has not been the forum of discussion and debate on this question. It has been handled in all its phases and the verdict has been unanimous and emphatic that the act demonetizing silver in 1873 was a great outrage on the debtor class; that it has pilfered and is yet pilfering from the debtor and handing to the creditor.

Mr. Speaker, a frank statement is always to be admired. The gentleman from Massachusetts [Mr. WALKER], in his able and lengthy argument in advocacy of this bill, says there is gold coin enough in the world to do the business of the world and that there is gold coin enough in this country to do the business of this country. From his standpoint he is consistent; were I in favor of a gold standard alone, this bill would certainly receive my support. This bill does what Grover Cleveland advised Congress to do, it absolutely demonetizes silver, except it be already coined; it repeals the law we now have, requiring the Secretary of the Treasury to coin $2,000,000 worth a month or at his discretion to coin $4,000,000 worth per month.

This bill degrades silver, makes the conditions so that under the bill silver can never be equal with gold, and then facetiously says when it shall be equal silver coinage shall be free; and at this point my humorous friend from Maryland [Mr. MCCOMAS], who favors the bill, offers his amendment, which in effect says when this impossibility shall occur then silver purchases shall cease. Mr. Speaker, that amendment is a farce, but it should pass, for it is in perfect harmony with the balance of the bill.

Mr. Speaker, I have been amazed to hear so many of my Republican colleagues in this discussion say that they were utterly opposed to this bill and its provisions, but at the same time say they would vote for it with the hope that the Senate would amend it by striking out the objectionable features. This, in my judgment, is a dangerous method of legislating. May it not be, when this bill reaches the Senate, that many Senators will say, "We are utterly opposed to this bill in many of its features, but, inasmuch as the House has passed it and the members of that House are fresh from the people, we will take it for granted they know what the people want, and we will vote for it on that ground," and thus the relief almost unanimously asked for by the people be denied?

Treasury Notes and Silver Bullion.

SPEECH
OF
HON. WILKINSON CALL.
OF FLORIDA.

IN THE SENATE OF THE UNITED STATES,

Tuesday, June 10, 1890.

The Senate, as in Committee of the Whole, having under consideration the bill (S. 2350) authorizing the issue of Treasury notes on deposits of silver bullion—

Mr. CALL said:

Mr. PRESIDENT: I design to submit a few observations upon the pending bill, and probably it would be quite as convenient to do so at this time as at any other.

The bill proposes to authorize the purchase by the Government of $4,500,000 worth of silver each month and the payment for it in Treasury notes. In my judgment this bill does not answer the demands of the country and the necessities of the coinage at this time.

FREE COINAGE OF SILVER.

The free and unlimited coinage of the precious metals is the only proper solution of the financial troubles which now rest upon the country. Any modification of that idea in the shape of a limitation or of a purchase by the Government is I think entirely inconsistent with the true theory of finance and with the policies which have prevailed throughout all time in reference to the currency.

GREEKS AND ROMANS UNDERSTOOD IT.

This question can not well be exaggerated in its importance. It covers the whole field of human efforts and human possibilities. We may go back as far as we please in the early history of the world, and we find that the subject of the coinage and the use of precious metals was well understood, and the principle upon which it was necessarily based in its relation to all other economies, and to the productions of the earth, and to invention and labor, was so clearly defined that there can even now be no reasonable question as to them. I read, from a treatise prepared by Sir John Lubbock, the following paragraphs:

That the true theory of coinage was well understood in Greece we may see from the words of Aristotle, who thus describes the origin of coins:

"It became necessary, therefore, to think of certain commodities, easily transportable and safely transportable, and of which the uses are so general and so numerous that they insured the certainty of always obtaining for them the articles wanted in exchange. The metals, particularly iron and silver and several others, exactly correspond to this description; they were employed, therefore, by general agreement, as the ordinary standard of value and the common measure of exchange, being themselves estimated at first by their bulk and weight and afterwards stamped in order to save the trouble of measuring and weighing them."

No one at this day can give a more accurate, a more comprehensive, and a more philosophical description of the nature and functions of coin and the relation which it sustains to the business of society and of communities that this statement of Aristotle. Again, it is said:

For a long period every Roman family had the right of coining denarii with their own device, though precautions were taken to preclude any tampering with the weight or fineness. With the same precaution what honest motive can there be for preventing any American, English, French, or German family from coining dollars, shillings, francs, etc. Is our modern civilization so much more the patron of freedom and independence than Roman imperialism that did not restrict a family from making honest money, no more than it would any honest commodity, but confined government work to seeing that it was honest?

FREE COINAGE THE RULE OF NATIONS.

Mr. President, through all the history of time it has been the policy of Government to allow the unlimited coinage of the precious metals, and upon no other theory can there be predicated any sound and philosophical relation of coin to exchange. Let me endeavor very briefly to investigate this proposition.

The proposition covers mankind—man and his needs of body and mind—his capacities and the earth and its productions.

Two men in their relations will furnish the type of all mankind and present all the varieties of this question in all the thousands of years of history and the thousands of millions of human beings, in whose relations it has borne an important part.

RELATIONS OF MONEY TO THE AFFAIRS OF MEN.

Let us consider the subject, then, in this relation, to the end that we may the more clearly perceive and understand it.

These two men require subsistence, clothing, amusement, gratifications of taste; they must obtain them from the earth and its productions by their labor and the use of their faculties. Each of them converts the productions of the earth into things useful to them both, into commodities. Each has something which the other requires. How can it be obtained?

The things they need are such things as will sustain life; then make it comfortable; then provide against future want; then amuse and entertain. How shall they each obtain what the other has, the use of which is necessary to them? They are in contact with each other and have the means of communication. The answer is easy and clear. It can be done by the exchange with each other of the things which each has and which the other requires. The things which they require are subsistence, shelter, clothing, and works of taste and art. In all these objects of need and use we find neither gold nor silver coin nor money.

They can neither eat it nor wear it, nor use it, in the shape of coin. They can use it as a commodity made into things for ornament and for their use and amusement.

We see, then, these two persons making an exchange with each other by transfer and delivery and by promises to exchange and transfer and deliver.

These promises to transfer and deliver are themselves transferable to others and become the easy and convenient means by which exchange is effected.

We will contemplate these two men in asssociation with others in the same vicinage and community. They have in that community all the productions of the earth in the forms into which labor and ingenuity have converted them, but in different hands; some with things for subsistence; some for protection against future want; some for amusement;

some for personal ornament; they have the same needs for the use of these things, but in different degrees; they can only be had by exchange. Exchange is easy to be made by transfer and delivery, and, when this is not convenient, by promises or agreements to transfer and deliver.

After production from the earth into things for use, into commodities, which can only be done by labor and the use of man's faculties, comes exchange, and this completes the circle of production and distribution. Exchange of commodities is thus the only thing to be done, the only means by which distribution to each man can be made. This exchange is the actual transfer in kind of the commodity to be used, of wheat, corn, meat, wine, and oil to those who have none for houses or labor, or clothes, or improvements, or services.

We have seen that this exchange or transfer can easily, conveniently, and naturally be made by actual transfer and delivery and by promises to transfer and deliver, which promises are themselves transferable. What is the difficulty if any two of us here in this Chamber, meeting daily here together and having everything which either needs or uses or can use, exchange with each other, as our daily needs require, whatever we need by actual transfer or by agreement to transfer or verbal or written orders of transfer?

It is easy to perceive that there is no difficulty in it, and that we would have no need nor use for any other methods of exchange.

Naturally this is and has always been the most general method of exchange, and by it much the greater part of the exchanges in the world are made now. What is required in exchange by this method is, first, immediate contact or contiguity; second, convenience of delivery.

EXCHANGE OF PRODUCTS THE MEANS OF DISTRIBUTION.

These we can see are the primary factors and causes, and all other factors are secondary. Exchange, then, is the great means by which distribution of the products of labor of every kind can be made. It is exchange then, and its methods, and the laws which regulate it, which must be the great subject of consideration in connection with the coinage of the precious metals. Production and exchange are the great factors of man's existence, progress, and civilization. We can stand here on safe and certain ground without speculation or sailing on an unknown and shoreless sea of generalization.

GOLD AND SILVER HAVE SUBSIDIARY USES.

Gold and silver, coined or uncoined, money, in whatever shape or form, can not sow or reap. The plow will not move at its bidding. The husbandman may have countless hoards of it, but unless he moves his muscles and exercises his faculties, turns up the earth, sows and plants, works the loom, makes inventions, the earth will not yield her treasures nor the fabrics of labor or art and invention be produced.

Two men in contact may each have his pockets filled with gold and silver, but when they desire to exchange things in the possession of each the exchange or the promise to exchange is more convenient and easy than for one to deliver a certain amount of gold or silver to the other and receive from the other a certain amount of gold and silver.

EXCHANGE AND PROMISES TO EXCHANGE.

We find, then, that exchange and promises to exchange can be made without gold and silver or money; that gold, silver, and money are not a primary or necessary factor in exchange; that, whatever they may be and however valuable their uses, they are in their nature secondary and subsidiary uses. What, then, are the necessary factors of exchange and where and how and to what extent does money stand in relation to exchange? Whence does it derive its uses? How far do these uses extend? Upon what do they depend?

Let us see if we can weigh and measure these ideas with precision and certainty. If we can do so and not depart from the line of strict logical sequences of cause and effect, we shall reach some certain and clear and true conclusion.

First, what are the necessary and primary factors of exchange of products between any two and every two persons in the world? They are contact, communication, opportunities and methods of transfer of commodities or products.

Without roads, communication, vehicles of transportation, ships, the mines and jewels of Golconda can not and will not effect the transfer and exchange of commodities or human productions. These factors, then, are the exercise of human faculties, contact and communication, highways, ships.

GOLD AND SILVER USEFUL BUT NOT NECESSARY FACTORS.

In all these factors and agencies we find neither gold nor silver as money; yet these are the great and necessary factors of all human life, and all progress, and all civilization; and we have the demonstrated truth that gold and silver and money are not necessary factors; that money as a means of exchange, as a representative of value, may be promises to exchange in kind or promises transferable to some common center of exchange.

RELATIONS OF MONEY TO EXCHANGE OF PRODUCTS.

Where, then, does money have a place in exchange and what are the necessary ideas or properties which will enable it to have a relation to exchange or any functions connected with it?

We have found that production and exchange cover the whole circle of human efforts and human possibilities. It follows that money can only have value or use or function as a means or method of exchange. When it ceases to be used for this purpose or to have this function it is no longer money, and can no longer represent values however much the law may make it a legal tender.

It is quite obvious that exchange of products can be made either by an actual exchange in kind or, where contact or contiguity does not exist, can be made between any two persons by an exchange into something which neither has use for, but which is of general demand or of universal demand, and which, because of this universal demand, can easily and always be converted into some other commodity or product which may be needed.

MONEY IS THAT WHICH EXCHANGES PRODUCTS.

It therefore follows that money is that which exchanges products, and that it is something that is of general use and need, and that the quality of general use and need or convertibility into other products is the absolutely essential and indispensable quality of money.

This, then, is the law. It is not a yard-stick; it is not a peck measure. As has been stated, it can not be a fixed and stable measure of any kind whatever, because its only value is to exchange for other things and the values of those things are constantly changed with their scarcity or abundance.

GOLD AND SILVER HAVE IMPORTANT USES.

We therefore perceive that while the use of the precious metals is an all-important one, fixed by natural law, as the true basis of exchange it is a subsidiary and a secondary use. We further perceive that the great mass of exchanges are and must of necessity be made without the intervention of gold and silver, and under the constant changes in the methods of commercial intercourse and communications throughout the world and from its great centers there are substituted methods of exchange, without the intervention of gold and silver, and by their use simply as standards or expressions of value.

IS THE VALUE OF MONEY A NATURAL OR ARTIFICIAL QUALITY?

It therefore follows that we must ascertain whether this is a natural quality or an artificial one created by law. If the latter, it follows that we can vary the money of a country and its methods of exchange by statute at will and pleasure. We can change it both in respect to substance, quality, and quantity. If it be artificial it is the creature of law and subject to wise and unwise regulation.

IT IS CHIEFLY A NATURAL QUALITY.

If the uses and needs of mankind depend on nature and natural economies, then it follows that we can not by law create the uses and needs of mankind.

IT IS BOTH A NATURAL AND ARTIFICIAL QUALITY.

If it be composed of natural qualities and of needs created by law, then we have a proposition in which the question of law and wise regulation must have place, and if we wish to reason on the subject we must weigh and analyze with precision the artificial and the natural qualities of money and find out if we can how far the law of nature will reach and control and within what limits wise regulation or law can operate. Is this quality of universal need and demand a natural quality or an artificial one?

EXAMINATION AS TO HOW FAR NATURAL OR CREATED BY LAW.

Let us search the domains of nature and see if we can find this quality of universality of use, need, and demand in any product of nature or of labor, and then let us see if this quality of general use, need, and demand is sufficient of itself to make it serve the uses of money.

If we search the domain of nature for some product of nature and labor which is of universal use, need, and demand, we find all the articles of food, wheat, corn, meat, wine, oil, cotton, rye, flax, wool, silk, and others. These are all of universal use, need, and demand. Why shall they not serve as a means of exchange, as money?

NATURAL PRODUCTS SERVE AS MONEY.

They do serve as a means of exchange, through the contiguity which modern methods of transportation have established and drafts on bills of lading.

LIMITATIONS IN THEIR USE.

These articles do serve the purposes of money. They are of general use, but they are perishable and bulky, and their use is limited to the extent to which they are consumed and produced in different countries.

EXTENT OF THEIR USE AS MONEY.

While the use of them is universal and primary, it is limited to the deficiency of production below consumption in different communities and countries. To this extent these articles of necessity are by natural and immutable law a means of exchange or money in all the senses but one, namely, legal tender, in which the word can be used. Any of these articles sent to any neighborhood or country and exchanged, whether by the term sale or barter or trade for something else, is an exchange of values, and, as money has no value and no function but to make exchange, these commodities serve the purposes of money to the extent to which they are sold or exchanged. The universality of the use of these articles is therefore limited by these considerations as to the functions of money. They represent for these purposes the value of the

articles at the centers of commerce, which is the proportion of supply and demand limited, increased or decreased, by the combinations which may be made for that purpose.

FURTHER EXTENT OF USE OF COMMODITIES.

Their further use is limited by the fact that the exchangeable value of these commodities in another neighborhood or country is not conveniently divisible into small quantities.

DRAFTS ON BILLS OF LADING THE GREATEST FACTORS.

It is not difficult to see that through drafts drawn on bills of lading this result may be very largely reached and the exchange between individuals and communities and countries largely supplied and effected.

EXCHANGES THAT ARE NOT MADE WITHOUT MONEY.

Even with this result of divisibility of the proceeds of the products of labor when concentrated for exchange, there must be a vast quantity of the numberless exchanges of service, for service, service for commodity, taxes for support of government, which can not be conveniently reached by the division of the products of labor.

CONCENTRATION OF PRODUCTS A SUBSTITUTE FOR MONEY.

It does, however, follow as a logical sequence that a large part if not the most important factors as money in the commerce of the world are the concentration of the products of labor or commodities for exchange and the distribution of these commodities or products from common centers, whether it is the neighborhood, State, the country village, the metropolitan mart, or the great cosmopolitan centers of New York, Boston, Chicago, St. Louis, San Francisco, New Orleans, Charleston, Savannah, London, Paris, and Amsterdam, through drafts drawn on bills of lading.

EFFECT ON USES OF MONEY OF EXTENDED COMMUNICATIONS.

The tendency of commerce which is exchange as communication over the world by telegraph, rail, and steam is extended is clearly to make exchange and distribution by this method and to substitute it as money or as the prevailing method or means of exchange or distribution to the full extent of its possibility.

POWER OF CONCENTRATION OF PRODUCTS ASSERTS ITSELF BY IMMUTABLE LAW.

By an immutable law the power of the concentrated products of labor asserts itself and is beyond control and limitation, because it is a natural law dependent on the wants and necessities of mankind, and the actual distribution of the products of labor is the only means of supplying them. The result of this natural law is concentration of products of labor in commercial centers for exchange and actual distribution.

For these two essential things there can be no substitutes. There may be anticipation and promises and these become values and transferable and are money as we have seen, and nothing can be money which does not effect this result and the performance of these two acts or the expectation of their performance.

SOMETHING OF GENERAL USE, IMPERISHABLE, DIVISIBLE, TRANSPORTABLE.

We are, however, on the search for something, whether it be a commodity, the product of labor or of nature alone, which does or may possess certain qualities or characteristics which are, first, to be of general use, need, demand, or desire, as nearly universal use and demand as possible, which shall be permanent, not perishable, easily divisible, easily transportable.

MERCHANT-OF-VENICE TRADING IN THE ORIENT.

To illustrate this need, let us suppose in the days of Venice, in the thousand years of her existence, when her merchants sought the far Cathay of the East, one of them starting on a venture to that far-distant country. He can not transport wheat, wine, oil, or articles of subsistence on his person. If he could, he would find these things in some form wherever human life can exist, and wherever the race has made any progress he will find them in greater or less abundance. What, then, shall he carry within the necessary limitations of space and means of transportation, and by what reason shall he be guided in selecting that which will be an object of desire with the people of that distant country?

COMMODITIES HE WILL TAKE AS MONEY.

He reasons that the desire for ornament is natural and universal; that gold and silver are the products of nature the most attractive for this purpose, the most easily converted into shapes pleasing to the eye and taste, the most rare or least abundant; that by natural qualities they are indestructible from ordinary causes, most easily divisible, and most easily transportable. He has thus found something which answers the necessary conditions of his search. No law of man can give these qualities; they are impressed on them by nature; they do not derive them from the stamp of the mint; no statute can make a man or a woman desire or prefer them for ornament to iron, copper, or the baser metals.

HE CHOOSES GOLD AND SILVER.

He takes, then, his store in gold and silver, and preferably under most conditions gold, on account of its smaller bulk and greater scarcity.

GOLD AND SILVER ALWAYS IN DEMAND AND ALWAYS CONVERTIBLE.

The reasons which govern him control us. We also find in gold and silver these natural uses and qualities which make them always a convertible value, a something for which every man may exchange anything he has, confident that he will everywhere find some other person who will want this gold and silver.

USE OF GOLD AND SILVER NOT DEPENDENT ON LAW.

He knows that these qualities and uses are not dependent on any law or statute or the will of any monarch; that, while their use may be increased and their value enhanced by law, they rest on the permanent base of natural desire and adaptation to human use for their value.

GOLD AND SILVER OF UNIVERSAL USE AND ADAPTATION TO USE.

We here find, then, the object of our search in the domain of nature a substance of universal use and desire, of adaptation to the wants of men, indestructible, divisible, and transportable. No royal stamp can either give or take away these qualities. Whenever a man has something which he wishes to dispose of and does not desire an immediate exchange into something for immediate use and consumption, here is a product of nature for which he may safely exchange whatever he has, knowing that when he wishes to exchange it again some one will easily be found who will desire it.

GOLD AND SILVER ARE MONEY, WHETHER COINED OR UNCOINED.

This fact makes it money or a medium of exchange, and the fact that this is the most current medium of exchange gives it an increased value and a new use.

The extent to which the law can either increase or decrease its value or use as a means of exchange is very limited.

EXTENT TO WHICH REGULATION BY LAW CAN AFFECT THEIR VALUE.

Let us see if we can weigh with precision and measure the extent to which regulation or law can either increase or decrease the value of these natural products, the precious metals of gold and silver.

Our Constitution and all other organic law gives to Government the power to "coin money;" that is, to divide and stamp it and "regulate the value;" that is, prescribe its fineness or its value with respect to other coin, not regulate its value with respect to other commodities; that is, as to how much land or wheat or corn or other things prescribed quantities of it shall buy.

CAN LAW FIX THE RATIO OF VALUE OF GOLD AND SILVER?

Neither can the law prescribe the relative value of gold and silver to each other. Let us examine this proposition and see whether it is true or not. Suppose the Government should declare that an ounce of silver shall be worth an ounce of gold; what effect will that have? The declaration of this fact by the Government will not in any way affect your taste in preferring gold to silver, nor will it change the preference of mankind for gold for use as ornament, nor the preference for gold in traveling because of its smaller bulk and safer transportation; neither will it make silver as scarce as gold; neither will it change the natural qualities of the two metals.

VALUE OF GOLD AND SILVER DUE TO NATURAL QUALITIES.

We see, then, that the value of each of these metals is based on natural qualities and adaptation to natural wants, and their relative value, like anything else, depends on the relative abundance or scarcity of each.

LAW CAN NOT GIVE OR TAKE THEM AWAY.

Law can not take away natural qualities, use, and adaptation to use.

WHAT CAN LAW DO IN RESPECT TO GOLD AND SILVER?

What, then, can law do in this relation and how far can an artificial use be created which will supplement the natural use and adaptation to use of the precious metals?

LEGAL TENDER AND ITS EFFECT.

The organic law of our country says:

No State shall make anything but gold and silver coin a legal tender for the payment of debts.

In this provision of the organic law the qualities which we have described are recognized, namely, universal use and universal demand. If gold and silver did not have these qualities the law which made them a legal tender would only be a declaration that a debt should not be collected or a contract performed. It is only because of its ever-present convertibility or exchangeable use that it may safely be made a legal tender for the payment of debts or the performance of obligations or contracts.

The legal-tender law does not and can not affect the validity of contracts and does not affect and can not affect the contracts which are executed, which comprise much the greater number of transactions of life or business. Neither does it affect the great bulk of time contracts which have become the subject of adjustment in the courts. Neither does the legal-tender law and the ratio of gold and silver affect the great bulk of time contracts, because when the ratio of gold and silver to each other is different from that prescribed in the law all contracts will be made on the basis of a performance in the cheaper metal, because the law in authorizing the discharge of the obligations in either of the metals according to a prescribed ratio authorizes its discharge in the cheaper metal, and all contracts made by intelligent persons will be on this basis, and it will be only the poor and ignorant who will be the sufferers, but very soon this knowledge will extend even to the poor and most ignorant.

EFFECT OF LAW GUARANTYING A RATIO.

Now let us examine the influence and scope and effect of laws which make the people at large as a Government guaranty the debt-paying

power or legal-tender quality of gold and silver coin of a fixed relative value or ratio, and measure if we can with exactness the influence and effect of such laws. We have ascertained that the value of gold and silver is because of their ever-present convertibility or exchange into other things; that this property or quality is because of its use and demand for ornamentation and use in the arts; that Government can neither give it nor take it away; that where it ceases to have this exchangeable value a law requiring it to be taken for the payment of debts would be a law confiscating debts and prohibiting the performance of contracts; that when the exchangeable values of gold and silver are respectively different from the prescribed ratio contracts will be made on the basis of performance in the cheaper metal. Now, the Government says we we will keep these two metals in a prescribed ratio of value. We will pay gold for silver in prescribed quantities wherever any one holding silver shall want it.

Now, if the exchangeable value of the two metals for commodities, etc., in the arts or for any purpose is different, how will the Government be able to do this? Here is a certain quantity of gold; it is of more value than a certain quantity of silver for which the Government gives it. The gold will sell somewhere, in England, France, India, or China, for more than the silver; that is, it will buy more travel, freight, products than that amount of silver. The Government obtained this gold from the people, who bought it with their labor or products sold for gold valued at the cheaper but actual market price of gold paid in silver; or, in other words, the people paid that much more of their labor in taxes to preserve this ratio. This seems to be the necessary result of this provision of law, but yet it seems to me that the taxation required for that purpose would be wise at present in furnishing an abundant and stable and convertible currency to relieve the farmers and people generally from the grasp of the usurer, extortioner, and money-lender.

RATIO OF VALUE DEPENDENT ON COMMODITY VALUE OF EACH.

The ratio of value between gold and silver is dependent on the use of each in the arts and needs of mankind. Legal-tender laws can not create it nor take it away.

The needs of mankind are for the actual exchange of commodities of things useful in life. All other things are secondary and it is only as this is promoted that currency has any value.

EFFECT OF LAW ON TIME CONTRACTS.

Now, let us see what part the law has or can have in affecting debts and obligations or time contracts, as they have been called. What is a time contract or debt? It is an agreement for a future exchange of commodities or properties for something that will itself be exchangeable into commodities or properties. This contract is in terms an agreement to take certain quantities of gold or silver coin at certain fixed relative values, each party taking the risk that the gold or silver can be exchanged into a greater or smaller quantity of other commodities, or, in other words, he takes the risk that the property for which the gold and silver can be exchanged at the time of the performance of the time contract will be greater or less than the gold and silver he receives. This is what he terms the rise or fall of prices; that is, the greater or less quantity for which commodities can be exchanged.

DECREASE OF GOLD AND SILVER COIN OR MONEY.

The gold and silver itself being subject to fluctuation by its own laws of abundance or scarcity, what then is the effect of decrease of coin or gold and silver? The coin only is a legal tender, and in coining or refusing to coin it there is a check on the quantity which may be obtained for the payment of debts or the performance of obligations. If Government gathers all the coin or the means by which debts can be paid or contracts performed in its own hands and holds it or by any public policy promotes its concentration in the hands of a few persons, it deprives the people of the means of performing their obligations. It increases the amount of labor or service the people have to give for coin.

It is true this evil soon ceases and remedies itself; coin having ceased to be a medium of exchange, having become too scarce and dear, actual exchange by other methods takes its place, properties are sacrificed, homes broken up, business suspended, until new arrangements are made. This is the result produced by the old method of clipping the coin, debasing the coin. The law remaining unaltered, the scope and effect of such law is the same as contracting the currency. It operates in contracts yet to be performed or damages recovered in suits at law, and here it stops as to the great mass of the community.

EFFECT OF INCREASE OF GOLD AND SILVER AS MONEY.

Now, what will be the effect of an increase of the coinage with this legal-tender quality preserved? The same law which governs any other value will govern the coinage in its relation to other things. If abundant and the demand for it is the same or greater, the quantity of commodities which it will take to buy a given amount of coin will be less. This is called inflation, but it is no more and no less than what belongs to any other species of property. Coin has to be bought with or exchanged for work, service, property, lands, houses, and products. It can be used in no other way. It is a commodity that can not be divested of this quality because of its artificial or money use.

The abundance of coin, therefore, can only affect values in a measure to which any value is liable to be affected, and it benefits the great mass of men who are the debtor class and who are the least able to bear loss.

No human ingenuity can prevent this fluctuation in the relative value of commodities to gold and silver or the relative value of gold to silver.

Whether we speak of buying property with gold and silver or of buying gold and silver coin with property it is the same thing; they are convertible terms, and with every fluctuation of the price of commodities gold and silver fluctuate in precisely the same degree, namely, in exchangeable value, which is their only value and use.

GOLD AND SILVER AS LEGAL TENDER.

Gold and silver coin as legal tender has no fixed value either to the person who is to receive it or to the person who is to pay it. If it will buy more property or commodities of any kind when the contract is performed, the man who receives is advantaged and the man who gives is disadvantaged; if less, they reverse places.

FREE COINAGE CAN HAVE NO DISASTROUS EFFECT.

I am therefore, Mr. President, confident in the opinion that the unlimited coinage of gold and silver and its legal-tender quality can have no disastrous effect upon the business of the country. I perceive in a little manual which I have here that the absorption of the silver coinage of the world in Oriental countries has been, if I read these figures aright, something like a billion and a half of money from the year 1835 to the year 1876. I read as follows:

Asia, with nearly double the population of Europe and America combined, depends almost exclusively upon the western continent for its supply of the precious metals. The annual import into Asia and Egypt of silver for the last thirty years has averaged $40,000,000.

At the beginning of the century, according to Humboldt, they took twenty-five out of forty-three millions of silver annually produced, and the remaining stock was insufficient to supply the requirements of silver for manufactures and change money. England, in 1816, and the United States, in 1853, depreciated their subsidiary silver coins, not on account of the excess, but from scarcity of silver and impossibility otherwise to retain their silver coins from export to the East. There is no reason to apprehend that the demand of India and China for silver will decline. During the last twenty-five years India has taken an average of $38,000,000, and China $9,000,000, making the average yearly absorption of silver by those nations $47,000,000. It is not unreasonable to expect that their future requirements will fully equal that amount.

DEPOSIT OF BULLION AND CERTIFICATE OF LEGAL-TENDER COIN.

I had a conversation this morning with a very intelligent and accomplished man who is the representative of the United States of Colombia in this country, in which he expressed his opinions in regard to the use of silver coin as currency and the unlimited coinage of silver. We remember with what distinguished ability the Hon. Mr. Romero, the minister to the United States from Mexico, discussed this subject in the Pan-American Congress which recently assembled in Washington. The following draft of a bill prepared by me embodies the views of Mr. Hurtado and other distinguished citizens of our sister Republics:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That silver bullion of the standard of fineness required by the laws of the United States for coinage shall be received at all the mints of the United States for coinage in the denominations and of the fineness now prescribed by law, and coined in the order in which such deposits shall be received.

That in making such deposit of the ores, of the standard of fineness required by the laws, by any citizen of the United States, the Superintendent of the Mint shall deliver to such depositor a certificate of the amount of such deposit and the amount and character of coin which he will receive and the time at which it will be coined and delivered to him, with the guaranty of the Government that such coinage will be made and the amount of coin delivered on the presentation of his certificate. The seigniorage shall be deducted from said coin.

That silver dollars and half-dollars coined from the mints of the United States shall be a legal tender in the payment of all debts and obligations and of taxes and dues to the United States.

The opinion of Mr. Hurtado is, I think, a wise one. He is an able and an accomplished man, and it is a matter of gratification that the representatives and citizens of our sister republics here are men of distinguished ability, who have given profound thought and consideration to these great financial subjects. I take pleasure in giving Mr. Hurtado the credit of this idea, whatever value it may have. He is of the opinion that coinage laws which authorize the deposit of gold and silver bullion of the standard of fineness required by the laws of the United States for coinage, required to be received at the mints of the United States and to be coined in their order, certificates being given for the bullion deposited, which certificates are to be redeemed in coin itself with the legal-tender quality attached, would at once remove from the market a great amount of silver bullion and place it on deposit in the mints of the United States; that this would to a great extent relieve the price of silver, and it would take time (there being coined probably not more than forty millions or fifty millions a year) for the coin to be made and to be delivered; that the Government would thus have a check upon the amount, the suddenness with which it should be placed upon the market, and that in this time the laws of trade and the business of the country would adjust contracts to the new and increased amount of currency. Thus an unlimited coinage might safely be resorted to and the beneficial effects of a great abundance of money had throughout the whole country.

LIMITATION OF COINAGE HURTFUL TO ALL INTERESTS.

I fail to see, Mr. President, anything but an undue and hurtful control of the great interests of production and distribution by any limita-

tion whatever upon the amount of gold and silver coin which can be placed in the world. Where do you find the idea and upon what do you found it? It possesses its value as a commodity; it is indelibly stamped upon it. Law can not give it and law can not take it away. It has no value except its use and capacity for exchanging the products of labor. Deprive it of these you leave it dead and inactive. The legal-tender quality attached to gold and silver or anything else without the power of making exchanges would leave it dead and inactive, and the legal-tender quality would only be a means of confiscation, a declaration that contracts can not be performed, or that when performed something that is incapable of transferring values and effecting exchanges shall be received in payment. To make anything of such universal use or value that any person will reasonably believe that whenever they desire they can convert it again into any other product or value which they may desire, it must have some natural, permanent, intrinsic value; that is, use and adaptation to use.

Legal-tender use is not universal. It is limited to unexecuted contracts, and to contracts which are submitted to legal arbitrament, and to contracts the performance of which is involuntary and compulsory.

All the legal-tender laws in the world could not make iron or copper or any of the base metals a means of exchange for commodities.

The only effect of such a law would be to limit all contracts to such as could be immediately executed or to the settlement of disputed contracts by voluntary arbitrament.

Therefore, Mr. President, I fail to see any force in the argument that any limitation whatever is desirable upon the supply of the precious metals that are to be found in the world. Exchange is not dependent upon it. It is promoted by it. That is all. The arts are kept alive. The abundance of gold and silver is constantly checked by the desire of the human race for ornamentation, which gives to it, as Aristotle said in the early days, its value, and its great and essential value, for the purposes of currency and of business.

NO FIXITY OF VALUE IN EITHER GOLD OR SILVER.

Mr. President, there is force in the suggestions made by the Senator from Ohio. While I appreciate the great ability and learning which have been exhibited by the Senator from Colorado upon this subject and quite agree with him, in most of the propositions of one of the most learned and able speeches ever made in the Senate on this subject, still I see that there are both force and ability in the suggestions of the Senator from Ohio. A single standard of value, and a gold standard, is certainly the more certain standard of the two. The divergence which the two metals may have can not exist when there is but one standard, and the measurement of contract values to be paid in the future would appear to be more certain if limited to gold values; but neither in gold nor silver can there be certainty.

The gold will buy more or less of commodities and commodities buy more or less of gold, for they are convertible terms, as commodities may be scarce or may be abundant, and there is no fixity and can be no fixity of value. The old theory as we read in the old school-books and in Blackstone of the institutions which instead of taking gold or silver took wheat for rent, is a proper illustration of this idea, which is true and will hold true as long as the world lasts.

ADVANTAGES OF FREE COINAGE TO FARMER.

But the great advantage, in my judgment—and I express it with modesty—of the unlimited coinage of these precious metals is that it prevents combinations from affecting the value of money; it prevents contraction of the currency by a few persons. It is true it does not exclude the possibility of it, but where gold and silver are abundant—and where it may be stored in the great centers of exchange thoughout the country everywhere, and where the farmer receives it for his products—and I am by no means certain that the ideas of the Farmers' Alliance for relief from their present depressed and impoverished condition will not in a modified form take a great part in the financial system of the world—when silver is abundant and it goes into the profits of the farmer throughout the country, and of the artisan, and of the laborer, they will have the means then of establishing their own centers of exchange and their little centers of finance. When it is scarce, when a single standard exists, when it is a subject of easy manipulation and control and does not have to be gathered from a great and wide center of distribution, it is easy to combine and easy to contract.

But, as I perceive it, Mr. President, the great factors of business, of life, and of civilization are production and exchange, and products by the laws of commerce are now concentrated in centers of exchange, in neighborhoods, in metropolitan cities, in cosmopolitan cities, in great centers of exchange, which through clearing-houses and draft on shipments distribute it throughout the different quarters of the earth. I am satisfied that the progress of financial skill and ability and enterprise will give some favorable direction to the ideas which the great agricultural interests of the country are now formulating in the direction of a concentration of the products of agriculture which are not perishable, so that they will be sources of credit.

These products do now, we perceive, furnish the methods of exchange and their proceeds are a currency. Who will say that the millions and hundreds of millions of wheat values exported to Europe and concentrated in a common center of distribution and the value of it drawn in bills of lading and paid in this country is not a credit, is not a capital, is not a money, is not a method of exchange? Why, unquestionably that is true.

This idea may be followed out, in my judgment and belief, into some practical results.

PUBLIC POLICIES WHICH IMPOVERISH THE FARMER.

Our present system of banks, our methods of collecting revenue by a tax on consumption which makes everything necessary and useful to human life dearer, increase the hours of labor necessary to obtain them. The concentration of the money of the country through the tax levied on the transportation of the people in the great centers of finance bears with great hardship on the farmer and leaves him with nothing but a bare and scanty support for himself and his family.

FIVE THOUSAND MILLIONS OF DOLLARS PAID BY FARMERS.

I think the estimate is not unreasonable that between four and five thousand millions of dollars of gold values have been sold by the farmers in foreign countries since the war and brought back to the United States; and of this great sum of money nearly one-half has been required by our laws to be paid by them in bounties to others for the things which they consumed.

From the remainder all charges of transportation and its incidents have been paid; and of this great sum there has been little or nothing left, and they have had to borrow from those who held the proceeds of their labor at 10 or even 20 per cent. interest to educate their children and clothe their families until a great debt has been accumulated upon them and a hopeless future seems to look them in the face.

MEASURES WHICH WILL CONTRIBUTE TO THEIR RELIEF.

It is true that the unlimited coinage of silver will not change these conditions, will not alter the tax levied on them of one-half their products, but it will do something towards it. Money abundant, farm produce will buy more of it than it would if scarce. This will aid them in paying taxes. It will make money cheaper. Money abundant, financial enterprise will find the means of making the farmer's products, which are not too perishable, a source of banking credit at low rates of interest if the farmer requires loans.

Changes in our laws regulating banks and banking may enable them to meet the needs and interests of their combined organizations without the intervention of the Government. The Government, we must remember, is the people and has nothing but that which the people give to it. It has nothing but taxes and the credit which the power to levy taxes gives. Of these taxes the farmer pays a great part of the whole amount. Money is nothing but a means of exchanging what the farmer makes with the product of the artisan, the manufacturer, and other farmers and fruit-growers of his own and other countries.

EXTENT OF THE POWER OF GOVERNMENT.

It is true that the belief, confidence, or credit that certain things or persons will be able to effect what we desire is equal as a factor while it lasts to the actual possession or existence of the power, and in this sense the Government has a credit or confidence much greater than its real power. Its real power is limited, first, by the capacity of the people and, second, by the willingness of the people to pay.

Government often exceeds the capacity of the people to pay in times of war, and the willingness of the people always stops short of the point where the tax encroaches upon their means to buy the bare necessaries of life. It is a question whether we have not reached that point now with the great farming interests of this country.

FAVORS ANY MEASURE WHICH WILL RELIEVE FARMERS.

I shall favor any reasonable and practical measure in the direction of the ideas of the Farmers' Alliance which can afford them relief, and I regard the free and unlimited coinage of gold and silver as an important step in that direction.

EFFECT OF LIMITED AMOUNT OF GOLD AND SILVER.

Let us further examine the effect of the confinement or limitation of the currency as the representative of exchange to a fixed and limited amount which may be easily held and controlled by a few persons concentrated in our great cities or in foreign centers of exchange.

We take gold and silver, for illustration. We have found that these precious metals have a universal and intrinsic value for ornamentation and use in the arts, which makes it reasonably certain that as bullion it will always be in demand everywhere, and therefore when we have any property which we wish to convert into something else which is not convenient immediately to buy or exchange, we purchase gold and silver either as bullion or as coin for future exchange into something else.

Seizing on this property of these metals the policy of the laws and of all forms of power, whether despotic or free, from time immemorial, has refined, milled, and stamped these metals in coins of convenient sizes, and endeavored to fix and create an arbitrary ratio or relative value of one to the other, for the purpose of making them by law or force a legal tender for the payment of obligations and for the purpose of giving absolute control to government or centralized power of something which would always command the services and labor and products of mankind by its power of convertibility.

The same motive has been powerful with bankers and all forms of

private combinations, as we discover from the organization of credit on the basis of the issue of bills of credit on the basis of a redemption reserve of three dollars of bills to one of gold or silver.

This fact equally illustrates the insufficiency of the total amount of gold and silver in the world to effect its exchanges and the great power and control over the labor of the people which the control of the precious metals gives.

Having erected on the foundation of these natural values of the precious metals this great fabric of commercial and centralized power and enshrined it in the confidence of the world by giving it a legal-tender or debt-paying power, sanctioned by all governments and all forms of power and by traditions from the most ancient times, when in our modern days a golden image was fashioned and all the world was required to bow down and worship it, we may well see what a shock it is to the customs, the traditions, and the interest of the world. We can also see how great the power in the hands of those who by law are vested with the power of making this golden image and commanding the world to worship it.

EFFECT OF HIGH TAXES AND SCARCE MONEY ON THE FARMERS.

How does the farmer stand whose labor has brought back to this country four or five thousand millions of dollars of this golden treasure or its representative values in the last twenty years. First, 45 per cent. paid in bounties to other persons; second, cost of transportation collected from the remainder and drawn to New York, or London, or Amsterdam, where interest on bonds is paid; third, four hundred and fifty millions a year in Federal taxes collected and drawn to a common center; fourth, a system of banking or the right to loan money limited by law to those who can buy Government bonds, with the condition attached by law that no loans or credits shall be made to the farmer on the security of his land, and practically excluding him from the privilege of loans on the products for the exchange of which this great system has been constructed and which is its only proper use. The farmer is then compelled to borrow, when he requires money, outside of these institutions at enormous rates of interest.

It is not difficult to perceive that under this system the farmer is the most oppressed of all people.

THE DEMOCRATIC PARTY THE FARMER'S PARTY.

The Democratic party since the day when Thomas Jefferson abolished entails and established the land policy of small farms and the protection of actual settlers has been, as it is to-day, the friend and support of the farming interest, without detriment to the true interests of manufacturers, which can only flourish permanently when the farmer prospers.

GREAT BENEFACTORS WHO HAVE SPRUNG FROM BUSINESS OF MAKING MONEY.

From the earliest time the business of handling and managing money has been the most profitable of all pursuits. It has produced many great men in every age of the world. Many of the world's benefactors have sprung from it: the great Jewish banker, Montefiore; the great citizen of Washington, Mr. W. W. Corcoran, whose statue ought to adorn some public park in Washington City; in my own State a citizen of New York, Mr. H. M. Flagler, who is still living, who, though not a banker, yet a great master of finance, has used his great fortune as a benefactor of mankind, in great works of public utility in the State of Florida and deserves honorable mention in the noble list of those who having accumulated great fortunes, have been inspired with a pure sympathy with the wants of mankind and a generous ambition that their talents should leave behind them the enduring fruit of good works; and there is another citizen of New York, Mr. H. B. Plant, who uses his great means there in other works of permanent beneficence, and a third, Mr. Robert Coleman, of Pennsylvania, who is still living, for whom the like claim may be made. These men, and others like them, will live in the gratitude of future generations of the people of Florida.

MONEY ALSO BREEDS SHYLOCKS.

The business of managing money breeds also men of another kind—Shylocks, extortioners, usurers—the reproach of all time, accursed of God and man.

The scarcity of the precious metals in forms of coin, the limitation of the legal-tender, the debt-paying power to a single thing scarce and difficult to obtain, breed this latter class of men in every little community and neighborhood to prey on the people as mercilessly as the jackal preys on the dead and wounded of some deserted field of battle. These men find their support in great combinations of credit in our commercial centers; they are fair as the "whited sepulchre on the outside," but false and foul with "dead men's bones" and rottenness within, preying on the farmers and on their wives and children.

FREE COINAGE PROTECTS FARMERS.

It is because the free and unlimited coinage of the precious metals will enable the farmers, by wise combinations, to avail themselves of the opportunity to obtain the use of money that I favor it as the first and one great step towards protecting them against this class of men.

OTHER MEASURES FOR THE FARMER'S RELIEF.

Other great measures will follow. The farmers should not be misled by wolves in sheep's clothing. The great struggle in which they are engaged is not now for the first time made.

It dates back many centuries, and is the contest between the people, the great body of whom must always be tillers of the soil—and, under favorable conditions, peaceable, contented, and prosperous—and the power of combination in the interest of the few. Low taxes, popular education, small holdings of land, laws inviting the cultivation of the soil, cheap transportation, abundance of money, government based on peace establishments, no standing armies, and no great navies, opportunities for industrial education of the farmers' children, diversity of employment—these are the great points on which the battle has been fought for ages.

DEMOCRATIC PARTY THE GREAT FARMERS' ALLIANCE.

The Democratic party, under the influence of the ideas and principles of Thomas Jefferson, stands fully committed to these ideas and measures.

It is and has been a great farmers' alliance. For myself, I will go as far as those who will go furthest in the support of every practicable measure, not only of present relief, but of permanent advancement and benefit to them. I believe that, with free coinage of gold and silver, with abundance of money, with lower taxes, with wise and intelligent combinations of the farmers for economical, not political, purposes, our system of banking and finance may be so changed that it will do all that is possible to be done for their prosperity. It is obvious, in my judgment, that so long as one-half or more than one-half the proceeds of their labor is taken in taxation in one form or another the first great measure must be to relieve them from this great burden of taxation.

Relieved from this, with abundance of money from the sale of crops, with banks organized subject to safe requirements established by law and under Government supervision, the farmers themselves will control their own banks, as they did in former times, and dictate within reasonable limits of the natural law of demand and supply the sale and disposition of their own products. The farmers, under a proper system of taxation and finance, are richer than the Government and than all other combinations. Their need and the purpose of their combinations must be for the successful establishment of the economies which will save and secure to themselves the greatest share of the proceeds of their own products, for the products of the farmer's skill and labor are the sources of all prosperity and wealth. They constitute the resources of government, and when it needs money or tribute it levies its taxes on the farmer and his products.

What is needed, then, is such policies as will enable the farmer to save for his own use the largest share of the products of his own labor and such policies as will enable him to control and direct in a reasonable degree the financial agencies which furnish the means of exchanging them.

AMOUNT OF THE PUBLIC DEBT OF THE WORLD.

On January 1, 1889, the amount of the combined debt of the world was $26,100,082,695.

DEBTS OF THE WORLD IMPOSSIBLE OF PAYMENT.

All the gold and silver, whether coin or bullion, in the world will not pay the debts of the world.

The debts of some particular countries are impossible of payment.

FORCE AND EFFECT OF THIS FACT.

What is the force and effect of this fact and what is its relation to coinage and to the precious metals and to money?

Let us examine these facts and endeavor to consider what they mean.

TOTAL AMOUNT OF BULLION AND GOLD AND SILVER COIN IN THE WORLD.

The total amount of bullion and gold and silver coin in the world in active circulation is estimated in the annual statistics for 1889 to be eleven billions five hundred millions; in banks, two billions; that is, thirteen billions five hundred millions; of paper money, three billions nine hundred millions. In a note on page 377 the author says:

The total amount of gold and silver in circulation at this time in the world does not exceed seven billions six hundred millions.

All the gold and silver in the world known to have been mined previous to 1492 amounted to $8,691,374; yet the existence of only one hundred and seventy millions could be traced. In 1809 there was estimated to be one billion eight hundred and forty-three millions of gold and silver in circulation altogether, although America alone had added between 1492 and 1809 $6,000,000,000 to the world's stock of precious metals.

The grand total of gold and silver produced in the world down to June 30, 1884, is estimated to be $23,148,762,501, of which $12,709,425,520 was gold and $10,439,336,981 was silver. The total amount of gold and silver, in coin and bullion, in circulation at this time in the world does not exceed $7,600,000,000.

WHAT IS A DEBT?

It may be properly defined to be an obligation or promise, either public or private, to give or pay to some person a quantity expressed and clearly defined of some value or commodity, either in kind or in some other thing which shall be exchangeable into that or into all commodities.

INTERCHANGEABLE VALUE OF PAYMENT THE ESSENCE OF THE OBLIGATION.

The interchangeable value of the commodity in which this obligation is to be performed is of the essence of the obligation. To make this clear let us suppose that I agree to pay you 100,000 bushels of wheat at some future time. You say, "I will take your obligation to pay me this wheat in something other than wheat, if I can find something which can at that time be exchanged for wheat or for any other commodity." I say to you, "Gold and silver is that thing," and we agree on gold and silver; and we estimate, according to our judgment, the amount of gold and silver which will equal this amount of wheat, tak-

ing the present values of wheat in relation to gold and silver and our judgment as to its increase or decrease. We have then in this illustration the use and necessity of a common and interchangeable and permanent representative of value.

REPRESENTATIVE OF VALUE MUST BE PERMANENT, UNIVERSAL.

We find it then the interest of mankind to make this representative of value as permanent and as universal as possible.

A GREAT POWER.

We can see then clearly what a great power it is to be able to create or control this representative of value.

MAY BE THE MEANS OF APPROPRIATING LABOR OF THE PEOPLE.

If it be interchangeable, it may be the means of appropriating or using the products of every man's labor. Yet, as we have seen, it is a purely artificial and a subsidiary use or factor.

TRADITION AND USE COMBINE TO MAKE GOLD AND SILVER THE REPRESENTATIVE OF VALUE.

Tradition, custom, and use in all countries have combined to establish this representative of value and have found in the natural properties of gold and silver and in the desire of mankind for ornamentation the permanency and universality of use and demand required in such a representative of value.

RELATION OF ACTUAL EXCHANGE OF PRODUCTS AND COMMON REPRESENTATIVE OF VALUE.

We have also found that the necessity of mankind is for the actual exchange of things and that exchange by a common representative of value is only a convenience, and not a necessary use. Now we have found a common representative of value and have made its use universal and have sought to make it compulsory by law as a legal tender.

We have also found that through its use there has been created an amount of promises or obligations to deliver it which are many times greater than the entire amount of it in all the world.

The laborer receives a dollar for a day's labor. He takes the same dollar to the grocer and pays for a quantity of groceries, measured by the quantity of gold which the groceries will buy, and this will be greater or less as groceries may be at that time and in that place abundant or scarce, and this will depend on the facility of communication and transportation.

EFFECT OF CONTROL OF REPRESENTATIVE OF VALUE.

If this dollar is held by one man or by a few men, the persons who hold it and sell it for commodities will charge more for it than if it was abundant and held by many men.

Thus this dollar goes on its way from hand to hand in an unending circle, performing its functions without cost to the community; but when it stops, when it is concentrated, when is diverted from these proper uses by any artificial means, it ceases to be a convenience and a means of exchange, and other methods of effecting actual exchanges become substituted easily and naturally.

FORCE AND INJURY OF LAW.

Here come and begin the force and injury of law. A great mass of obligations, private and public, have acquired the force of law and are required to be performed in this dollar not in actual exchange.

A person may have all the things which the dollar may be exchanged for, and of the value of which its sole function is to be the representative, but the law requires you to have the dollar money, and if you have it not everything you have is taken, though many times greater than the value of the money representative fixed in the obligation. It is the control of the dollar, or money representative of value, and its scarcity and its abundance which are great controlling factors as to this great mass of indebtedness, public and private, and are great objects of desire, and are the means by which the great mass of the people are held in the slavery of want and ignorance, which is the worst form of slavery.

CONCLUSIONS OF FACT AND REASON.

We have thus found the following propositions of fact and reason:

First. A greater amount of public debt or public obligations to transfer and deliver the exchangeable products of mankind than there are products in the world.

Second. A mass of debt impossible of performance or payment.

Third. A mass of private debt or contracts impossible of performance, because they exceed the products of the world.

Fourth. A power in the legal-tender laws to compel the performance of these obligations in one species of exchangeable value, namely, in gold and silver, and not in other values.

Fifth. A proposition to further limit, compel, and confine the performance of these obligations to less than one-half of these two values, namely, to gold.

Sixth. The concentration of these legal-tender values in the possession and control of a very small number of persons in every country in the world who, by the ownership of the public debt of the world and through the taxing power of governments, and by the ownership of the land virtually own and appropriate the products of the world, regulate prices, and prescribe the abundance or scarcity of the supply to each person of the necessaries and comforts of life.

SUBSTITUTION OF PAYMENT OF INTEREST CHARGE IN PLACE OF PRINCIPAL OF PUBLIC DEBTS.

We may form some idea of the effect of this mass of debt and of legal-tender laws and of the tax power by a consideration of the fact that the public debt of the world is impossible of payment, and practically there has been substituted for it an obligation to pay only a part of the debt, namely, an annual charge of a fixed amountwhich is termed interest, and that the obligation to pay this annual interest has become a value, and men sell their labor and all their products for gold and silver and pay it for portions of this debt with the certaintythat the Government can never pay it, and solely for the purpose of obtaining this annual payment, and the payment of this interest or annual charge upon this great mass of fictitious and impossible obligations has become so great a burden on the people of some countries as to approach the point of impossible performance even of this substituted obligation of so small a part of the original debt.

EFFECT OF OWNERSHIP OF PUBLIC DEBTS AND CONTROL OF TAXING POWER OF GOVERNMENTS BY A FEW PERSONS.

The ownership of this public debt of Governments and the control of the tax power and the ownership of the land by a few persons in the great centers of commerce and finance are oppressive and ruinous to the people in concentrating the representative of value and directing through it the proceeds of labor and all the products of man into the ownership, use, and enjoyment of the few.

FREE AND UNLIMITED COINAGE OF GOLD AND SILVER A REMEDY.

It therefore follows that the free and unlimited coinage of gold and silver and its supplement by all other methods of exchange are beneficent uses, and while they may affect to some extent this great mass of debt which is impossible of payment, and which must fall of its own weight before many generations shall pass, and if it does not can only survive to carry civilization down with it, until both perish—while it may have this effect, it will also limit the power of the few. It will also promote fair exchange and distribution, and be an unmixed blessing to the toilers of every country in the world.

Silver-Bullion Certificates.

SPEECH

OF

HON. ZEBULON B. VANCE,

OF NORTH CAROLINA,

IN THE SENATE OF THE UNITED STATES,

Thursday, June 12, 1890,

On the bill (S. 2350) authorizing the issue of Treasury notes on deposits of silver bullion.

Mr. VANCE said:

Mr. PRESIDENT: Since I have been a member of this body I can not recall a question that has been more thoroughly and ably discussed than this of the coinage of silver, nor can I remember one which has come before this body which I think of greater interest to the people of the country.

It is a fundamental, elementary maxim of the science of finance that an abundance of money makes high prices for products, and, *per contra*, that a scarcity of money makes low prices for products. In other words, the value of the products of the world is measured by the amount of circulating medium, of the precious metals, that there is in the world to exchange for them.

I do not think anything has been better established than the necessity of this country for more money, for a larger circulation to meet its constantly enlarging business and its rapidly increasing population. We must have more money; it is necessary to our progress and to our prosperity. It is necessary that the currency of a country should keep pace with its growth in population and its business. It is a remarkable fact, most complimentary to the civilization of this age, that the wealth, and consequently the business, of the world has increased even in a far greater ratio than its population. Within the last fifty years it is not too much to say that the wealth of the world has increased tenfold. Now, the circulating medium of the world is furnished by the precious metals, gold and silver, and with the exception of remarkable finds now and then, lasting not a great while, the output from the earth of the gold and silver which furnish our circulation has kept pace neither with the population of the world in the last fifty years nor with its wealth.

In consequence of business and population having outgrown the circulating medium of the United States, hard times have come upon this country and prices of all products are low, lower perhaps than they ever have been in the history of the Government. Wages are low, lower than they have been in recent years of our prosperity, and they would have been still lower if they had depended altogether upon economic causes. The very slight increase in the compensation of labor that has taken place within the last twenty years is due more to the exertions of labor itself than to any economic cause. Labor associations and the struggles which they have made to secure their proportionate and proper division of the proceeds of capital have operated to some extent

to keep up the price of wages; but in every other respect the condition of the country is an unhappy one so far as its finances are concerned.

The debtor class especially are in trouble in consequence of the legal ratio which existed for hundreds of years between gold and silver having been dissolved and the extraordinary fall of one of the metals or the rise of the other; and owing to the fact that debts contracted years ago have to be discharged in a metal that is constantly increasing in value, the debtor class perhaps are suffering worse than any other. No, I will not say that. Those who have suffered most from this depreciation, this bearing of silver by means of legal enactment, are the agricultural class of our country.

The farmer has not only to receive these low prices for his products, but he has gradually fallen behind more and more, until his farm, and his homestead, and his roof-tree have become covered with mortgages and he is so in debt that if the present state of things continues, if he receives no more for his products than he does now and there is no aid given to him in the way of increasing the currency of the country and putting some of it within his easy reach, a very large portion of that class of our fellow-citizens are doomed to bankruptcy and ruin.

It seems to me that the causes which have tended to his destruction arise, in the first place, from the unequal taxation to which he has been subjected by our tariff laws, inasmuch as he has been compelled to sell his leading products in the free-trade markets of the world in competition with all similar products of the world and has been compelled to buy his supplies in the highest market in the world, restricted by tariff to prevent competition.

Another cause of the ruin which is threatening him arises from the fact that those same tariff restrictions operate against the extension of his trade. Inasmuch as his products can not freely go abroad, for the reason that the products of the people abroad can not freely come in exchange for them, he has not only been subjected to these disadvantages to which I have just alluded, but his market has been so restricted that the natural law of supply and demand could not work to increase the price of his products.

But, as if that was not enough, after you had practically forbidden him to send anything abroad and stationed a sentinel with a club at every port of the country to keep anything from coming in to exchange with him, you stepped in at the instigation of Wall street and demonetized one-half of the currency of the country which gives credit and value to his products. One of the strangest economic operations that I have ever known advocated by sane men in modern times is that when the wealth and business of the world had increased tenfold the money with which that business was done should have been diminished one-half. Just when it had most to do was the time when the currency was curtailed, and the work which had been performed by both silver and gold was left to be performed by gold alone.

But so it is that these hard times have come upon the country, and we are called upon to do something to relieve the people who are in distress. Inasmuch as there seems to be but little chance to relieve the farmer of the incubus which has been imposed upon him by unjust taxation, then the question arises, are we willing to relieve him in this way or in any other way?

In order that there may be no misunderstanding about the purport of my remarks, that it may not be inquired as I go on which side I am upon, I simply wish to say now that I favor the unlimited coinage of silver money and the restoration of silver as it was before it was demonetized and the coinage of the silver dollar was forbidden in 1873.

Now, what is the danger of this coinage? Suppose that we yield to the clamor of our fellow-citizens who are in distress, the laborer, the workingman, and the agricultural classes everywhere with their labor, and the common people at large, who all demand this addition to our currency—suppose we were to yield to it, what is the danger that is to come upon this country? In the first place, it is said that we will be immediately deluged with silver; that all the silver of the world will come immediately to the United States to be coined. Mr. President, I do not regard that as a danger. I do not regard it as a misfortune if, having $1 in my pocket with which to buy so much flour and so much meat, there comes legislation which will put $10 in my pocket to do the same thing. Some men may regard that as a misfortune, but I do not. But, treating it as though it were a misfortune, I wish to suggest that there is no danger of any such thing happening. The silver of the world will not come here for various reasons.

In the first place we coin at a ratio of 16 to 1 when Europe coins at a ratio of 15½ to 1. It is hardly supposable that a man who had silver in Europe worth 15½ to 1 would lose 3 per cent. upon it by voluntarily taking it where it could be coined at only 16 to 1. It is very certain that the silver of the silver countries of the world would not come here, because it is their standard of value, and they would not make the sacrifice, of course, of sending it off and making their standard of value scarce.

The silver of Asia would not come, nor would the silver of European silver-standard countries come, nor would the silver of the bimetallic-standard countries of Europe come, nor would the silver of the gold-standard countries come. Why? They all use silver, every one of them. The gold-standard countries use silver. I have here the last copy of The London Economist, dated the 31st of May, in which I find a table of the coinage of Great Britain and of the world for the year 1889, and I find that Great Britain coined over $12,000,000 of silver last year, 2,215,000*l.*, just about half of what we coined ourselves. I find the following important fact, which is commented upon by the editor of The Economist:

> The gold coinage, it will be observed, consisted wholly of sovereigns, the coinage of half-sovereigns being suspended, as it was in 1888 also. Indeed, during the past few years only 841,200 half-sovereigns have been coined. An opening has thus been created for the more extended use of silver in the currency, and two measures taken by the Treasury in 1889 further increased the use of the white metal. Arrangements were made for paying wages in dock-yards and other large Government establishments in silver instead of in half-sovereigns, and as the small charge previously made for sending silver from the Bank of England to banks or firms in the provinces was found to interfere with the free circulation of the metal, that was abolished, the cost of carriage being defrayed by the mint.
>
> It is no doubt to these measures that the large expansion of the silver circulation is mainly due, and although the Chancellor of Exchequer was blamed in certain quarters for pushing out silver he unquestionably acted wisely in doing so. The half-sovereign is a very convenient coin for the wealthier classes, and as it is less troublesome to handle than silver to the same value it is naturally preferred by bankers and those who have large wages bills to pay. The great mass of wage-earners, however, find it more convenient to be paid in silver than in gold, which they not unfrequently have a difficulty in getting changed, and, as in addition to this there is a very large profit in the issue of silver, while the half-sovereign is a costly coin to maintain, there is a double advantage in the substitution within due limits of silver for the small gold pieces.

This is the organ of the gold-standard economists and financiers of England, and this is the official action, showing that the Government of England, although it has the single gold standard, finds it necessary not only to keep a certain amount of its silver in circulation, but is from time to time increasing that amount and refusing to coin the smaller pieces of gold in order that the silver may more readily take its place.

Now, where has England got any silver money to send to us in case we adopt the free coinage of silver? Why, Mr. President, the Secretary of the Treasury tells us the same thing. In his last report he tells us that England could not send any of her silver here without the greatest inconvenience and without disarranging her currency and incommoding her people.

If this be so, that the chief gold-standard country of the world can spare no silver, surely the double-standard countries will not spare it.

Where then is silver to come from? There is no surplus silver known to be anywhere unemployed in Europe, unless it be the remnant of the German quantum that was on hand when Germany demonetized silver and adopted the gold standard, and, as she has already sold off more than $140,000,000 worth of her surplus, who knows how much silver Germany has on hand? France has more than any other country, but she is using it all and coining more.

The Secretary of the Treasury also estimates for us that the total production of silver in the world is only about $142,000,000. I believe it is. Of that India alone takes and is obliged to have about $35,000,000. China and Japan take about $20,000,000. The remainder, bringing the total down to about one-half of it, $70,000,000, is distributed over the silver-using countries of Europe. From that must be deducted the amount required for use in the arts, which is estimated at about $15,000,000. That would leave about fifty-five or sixty million dollars of surplus silver that could come to the United States in consequence of our adopting the system of free coinage. But by the table which I append from The Economist it will be seen that the world's coinage for last year was 25,376,278*l.*, or more than $125,000,000, leaving only about $17,000,000 for use in the arts and for "flooding" us! The dire predictions of calamity and disaster that are made by Senators on the other side, of ruin to come to our financial system by this influx, would mean, if my calculation is correct, only about $1,000,000 more than is provided for by this bill which was reported by the Finance Committee, which is $54,000,000.

* No record obtained.

To the increase in the gold coinage of the year it will be observed that this country and Australia and Germany have mainly contributed, while the decrease in the silver coinage is fully accounted for by the lessened output of the Indian mints. The Indian coinage in 1888 was, however, exceptionally large, owing to the importation in that year of the native coins received from the Maharaja Sindia.

In confirmation of the views I have just been expressing, to the effect that there is no danger of a flood of silver, I beg leave to read from the report of the royal commission, those distinguished gentlemen who had in charge the inquiry as to the depression in trade, etc., arising from the separation of gold and silver in bullion value. They say, on page 78, as follows:

Turning next to silver, it is very difficult to estimate the extent to which the use of this metal has diminished in Europe and America owing to currency changes.

No doubt the adoption of a gold standard in Germany diminished the demand for silver in that country, but on the other hand there has been a very large coinage of silver in the United States during the last ten years, amounting to upwards of $300,000,000, while in the ten years preceding 1873 the currency in that country was paper and but very little silver was coined.

When all the facts are taken into account it seems doubtful whether there has been, on the whole, any great diminution in the use of silver for currency purposes.

Now, if under all those circumstances, if in the period following the depression of silver by its demonetization in many of the leading countries in Europe and by the closing of the mints of all the countries of Europe to its coinage it had still maintained, or very nearly maintained, in the language of these distinguished gentlemen, its use in circulation, how can we argue that the increase of its use now will be injurious to anybody? The very fact that the price of silver has never fallen as compared with products and that a dollar in silver now will buy as much as a dollar in gold and as much as a dollar in anything else will, is evidence that the county wants it and that the country desires more of it. That which the country wants kept in use and wants increased can not possibly be construed by any kind of philosophy into an injury to the country.

I believe all sides agree now, though they did not agree until pressed by what they regard as the great danger of the free coinage of silver, that, whilst it would be an excellent international arrangement, yet the United States Government would find itself overwhelmed and ruined if she undertook to remonetize silver and to maintain its parity with gold throughout the world. Who prophesies all these dangers to this country? Who tells us of the evils that are to follow if we remonetize the silver of our fathers and give the people once more the money that they are entitled to have by the Constitution of the United States? The same men who told us in 1875, in 1878, in 1883, in 1885, and all the way through, whenever any increase of the coinage of silver or the remonetization of the silver dollar was proposed; the same men who told us then that ruin would come tell us now the same story. When pushed to the wall by the facts they begin to prophesy, and in every instance they have proved false and lying prophets. In other words, the prophets speak for their profits, and that is what they are doing now.

Why could not the United States maintain the parity of gold and silver with unlimited coinage, if she could maintain that same parity and preserve herself from financial ruin by adopting the bill reported from the Finance Committee, which comes very near taking all the surplus silver in the world? What is the practical difference of the two propositions? We have the greatest country in the world; we are the third country in the world in territorial extent; and when you take into consideration the character of our country, its situation, its fertility, its teeming and untold wealth, and the energy and intelligence and the force and power of the people, it is not too much to say that this is the greatest country in the world, and that it can solve successfully this greatest financial problem.

Let me read to you what is reported in the newspapers to have been said recently by a distinguished English financier and bimetallist, Mr. Moreton Frewen, when interviewed on that subject. The interviewer says:

And, if these results follow, do you think that England will then accept bimetallism?

The results to which he alludes were answered in another question. I had better read that first:

Assuming that there is to be a coinage monthly of 4,500,000 ounces, I think these results will follow during the next twelvemonth: There are some 87 crores of Indian rupee paper, worth to-day, say, 55,000,000*l.*; the rupee will rise to about 22*d.*, and these securities will increase their value to 80,000,000*l.* There will be a great boom in the Lancashire trades, and real estate in Manchester will rise. *Pari passu*, there will be an industrial crisis in Bombay, and immense numbers of black men there will be thrown out of work. There will also result a rapid rise of prices and wages in the United States which the gold bugs here will ascribe to inflation—for everything with these gentlemen is inflation unless the world's currency is being contracted visibly by anti-silver legislation—and trade to the States will be stimulated, and America, rapidly increasing her imports, will for a year or two lose much gold, which gold will come here, so that probably 1891 will be a year of brisk speculation in the city.

Then the question is put:

And, if these results follow, do you think that England will then accept bimetallism?

Probably not; and, however desirable, it may be no longer necessary; for if, as I anticipate, the action of Congress forces silver up to nearly the American coinage ratio of 1 to 16, it is almost certain that after a conference with the United States the mints of the Latin Union would be thrown open to the free coinage of silver once more. I quite believe that America could, even single-handed, maintain the ratio—the par of exchange—all over the world; but certainly America and France together can. So that the world of trade would be once more bimetallic, as before 1873.

I have no doubt in the world of the soundness of that opinion. I believe the world is waiting for somebody to begin and that the moment this great people throw open the doors of their mints, the moment that they pledge their immense volume of business to support the ratio and to support exchanges, the moment that they pledge their great wealth to support silver money, the success of free coinage will be so well assured that the smaller nations of Europe, who ardently desire the free coinage of silver money, will at once come to the rescue, and that it is only a matter of courage that is required on our part to cease to regard the interested howls of gold speculators, throw open the doors, and make the beginning.

Mr. President, all classes of our people desire the passage of this bill. The agriculturists especially desire it; and as the rates of exchange have to be maintained by our foreign commerce and as seven-eighths of that foreign commerce is the product of the field and the farm, why should not their voice be heard in this matter? Yes, sir; out of every $8 which enters into our foreign commerce $7 of it is the product of the agricultural classes of this country, and that foreign commerce alone maintains the rate of exchange between our country and Europe.

The agriculturists desire this thing earnestly. They will suffer, if it is not successful, more than anybody else and longer than anybody else through any losses of trade which can possibly occur. The merchants will charge up the percentage they have to pay for exchange; the bankers will make it off their customers; but the farmer whose product goes to market and is sold has no one upon whom he can throw his losses. Every man in the country who works for wages desires this great change.

Silver is the money of the people, the common people, not of the speculators, not of the wealthy men, not of kings and princes and potentates. It is the money of the people and has been the money of the people so long and so far back in the history of our race as we have any record whatever.

The common day laborer, who works with his hands and receives his pay on Saturday night, knows nothing of your theories of finance and economy; he knows nothing of the automatic theory; he never heard of Gresham's law; he never heard of the differences in exchange and of those things which are technical to the theory of finance; but he knows that when silver dollars are plenty his wages are higher than when they are scarce, and he knows when he hears them clinking in his pocket as he returns to his home on Saturday night that they make a music which speaks of food and raiment, cheerful faces, and more comfortable surroundings at his hearthstone. He wants this money. We ought to give it to him.

There never was a greater crime perpetrated against the American people by legislation—and that is saying a great deal, for I have known some most infamous crimes of that character—than the one which robbed them of the value of their silver money. Nature has placed it in the earth at a ratio of about 15 or 16 to 1. The poor men who use it and receive their wages and buy their weekly supplies with it are in a ratio of about 16 to 1 of the rich men who put their money in bank and use checks and handle gold. Let us establish that ratio and give them this money.

But we are told that if we increase the value of silver money and make it about the ratio of 15½ to 1 and make it a legal tender on a parity with gold in all respects we shall so stimulate the production of silver that the price will go down again and financial ruin will ensue.

Mr. President, how is money produced? Do you sow a crop of it in

the earth? Is it produced like wheat, or tobacco, or cotton? Do you sow it broadcast, or do you drill it, or do you plant it in hills? To talk about increasing the value of silver stimulating its production, it seems to me, Mr. President, is not much removed from talking nonsense. If making it of equal value with gold or even increasing its value would stimulate its production, will some one please tell me why gold, which is now more valuable than it has been for fifty years, is constantly decreasing in its production?

Why is it that the stimulation will operate to bring out more silver than we want if its value is made equal to gold, when, the value of gold now being about 30 per cent. above silver, the product itself is decreasing from year to year?

It is well enough to look ahead at these things.

Why, this same royal commission, or a portion of them, gave it as their opinion that, if something was not done to increase the value of the silver production and to create a parity between it and gold, gold would go on appreciating until there would be financial disturbances, and the credit of the world would be disturbed by the appreciation of its standard just the same way that it is disturbed by the depreciation of its standard; and that it was absolutely necessary to have a bimetallic currency, so that silver in its fluctuations and its uncertainties might be supplemented and supported by gold, and that gold in its fluctuations and uncertainties might be supplemented by silver. In other words, as the commission expressed it, silver was needed to broaden the base on which the financial edifice stood, in order to make it more secure.

Mr. President, I may argue myself into opinions which are not well founded, as men frequently do when they have the object which is to be attained much at heart. I may argue myself into the belief that there is no argument on the other side, but at the same time no proposition can be plainer it seems to me. What are we going to do for our country? What are we going to do for the agricultural classes, whose farms and homesteads are covered with mortgages? What are we going to do for the working classes, who are struggling and striving to maintain their wages. Where is our country going if we continue to restrict silver and that is followed by the continued appreciation of gold and a reduction of prices in consequence—where are we going to land? How are you going to recompense the farmer for the evils he has suffered, from the very nature of things, through unequal taxation? Or do you really intend to do anything? If not, candor requires you to say so.

It is your best policy to say so. My word for it you can not fool him much. I do not see how you are to do it now except by giving him abundance of money and putting it within his easy reach, and then, in the language of the distinguished English financier which I have quoted here, wheat, flour, pork, beef, and all the food products that are produced in this country will go up, the prices will be increased, and the farmer will be enabled to discharge his mortgages, and his homestead once more will be safe. He can then educate his children, and he can feel that the laws of his country are not unjust to him; that they have given him what he has desired, and after long years of patient suffering his time has come at last.

Let me read once more about the effect that the increased value of silver will have upon the products of the farmer. The only two items, or rather the two main items, in which the cheap silver countries of the world, India particularly, compete with the United States are wheat and cotton. There we not only have to compete against the cheap labor of those countries—and we can hardly form a conception of how cheap it is—but we have to compete also under the circumstances which are produced by the fact that a silver rupee in India will buy just as much wheat or cotton as it ever did, and that the English merchant can buy the silver rupee in London, or the silver to be converted into the rupee, or with which to purchase the rupee, for 30 per cent. discount, and that enables every man who has a bushel of wheat in India to be shipped from Calcutta to England, to meet the bushel of wheat that comes from Illinois or the plains of the West in the market of London with 30 cents on the dollar advantage over it, to say nothing now of the cheap labor with which it is produced. Here is what Mr. Frewen said on that subject:

> Now, it is no longer questioned, even by our monometallists here, that the lower the price of silver falls the lower must fall the prices of wheat, cotton, and other American exports. If the silver countries, say India, can secure in Mark Lane the gold equal to 20 silver rupees per quarter they are satisfied to sell their wheat. Therefore, with the rupee at 2*s.*, the price of wheat here will be 2*l.*, but with the rupee at 1*s.*, then 1*l.* Thus the export price of American wheat, and therefore the entire home price, the New York price, has been hammered down by the great fall in silver, and has resulted in the impoverishment of the farmers of the far West to a degree quite pitiable. I think farmers west of the Alleghanies have suffered even more than in England since the monetary revolution of fifteen years ago, and it is for this reason that the strength of the silver party is in the Central, the Western, and the Southern States.

Mr. President, it seems to me that those of us who make professions of regard for the great agricultural portion of these United States, those who constitute nearly 50 per cent. of all its workers, of all those engaged in labor or gainful occupations, those who furnish seven-eighths of those products which constitute our foreign commerce—I say if those of us who profess any regard for them and any desire to do something for them refuse either to take the taxes off their necessaries of life or to give them abundant currency, we might well be set down as their absolute and implacable enemies, as men who will do nothing for them, because all the means by which it is sought to ameliorate their condition have been rejected by these statesmen.

I do not know, Mr. President, that I have anything more to say. I only desired to make a few brief remarks on this silver question, in order that my position might be known to my people, who are deeply interested in it, and in the desire that I have to contribute something towards this discussion and a proper solution of the question which we have been debating. It is difficult, indeed, to go over this field, which has been so carefully swept and gleaned, and add anything worthy of consideration; but I am obliged to the Senate for having listened to me with so much attention.

Samuel Jackson Randall.

REMARKS
OF
HON. WILLIAM McADOO,
OF NEW JERSEY,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, June 14, 1890.

On the resolutions of respect to the memory of Samuel J. Randall, late a Representative from the Third Congressional district of Pennsylvania.

Mr. McADOO said:

Mr. SPEAKER: We stand in the shadow of a great name. We pay a tribute of honor and respect to an immortal memory. Samuel Jackson Randall, the intense and devoted American, the loyal and loving Pennsylvanian, the tribune of the people, the faithful friend, the invincible leader, the unstained, unscathed, long-tried public servant, the proud, self-respecting man, the humble, trusting Christian, has passed from the highest courts of earthly honor to the august temples of heavenly glory, from the circles of domestic happiness and affection to the unbounded realms of infinite love and eternal felicity.

It was my good fortune to share the confidence and friendship of Mr. Randall from my first appearance here, and thus to get some slight insight as to his convictions and character.

Like all men cast in bold, rugged, and heroic mold and destined to play chief parts in great events, he was essentially natural, simple, and childlike in his intercourse with his friends. That splendid face, chiseled in strong, classic lines, would melt into tenderness and unaffected interest at the prattle of a child or the warm clasp of a friendly hand; and those soulful eyes, which could flash the fire of scorn and determination on an enemy, would dim in deep sympathy at the tale of sorrow or misfortune.

Mr. Randall had all the qualities of a leader of men. Placed anywhere, he would naturally and without effort be looked up to as counselor and leader. An attractive personality, indomitable courage, great prudence, eminently practical, and with intense and immovable convictions, other men came to him as streams seek the sea. I have in many cases known men to come here with violent antipathies to his ideas on public questions, and yet in the course of a few weeks without in any way yielding up their own opinions become his warmest admirers and friends.

I have alluded to his qualities of leadership, and I may here repeat what I often said to himself and what I yet believe, that, with his foresight, invincible determination, tremendous staying powers, careful consideration of his followers, faithful attention to details, and instinctive knowledge of the weak points in an enemy, had he been educated to or followed the profession of arms, he would in case of war have been one of the world's great soldiers.

The bent of his mind was concentrative and direct rather than speculative. One demonstrated fact was of more value to him than all the speculations of philosophy. While possessed of a great fund of knowledge and ripe in his experience with men, he was more a man of action than a man of the library. He valued means by their results. On what he considered the proven and apparent facts he stood as on a rock beset by the tempestuous waves of conflicting opinions. From the central and main question he made few excursions into the by-paths of collateral issues. This did not arise from either timidity, lack of mental grasp, or narrowness of vision, but from an eminent conservatism and an intense desire for action that would show results. The world to him was a real world, calling for action, vigilance, devotion to duty. To know anything was, with him, to know it thoroughly to the smallest details. Patiently, laboriously, faithfully, perseveringly he mastered the whole vast enginery of this Government in its general scope and in its minutest particulars. His generalship, his tact, his patience, his inexhaustible knowledge displayed in the passage of a great appropriation bill were most remarkable.

No man knew so well as Mr. Randall when to speak and when to be silent, when to reply to criticism, and when, without word from him,

to let the House judge for itself as to its merits and fairness. Although he was at heart a very proud and sensitive man, he could sit as calmly as a sculptured Ajax and defy by his very silence the bitterest and most personal attacks. The strong, determined, well chiseled face, with its fine expressive eyes, would look sternly, but calmly, into the excited countenance of the impassioned critic. But, if he did reply, his opponent would long have occasion to remember the occurrence. The speech was short, the sentences few, but each word struck home like the blow of a sledge-hammer. For the time being, a veritable Thor was swinging his huge iron maul, crashing its way with thunderous noise through opposing obstacles. The man who swings this monster mallet can not play with it all day to divert himself, as gentlemen of the light sword are wont; in deep impressive silence must he store up the prodigious force to send this great irresistible body whirling through mid air; patient, too, he must be, deaf to taunts and challenges from hosts of ambitious champions, who, in the world's warrings, play their part, no doubt, well, but with whom he can have no quarrel, his place and mission being so different from theirs. Many men may man the bellows and stir the coals and prepare the iron, but when it is heated only Thor himself can rain down these crashing thunder strokes.

As the term is commonly used Mr. Randall was not an orator, but if intense earnestness of manner, terse, vigorous, expressive phrases, rugged, direct, positive statement of convictions, constitute eloquence, then he never failed to be eloquent and impressive. I judge that to those who always associate graceful and pleasing oratory with Congressional leadership, he was at first view disappointing, but even to them he soon revealed his great and unusual powers and they soon felt the all-pervading influence of that strong and forceful personality. A deep, sincere, aggressively honest nature, voicing in tones naturally attractive and pleasant the intensity of its convictions, needed little of the arts of rhetoric. He seemed to care little for his manner, which was simple, natural, and elementary, and was concerned wholly for the matter. He seemed at times to be limited in his vocabulary, and would use two or three times in a short address the phrases which he found most expressive. I do not think this really arose from any lack of flow of words, but that he was much averse to using many, and seized readily on those that most quickly and fully expressed the thought that was in him. He would seize a single word that conveyed his meaning and hurl it like a javelin true to his aim. He was at times very happy in his replies, as is well known.

Mr. Randall's whole course in public and private life was based on great fundamental principles which to him represented the substance of truth, and to these lines he rigidly and sternly adhered. He was not oblivious to criticism, but he lived without and above it, and so long as he had the approval of his reason and his conscience it never entered his mind to regard it in the slightest. He was always fair and manly to his opponents, and fought them in the open field, asking no favors. He was withal a master of that strategy which wins in war and politics. He frequently followed the tactics of allowing the enemy to exhaust himself and then swiftly and overhelmingly crushing him. Nothing could divert him from the main purpose he had in view. He wasted no energies on minor matters, but made all roads lead to the desired end. It does not follow from this that he rode a hobby or narrowed his sphere of action here. On the contrary, he participated in the general business of the House with rare zeal and fidelity, and when in health was a most faithful attendant in its sessions, sitting calmly erect, vigilant, and self-possessed in his accustomed seat.

He was the best friend of the new member, especially the young man coming here for the first time. He was a rare good judge of men and his friendship never slept, so that unknown to his friends he was constantly aiding them and studying their interest. He was as solicitous about the success of his friends, as all who in Congress were honored with his friendship can testify, as a mother about her children. To them he would write when away from here the kindest letters, in which his deep and hearty interest in them was most felicitously expressed, and which always conveyed pointed and practical advice. He was never too busy or engrossed to serve his friends, and he would not hesitate at any time to step into the breach for them. His deep, earnest friendship and intense sense of gratitude were among his strongest traits. His friendship would sacrifice everything but his integrity and convictions.

It is a tame phrase to say that he was honest. He was more than that: he was not only conventionally honest, but he had enlisted for life in a deadly war against dishonesty in all forms. His best friend could come to him and ask anything, if only his hands were clean, and his heart pure, and his purpose honest, but he was justice personified to friend and foe when a shadow of impure motives rested on them. "You must not speak to me about that bill," he said sternly to a friend who ventured to ask his aid for a pending measure. "It is a bad bill, and I shall do everything I can to defeat it." He had little patience with self-seekers who approached him with fulsome flattery, and generally, with due regard to politeness, brought such interviews to a speedy termination. He was always willing to give a fair hearing to all who approached him, having no regard to person, but hated wordy circumlocution and always insisted on getting at the very heart of the matter as soon as possible. He was, on the other hand, infinitely patient with the honest and inexperienced in distress and needing his aid.

He always rose to the occasion. Who can ever forget the passage of the bill for the benefit of General Grant, then on his dying bed? The clock ticked the seconds to the dissolution of the Forty-eighth Congress. Without, great hosts of jubilant citizens awaited the climax in a peaceful revolution in government. Within, clamor and bustle and confusion on every hand. Then the master hand of Samuel Jackson Randall seized the discordant elements and molded them to his will, stilled the angry sea of acrimonious debate, and directed the waters as he wished. By his skill and sheer force of character he had seized this vast enginery, rushing wildly in the confusion of the closing hours of a Congress preceding the inauguration of a Chief Executive, and when political passions and prejudices were fiercest, directed it, when every second was precious and big with fate, into executing an act pregnant with sentiment and of national and universal importance.

Mr. Randall was a true friend to the South and its people. He took a deep and abiding interest in the growth and development of that section, and nothing so rejoiced him as the phenomenal progress made in utilizing its great mineral wealth. I had the honor to accompany him in 1885 on a tour through portions of Kentucky, Tennessee, and Alabama, and it was gratifying to see the esteem and affection entertained for him by the citizens of those States. Those who differed with him on the economic questions of the day were as enthusiastic and friendly as those who agreed with him, for all remembered with deep gratitude his noble and successful fight for the people of the South when sectional passions were still hot and partisan prejudices intense. His manly bearing and noble simplicity of manners charmed all who met him, and, in return, the continuous ovations of a warm-hearted people lingered with him as a sweet memory to his latest moment. "I want to see these States in the great mineral region of the South outstrip, if possible, even my own State of Pennsylvania," was a constant remark of his on that tour. He was always enthusiastic and sanguine as to the future of the people of the Southern States and as to their ability and patriotism to solve the great questions committed to them, and, in return, some of the evidences of their regard for him were touching in the affection they expressed. I well remember how, in the early dawn of the morning, at a little station in the mountains of Alabama, a horseman rode up to the train, having ridden many miles in the night to present to him a great wreath of flowers, made up by the ladies of the locality and having attached to it a card expressing the esteem and gratitude of the women of the South. Only Omniscience can tell how many moments and weary hours of pain were soothed by the consciousness of the affection in which he was held by his countrymen, nor how much the sting of death was removed by the memories of a useful and honorable life.

Of Mr. Randall's home life it is sufficient to say that it was worthy of the man. Love, honor, truth, all the domestic virtues, gathered around the family board, and his private life in its simplicity and unaffectedness recalled the lives of the great fathers of the Republic. To his faithful companion, the true and noble woman who had shared his sorrows and his joys for so many years, the loving and unselfish wife, he was always simple and obedient as a child, and he struggled with his latest breath to call by the dearest of terms "mother." To this noble and stricken woman the deep gratitude and sympathy of the Republic go forth in no mean measure. The laurel wreaths laid on the grave of her husband will outlive many such won in the field of war, and his services to his country were much greater than those of many heroes whose deeds were done under the intoxicating excitement of physical conflict in the pursuit of military glory.

A truer man never sat in the Congress of the United States. Pennsylvania never reared a more loyal and devoted son. Proud of her history, faithful to her interests, he rested secure in the love and respect of her people, and withal, in the broadest and best sense, he was a grand type of American citizen, knowing no confines or geographical limitations to his patriotism. In his power and influence, the oak towering on the mountain-top above its fellows; in his integrity, the unimpressionable rock washed by the turbulent waters of the ocean, his character and example remain to his countrymen as stimulative to honorable lives, noble deeds, fraternal good feeling, devotion to duty and to country. For some time before he withdrew from active duty in the House, and while as yet his physical weakness was not generally known, he intimated to his nearest friends that he was engaged in conflict with disease. He entered this last dread conflict for life cheerfully, determined, and even sanguine, as was characteristic of him in all contests. He was, in truth, although not demonstrative of it, deep down in his heart, at all times a deeply reverential and, in the best sense, a religious man, and his last open confession of his faith was, I believe, made in the hope that it might influence his fellow-men. Patiently, without a murmur, anxious only for the good he might do, he waited cheerfully the summons to pass into "the better country." Oh, big, brave man, thy day's work so well done, the approaching night found thee without fear cheerfully going to thy home in the "house not made with hands, eternal in the heavens."

Silver.

SPEECH

OF

HON. THOMAS M. BAYNE,

OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, June 25, 1890.

The House having under consideration the bill H. R. 5381, with Senate amendments, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. BAYNE said:

Mr. SPEAKER: I hope the House will insist upon adhering to the bill originally reported by the House Committee on Coinage, Weights, and Measures which preserves the bullion-redemption feature. I hope the House will not agree at all to the Senate amendments. With due respect to that body, I think the Senate amendments illustrate simply a craze of the day.

The first section of the Senate substitute authorizes the free coinage of silver. The fifth section, not content with what our mints might do, proposes to have the Secretary of the Treasury issue certificates upon all the silver that may be offered. At the ratio of 16 grains of silver to 1 of gold, this will make the United States the dumping-ground for the silver of the entire world.

It is proposed by the Senate of the United States by the bill which is now before us to authorize the free coinage of silver at a juncture in the history of this world when the two metals have separated more widely than ever before since they have been used as coin. From the beginning of the Government up to 1873 there were not over eight millions of standard silver dollars coined by the United States mints. Up to that date silver was worth more than gold at the then existing ratio of 16 to 1. In 1874 the divergence began against silver, and silver became less valuable than gold at the ratio of 1 to 16. That divergence has increased gradually, though constantly, from that day to this, until to-day the difference between the value of the two metals—or it was in 1889—is 1 to 22.10. Now, at this period in the history of the two metals, when the divergence is greatest, when the silver that would go into the dollar is worth but about 72 cents, it is proposed to open our mints, and not only our mints to their full capacity, but to permit silver bullion to be deposited with the Secretary of the Treasury and silver certificates issued for all the silver that may be brought.

Mr. KERR, of Iowa. Not silver certificates.

Mr. BAYNE. Well, certificates of deposit on the bullion to the extent of the entire silver of the world that may be dumped down upon our country at a value of 412½ grains of silver to the dollar when these 412½ grains are worth only from 72 to 73 cents. If that is not craziness I do not know what craziness is. If that will not eliminate from our country the $450,000,000 in gold that are now in circulation either by certificates or in substance, then I do not know what will occur in the future. If that will not reduce our country to a silver standard of value, supplant the gold standard, and give us a fluctuating measure of value I do not know what will occur in the future.

If that will not disturb all of our commercial relations and reduce this country, which can become by virtue of its great wealth and tremendous resources the gold treasury of the world, if it will not reduce it to a parity with the silver countries of the world, such as Mexico, Russia, the West Indies, and all of the other silver nations, I do not know what will occur in the future. It is as certainly and emphatically a craze to-day as was the greenback craze in its time, which has been abandoned by everybody who has given thought to the subject. And, Mr. Speaker, for this great, rich, and powerful nation of ours to yield its foremost place among the great commercial nations of the world which have their gold standard supplemented and aided by silver coinage—I say for this great nation to yield its place among them would be no more nor less than financial suicide.

The first amendment of the Senate reads:

That from and after the date of the passage of this act the unit of value in the United States shall be the dollar, and the same may be coined of 412½ grains of standard silver, or of 25.8 grains of standard gold; and the said coins shall be legal tender for all debts, public and private. That hereafter any owner of silver or gold bullion may deposit the same at any mint of the United States to be formed into standard dollars or bars for his benefit and without charge: but it shall be lawful to refuse any deposit of less value than $100 or any bullion so base as to be unsuitable for the operations of the mint.

That is free coinage. But the capacity of the mints of the United States is limited. It is estimated, I believe, that if the mints were run to their full capacity they could not coin, perhaps, over fifty million silver dollars a year. So, to give the dumping operation unlimited sway, the fifth section was conceived. Listen to the fifth section proposed by the Senate:

SEC. 5. The owners of bullion deposited for coinage shall have the option to receive coin or its equivalent in the certificates provided for in this act, and such bullion shall be subsequently coined.

By that section the relief and protection measurably afforded by the incapacity of the mints are taken away. If that is not an invitation to the silver-bullion owners of the world to bring their silver bullion to the mints of the United States as fast as they can carry it, I should like to know what it is.

Now, in the report of the Director of the United States Mint (1890) on the production of the precious metals in the United States the ratio of silver to gold is shown from 1687 to and including 1872 to have been in every year, excepting 1812 and 1813, more valuable than gold on the basis of 16 to 1.

Here is the table:

[NOTE.—From 1687 to 1832 the ratios are taken from Dr. A. Soetbeer; from 1833 to 1878 from Pixley and Abell's tables; and from 1879 to 1889 from daily cablegrams from London to the Bureau of the Mint.]

Year.	Ratio.	Year.	Ratio.	Year.	Ratio.	Year.	Ratio.
1687	14.94	1734	15.39	1781	14.78	1827	15.74
1688	14.94	1735	15.41	1782	14.42	1828	15.78
1689	15.02	1736	15.18	1783	14.48	1829	15.78
1690	15.02	1737	15.02	1784	14.70	1830	15.82
1691	14.98	1738	14.91	1785	14.92	1831	15.72
1692	14.92	1739	14.91	1786	14.96	1832	15.73
1693	14.83	1740	14.94	1787	14.92	1833	15.93
1694	14.87	1741	14.92	1788	14.65	1834	15.73
1695	15.02	1742	14.95	1789	14.75	1835	15.80
1696	15.00	1743	14.85	1790	15.04	1836	15.72
1697	15.20	1744	14.87	1791	15.05	1837	15.83
1698	15.07	1745	14.98	1792	15.17	1838	15.85
1699	14.94	1746	15.13	1793	15.00	1839	15.62
1700	14.81	1747	15.26	1794	15.37	1840	15.62
1701	15.07	1748	15.11	1795	15.55	1841	15.70
1702	15.52	1749	14.80	1796	15.65	1842	15.87
1703	15.17	1750	14.55	1797	15.41	1843	15.99
1704	15.22	1751	14.39	1798	15.59	1844	15.85
1705	15.11	1752	14.54	1799	15.74	1845	15.92
1706	15.27	1753	14.54	1800	15.68	1846	15.90
1707	15.44	1754	14.48	1801	15.46	1847	15.80
1708	15.41	1755	14.68	1802	15.26	1848	15.85
1709	15.31	1756	14.94	1803	15.41	1849	15.78
1710	15.22	1757	14.87	1804	15.41	1850	15.70
1711	15.29	1758	14.85	1805	15.79	1851	15.46
1712	15.31	1759	14.15	1806	15.52	1852	15.59
1713	15.24	1760	14.14	1807	15.43	1853	15.33
1714	15.13	1761	14.54	1808	16.08	1854	15.33
1715	15.11	1762	15.27	1809	15.96	1855	15.38
1716	15.09	1763	14.99	1810	15.77	1856	15.28
1717	15.13	1764	14.70	1811	15.53	1857	15.27
1718	15.11	1765	14.83	1812	16.11	1858	15.38
1719	15.09	1766	14.80	1813	16.25	1859	15.19
1720	15.04	1767	14.85	1814	15.04	1860	15.29
1721	15.05	1768	14.80	1815	15.26	1861	15.50
1722	15 17	1769	14.72	1816	15.28	1862	15.33
1723	15.20	1770	14.62	1817	15.11	1863	15.37
1724	15.11	1771	14.66	1818	15.35	1864	15.37
1725	15.11	1772	14.52	1819	15.33	1865	15.44
1726	15.15	1773	14.62	1820	15.62	1866	15.43
1727	15.24	1774	14.62	1821	15.95	1867	15.57
1728	15.11	1775	14.72	1822	15.80	1868	15.59
1729	14.92	1776	14.55	1823	15.84	1869	15.60
1730	14.81	1777	14.54	1824	15.82	1870	15.57
1731	14.94	1778	14.68	1825	15.70	1871	15.57
1732	15.09	1779	14.80	1826	15.66	1872	15.63
1733	15.18	1780	14.72				

As I have said, from 1790 to 1873 less than 8,000,000 standard silver dollars were coined by the United States mints, though coinage was free up to that date.

That was natural enough, for the reason that the silver was the more valuable metal at the ratio established by law.

But in 1874 the situation was changed; not by legislation, not by the demonetization act of 1873, but by the inexorable decree of the law of commerce.

The Director of the Mint gives this table in his report as showing the ratio of silver to gold:

1873	15.92	1882	18.19
1874	16.17	1883	18.64
1875	16.59	1884	18.57
1876	17.88	1885	19.41
1877	17.22	1886	20.78
1878	17.94	1887	21.13
1879	18.40	1888	21.99
1880	18.05	1889	22.10
1881	18.16		

This table shows that in 1874 a divergence in value set in against silver, and that divergence has violently increased up to 1890, notwithstanding the rehabilitation of the standard silver dollar by the act of 1878.

It was claimed the act of 1878 would arrest the divergence in value. The prognostications of the silver advocates to that effect were positive and assuring. They enjoyed the vantage ground of unlimited free coinage for such prognostications. They availed themselves of their opportunities, for it cost nothing but the expenditure of an invaluable tissue. But the act of 1878 did not arrest, did not even check temporarily, the depreciation in the value of silver as compared with gold.

Now, since those gentlemen have conclusively shown themselves to be false prophets, why should anybody accept their declarations in the same line and against all reason to-day?

By the free coinage of silver the United States may temporarily inflate the value of that metal. The inflation, however, would be but

temporary. The divergence in value against silver and in favor of gold will go on so long as the relative productions of the two metals continue as they are now doing. A greater relative production of silver would increase the disproportion in value beyond the normal separation.

On the other hand, if vast quantities of gold should be discovered and produced and the production of silver should remain constant or diminish, silver would appreciate and gold depreciate until a standard silver dollar would become more valuable than a gold dollar. This would be so because the metal in a silver dollar would be worth more than the metal in a gold dollar in the markets of the world.

But the silver advocates seem to think that the non-admission of silver to the United States mints as gold is admitted is the one reason for its relative depreciation. They do indeed credit the United States with a tremendous influence over the commerce of the world. But the reply to all that is that, if the fiat of the United States is to work this wonderful change, why did not its fiat make greenbacks as good as gold? The United States could not do that even within its own territory, as experience has abundantly shown.

Look at a list of the silver nations of the world: Austria-Hungary, Russia, Mexico, Central America, Hawaii, Argentine Republic, Brazil, Chili, Peru, Colombia, Uruguay, Venezuela, Cuba, Hayti, Porto Rico, British West Indies, Dutch West Indies, China, India (British), India (Dutch), Japan.

Now, the assumption is, if the United States will add itself to that column, silver will come to a par with gold at the ratio of 16 to 1. Can any one conceive of a greater delusion?

But every other country in the world uses silver to a greater or less extent. So silver is used the world over as a money metal. Why, therefore, should anybody cherish the hope or expectation that free coinage of silver by the United States would work out this arbitrary equality?

The free-coinage advocates should pause. They want more money. They should beware lest they get less than we now have. The free coinage of silver, the day it is authorized by law, will drive the $450,000,000 of gold we now have out of circulation. That would be a contraction of the currency which would entail indescribable troubles. It would arrest business, disturb values, destroy confidence, impair credits, and bring panics and disasters upon our people, who are now enjoying a safe, secure, and excellent financial system.

Indian Appropriation Bill.

SPEECH
OF
HON. ELIJAH A. MORSE,
OF MASSACHUSETTS,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 17, 1890,

On the bill (H. R. 10726) making appropriations for the current and contingent expenses of the Indian Department and for fulfilling treaty stipulations with various Indian tribes for the year ending June 30, 1891, and for other purposes.

Mr. MORSE said:

Mr. CHAIRMAN: I have listened with interest and pleasure to the explanation of this bill as given by the gentleman from Kansas [Mr. PERKINS], and I have listened with especial interest to that feature of the bill which provides for the education, civilization, and elevation in the scale of humanity of these poor dark and benighted sons of the forest. It is said of one of the converts of the apostle Eliot, who labored among the Indians of Massachusetts two hundred and fifty years ago: This red man was asked what the Lord Jesus Christ had done for him. He put a worm on a leaf, surrounded it with a windrow of leaves, set fire to them, and as the flames reached the worm he lifted him safely out of the fire with the remark, "That's what the gospel had done for him." Now, I thank God that our former policy in regard to the Indians and our treatment of them is being reversed. It is estimated by a good judge that under the policy of fighting and exterminating the Indians it costs the Government of the United States a round million dollars to shoot an Indian. On the low plane of expense to the Government and to the tax-payers of the country, how much wiser the policy of this bill, as explained by the chairman of the committee, that proposes to expend vastly less than one million or one thousand or one hundred dollars to an Indian in the attempt to civilize and christianize these sons of the forest.

I have always had a sympathetic feeling towards the Indian since in my boyhood I read the reply of an Indian chief to the demand of a Government commissioner that he and his tribe should remove to a distant reservation. In that speech he pleaded as a reason why he and his tribe should not remove "that in this valley his fathers had lived and died, and here their bones were buried; that here they heard the voice of the Great Spirit in the thunder and in the rushing water; they had seen His tears in the rain-drops and heard His moans in the sighing winds of summer." Surely great injustice has been done the Indians by the Government of the United States, that has over and over again broken treaties and disregarded the most binding and solemn obligations which a nation could make. Well did this Indian object to signing the treaty and say that "writing was the invention of the pale faces and gave birth to error and fraud," and "The Great Spirit talks, but never writes." I believe many an Indian has died of starvation as the result of these forced removals; died I say, died with his arrow pointing to the bar of God.

Mr. Chairman, I should not have trespassed on this privilege of the House but for the fact that I did desire to record my approbation and indorsement of the liberal, wise, and statesmanlike policy of General Thomas J. Morgan, Commissioner of Indian Affairs, a soldier and a christian gentleman, who has eminent qualifications for the high office and responsible duties imposed upon him by the President of the United States. I also desire to congratulate this House and the country upon the fact that the President of the United States has seen fit to appoint as superintendent of Indian schools an eminent citizen of Massachusetts, a ripe scholar and a christian statesman, Dr. Daniel Dorchester. He, too, has eminent qualifications for the duties to which he is assigned, and I happen to know at this moment while I am speaking he is in the far West daring the dangers of hostile Indians and wild beasts, traveling in discharge of those duties. I also desire to record my hearty approval of the Indian schools established in the East for the education of Indian youth. Eternity alone will tell the good they have done. It was my privilege several years ago to visit the school at Hampton, Va., presided over by that christian soldier, General Armstrong. Surely the policy of education, civilization, and christianization of the Indian as contemplated by this bill is in accordance with the dictates of morality, of wise statesmanship, and christian philosophy. There can be no question about the indorsement of this measure by the House and by the country.

International Copyright.

SPEECH
OF
HON. ASHBEL P. FITCH,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

Friday, May 2, 1890,

On the bill (H. R. 6941) to amend Title LX, chapter 3, of the Revised Statutes of the United States, relating to copyrights.

Mr. FITCH said:

Mr. SPEAKER: The opponents of this bill have assumed to be greatly horrified that the authors who are in favor of this measure should have made a combination to present a matter in which they are interested for the consideration of the House.

The gentlemen from Illinois and Kansas in particular, who have always been heard on this floor in advocacy of the most liberal allowances to the soldiers of the country, rise here one after another and object to the hearing of a respectful protest of the men whose words during the war were at once the inspiration and the reward of patriotism.

First upon the list of authors who have requested that this legislation should have respectful consideration is the name of Henry Ward Beecher, whose services to the Union, in England and in America, were certainly as great as those of any of the soldiers whose claims they have over and over again advocated on this floor. It seems to me that it comes with ill grace from gentlemen who have so strenuously advocated the claims of the soldier to object to considering the sentiments of Holmes, of Longfellow, and of Whittier, whose books encouraged the Northern people in their struggle for the Union, every one of whom rendered more service to the cause of liberty than any officer on the retired-list.

It is but a matter of common gratitude for services rendered that such a protest as this should have a respectful hearing. It is but common sense that it should be granted. There is no reason, no principle, nor sentiment why the foreign author should not be treated with the same respect that is given to the foreign inventor. The gentleman from Illinois [Mr. PAYSON] has with great heat and vehemence objected to providing for any recognition of an English author who may have written a work like The Virginians or Vanity Fair, but he has no word or comment for a similar recognition authorized by law for sixty years in this country for the English inventor of any article of common use.

Charles Kingsley well said, "Except a living man, there is nothing so wonderful as a book;" and it seems to me if, without protest, we recognize every English or German or French inventor as entitled to adequate protection for his work, we should give, at the request of the authors to whom we owe so great a debt in this country, the same pro-

tection to their brethren in letters. Gratitude forces us to a recognition of this request and common sense leads us to grant it. Common honesty requires that we should do so.

Mr. Speaker, it is disgraceful for it to be urged on this floor that the argument of cheapness should override the obligation to pay honestly for whatever we use. The reputation of the Republic is at stake. Wealth alone or business achievements can not make a nation great. Character is more valuable than any other element in a republic, and in this matter as in all others the question is not "What is cheapest?" but "What is right?"

It is unfortunate that there is so little opportunity offered in this debate for the friends of the bill to explain its merits and to meet the attacks which are made upon it; but it seems to be certain that the good sense and honor of our people will ultimately succeed over such arguments as have been used here; that we shall agree with Mr. Lowell that "there is something better than a cheap book, and that is a book which is honestly come by."

The Silver Bill.

SPEECH

OF

HON. JOHN A. ANDERSON,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 7, 1890.

The House having under consideration the bill (H. R. 5381) authorizing the issue of Treasury notes on deposits of silver bullion—

Mr. ANDERSON, of Kansas, said:

Mr. SPEAKER: The proposition which lies at the base of the silver question is simply this, that where you give to an article, either a money metal or anything else, a use which it did not before possess, you increase the price of that article, its market value, just to the extent that the new use creates a new demand for it. The reverse of that proposition is also true, that where a metal or other commodity has obtained a value because of some specific use, and you take that specific use away from it, you thereby diminish the value of the commodity.

From time immemorial all commercial nations have used both gold and silver for money, the reasons being the scarcity of the metals, the amount of labor necessary to procure them, their hardness, their ductility, their glistening color, their indestructibility by fire, water, or earth. These are intrinsic properties which adapt the metals to various uses. But by law an additional use is conferred upon them by many nations, namely, their employment as money. Some nations give to gold alone the additional use of being the only standard by which to measure commercial values, others give to silver alone this exclusive use, and others employ both metals as a compound standard.

Apart from the intrinsic value of these metals, this statutory value is very great, oftentimes greater than the intrinsic value alone. To illustrate. Suppose that gold and silver were both demonetized and that Congress should fix upon the diamond as a representative and standard of money values. To-day the diamond has a given market price, but the moment this additional use were made of it its market value would increase and largely, because the demand for diamonds would increase; men would want them who do not now need them, in order to make change or to settle those exchanges that are now settled by gold and silver money, and in that manner you would greatly enhance the value of the diamond. If, however, the diamond in the past had possessed that money value, and by legislative enactment you took it away and made something else money instead of the diamond, then you would correspondingly decrease the price of the diamond. And in the days of Greece and Rome, when travel was unsafe, the diamond was not only used as money, but had a higher price than now because of the demand for it created by this use.

Our nation, Mr. Speaker, from its earliest history and by enactment of the Constitution, has used both metals as money. Silver was as much a standard of monetary measurement as was gold up to 1873, and at that time it was worth 3 cents more than gold. In that year, by unfortunate legislation, was taken from it its use as a standard of measurement, which was exclusively conferred upon the gold dollar. So far from having the balance-wheel of the monetary watch made of two metals that were affected by temperature in different degrees, in order that the expansion or contraction of the one might correct that of the other, at that time you made the balance of but one metal, gold alone, and by so doing enhanced its value, and of course correspondingly decreased the price of the silver because taking from silver a use and value greater than its intrinsic value. I shall embody in my remarks, Mr. Speaker, some statistics given yesterday by the gentleman from Minnesota [Mr. LIND] in his admirable speech, to show that the price of gold since 1873 has steadily gone up because of its scarcity and because of its being alone used as a standard of measurement, and that silver, wheat, corn, and everything else have gone down in the same proportion.

The following table, prepared by Dr. Soetbeer, the highest authority, shows that the production of gold is decreasing, and therefore that its purchasing power is increasing. It gives the average annual production of gold in the world in five-year periods:

Period.	Weight.	Value.
	Kilograms.	
1841–1850	54,759	$36,262,831.40
1851–1855	199,388	132,513,264.80
1856–1860	201,750	134,083,050.00
1861–1865	185,057	122,988,862.20
1866–1870	195,026	129,614,279.60
1871–1875	173,904	116,677,598.40
1876–1880	172,414	114,586,344.40
1881–1885	149,137	99,116,450.20
1886	149,338	99,250,877.00

Mr. LIND says:

Its consumption in the arts is increasing. Dr. Soetbeer calculated that it exceeded $60,000,000 in 1885. The Director of the United States Mint, in 1888, said:

"The total consumption of the precious metals in the industrial arts, according to the statements furnished the bureau, has been very much larger during the past year than in preceding years, both in gold and silver.

"The aggregate employment of the precious metals in the arts during the calendar year of 1888 may be placed at $16,500,000 gold and $8,100,000 silver (coinage value), against estimated employment for the calendar year 1887 of $14,600,000 gold and $5,280,000 silver.

Mr. LIND tersely shows the extent and effect of the conspiracy to demonetize silver, as follows:

But not satisfied with this natural advantage, the creditor classes of Europe and of this country conspired to enhance the value of their bonds and securities by a system of class legislation which has no parallel in the annals of history. Silver and gold had always been money, each dividing with the other the burden of measuring the values and carrying on the business of the civilized world at the ratio in Europe of 15½ of silver to 1 of gold, and here of 16 to 1. In quantity there was about $39 of silver to $31 of gold (in 1871). If silver could be dethroned the creditor classes and those having fixed incomes would reap the benefit of the increased value of gold. England, the great creditor, actuated by her greed, advocated demonetization of silver. Germany, flushed with pride and with the thousands of millions of gold wrung from France, listened to the siren, made gold her sole standard of value, commenced to call in and sell her silver, and finally demonetized it in 1873; 3,552,000 kilograms of German silver, worth about $42 per kilogram, having been robbed of its prerogative, was thrown upon the market as a commodity. Its gold price commenced to fall. A hue and cry against silver was inaugurated. In this country it was taken up by the organs of the bondholders. By means of a pretended codification of our coinage laws the authority for coining the silver dollar was repealed. Congress was captured by stealth, and President Grant is said to have stated that his signature to the act was obtained by misrepresentation. This happened in 1873. The following year France, Belgium, Italy, and Switzerland limited their coinage of silver, and in 1878 closed their mints to that metal. Like action was taken by the Scandinavian countries in 1876. A scramble for gold ensued, in which every expedient to obtain and to keep it was resorted to. The German Government banks made loans for nominal rates of interest conditioned on their repayment in foreign gold. The reign of Mammon had been inaugurated. Gold rose in price from day to day, and all other commodities, when measured by it, fell. In March, 1879, Mr. Disraeli said:

"All this time the produce of the gold mines of Australia and California has been regularly diminishing, and the consequence is that * * * the amount of the currency itself is yearly diminishing until a state of affairs has been brought about by gold production exactly the reverse of that which it produced at first. Gold is every day appreciating in value, and as it appreciates the lower become prices."

This was true in 1879, and is a terrible reality to-day. Does any one doubt the effect on prices of these monetary changes by the principal nations of the world? While the burden has fallen the most heavily on the farmer, other classes have suffered as well. All values have shrunk nearly one-third, except debt and taxes. By reference to the table it will be seen that the wheat crop of 1874 was worth $441,398,655.60; that of last year, though a third larger, was only worth $440,031,320. The national debt on July 1, 1874, according to the report of the Secretary of the Treasury (less the cash in the Treasury), was $2,143,688,241.16. Since that time and up to July 1, 1888, we had paid some $1,500,000,000 in principal and interest, leaving the balance then due of $1,087,930,703.87. In 1874 it would have taken 1,603,454,403 bushels of wheat to pay the debt, and in 1888, 1,212,854,772. Stocks of merchandise have shrunk without being sold. A stock carried over a season has suffered more from a fall in prices than from moths or shelf-wear.

While gold has thus gone up in value, as compared with all other articles of commerce, silver has maintained about the same relation to them. The table annually published by the Economist gives the wholesale prices of twenty-two of the principal articles on the London market, and compares them with the average prices for the same articles during the five years 1845–'50, the latter being graded as 100. In 1873 these articles were 34 cents higher than in 1845–'50, or 134.

Mr. Lind says:

I have thus far spoken of the change in the relative value of the two metals as an appreciation or rise in the value of gold. I believe this to be correct. Ordinarily we speak of silver as having depreciated or fallen. We have been led into this habit by the gold advocates, who neglect no opportunity to speak of silver as depreciated and the silver dollar as "dishonest." Neither is true. Comparing the two metals only, each with the other, simply shows a greater difference between them than formerly. Of this difference it is just as fair to say that gold has appreciated as it is to say that silver has fallen. To ascertain the truth let us compare silver to the index numbers given above. The Secretary of the Treasury gives the following table of the value of silver since 1873 in his annual report. I have added the Economist's index number:

Average price of silver in London each fiscal year, 1873-1889, and value of an ounce of fine silver at par of exchange, with decline expressed in percentages in each year since 1873.

Year.	Price in London.	Value of a fine ounce.	Decline from 1873.	Economist's index number.
	Pence.	*Dollars.*	*Per cent.*	
1873	59.2500	1.29883	.....	134
1874	58.3125	1.27827	1.6	131
1875	56.8750	1.24676	4.	126
1876	52.7500	1.15634	11.	123
1877	54.8125	1.20156	7.5	124
1878	54.3107	1.19050	8.3	115
1879	50.8125	1.11387	14.2	100
1880	52.4375	1.14954	11.5	115
1881	51.9375	1.13852	12.3	108
1882	51.8125	1.13623	12.5	111
1883	51.0230	1.11826	13.9	107
1884	50.7910	1.11339	14.3	100
1885	49.8430	1.09262	15.9	95
1886	47.6380	1.03112	20.6	92
1887	44.8430	.98301	24.3	94
1888	43.6750	.95741	26.3	101
1889	42.4990	.93163	28.3	.....

From this it will be seen that silver has not only maintained its relative value as compared to commodities, but it has actually appreciated. In other words, an ounce of silver will buy more of the necessaries of life, more of any kind of property, to-day than it would in 1873. And the silver dollar, instead of being dishonest, will pay a debt, buy as many things, and carries as many cents as the dollar in gold. The only trouble that most of us ever have with it is "the getting of it."

The following table shows that the fall in the price of wheat has kept step with the rise in gold, and has not been occasioned by overproduction:

Table showing the population, wheat product, and export price of wheat during the years named.

Year.	Population.	Wheat product.	Wheat product per capita.	Average export price.
		Bushels.	*Bushels.*	
1873	41,676,000	281,254,700	6.75	$1.312
1874	42,795,000	309,102,700	7.22	1.428
1875	43,949,000	292,136,000	6.65	1.124
1876	45,135,000	289,356,500	6.41	1.242
1877	46,351,000	364,194,146	7.71	1.169
1878	47,595,000	420,122,400	8.83	1.328
1879	48,863,000	448,756,630	9.19	1.068
1880	50,155,783	498,549,868	9.94	1.245
1881	51,462,000	382,280,090	7.43	1.114
1882	52,799,000	504,185,470	9.55	1.185
1883	54,163,000	421,086,160	7.77	1.127
1884	55,554,000	512,765,000	9.23	1.066
1885	57,093,000	357,112,000	6.25	.862
1886	58,420,000	457,218,000	8.00	.870
1887	60,018,000	456,329,000	7.60	.890
1888	61,521,000	415,868,000	6.76	.853
1889	64,554,000	490,560,000	7.77	.897

S. G. BROCK, *Chief of Bureau.*

TREASURY DEPARTMENT, BUREAU OF STATISTICS, *March* 12, 1890.

Wheat crop of the world.

Year.	Bushels.	Year.	Bushels.
1880	2,111,000,000	1884	2,293,000,000
1881	2,025,000,000	1885	2,095,000,000
1882	2,2-2,000,000	1886	2,055,000,000
1883	2,054,000,000	1887	2,188,000,000

Mr. LIND further says:

The table of domestic production shows that our wheat crop in 1882 was nearly 2 bushels per capita larger than in 1887, and the crop of the world nearly 100,000,000 of bushels greater, and still the export price in the former year was $1.24 and in the latter only 89 cents per bushel.

* * * * * * *

The price of an article, I take it, is the amount of money that it will exchange for. The price of a bushel of wheat is the amount of money it will buy in the market. As stated before, a bushel of wheat will buy as many articles of other commodities as it did prior to 1873. But it will not buy as much gold, and gold, strictly speaking, is the only money of Europe and of this country at the present time. Gold is the standard of value. If we consider wheat the standard, its value (as compared to commodities other than gold) has varied but little, while the price of gold has risen enormously. In 1873 a bushel of wheat would buy 33.41 grains of gold; in 1889, only 20.89 grains.

If a difference like this should suddenly spring up and continue to increase between the relative value of wheat and some other commodity, say oranges, we in Minnesota would naturally surmise that the orange crop in California was short or that the market for California oranges had increased faster than the demand for wheat, or both. Perhaps this is the trouble with gold? It seems very reasonable that if gold has become scarcer, both in point of quantity and relatively for the amount of work that it has to perform, and that the demand for it has increased, it should rise in price in comparison to wheat and other commodities which have not been so affected, the same as the oranges.

So much for the points made by Mr. LIND.

Mr. Speaker, the proposition now presented to us is this: Shall we restore to silver the use that we took from it? Shall we give to the Government the power to make this again a standard of monetary measurement? If we do we depreciate gold just to the extent that we deprive it of its exclusive use as a standard of measurement, and just to the extent that its value is enhanced by that use, and silver will have an added value, because it again becomes a standard.

What will be the effect of this legislation upon the masses of the people? Let us consider that for a moment. Clearly the effect will and must be to increase the price of every bushel of corn, every pound of cotton, every bushel of wheat, every day's labor that is performed in the country; you will increase the prices on all our products and labor to an extent that no man can compute. And who will be affected injuriously? Will it be the laboring masses of the people; will it be the farmers of the country? No; it will be the men who to-day have money to lend. They are exactly the men who are fighting this proposition. They say, Here is a silver lobby. Yes; so there is. They say, This is for the benefit of "bonanza kings." So it is; I admit all that, and, further, that the producers of silver will be permanently benefited. But here is also the Wall street lobby. Wall street exercises a power that is felt all over the country; and Wall street is always with the House of Representatives, and a good deal more than always with the Senate. [Laughter.]

But so far as these two interests and their mighty lobbies are concerned it is the old story of the skillet calling the gridiron black. I care nothing for either of them; and in spite of both of them take the higher ground that by giving silver parity of coinage with gold, by restoring its use as a standard of measure you will give every man who has anything to sell relief from existing depression, and enlarged prices, far better than you can in any other way; and that the only man injuriously affected will be the lender of money.

This, Mr. Speaker, is not an issue between the Democratic party and the Republican party, and the vote both here and in the Senate will prove the fact. It is an issue between the East and the West; between communities which have money to lend and those which borrow money. And no intensity of asseveration can make it a purely party issue. Let me briefly consider some of the provisions of the bill.

My first objection is that it treats silver precisely and solely as a commodity, such as iron or potatoes. So does the present law. The only authority given by the bill is that of merely purchasing silver, no other authority. There is nowhere in the bill any authorizat on or requirement that the Secretary of the Treasury shall coin silver. In section 3 is a provision—

That the Secretary of the Treasury shall coin—

What? The silver that he buys? Oh, no; but—

such portion of the silver bullion purchased under the provisions of this act as may be necessary—

Mark the words—

as may be necessary to provide for the redemption of the silver notes therein provided for.

And that very limitation prevents him from coining for any other purpose.

Now, what would be the demand for the redemption of these Treasury notes? Who would take a single one of them to the Treasury and ask for its redemption? You pile up fifty millions of purchased bullion this year, fifty millions next year, fifty millions the next year, and the next year fifty millions—$200,000,000 piled up in the Treasury—and nobody wants to have a note redeemed. The process of piling up goes on, and if anybody should ask to have a note redeemed the Secretary of the Treasury could redeem it in coin; that is, gold. He need not coin a single dollar in silver for years to come, and then we will be met with the proposition, should this bill become a law, that there are $200,000,000 of bullion lying in the Treasury, that it is useless, and what are we to do with it? Certificates are out and can not be called in; more bullion is piling up and more certificates are going out: and then you will come to the point that is made to-day, namely, that we must abandon silver and must continue the exclusive use of gold as a monetary standard.

There is the fact in regard to the bill; and, in addition, it specifically repeals the only provision on the statute-book requiring the coinage of the silver dollar. I want to call the attention of gentleman to that.

Here it is, in section 7:

That so much of the act of February, etc., as requires the monthly purchase—

Now, if they had stopped there it would have been all right—

as requires the monthly purchase and coinage into silver dollars * * * is hereby repealed.

So, gentlemen, the bill does this: It continues to treat silver simply as a commodity, and not as a money metal. It demonetizes silver; it repeals the only requirement for coinage; and it permits the Secretary of the Treasury, at his discretion, to redeem those certificates on the demand of the holder, in bullion, and that is what would be done four years hence with your two hundred millions of bullion, very likely. They would say: "There is gold coin enough: we have silver dollars enough; we are at the expense of building Treasury vaults, and now let us get clear of this accumulation; let us call in a lot of these Treas-

ury notes and dispose of the bullion." Now, gentlemen, I simply can not and will not vote to demonetize silver [applause] and shall vote against this bill. I am putting the issue upon the broad basis that the prosperity of the people of the nation requires that there shall not be a monopolistic standard, but that there shall be a dual standard; that no part of that dual standard shall be treated as a commodity, but that there shall be a compound standard of measure made of both gold and silver. And when gentlemen speak of themselves as being "silver men," and say that they do not want either gold or silver alone, but that they want both, only that silver must be bought as a commodity by the gold standard alone, I can see them going around with a little gold 2-foot rule and not only measuring the silver by it, but vociferating that it is a full yard long, unmindful of the fact that their gold rule depends for its length on the demand and supply of gold and unmindful of the fact that the production of gold is decreasing and has decreased for years. Your alleged yard-stick is getting shorter and shorter. The men who have the gold are getting richer and richer and the laboring man and the farmer are getting lower and lower prices. Now, I want you to take a yard-stick that is not subject to such shrinkage, one made of silver and gold, 36 inches long; an American dollar worth 100 cents, instead of a gold dollar worth 128 cents, but called only 100 cents.

[Here the hammer fell.]

The Tariff.

SPEECH

OF

HON. SAMUEL M. ROBERTSON,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 21, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

Mr. ROBERTSON said:

Mr. CHAIRMAN: The Republican party has deprived itself of its slogan of attack on the Democratic party by its support of this McKinley bill. During the last campaign they arraigned this side of the House before the bar of public opinion as advocates of free trade. This was their shibboleth. They proclaimed it vociferously upon the stump from the Atlantic to the Pacific. Their denunciations of free trade served as a cloak to hide the real issue, and under the shadows of their dark deception they succeeded in duping the American people and in capturing the executive and legislative branches of this Government.

But, Mr. Chairman, they appear again in the arena; clothed in the garb of the free-trader and using the weapon of their antagonists with greater skill, they propose a free-list 200 per cent. greater than that proposed in the Mills bill as a means of reducing the revenues.

The free-list of the bill drawn by a Democratic majority and passed by this House in the Fiftieth Congress proposed a reduction of only about $20,000,000, while the total reduction proposed from all sources was about $75,000,000. The free-list, therefore, was about 26 per cent. of the total proposed reduction. This (the McKinley) bill proposes a total reduction of $71,264,414.41; of this amount $60,936,536.35 comes from the free-list, or in other words, the free-list is about 86 per cent. of the total reduction proposed in this bill.

If the Mills bill, carrying a free-list of 26 per cent. of the total reduction proposed, was a free-trade measure, what in the name of conscience and easy logic is the McKinley bill, carrying, as it does, a free-list of 86 per cent.?

But this 86 per cent. represents no relief to the people, and though it may apparently show without further examination of the principles under which the majority are proceeding a wonderful increase of the free-list, yet it is, when examined even casually, as false in doctrine and as true to sectionalism as are all the professions of its advocates. Upon this list are found acorns, beeswax, braids, bristles, chicory-root, coal-tar, dandelion-root, currants, dates, grass, grease, hair (human), ore (nickel), red earth, sand, tar and pitch of wood, tobacco-stems, turpentine, brier root, and paintings in oil or water colors, and statuary for the use of the rich, a few chemicals, and sugar below No. 16 Dutch standard.

This free-list as taken from this bill professes to relieve the people of about $60,000,000 of taxes. Nearly fifty-six millions is contributed by sugar, while the remaining four millions is gained by relieving the people of the onerous taxes on such necessaries of life as acorns, hair, sand, etc. Fifty-six millions from sugar is obtained by crushing an industry which now exists in the South almost exclusively, while, at the same time, grades produced by the refiner are still protected by a sufficient duty to enable the continuance of trusts and combinations to control the price to the consumer.

One industry of all those in this country is proposed for annihilation. The tariff upon the products of nearly every other industry has been raised until it has in many instances reached the enormous ad valorem rate of 100 to 150 per cent. By reference to the wool and woolen schedule the truth of this assertion is apparent. Unwashed wool is increased from 35 to 54.10 per cent.; washed wool, from 52 to 65 per cent.

	Present rate.	Increased rate.
	Per cent.	*Per cent.*
Unwashed wool, second class	26	61.52
Scoured wool	41.23	49.47
Woolen and worsted yarns	67	123.3
Woolen cloths and knit fabrics and all manufactures of every description made wholly or in part of wool	65	147
Blankets and woolen hats and flannels	69	110.81
Women and children's dress goods	70	92

These increased rates must of necessity increase the price to the consumer.

Is it possible, Mr. Chairman, that it is necessary to increase the duties on these articles produced in this country in order to save these industries, protected as they have been for twenty-five years by a tariff levied for war purposes? Will gentlemen admit that these industries are growing weaker each year and that it is necessary to continually increase the duties in order that they may prosper? Are these industries still infants? The increased duties proposed in these schedules are answers to these questions. They have been protected for a great number of years, and yet they are unable to prosper if we are to account for the reason for these increased duties.

It has been stated by many advocates of free sugar, who are high protectionists in other industries, that, though the sugar industry has been protected by a high rate of duty for a number of years, under the most propitious circumstances it is impossible to produce a quantity sufficient for home consumption, and for that reason the sugar-planter and manufacturer should be deprived of that protection which advocates of this bill willingly accord to other industries.

This argument, if good at all, can not be applied at this time. The great possibilities now open to the West in the production of beet and sorghum sugar, coupled with the extended territory in which sugar from cane is now being produced in Texas and Florida, with the improved mechanical appliances used in the manufacture of sugar in Louisiana, are proofs evident of the grand possibilities in store for the future development of sugar production.

The progress possible in this industry has for years been greatly retarded by the continued agitation of the tariff question. Capital, timid as it is, has with difficulty been induced to any great extent to enter into this otherwise productive field.

The sugar industry is no longer confined to Louisiana; it is becoming rapidly national in its character. Its development is watched with great anxiety by the industries of the East and North, and fearing the development of the child into a powerful giant they are determined to crush it in its swaddling clothes.

This is the real reason for this attack on sugar.

To treat the industry as it is proposed in this bill is a direct violation of the platform of the Republican party, by that party. They say that they have the verdict of the people on the principles of their bill, yet they told the people that no part of the protective system should be disturbed, even if it were necessary to repeal the entire internal-revenue tax. In face of this very declaration they propose to put sugar on the free-list and to reduce the internal-revenue taxes only ten millions.

What has become of the twenty-four-million reduction from the internal revenues of the last proposed Senate tariff bill? They went before the country on this bill; did not the people by this same verdict indorse it? Why, then, do they not still adhere to their determination to make a proper reduction from the internal taxes? They accused the Democrats last year of being unwilling to reduce the surplus by reduction from this source, and yet it is a known fact that the Democratic measure of the last Congress proposed a reduction from the internal taxes of more than twenty-four millions. Why is it now that they practically avoid the question of internal reduction? Is it for the purpose of willfully destroying an industry which has grown up under a protective tariff as old as the tariff itself?

The excuse given by the advocates of this measure for increasing the duties on imports is that wages of the laboring man will be correspondingly increased; yet they destroy the avocation of nearly 500,000 people at one fell swoop by placing sugar on the free-list. If protection is proper for the Northern and Eastern laborer, why is it not for the people of Louisiana, Kansas, Nebraska, and California who are engaged in the production of sugar?

Mr. Chairman, sugar is the only really agricultural product protected by the tariff, and yet it is made to suffer practically the entire reduction proposed. This is the only agricultural product of great importance which is not exported, and is therefore the only one to which the protective-tariff theory is applicable.

The tariff proposed by this bill upon corn, wheat, etc., is like every

other proposition advanced by this Republican party in the interest of the farmer. It is the lulling to sleep by the wings of the vampire that their blood may be more easily sucked by the manufacturer and monopolist, grown rich through the medium of exorbitant taxes levied under the guise of protection.

It is an attempt to obtain their acquiescence to the robbery concealed in this bill by mustering them into the band of protection with no hope of the farmer in his new rôle to a share of the booty. Like the invited guest at the feast of the lion, the farmer will find the prey devoured before his very eyes and his gnawing hunger increased as the choicest morsels disappear in the powerful jaws of his hospitable host.

But the sugar-planter is told that the people of this country shall be taxed in order to pay him a bounty of 2 cents a pound on all the sugar he produces. Is not this an admission that this industry is worthy of protection? If so, why change the principle? And if the principle is changed, why is sugar to be the favored article? Why not pay the farmer a bounty on cotton, corn, wheat, and rye?

Mr. Chairman, the sugar-producer will not be betrayed with a kiss. The insincerity of the proposition is a poor guaranty of good faith. The song of this siren may be sweet, but the mariner dreads the hidden rock. What is the necessity of encumbering our tax system with this innovation? It may be said that there is a precedent in the bounty to the fishermen of New England. It is true that there was such a bounty, but what became of it? If we take this bounty as a precedent we must take its repeal as a precedent also; and, in doing this, what faith can be placed in the continuance of the law making appropriation to pay it? This whipping the devil around the stump in this pretended desire to protect sugar by such a proposition is so apparently insincere that no sane man interested in it has yet consented to accept it, even in the face of a threatened reduction which would result in seriously crippling the industry. [Applause.]

I am opposed to this bounty, first, because I believe there is no constitutional warrant for it; second, because it is not possible to make it permanent; the American people will not submit to it; third, because coupled with it is a proposition to place sugar on the free-list, and thus destroy ultimately an industry which gives employment to a great number of the people of my State and of the district I represent; fourth, because the iniquitous, inquisitorial provisions of the internal-revenue laws are to be resorted to to ascertain the quantity of sugar produced in order to regulate the amount of bounty to be paid, all of which tends to extend the power of the Government directly over the private concerns of the people and establishes a system of espionage on the part of the General Government which can not be less destructive of our governmental polity than the use of Federal power at the polls.

Thomas Benton said in his report on a bill proposing to repeal the fishing bounties, made in the Senate in 1840, that—

> There is no clause in the Constitution to warrant such bounties. They are the *ne plus ultra* of the protective system, going beyond protecting duties, beyond prohibitory duties, beyond the remission of duties, beyond exemption from payment of duties, and plunging into the Treasury to take out the money for the benefit of the few which the contributions of the many had placed there for the support of the Government.

Mr. Chairman, I am opposed to the bounty for the further reason that it will encourage duplicity, corruption, and fraud. We must judge it by the experience of the past. One of the strongest arguments made against the fishing bounties by Senator Clay, of Alabama, in 1860, was the report of the Secretary of the Treasury upon this very question. The Secretary in his report to Congress, speaking of the manner in which the law had been violated by those claiming the bounty, says:

> Under this state of things an important question of expediency, as well as of morality arises, since these laws, instead of furnishing encouragement for seamen, mainly encourage the commission of multiplied perjuries and tend to the demoralization of a large class of the community. Several indictments for perjury committed in making up these proofs have been tried within two or three years, which have generally resulted in acquittal, it being found in some sections of the country difficult, if not impossible, to convict for perjury on false custom-house oaths.

It is scarcely possible to expect that time has in any manner so educated the people that there will not be a recurrence of the same conditions under like circumstances.

Human nature is the same now as it was then. It is to be hoped, should this bill become a law, that the people who would receive bounties under it can escape arraignment on charges of perjury and immorality, which under similar conditions were made by high officials against the people of New England, who were charged under a like provision of law with perjury, immorality, and evasion.

Schedule E of the bill provides that—

> The producer of said sugar, to be entitled to said bounty, shall have first filed with the Commissioner of Internal Revenue a notice of the place of production, with a general description of the machinery and methods to be employed by him, with an estimate of the amount of sugar proposed to be produced in the next ensuing year and an application for a license to so produce, to be accompanied by a bond in a penalty, and with sureties to be approved by the Commissioner of Internal Revenue, conditioned that he will faithfully observe all rules and regulations that shall be prescribed for such manufacture and production of sugar.
>
> The Commissioner of Internal Revenue, upon receiving the application and bond hereinbefore provided for, shall issue to the applicant a license to produce sugar from sorghum, beets, or sugar-cane grown in the United States at the place and with the machinery and by the methods described in the application; but said license shall not extend beyond one year from the date thereof.
>
> * * * * * * *
>
> The Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall from time to time make all needful rules and regulations for the manufacture of sugar from sorghum, beets, or sugar-cane grown in the United States, and shall, under the direction of the Secretary of the Treasury, exercise supervision and inspection of the manufacture thereof.

Mr. Chairman, when the sugar-producer upon his farm finds that he is in the clutches of the law, that his private affairs are to be invaded by an officer of the General Government, that a bond will be required of him to follow the avocation which he has for years followed untrammeled and free, that he is forced to obtain a license for tilling the soil and to adopt methods prescribed by the Commissioner of Internal Revenue with the approval of the Secretary of the Treasury in the conduct of his private concerns, he may well exclaim when he receives his bounty:

> Thou art a gilded, but a bitter pill,
> Of varied, great, and complicated ill.

The payment of this bounty is confined to producers of sugar testing 85° by the polariscope. This is a palpable injustice, because the high polariscopic test of 85° virtually deprives the small farmer producing sugar by his little mill and in the ordinary evaporation of any protection either by bounty or duty. The ordinary grade of sugar produced in this way tests ten or fifteen degrees lower than the minimum fixed in the bill.

Why should these people producing sugar on a small scale be made to suffer while the more fortunate and larger producer receives his bounty of 2 cents a pound?

If 2 cents a pound is considered too large a bounty for these grades would it not be just and fair to lower the bounty, say, to 1½ cents per pound on all sugar testing below 80 degrees and above 70 degrees by the polariscope. This is a fair and equitable proposition if the bounty provision prevails as is provided in this bill.

This is another stone given by the advocates of this bill to the farmer when he has asked for bread. Where do you propose to stop? You have forced sugar on the free-list and have increased the duties enormously on cotton-ties and tin-plate. This duty on tin-plate is indefensible under the argument for the abolition of the sugar duties. There is no tin-plate produced in this country, while there was imported last year about 360,000 tons. The pig-tin used in making tin-plate has not yet been successfully produced from our mines.

It is probable from the testimony given before the Committee on Ways and Means that years will elapse before the tin mines of the Black Hills can be developed, and it is doubtful even in the development of these mines whether sufficient tin can be produced to supply the home consumption. The canning industries engaged in putting up canned goods have universally protested against the increased duties on tin-plate, from which cans are made, stating as their reason for protest that it will increase the cost of these goods to the people.

It was shown clearly to the committee in the investigation of this tin-plate question that it was an industry that did not even exist in the United States, that at present little or no capital is invested in it, and that it affords employment to none of our people. In the testimony of those who desired the increased duties to inaugurate the industry it was stated that in future years it might, under propitious circumstances, give employment to about five hundred thousand people—when, nobody knows.

The ostensible object of any tariff bill should be to reduce taxation, to prevent a surplus, and to relieve the people from unnecessary taxes. This has been proclaimed in the platform of each political party to be its desire. If the object to be accomplished is to reduce taxation this tax on tin-plate can not be sustained. If the object to be attained is protection to American industries this tax on tin-plate is wholly out of the question, because the industry does not even exist.

Under no theory, therefore, Mr. Chairman, is this tax justified or defensible, particularly when it is necessary to crush another industry already existing, now giving employment to more than five hundred thousand people in order to establish it, and to increase the price of the household utensils in every poor man's family in the country to enrich two or three men in Pennsylvania for whose benefit this increased tax is evidently proposed.

Eastern capital which has been produced and accumulated in the hands of a few men by this protective system not only controls the sentiment of the East upon all questions of national legislation, but it has entangled the farmers of the West, deeply mortgaged and oppressed as appears from their own statements, until they, too, in obedience to the dictates of this same power, bow before the foot of the throne upon which sits the monopolistic manufacturer grown plutocratic by the unjust burdens of exorbitant taxes, and vote to perpetuate a system which inwardly they must condemn and despise as unwarranted by any constitutional provision or any existing condition.

But, Mr. Chairman, a new era is beginning to dawn. The farmers of this great country are awaking from the sleep of Endymion, and, however extreme their declarations may seem, they are the clarion notes of regeneration.

Mr. Chairman, for two or three years past the people engaged in raising cotton have been at the mercy of combinations and trusts of every conceivable description. Jute cotton bagging by reason of a tariff of 1½ and 2 cents per yard has been the fruitful subject of one of the

trusts, by the existence of which the price per yard has been increased 100 per cent. Manfully have the farmers of the cotton-growing States fought this monopoly which has its existence through this tariff.

I had hoped that relief would be given them by a proper reduction of the tariff on cotton bagging, but what is the result under this bill? The tariff on bagging worth 6 cents (imported) has been increased from 1.5 to 1.6 cents per yard, while that worth 7 cents (imported) has been reduced only four-tenths of a cent, leaving still a tariff under which this monster trust can flourish and grind the people.

The present tariff on iron cotton-ties is about 35 per cent. ad valorem. The small margin given by this duty, combined with other causes, has prevented so far the formation of trusts to control their price to the farmer. This was well, and probably the farmer could without much complaint submit to the tax, but as a representative of a large number of farmers engaged in producing cotton I must enter my earnest protest against this schedule in this bill proposing to increase the duty on ties from 35 to 104 per cent. ad valorem.

Should this bill pass, the importation of ties will be completely checked, trusts in the production of them encouraged and invited, and the price increased from 100 to 150 per cent. over the present cost. In this increase the people of my State and the entire South are to be taxed beyond measure and endurance to benefit the manufacturers in one or two districts of Ohio, and yet the honorable chairman of the committee in charge of this bill has the temerity to say that it is not a sectional measure.

What is the necessity of the increase? It is stated as a reason that the present price of cotton-ties is so low that the manufacturers in America can not compete with those in England. It is admitted that by increasing the tariff the price will be increased sufficiently to render the manufacture of ties profitable to the Ohio capitalist. He will grow rich; there is little doubt of that; but the tax which enriches him is forced as a tribute from the toiling farmer of the South, who is the exclusive consumer.

Mr. Chairman, this proposed increase is in harmony with the avowed principle underlying this bill. The Democratic party proposes to reduce the tariff on imports, to reduce taxes, and at the same time reduce the price on the necessaries of life, having due regard to existing conditions of trade, but at the same time giving relief to the people and obviating the necessity of extravagance in appropriations as a means of keeping our money in circulation by thus preventing its accumulation in the Treasury. By reducing the tax on imports and by a proper revision of internal taxes, relief will come to the people and prices will be lowered on all they consume. The principles which underlie this bill check imports by increasing the duties, and at the same time, as a natural sequence, reduce the income of the Government from customs taxes.

Gentlemen who advocate this theory of reduction seem to forget the fact that the great masses of the people obtain no relief through it. They seem to forget that under this theory the farmers of the West are burning their corn for fuel, while they will be forced, under this bill, to pay a still higher price for the coat which shields them from the cold, by the higher taxes proposed on woolen goods and blankets.

Let us hope, Mr. Chairman, that this mad career may soon have an end, that the masses of the people may at length be aroused from their lethargy, and that the monopolist and plutocrat, now dictating our legislation, may bend a suppliant knee before the patriotic power of the American people.

Silver.

SPEECH
OF
WILLIAM S. HOLMAN,
OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 6, 1890.

The House having under consideration the bill (H. R. 5381) authorizing the issue of Treasury notes on deposits of silver bullion—

Mr. HOLMAN said:

Mr. SPEAKER: During the progress of this debate on the silver question it has been asserted by a very distinguished gentleman prominently identified with Congress for many years and who was a member of the Senate when the bill was passed striking the silver dollar from our coinage that there is no evidence that the act of the 12th of February, 1873, was either a covert and underhanded measure or directly designed to benefit a small class at the expense of the great mass of our people. I wish, sir, having participated somewhat in the events which led to the passage of that bill in the House, that I could, for the credit and honor of our legislation, reach the same conclusion; but the facts, to my mind, do not justify so favorable a judgment.

I remember distinctly what transpired in the House when the bill was passed, and I have before me the record of the proceedings of the House when that bill was passed, and I am forced to the conclusion that it was intended to be passed and was passed without the House understanding its purport and effect. Mr. Hooper, of Massachusetts, a distinguished gentleman of that State and a leading banker of the city of Boston, had reported from the Committee on Coinage, Weights, and Measures a bill to the House on the subject of reorganizing the mints of the United States. Afterward, on the 27th of May, 1872, Mr. Hooper obtained the floor and said:

I desire to call up the bill (H. R. 1427) revising and amending the laws relative to mints, assay offices, and coinage of the United States. I do so for the purpose of offering an amendment to the bill in the nature of a substitute, one which has been carefully prepared and which I have submitted to the different gentlemen in this House who have taken a special interest in the bill. I find that it meets with universal approbation in the form in which I offer it. I move that the rules be suspended and that the substitute be put on its passage.

* * * * * * *

Mr. HOLMAN. I suppose it is intended to have the bill read before it is put upon its passage?

The SPEAKER. The substitute will be read.

Mr. HOOPER, of Massachusetts. I hope not. It is a long bill and those who are interested in it are perfectly familiar with its provisions.

Mr. KERR. The rules can not be suspended so as to dispense with the reading of the bill?

The SPEAKER. They can be.

Mr. KERR. I want the House to understand that it is attempted to put through this bill without being read.

The SPEAKER. Does the gentleman from Massachusetts [Mr. Hooper] move that the reading of the bill be dispensed with?

Mr. HOOPER, of Massachusetts. I will so frame my motion to suspend the rules that it will dispense with the reading of the bill.

The SPEAKER. The gentleman from Massachusetts moves that the rules be suspended and that the bill pass, the reading thereof being dispensed with.

That motion was not sustained by the House.

At a later moment, after some other business had been transacted, the question was again brought forward, and I read from the report of the proceedings:

Mr. HOOPER, of Massachusetts. I now move that the rules be suspended and the substitute for the bill, in relation to mints and coinage, passed; and I ask that the substitute be read.

The Clerk began to read the substitute.

Mr. BROOKS. Is that the original bill?

The SPEAKER. The motion of the gentleman from Massachusetts [Mr. HOOPER] applies to the substitute, and that on which the House is called to act is being read.

Mr. BROOKS. As there is to be no debate, the only chance we have to know what we are doing is to have both the bill and the substitute read.

The SPEAKER. The motion of the gentleman from Massachusetts being to suspend the rules and pass the substitute, it gives no choice between the two bills. The House must either pass the substitute or none.

Mr. BROOKS. How can we choose between the original bill and the substitute unless we hear them both read?

The SPEAKER. The gentleman can vote "ay" or "no" on the question whether this substitute shall be passed.

Mr. BROOKS. I am very much in the habit of voting "no" when I do not know what is going on.

Mr. HOLMAN. Before the question is taken upon suspending the rules and passing the bill I hope the gentleman from Massachusetts will explain the leading changes made by this bill in the existing law, especially in reference to the coinage. It would seem that all the small coinage of the country is intended to be recoined.

Now, it will be observed that the attention of Mr. Hooper was called to two matters.

First:

I hope the gentleman from Massachusetts will explain the leading changes made by this bill in the existing law, especially in reference to the coinage.

Second:

It would seem that all the small coinage of the country is intended to be recoined.

Mr. Hooper, of Massachusetts, and I were standing close together in the central portion of the Hall, so that the colloquy was very distinctly heard by us both and by the House.

Mr. HOOPER, of Massachusetts. This bill makes no change in the existing law in that regard. It does not require the recoinage of the small coins.

Now, Mr. Hooper seems very fairly to answer both inquiries in the negative. There was to be no change in the coinage and no recoinage of the smaller coins. He added:

On the contrary, I understand the Secretary of the Treasury proposes to issue an order to stop the coinage of all the minor coins, as there is now a great abundance of them in the country. The salaries are not increased. They remain as they were.

* * * * * * *

Mr. MERRIMAN. Has this bill been submitted to the Secretary of the Treasury? And, if so, does it meet his approval?

Mr. HOOPER, of Massachusetts. It has been submitted to him, and he not only approves it, but strongly urges its passage. He deems it exceedingly important, as there are irregularities in the Mint now which can not be controlled by existing law.

That carried out the idea that prevailed in all that proceeding, that this was simply a bill to reorganize the mints. Later on, nothing further having been said in relation to the coinage:

Mr. SARGENT. I hope we will have a vote.

The question being taken on the motion of Mr. Hooper, of Massachusetts, to suspend the rules and pass the bill, it was agreed to; there being—ayes 110, noes 13.

The negative vote, it will be seen, was not sufficient to justify a call for the yeas and nays, and so no record of the vote was made.

For myself, I was satisfied with Mr. Hooper's assurance that there was no change in the coinage. I voted in the negative because the

substitute had not been read. I am not able to recall all the negative votes. Mr. Kerr, Mr. Brooks, and Mr. Beck were among the number.

Now, Mr. Speaker, the fact appears clear and conclusive that gentlemen had not examined the bill; that it had not been examined by any gentlemen then present except those interested in its passage. The haste was manifest, and the persistent effort to prevent the reading of the substitute and the original bill is an unpleasant feature in this transaction.

Mr. BUCKALEW. If it does not interrupt the gentleman, I would like to know what the date of that was.

Mr. HOLMAN. That was May 27, 1872.

Mr. HEARD. Who was Speaker at that time?

Mr. HOLMAN. My friend is aware that at that time Mr. Blaine was Speaker. On that 27th day of May, a comparatively early period in the session, there was no pretense of any necessity for extraordinary haste in our legislation. It will be observed that the measure was not urged upon that ground. There was no occasion or excuse for haste.

Mr. Hooper did not urge any reason for early action. The simple proposition was to suspend the rules and pass the bill without reading; and if it had been a bill simply to reorganize the mints, inasmuch as he had given the House to understand that there was no change in the coinage and had over and over again said that there was no increase of salaries, why it seemed not specially improper to suspend the rules and to put it upon its passage upon the statement of the chairman of the Committee on Coinage, Weights, and Measures of the unobjectionable character and purpose of the bill; but it is very obvious, Mr. Speaker, that the main purpose of that bill was a radical change in our coinage and to drop the standard silver dollar from the coinage of the United States. That was the central and important provision of that bill. All the other provisions of the bill were comparatively unimportant, and the unpleasant fact to be remembered is that that important and leading provision was concealed from the House when it was the central point of the legislation involved in the bill. The other features of the bill were comparatively unimportant. They related to the organization of the mints, and the House being informed that there was no change in the coinage there was no special necessity for the reading of the bill except a decent respect for the orderly proceedings of the business of the House.

Mr. HEARD. Will my friend allow me a question? I want to ask, was there any discussion in the consideration of that bill as to the propriety or impropriety of the cessation of coinage of the silver dollar?

Mr. HOLMAN. That subject was not referred to except my question to Mr. Hooper whether there was any change in the coinage. Mr. Hooper said distinctly that there was "no change in the existing law in that regard;" that the sole object was a reorganization of the mints. There is a portion of the remarks that were made at the time that I have not read. Mr. Garfield asked a question whether there was any increase in the salaries in the Treasury Department—was there any increase in the salaries of certain officers of the Treasury. The answer was that there was no increase in the salaries; and another question was whether there was a transfer of officials from one part to another of the Treasury Department, and that was answered in the negative. All the colloquy in the whole course of this discussion which I have not read refers to other matters than the coinage. The subject of coinage was not mentioned after Mr. Hooper's answer to my question. The question having been asked if the measure was to interfere with the coinage, the answer being in the negative, the members generally acquiesced. All understood that a reorganization of the mints was a proper measure, and there was no struggle, but a few of us stood up and voted in the negative, not satisfied with this kind of legislation, and the result was a vote of 100 for and only 13 against the bill. There was no call for the yeas and nays, the negative vote being so small.

It is very true that this bill lay in the Senate from that time until near the close of that Congress, but it seemed to attract no attention. More than a year, nearly two years, after the passage of the bill, in talking with three or four distinguished Senators who were generally vigilant and watchful of what took place in that body, I mentioned the fact that the standard silver dollar had been demonetized. I was promptly contradicted with the statement that it was impossible that any such measure could have passed the Senate without the fact being generally known, and an appeal to the law was necessary to settle the question.

Now, Mr. Speaker, there is another fact to be considered in connection with this matter. The time was favorable for just that kind of legislation. The money of our country was paper money. There was no coin in circulation. The reorganization of the mints seemed to have reference to the future, when specie payments should be resumed, rather than to the necessities of the hour, so that a measure concerning the coinage would not command special attention either in the House or Senate except on the part of gentlemen interested personally and directly in financial affairs and eager to mold legislation in the interest of wealth. To men whose fortunes would be promoted by the abolition of the silver dollar and the adoption of gold as our only measure of value the then condition of our affairs furnished a golden opportunity.

The fact, a very unpleasant fact, was called to mind in this Hall within three years after that remarkable bill was passed, that during the pendency of the bill certain distinguished European financiers were here at this Capitol watching the course of events and that, too, at a time when a very large portion of our bonds were held in Europe.

Whether their presence or their suggestions had anything to do with the framing or passing of the bill I do not pretend to say, because I do not know; but the attention of the House was called to the fact soon after the effect of that bill on our silver coin was known and the inference was drawn, rightfully or wrongfully, that their presence was intended to aid the passage of the measure.

Now, sir, what was the motive for such legislation? Let me answer that question. Our bonded indebtedness, all of which by the infamous act of 1869, known as "The act to strengthen the public credit," was made payable, principal and interest, in coin, silver and gold, although the principal of the greater part of the bonds, the five-twenties, was by the terms of the bonds expressly payable in lawful money (greenbacks, for which, greatly depreciated, they had been sold), and by striking down the silver dollar the whole of our bonds, principal and interest, were made payable in gold coin only. The act of 1869, it is estimated, added $200,000,000 to the value of the bonds, and, of course, correspondingly increased the burden of the public debt on the labor of our country.

No one can say how greatly the elimination of silver dollars from the means of payment of the bonds increased their value, yet it is obvious that the increased value of the bonds has been many millions, but the partial restoration of the silver dollar in 1878 of course diminished the advantage to the bondholder which the abolition of the silver dollar was intended to give. Again the fact is known that in 1872–'73 a very large portion of our bonds were held in England, France, and Germany. Gentlemen who talk so eloquently about English influence in American affairs may be called on to explain how it happened that when English capitalists held a large portion of our 5-20 bonds their value was enormously increased, at the expense of the labor of our country, by the two extraordinary acts of Congress of 1869 and 1873, the one act making the principal of the bonds held by them payable in lawful money, payable in coin, and the other making them, principal and interest, payable in gold. Besides all this, the aggregate public debts of the nations were greater at that time than at any other period in the world's history. Our own great debt was being reduced slightly, but the aggregate debts of the nations had reached the enormous sum of $19,550,000,000, and was greater than at any other time in all history. It was at this period Germany was demonetizing silver; the Latin Monetary Union was falling to pieces. If the United States, with a great public debt on their shoulders and being at the same time the leading silver-producing country of the world, would join in the work of striking down silver as a measure of value and means of payment, leaving gold alone the standard of value in which public and private debts should be paid, the triumph of capital over productive labor, on which rests the burden of all national debts, would be complete.

If there was not concert of action of the capitalists of Europe and America in all this, with a common interest and purpose, how did it happen that this bill passed Congress at a period when the advantage it would confer on capital by the adoption of the gold standard, both in Europe and America, would be of such astounding magnitude?

When all the facts are considered, the enormous public debts of the nations, with our bonds largely held in Europe, the whole movement in Europe and America seemed to justify the charge that it was a sinister movement of the capitalists of the world, seizing upon that unhappy opportunity—a conspiracy of capital, not only against labor in America, but against the labor of the human race, increasing enormously the burdens of national indebtedness and of the debtor class, and thereby adding enormously to the wealth of the creditor class, the bondholding class, and the favored classes of all nations. [Applause.]

All men must admit that the record of the proceedings of the House in the passage of the bill by which the standard silver dollar, the old unit of value, was eliminated from our monetary system, is a very extraordinary one. Why did Mr. Hooper wish to suspend the rules and pass the bill without its being read? The period in the session shows that there was no occasion for haste. Why was the fact withheld from the House that the bill eliminated from our monetary system the standard silver dollar, which had been the unit of value in our monetary system ever since our coinage of money commenced? No one has ever asserted that that fact was known to the House when the bill passed and no one can truthfully assert that the bill was ever read in the House. The reading of the bill which passed the House was, I admit, commenced, and barely commenced, when the assurance was given by the gentleman having charge of the bill, Mr. Hooper, that it made no change in the coinage, and this assurance gave rise to a series of questions as to subordinate matters, salaries, and the like.

I am able to assert positively, as I saw and heard all that transpired in the House in the passage of that bill, that when the assurance was given that the bill did not provide for any change in the coinage that assurance was accepted as final, and the bill was never read in the House, neither the original bill nor the substitute.

I might distrust my memory after this interval of seventeen years as to what occurred at the time the bill passed, but I find on examining the records of the House that soon after the passage of the bill my recollection of what transpired at the time is the same as it is now.

In a speech I delivered in the House on the 13th day of July, 1876, but a few years after the event occurred, I said:

I have before me the record of the proceedings of this House on the passage of that measure, a record which no man can read without being convinced that the measure and the method of its passage through this House was a "colossal swindle." I assert that the measure never had the sanction of this House, and it does not possess the moral force of law.—*Congressional Record*, volume 4, part 6, Forty-fourth Congress, first session, appendix, page 193.

And again, on the 5th of August, 1876, in a speech on this subject, I said:

The original bill was simply a bill to organize a bureau of mines and coinage. The bill which finally passed the House and which ultimately became a law was certainly not read in this House.

* * * * * * *

It was never considered before the House as it was passed. Up to the time the bill came before this House for final passage the measure had simply been one to establish a bureau of mines; I believe I use the term correctly now. It came from the Committee on Coinage, Weights, and Measures. The substitute which finally became a law was never read and is subject to the charge made against it by the gentleman from Missouri [Mr. BLAND], that it was passed by the House without a knowledge of its provisions, especially in relation to coinage.

I myself asked the question of Mr. Hooper, who stood near where I am now standing, whether it changed the law in regard to coinage. And the answer of Mr. Hooper certainly left the impression upon the whole House that the subject of the coinage was not affected by the bill.—*Congressional Record*, volume 4, part 6, Forty-fourth Congress, first session, page 5237.

The fact must and will go into history that the bill which revolutionized the monetary system of this country, and which inflicted irreparable injury and injustice on the debtor class, and enormously increased the value of the securities held by the bondholding class of our people, and benefited enormously the class favored under our laws, the foreign bondholders and the creditor class, and correspondingly oppressed the debtor and all men engaged in productive labor, adding millions to the wealth of the favored classes and imposing a corresponding burden on labor, passed this House under a suspension of the rules and upon an untruthful statement of its provisions and without the bill being read.

In relation to the presence in this city of European capitalists during the pendency of this bill which struck down the standard silver dollar, I ought to say that their presence, notwithstanding the manifest interest of the capitalists of Europe in the passage of the bill, does not necessarily or perhaps fairly justify the inference that they were here to influence our legislation in a matter of vital moment to the people of the United States, for the reason that European capitalists are constantly in this Capital. But the fact remains that the holders of our bonds in Europe as well as the American holders of our bonds and the creditor class in Europe as well as America had a direct and immense interest in the passage of the bill. No man can tell how many hundred millions of dollars were involved.

It is no answer to all this to point to the amount of silver dollars we had previously coined. The Mexican silver dollar, the Spanish milled dollar, the five-franc coin of France, the German thaler, and other foreign coins had occupied in former years an important place in our currency. Their value was determined under provisions of law, from time to time, by the Secretary of the Treasury, especially in relation to the payment of tariff duties, and all men now understand that when Congress determined that specie payments should be resumed, if the coinage of gold and silver, on the same basis of free coinage, had been authorized by law, the severity and hardships of that measure would have been avoided in a great degree, countless citizens would have escaped bankruptcy, and countless homes, wrecked by the operations of that inexorable law, would have enjoyed prosperity; but gold alone was declared to be the standand of value and all estates and property had to shrink to that measure of value. The triumph of Wall street and of the money-changers was complete.

The course of our legislation after the close of our late war and after the ability of our Government to meet the demands of our enormous public debt was certain is without any example in history. An ignoble, mercenary spirit controlled the Government in wonderful contrast with the loyal and manly spirit that inspired our people during the war. A great debt, mostly expressed in the 5-20 bonds, the principal of which was payable in lawful money, greenbacks, the currency with which the bonds were purchased by capitalists at an average discount of 40 per cent., was by the act of Congress of March 18, 1869, made payable in coin, and then by the act of the 12th of February, 1873, silver coinage in our monetary system was stricken down, so that the principal of the 5-20 bonds, the great body of our public debt, was made payable in gold coin, adding at the most reasonable estimate by the first act $200,000,000 to the value of the bonds and imposing a corresponding burden on the labor of the country.

It is impossible to estimate the benefit to capital and the injustice to labor of the second act of Congress, but it could only be expressed by millions of dollars, speaking carefully, for no one can state the exact or approximate result of such a measure. In the history of the world, few, if any, instances have occurred by which such enormous benefits have been conferred on capital. It may be found that monarchies have, in some instances, in regulating public securities and the coinage of money, conferred on a favored class an extraordinary advantage; but that such legislation should occur in a government like ours, where the people govern, seems absolutely incredible.

I have given the history of the passage of the bill through the House which demonetized the silver dollar for the reason that it is manifest that the section of our Union that has been especially benefited by acts of Congress, by tariff legislation, and in countless other forms of legislation, and has become thereby the creditor section of the United States, is determined that the debts due to it shall be paid on the gold basis. We do not complain of the prosperity of any section of our national Union; but we of the West must object to such a regulation of our currency as shall give them an unjust advantage. Tariff legislation unexampled in the history of the world in its favoritism of capital has enabled the capitalists of that section of the Union to loan millions of dollars to other sections of the Union, North and South, necessarily oppressed by such legislation.

But the favored section can not justly complain if Congress shall restore to our monetary system a coin in payment of debts expressly recognized by the constitution. Of course, gentlemen of the East, you will vote against the full restoration of silver to our circulation, for of course it will reduce the per cent. of your capitalists, and yet it will increase the chances of your debtors to pay their debts without being reduced to bankruptcy, it will, I admit, reduce the value of the money through which the payment is to be made, but they will still pay in the money recognized in express terms by the constitution of the United States. Can you complain of this? If they had not the right to pay on the basis of the coinage prescribed by the constitution, have they not the right to complain?

The effort in Europe and America, especially in view of the great public debts of the nations, to make gold the only standard of value, justifies the charge that, while slavery in its most offensive form has been abolished in both continents, a system has been devised through public debts and oppressive taxation to re-establish the servitude of mankind. Still a favored class, the holders of public securities; and an oppressed people! A new form of servitude hardly less oppressive than the old!

It has been vehemently denied that the demonetization of the silver dollar was brought about by covert or fraudulent methods or that a conspiracy among capitalists, international, was formed for that purpose; and I have presented the record of the proceedings of the House when the bill was passed, not only for the purpose of showing the clandestine method employed to pass the bill through the House, but to illustrate the spirit of the persistent opposition displayed ever since that time in the House and Senate to the restoration of silver money to its position in our monetary system as declared by the Constitution of the United States.

Among the powers conferred on Congress is the power "to coin money, regulate the value thereof and of foreign coin, and fix the standard of weights and measures" and among the powers denied to the States is the power to "make anything but gold and silver coin a tender in payment of debts."

Gold and silver money have from the beginning of the history of the human race been the recognized standards of value, and in the earliest dawn of recorded history silver alone was the measure of value. It is an interesting fact that the Bible furnishes the earliest evidence we have of the use of money, the purchase by Abraham of the "field of Ephron."

The imperishable record is as follows:

And Abraham weighed to Ephron the silver, which he had named in the audience of the sons of Heth, four hundred shekels of silver, current money of the merchant.

Since that remote period, through all the ages, silver and gold, in proportions which have never greatly changed until in recent years, have been the measures of value and standard of exchange throughout the civilized world. Only within the present century has any nation sought to obtain a temporary advantage over other nations by reducing the volume of money and hence increasing its value, by eliminating either silver or gold from its monetary system. It was left to the mercenary and grasping spirit of the British bankers and merchants during the present century to enact the part of Shylock in the greed of gain by reducing the amount of the common medium of exchange and enlarging the measure of value, by rejecting silver and compelling payment on the basis of gold alone, striking down one-half, as a general rule, the means of payment, and thus enhancing the value to be received and the burden of the payment.

It is easy to see with gold only the measure of value how readily the capitalists of the world can, by hoarding the one metal, in any given emergency reduce values and impoverish the producing and debtor class and correspondingly increase their own wealth. With silver and gold both measures of value such a result could hardly be possible; hoarding could scarcely include in any great degree the united volume of both silver and gold, and judging from the experience of former ages would never be attempted.

Wall street and the exponents of its views in the House inform us that, if silver is fully restored to our monetary system, the more valuable money, gold, will go to Europe, leaving us with our greenbacks and

silver only. These "accomplished financiers" gave us this same information with greater vehemence eleven years ago, when silver was partially restored to its old relations with our monetary system, and yet during every year since then the amount of gold in the United States has been increased until last year, 1889. During the last year, as is shown by the Comptroller of the Currency, an unexampled number of our people, generally persons of wealth, visited the Exposition of France. It is stated by the Comptroller that the public records show that the number who embarked from New York alone exceeded 178,803 and that the amount of money expended by them in Paris alone was $92,771,950, and it is shown by the official reports that the greater part of this great expenditure was in Paris, so that the shipment of gold to France can readily be accounted for by that fact; and therefore this exception as to the course of the movements of gold furnishes no argument against the restoration of the silver dollar. But as a matter of fact the expenditure of our wealthy class of people in Europe annually exceeds $50,000,000.

I wish to present the statistics furnished by the Comptroller of the Currency on this point, as follows:

The following table, showing the number of passengers to Europe by the steamship companies from New York during the last fiscal year, has been made up from copies of half-yearly statements furnished by the companies to the custom-house:

Passengers from New York to Europe during the fiscal year ending June 30, 1889.

Steam-ship line.	Adults.		Children.		Total.
	Cabin.	Other.	Cabin.	Other.	
French	9,841	8,405	.....	.....	a18,246
White Star	4,381	9,263	166	426	14,236
Cunard	14,761	11,465	611	1,029	27,866
Netherlands	1,947	5,843	243	655	8,688
State	2,034	1,942	202	205	4,383
Guion	3,809	5,299	303	380	9,791
Hamburg	3,825	5,141	412	340	9,719
Thingvalla	216	1,792	67	224	2,289
Fabre (Italian)	14	3,685	.....	17	3,716
Anchor	6,223	6,665	647	805	14,350
Inman	7,503	7,321	652	883	16,359
North German Lloyd	12,360	15,760	1,621	1,937	31,678
Red Star	3,729	7,342	279	593	11,943
National	442	1,825	56	175	2,498
Spanish	475	143	65	6	689
Various	643	1,504	62	143	2,352
Total	72,214	98,395	5,376	7,813	178,803

a Includes children.

The average amount used on letters of credit, issued by eight leading banking houses of New York, was about $1,500.

An estimate of $1,000 (say one hundred days at $10 per day for all kinds of expenses and purchases) as the average amount expended by or on account of each cabin passenger would certainly be low.

While it is difficult to estimate the amount expended by third-class passengers, an average of $150 for each would seem safe.

The result would be as follows:

Cabin passengers (77,590 at $1,000)	$77,590,000
Third-class passengers (101,213 at $150)	15,181,950
Total estimated expenditures by passengers from New York to Europe	92,771,950

I have a double purpose in presenting this table of the Comptroller of the Currency. I wish to show by it the vast number of our people who visit Europe and to call attention to the extraordinary advantage which our wealthy citizens enjoy who visit Europe under the McKinley tariff bill, for each of them, men, women, and children, may return with $500 worth of clothing purchased in Europe for personal use, worth here from $900 to $1,000, without the payment of any tariff tax whatever.

The following table shows the product of gold and silver in the United States, as stated by the Comptroller of the Currency. It will be seen that while this table is manifestly furnished as an argument against silver, the silver production only bears a fair relation to the production of gold:

The product of gold and silver from the mines of the United States since 1878 has been as follows:

Gold product of the United States.

Years.	Fine ounces.	Value.
1878	2,476,600	$51,200,000
1879	1,881,787	38,900,000
1880	1,741,500	36,000,000
1881	1,678,612	34,700,000
1882	1,572,187	32,500,000
1883	1,451,250	30,000,000
1884	1,489,950	30,800,000
1885	1,536,325	31,800,000
1886	1,693,125	35,000,000
1887	1,596,375	33,000,000
1888	1,604,841	33,175,000

Silver product of the United States.

Years.	Fine ounces.	Commercial value.	Coining value.
1878	34,960,000	$40,270,000	$45,200,000
1879	31,550,000	35,430,000	40,800,000
1880	30,320,000	34,720,000	39,200,000
1881	33,260,000	37,850,000	43,000,000
1882	36,200,000	41,120,000	46,800,000
1883	35,730,000	39,660,000	46,200,000
1884	37,800,000	42,070,000	48,800,000
1885	39,910,000	42,500,000	51,600,000
1886	39,440,000	39,230,000	51,000,000
1887	41,260,000	40,410,000	53,350,000
1888	45,780,000	43,020,000	59,195,000

As bearing on this question of the reduction of the amount of gold in the United States in 1889, I present the following table prepared by the Director of the Mint, showing the stock on hand in the United States of gold and silver, and showing, as I think, the extent of the drain from this country of gold incident to the exceptionally great expenditure in France of money by our people in 1889:

The metallic stock at the commencement of the fiscal year was as follows:

Metallic stock, July 1, 1888.

Coin and bullion.	Value.
Gold	$705,818,855
Silver	386,611,108
Total	1,092,429,963

From the above figures it will be seen that the stock of gold in the country was reduced during the last fiscal year $25,755,350 and the stock of silver increased $33,937,821.

These changes in the metallic stock are worthy of note for the reason that since 1875 there has been an uninterrupted increase in the accumulation of gold in the United States, and the past year is the first in a long series of years in which there has been a reduction in the gold stock of the country.

It is obvious that these tables furnish no ground for anxiety. The reason for the decline of the amount of gold in this country in 1889 is very apparent from the facts already stated. It is clear that if the rate of exchange in 1889 between the United States and France was in favor of France, as upon the facts stated, gold would be the more convenient medium for the settlement of the account. It was a special and exceptional incident and does not bear on the general question; besides France has more silver money than any other country and gold bears the relation of 1 to 15½ of silver; with us 1 to 16. Silver, therefore, is, and always has been, less valuable in our monetary system than it is in France, and, of course, more valuable under the monetary system of France. Gold, therefore, to them was the cheaper money; hence the accounts of 1889 between us and the French were adjusted on the gold basis and hence the comparatively small decline in our volume of gold.

For the purpose of showing still further the relation of gold and silver in our monetary system, but especially to show the actual state of our money in circulation, I submit the following table prepared by the Director of the Mint:

Location of the moneys of the United States, July 1, 1888.

Items.	In Treasury.	In national banks.	In circulation.	Total.
METALLIC.				
Gold bullion	$110,469,018	.....	.....	$110,469,018
Silver bullion	3,950,388	.....	.....	3,950,388
Silver bullion (melted trade-dollars)	6,545,554	.....	.....	6,545,554
Gold coin	203,636,984	*$95,709,782	$296,003,071	595,349,837
Silver dollars	243,879,487	6,906,432	48,922,871	299,708,790
Subsidiary silver coin	26,051,741	2,819,278	47,535,357	76,406,376
Total	594,533,172	105,435,492	392,461,299	1,092,429,963
PAPER.				
Legal-tender notes	†52,398,204	81,995,643	212,287,169	346,681,016
Old demand notes	.....	.....	56,807	56,807
Certificates of deposit	250,000	12,315,000	2,100,000	14,665,000
Gold certificates	22,135,780	68,761,930	51,125,440	142,023,150
Silver certificates	29,104,396	7,094,854	193,292,522	229,491,772
National-bank notes	7,054,221	125,130,431	220,183,669	252,368,321
Total	110,942,601	195,297,858	679,045,607	985,286,066

* Includes $20,884,000 clearing-house gold certificates.

† Includes $14,415,000 held for the redemption of certificates of deposit for legal-tender notes, act of June 8, 1872.

‡ Includes $3,787,026 of their own notes held by the different national banks.

From an examination of the above tables it will be seen that the amount of metallic and paper money in circulation in the United States (outside of the Treasury) on July 1, 1889, was $1,380,418,091, against $1,372,240,256 at the close of the preceding fiscal year, showing an increase in the amount of money in circulation between those dates of $8,177,835.

And the following table from the last report of the Comptroller bears on the same question:

The coinage executed is exhibited in the following table:

Coinage, fiscal year 1889.

Description.	Pieces.	Value.
Gold	1,639,285	$25,543,910.00
Silver dollars	33,793,860	33,793,860.00
Subsidiary silver coins	6,477,134	721,686.40
Minor coins	51,516,861	906,473.21
Total	93,427,140	60,965,929.61

The coinage of gold was $2,820,260.50 less than during the preceding fiscal year.

The coinage of silver dollars exceeded that of the preceding fiscal year by 1,075,187 pieces.

The coinage of subsidiary silver was $695,735.85 less than in the preceding year.

The minor coinage was $312,503.36 less than in the preceding fiscal year.

As bearing on the exportation of gold in 1888–'89 I submit the following statement of the Comptroller of the Currency:

The bulk of the gold exported since May, 1888, when shipments commenced, consisted of United States gold bars shipped from the port of New York. The value of the fine gold bars exported from May 1, 1888—about the commencement of the movement—to September 30, 1889, was $61,435,989.

These bars were invoiced to three countries, namely, France, England, and Germany, in the following proportions:

France	$27,692,855
England	18,717,087
Germany	15,026,047
Total	61,435,989

This, of course, shows an export of $61,435,989, but the imports and exports together with domestic production show only a decline in our gold of $25,755,350, as shown by the Director of the Mint. I submit this table only to show the exceptionally large exportation to France, with which Government it is well known we have but limited commercial relations. But a fair presentation of this matter requires the following statement of the exports of gold bullion and coin from 1875 up to 1889, when the decrease began, which covers the period since the silver dollar was remonetized.

Imports and exports of gold bullion and coin to and from the United States, each year from 1875 to 1888.

Fiscal years.	Imports.	Exports.
1875	$13,606,793	$66,980,977
1876	7,982,709	31,177,050
1877	26,246,234	26,590,374
1878	13,330,215	9,204,455
1879	5,624,948	4,587,614
1880	80,758,396	3,639,025
1881	100,031,259	2,565,132
1882	34,377,054	32,587,880
1883	17,734,149	11,600,888
1884	22,631,317	41,081,957
1885	26,691,696	8,477,802
1886	29,743,349	42,952,191
1887	42,910,601	9,701,187
1888	43,934,317	18,376,234
Total	456,903,037	309,522,856

So that in nearly every year since the silver dollar was at least partially remonetized, until last year, when larger exports of gold than usual took place and are satisfactorily explained, the imports of gold have been largely in our favor, and that, too, it may be remarked, whether the balance of trade was against us or not.

The following table of the Comptroller of the Currency bears on this question, as showing the comparative production of the two metals:

Product of gold and silver in the world.

Calendar years.	Gold (value).	Silver.	
		Value at average price of silver for the year.	Value (coining rate).
1885	$103,435,600	$97,564,565	$118,445,150
1886	106,163,877	93,397,200	120,626,800
1887	106,954,900	95,086,005	125,578,710
1888	105,994,150	103,536,280	142,437,150

The coinage "value," of course, refers to the United States, where silver even in our coinage is now always treated as an article of commerce, while gold is always considered the standard of value, exactly the reverse of the policy of the founders of our Government, who made the silver dollar the unit of value in our monetary system.

Last year gold was imported into the United States to the amount of $10,372,145. It is true that the importation of silver exceeds this and reached $24,682,380, but $12,687,832 of this was in foreign coin, showing that it was brought by immigrants, and $6,004,165 was foreign ores (Mexican), showing how little silver we receive from Europe in our commercial transactions.

The whole world's coinage, 1885, 1886, 1887, and 1888, as shown by the Comptroller of the Currency, is as follows:

WORLD'S COINAGE.

The value of the gold and silver coinages executed during the calendar years 1885, 1886, 1887, and 1888 by the nations of the world, so far as reported, is presented in a table in the appendix.

In compiling this table the silver coinages of foreign countries have been converted into United States money at their coining value.

This table is believed to include substantially the entire coinage of the world for the years named.

The following summary is presented:

Calendar year.	Gold.	Silver.
1885	$95,757,582	$126,764,574
1886	94,642,070	124,854,101
1887	124,992,465	163,411,397
1888	134,720,639	149,737,442

The large increase, during the last two years, in the amount of gold and silver employed in coinage, is worthy of note.

In regard to the silver coinage, it may be said that the only mints which are open to the coinage of silver for depositors are those of India, Mexico, and Japan.

The silver coinage of Mexico is unimportant, as a comparatively small amount remains in the country. The conversion of silver bullion into Mexican dollars is simply a convenient means of putting it into some merchantable shape for oriental trade.

The bulk of the silver coinage of Mexico is either remelted and used in other coinages or is absorbed by Asia.

This table, the last I shall submit, is to my mind a very instructive one. It is obvious that it was not prepared in the interests of free coinage, and yet it appears that with all the mints of the world restricted as to the coinage of silver, except India, Mexico, and Japan, the coinage of gold and silver during the years from 1885 to and including 1888 bore a fair and nearly natural relation, such as the coinage of the two metals has borne for hundreds of years.

But all of these tables show one fact beyond dispute, that, if the world ignores silver as a measure of value, the currency of the world, always based finally on coin, is reduced substantially one-half, in some countries more, and all debts are correspondingly increased as against the debtor and increased in favor of the creditor to the same extent. All fair-minded men see the infamous injustice of this. And yet that state of things has been going on. It has wrecked thousands and perhaps hundreds of thousands of homes in our country during the last seventeen years. The evil was only partially checked by the partial restoration of silver in this country in 1878. But the effect of reducing by one-half the standard of value and means of payment in our country is still felt in multitudes of impoverished homes. The conscience of all honest men must revolt against this.

I admit, speaking for myself, that I have always been anxious to adopt the principle in the complete restoration of silver to our coinage that the seigniorage, the difference in value, at any time, between the commercial value of silver or gold and its monetary value, resulting from the stamp of the United States upon it, should inure to the Government, the whole people. As the price of gold and silver bullion depends on the act of Congress fixing its value as money in given proportions, it would seem that the difference between the commercial value of gold or silver bullion on a given standard and its value as money ought to inure to the Government. The men who own silver or gold bullion are only entitled to its commercial value. I do not believe in increasing the wealth of any class of people merely by an act of Congress.

But it is obvious, from the nature of the contention between the men who believe that both gold and silver should be the basis of our monetary system and those who believe that gold only should be the basis of the system, that silver will either be placed on an equal footing with gold on the basis of 16 to 1 or else silver will occupy an uncertain and subordinate relation to our monetary system. Under these circumstances, for the general interest, I unhesitatingly vote for the full and free coinage of silver on the same basis as gold.

Taking it for granted that in a few years, with the steady reduction of the public debt and cancellation of the Government bonds, the national-bank system, a system which, resting exclusively on the public credit, has cost the people of our country hundreds of millions of dollars and done much in centralizing the wealth of our people, aiding in the creation of the imperial estates which now imperil our free institutions by exerting a dangerous influence in our legislation, State and national, will disappear as a system of banks for issuing money, it is obvious with the present drift of opinion in Congress that gold alone and gold certificates, with the present volume of greenbacks, $346,681,016, will constitute our currency, or that gold and silver and gold and silver certificates, full legal-tender money, with the greenbacks, will constitute our money.

The conflict of interests involved is obvious. Accumulated capital, fixed estates, and permanent incomes and salaries demand the former, for it would more than double the value of money, while labor in all fields of productive industry, the farmer, the mechanic, laborers, in fact, in every field of human enterprise, will demand the latter, for it would secure an ample and absolutely safe currency, "a sufficiency of real money," which has been found in all ages to be the life blood of industry, enterprise, and labor.

I will give my vote in favor of the full and free coinage of silver, placing it on the same footing as the coinage of gold, as a measure best for the whole people, setting aside the scheme of capitalists who sought to obtain, and did for the time obtain, a dishonorable advantage over labor, and give by assurance of a good and ample currency new life and spirit to the industries and enterprise of our people.

Just Pensions.

SPEECH

OF

HON. MARK H. DUNNELL,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, June 11, 1890.

The House having under consideration the report of the committee of conference on the disagreeing votes of the two Houses on the bill (S. 389) providing for dependent and other pensions—

Mr. DUNNELL said:

Mr. SPEAKER: I have not hitherto asked the attention of the House on the subject of pensions. In the many speeches which have been made, the just claims of the men who fought the battles of the Union have been fully and eloquently set forth. Some legislation was determined upon at the very beginning of this session of Congress. The Republican members of the House were pledged to it, and not a single member of the party has been found voting against such legislation.

There have come to Congress very many petitions asking for further pension provision. Some of the petitions have asked for appropriations or provisions which exceeded the ability of the Government to meet them without a large increase of the public debt. This has an illustration in the demand for a repeal of the limitations to the full operation of the arrears act. The justice of a repeal of these limitations can not be overcome by any good argument. The only argument which could prevail is the inability of Congress to favor the repeal because of the consequences to which I have referred. Good legislation can never fail to consider the financial condition of the Government.

Congress should ask how much the Treasury holds for the various objects to be cared for, or for which appropriations are to be made, including pensions. The public has demanded a reduction of revenues to the amount of $60,000,000. The interest on the public debt, amounting to $34,000,000, must be provided for. The amount required to meet pensions now provided for is not less than $120,000,000. When these and the other various objects of legislation and appropriation, such as the Army, Navy, public works, the various Departments of the Government, were counted, there were found to remain from the expected revenues not exceeding $50,000,000. With these demands upon the Treasury, with but this $50,000,000 remaining, Congress has been forced to consider how best to use this amount in the interest of the Union soldiers not now provided for. No Republican has objected to the use of this additional and remaining amount as above indicated.

Let me now consider the various propositions which have been made to Congress. Many thousands, and perhaps hundreds of thousands, have asked for a repeal of the limitations to the arrears act. This demand could not be met, for this repeal would involve an expenditure of $478,000,000. Such an increase of the public debt would not be indorsed by the tax-payers of the country. If the pending bill shall become a law the pensions for the coming fiscal year will amount to not less than $160,000,000, an amount equal to two-fifths of the entire income of the Government. Another class or kind of pension legislation asked for was presented by the Grand Army of the Republic.

The committee of the Grand Army of the Republic on pension legislation urged a service-pension law. Here again has Congress been confronted with a lack of money in the Treasury. The cost of such a provision has been variously estimated from $80,000,000 to $140,000,000. This would be the annual cost for the present. If it should cost $100,000,000, then the pension appropriation for the next fiscal year would considerably exceed $200,000,000, fully one-half of the entire income of the Government. If such a law had been passed, the widows of deceased soldiers, their children, and dependent parents would have necessarily been left with far less provision than was given them in the bill which passed the House or in the bill now under consideration.

The Committee on Invalid Pensions in this House have given to the questions above referred to, and the various other propositions coming to them, an amount of labor, study, and patriotic devotion not surpassed by any committee ever organized in any Congress. The honorable chairman [Mr. MORRILL], himself an old soldier, has won the admiration of the entire House for his zeal in behalf of his old comrades.

The bill (H. R. 8297) granting pensions to soldiers and sailors who are incapacitated for the performance of labor, and providing for pensions to widows, minor children, and dependent parents, reported by this committee, came before the House for consideration and action April 30. That bill placed upon the pension-roll every honorably discharged soldier and sailor who had served ninety days and had reached the age of sixty-two years. This was the age limit recognized in the laws granting pensions to the soldiers in the Revolutionary war, the war of 1812, and the Mexican war. Under this provision it is estimated that 80,493 survivors would have gone at once on the pension-rolls at $8 per month, costing $7,727,338. In regard to the age-limit provision in the original House bill the chairman used these words:

> Mr. Speaker, the policy of the Government in regard to the payment of pensions was declared at its very beginning and has ever since been steadily pursued. One hundred years ago it was enacted that officers and soldiers of the militia called into the public service, being wounded or disabled in actual service, shall be taken care of and provided for at the public expense by being placed on the invalid pension-list. The principle of providing a service pension when the soldier had reached an age which impaired his ability to earn his subsistence by labor was soon added. In a government formed by the people for their own benefit, and one intended to depend for its defense on its citizens, and not on its regular Army, this provision is eminently proper and wise. It is in every way better to spend a hundred millions of dollars a year in pensions than it is in maintaining a large standing army.

I confess to my regret, that the pending bill does not retain this provision. It seems to me that we are able to do this and at the same time do full justice to the disabled and dependent who have not reached the age of sixty-two years, as well as to the widows, minor children, and dependent parents. By the second section of the House bill, it was provided that the claimant for a pension on account of disability should not be required to furnish evidence that his disability was a result of his service. Service and existing disability were to settle the right to a pension.

The third section provided that the widow of an honorably discharged soldier should be placed on the pension-rolls, on reaching the age of sixty-two, without being required to prove that the husband died because of his service. The House amended the bill so as to make the age-limit sixty instead of sixty-two years. The fourth section of the House bill provided that all widows of honorably discharged soldiers and sailors, who were left without other means of support than their daily labor, should be placed on the pension-roll at $8 per month, without regard to the cause of the death of the husband. The estimated cost of the House bill, in round numbers, was $39,000,000. The bill to whose provisions I have now called the attention of the House passed the House April 30, as follows: Yeas 179—Republicans 146, Democrats 33; nays 71—Democrats 71, Republican 0.

But, Mr. Speaker, we are not now so much interested in the bill which passed the House or which passed the Senate as in the bill which is reported to us by the conference committee and which will be the chief pension legislation of this session.

Under the provisions of this reported bill we give a pension to every disabled soldier not now on the pension-rolls, who is incapacitated by any mental or physical disability, not the result of his own vicious habits, for the performance of manual labor in such a degree as to render him unable to earn a support.

The rate of pension shall not exceed $12 per month and be not less than $6. By this provision we shall take many thousands from the poor-houses of the country. Two hundred thousand men who served their country in its days of peril will be taken from distress and want. It does not require these brave defenders of the nation to make proof that their incapacity is the result of their military service. It only asks for proof of service and inability to earn support by manual labor. The bill also provides that the dependent parent of the soldier whose death was the result of his service and who left no widow or minor children shall have a pension and shall not be required to prove dependence at the time of the soldier's death.

Many thousands of parents now poor and dependent will here find relief. Many such parents have come into the condition of dependence since the son gave his life to his country. This bill makes provision for widows and minor children. The widow must prove the service of the husband, her marriage, her lack of other means of support than her daily labor, and the birth and age of her children under sixteen years, and then she is placed on the pension-roll at $8 per month and the children each at $2 per month.

The supreme object and purpose of the pending bill is to lift the burden of want and dependence from every old veteran, from every widow doomed to toil, from the minor children of the dead soldier, and from any needy parent whose son gave his life that the nation might be saved. The existing pension laws remain unrepealed. The more this bill is considered, the more, in my judgment, will its beneficence be seen and felt. Happily those to whom this beneficence is to come do not fear a Presidential veto, if we shall unite in its passage. It is fair to expect the same vote against it as was given against the passage of the House bill.

The pending bill should have the vote of every member of Congress who believes that the men who saved the nation, and especially those who are now suffering from the effects of service, should be cared for. As already said, it does not go far enough; yet the reasons given for this legislation will, in my belief, be accepted by the veterans of the nation. In this legislation some of the words of the immortal Lincoln will be answered when he said:

Let us strive on to finish the work we are in, to bind up the nation's wounds, to care for him who shall have borne the battle, and for his widow and orphans; to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations.

The chairman of the Committee on Invalid Pensions [Mr. MORRILL] in his remarks on the House bill, April 30, closed with these words:

Mr. Speaker, I believe that my old comrades are as loyal and true to the Government to-day as when they left their firesides and their homes and went forth to battle for the preservation of the Union, and I believe those who have been successful in the world's strife, who are now surrounded with the comforts of life, and who are in the enjoyment of health and strength, will willingly forego any claims which they may have against their Government until their more unfortunate comrades are kindly cared for. The passage of this bill will lift the burden from thousands of the old veterans and brighten the homes of many a poor widow toiling unceasingly to care for those who look to her for support. I am confident that the liberty-loving citizens of this great country will heartily indorse our action and look upon it as a simple act of justice; certainly nothing more, perhaps something less.

These grand words I commend to the considerate judgment of those to whom they apply, and I sincerely hope the day is not distant when all the gallant defenders of the Union shall, if they ask it, be placed upon the pension-rolls of the Government. It is in harmony with our national policy. We are not burdened by an immense standing army, as are nearly all of the governments of Europe. The United States should so legislate and so treat the volunteers that our liberties may be safely left with them to defend whenever put in peril.

As I have already said, the pending bill would be greatly increased in attraction to me if, in addition to all the beneficent provisions contained in it, there could be added to it the provision that every soldier and sailor, on arriving at the age of sixty-two years, could be placed on the permanent pension-roll, if he should ask it. This would add at once, as estimated, the names of 80,493 survivors. This would cost for the first year $7,727,338. This could be done and not exceed the limit of $50,000,000 for the increased pension legislation for this year.

Still, Mr. Speaker, the bill reported back from the committee of conference is so humane and beneficent that we should not delay its passage by further attempts to secure provisions which have been discussed in both Houses and which, after mature consideration, have for the present been left out.

I will, with the permission of the House, extend my remarks by the insertion of the conference bill upon which we are now to vote and which will, we trust, soon become a law of the land:

An act granting pensions to soldiers and sailors who are incapacitated for the performance of manual labor, and providing for pensions to widows, minor children, and dependent parents.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in considering the pension claims of dependent parents the fact of the soldier's death by reason of any wound, injury, casualty, or disease which, under the conditions and limitations of existing laws, would have entitled him to an invalid pension, and the fact that the soldier left no widow or minor children having been shown as required by law, it shall be necessary only to show by competent and sufficient evidence that such parent or parents are without other present means of support than their own manual labor or the contributions of others not legally bound for their support: *Provided*, That all pensions allowed to dependent parents under this act shall commence from the date of the filing of the application hereunder and shall continue no longer than the existence of the dependence.

SEC. 2. That all persons who served ninety days or more in the military or naval service of the United States during the late war of the rebellion, and who have been honorably discharged therefrom, and who are now or who may hereafter be suffering from a mental or physical disability of a permanent character, not the result of their own vicious habits, which incapacitates them from the performance of manual labor in such a degree as to render them unable to earn a support, shall, upon making due proof of the fact according to such rules and regulations as the Secretary of the Interior may provide, be placed upon the list of invalid pensioners of the United States and be entitled to receive a pension not exceeding $12 per month and not less than $6 per month, proportioned to the degree of inability to earn support; and such pension shall commence from the date of the filing of the application in the Pension Office, after the passage of this act upon proof that the disability then existed, and shall continue during the existence of the same: *Provided*, That persons who are now receiving pensions under existing laws or whose claims are pending in the Pension Office may, by application to the Commissioner of Pensions, in such form as he may prescribe, showing themselves entitled thereto, receive the benefits of this act; and nothing herein contained shall be so construed as to prevent any pensioner thereunder from prosecuting his claim and receiving his pension under any other general or special act: *Provided, however*, That no person shall receive more than one pension for the same period: *And provided further*, That rank in the service shall not be considered in applications filed under this act.

SEC. 3. That if any officer or enlisted man who served ninety days or more in the Army or Navy of the United States during the late war of the rebellion, and who was honorably discharged, has died, or shall hereafter die, leaving a widow without other means of support than her daily labor, or minor children under the age of sixteen years, such widow shall, upon due proof of her husband's death, without proving his death to be the result of his Army service, be placed on the pension-roll from the date of the application therefor under this act, at the rate of $8 per month during her widowhood, and shall also be paid $2 per month for each child of such officer or enlisted man under sixteen years of age, and in case of the death or remarriage of the widow, leaving a child or children of such officer or enlisted man under the age of sixteen years, such pension shall be paid such child or children until the age of sixteen: *Provided*, That in case a minor child is insane, idiotic, or otherwise permanently helpless, the pension shall continue during the life of said child or during the period of such disability, and this proviso shall apply to all pensions heretofore granted or hereafter to be granted under this or any former statute, and such pensions shall commence from the date of application therefor after the passage of this act: *And provided further*, That said widow shall have married said soldier prior to the passage of this act.

SEC. 4. That no agent, attorney, or other person engaged in preparing, presenting, or prosecuting any claim under the provisions of this act shall, directly or indirectly, contract for, demand, receive, or retain for such services in preparing, presenting, or prosecuting such claim a sum greater than $10, which sum shall be payable only upon the order of the Commissioner of Pensions by the pension agent making payment of the pension allowed, and any person who shall violate any of the provisions of this section, or who shall wrongfully withhold from a pensioner or claimant the whole or any part of a pension or claim allowed or due such pensioner or claimant under this act, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall, for each and every such offense, be fined not exceeding $500, or be imprisoned at hard labor not exceeding two years, or both, in the discretion of the court.

Federal Election Law.

SPEECH

OF

HON. HENRY STOCKBRIDGE, JR.,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 26, 1890.

On the bill (H. R. 11045) to amend and supplement the election laws of the United States, etc.

Mr. STOCKBRIDGE said:

Mr. SPEAKER: I am glad to avail myself of this opportunity to say a few words upon this subject, not because I cherish any hope of bringing forward anything that is novel in theory or fact, not because I have the hardihood to believe I can add any material arguments to those already adduced in support of this bill, but because, on a measure of as great importance as this, one which brings a new feature into our elections, I believe it to be the duty of every Representative upon this floor to give expression to his views, to reflect as best he can the sentiments of his district, that thereby the House may have the largest possible consensus of opinion.

The subject naturally divides itself into two entirely distinct propositions. The first of these involves the conditions in the various States attendant upon the elections and the question of the need of any national legislation upon the subject; and this being affirmatively answered there follows the no less important consideration whether the proposed bill is a proper one, adequate and adapted to the conditions under which it must operate.

I have the honor to represent a constituency in one of the border States, as they were formerly called, a State upon the dividing line between the North and the South, a State wherein there is enough of a colored vote to have it an important factor in our elections, and a State which I do not believe to be appreciably above or below the average of the forty-one other States in the purity of the ballot.

The question of a Federal election law does not present itself to my mind as a sectional one, nor should any law framed be directed solely at existing conditions in any one section of the country. It should have for its aim the giving effect to the honestly declared will of the majority as expressed at the ballot-box, alike in Maine and Missouri, in Minnesota and Mississippi. No State can claim preeminent virtue for the purity of the ballot. In the South the cry is of violence, intimidation, and false counting, and the testimony which has been laid before this House in the various contested cases which have been heard is conclusive as to the fact of its existence in greater or less degree. As to its extent there is, of course, difference of opinion, but of the fact there can be no dispute. How far it goes may be inferred from such a case as the McDuffie-Turpin contest, wherein 13,000 of the ballots were held as fraudulent, and even by the report of the minority of the Committee on Elections over four thousand of the majority credited to the contestee by the State authorities were rejected, and this in a single Congressional District of Alabama.

The ingenious ballot-box lately before this House in the Featherston-Cate contest was an ocular demonstration of how in a different way human ingenuity was employed to subvert the will of the people, and so also in the case of Waddill against Wise the minority of the Committee on Elections could make no stronger report in behalf of their associate than that there had been no election, which was tantamount to a public declaration that it was the result of illegal methods that the contestee had occupied for months a seat upon this floor.

These are recent examples, still fresh in the minds of all of us as to the condition of the elections in one region, and coupled with them is the fact already often alluded to that several Representatives on this floor hold their seats by a total vote so small as to be absolutely ridiculous, when it is borne in mind that each district contains, or should contain, 153,000 persons, and in some instances so meager has been the vote as compared with that of other members that it may be fairly questioned whether this is in a proper sense any longer a representative body of the people.

I am not unmindful that it has been stated by some of those gentlemen upon this floor, and inserted by them in the Congressional Directory, that there was no opposition in their districts, and hence only an imitation of an election, a form without a substance. But why, let me ask, was there no opposition? I can understand perfectly that there was none on any personal ground to the gentleman from Georgia who made this statement the other day in the course of his remarks, but will he pretend to say for a moment that there is an absolute concurrence of sentiment in all of these districts, where there is said to have been no opposition, upon the great economic questions of the day upon which the parties are divided? I for one can not believe such a condition to prevail in any portion of our country, and where differences do exist upon the issues which are national in their scope it is an attribute of not merely the American citizen, but of human nature to seek for an opportunity for giving them expression. The conclusion is therefore forced upon me that there must be some cause for this unanimity, and as I read the testimony in the case of Featherston *vs.* Cate, and the circumstances under which it was compelled to be taken, and find the corroboration of it in the newspaper accounts of the political atmosphere in another district of Arkansas, the key seems to be at hand which opens the mystery.

But this is not a sectional question. Frauds upon the ballot-box are not limited to the Southern States only. While this debate has been in progress New Jersey has been trying in her courts as precious a set of scoundrels as ever conspired anywhere to subvert the will of the people, and to her credit be it said that over the wire has flashed the news of their conviction, and there is now a reasonable probability that these most heinous of all offenders will spend a season in confinement, a feeble expiation of the wrong they have done. If the reports I have seen of this case are correct, the New Jersey miscreants are not adherents solely of one political party, but in their conviction there is cause for all men to rejoice who desire to see the purity of the ballot preserved. It is not a question of party or of the political supremacy of any man or set of men; it is the preserving inviolate of the fundamental principle of our republican form of government.

In my own State and city judges and clerks of election have falsified returns, have perverted the will of the people, and a few of them have been convicted for their offense, only to receive the pardon of the governor of the State, than which was executive clemency never more abused. From Chicago, Cincinnati, New York, and San Francisco, at one time or another, have come the loud-voiced protests of honest citizens against the corruption of the ballot in those localities. Some of them have been already alluded to in the course of this debate, and I mention them only to show that the question now before the House is in no sense a local one, limited by no sectional boundaries, and not necessarily an accusation against any political party. In New England the charge has frequently been made that manufacturers controlled and delivered the votes of their employés to the candidates of the political party of their preference, and I fully believe that there is ample foundation for this statement. The demand of the present is that North and South, East and West, there shall be a free, untrammeled, unbought, and unintimidated ballot cast by every citizen, and that ballot honestly counted and given effect, and the people of this country are to-day looking to Congress, to their Representatives on this floor, to enact the necessary legislation to this end.

The question is sometimes asked whether elections are any more corrupt to-day proportionally to our population than they have been in the past, whether the individual voter is more restrained in his liberty of casting his ballot, and I have no hesitation in answering in the negative. But at the same time it is worthy of note that the public sentiment is aroused to a pitch that it never has been before on this matter, and the cry for honest elections is going up to-day not only from the politician and professional reformer, but from every class and condition. Labor organizations are alive to the importance of the matter, and as the best preventive of corruption and bribery are demanding a secret ballot and in many States are getting it. The press, the pulpit, and the bench are speaking out in no unmistakable terms, and all to the same effect.

In the New Jersey case, to which I have already alluded, Judge Lippincott said in his charge to the jury:

> The government of the ballot-box-stuffer and repeater is no government at all. Such crimes are the most dangerous that can occur. Honest ambition and honest aspiration are crushed. Intelligence is scorned. The patriotism with which you would imbue your children becomes to them a useless acquisition. To instill in their minds a love of country so governed would be only to invite them to a sickening fraud feast. The history which would be placed in their hands would only be the cruel story of bribery and corruption of the ballot-box. Under such rule property becomes the prey of confiscation. Under the name of taxation communistic parasites and sinecurists would eat up the heart of mankind.

No less direct was a recent sermon of Dr. Parkhurst, of New York, which is quoted and commented upon in the July Century, as follows:

> Dr. Parkhurst says with regard to the men who dominate New York municipal life that "their only title to candidacy was their deviltry, and their only apology for being elected the apathy of the saints and the subserviency of respectable men to political boasism." He adds:
>
> "We maintain in this city schools of the prophets, we ship missionaries to all countries, and we annually export tons of Bibles and evangelical literature, and yet there is not concrete holiness enough on Manhattan Island to insure us against a system of political brigandage that excels even the organized outlawry of Italian banditti in the monstrousness of its demands and the frank cheerfulness of its methods.
>
> "It is as much a christian's duty to love his country as his God. To an American the Stars and Stripes ought to be as much of his actual religion as the Sermon on the Mount. It is as much the duty of a New York christian to go to the polls on election day as for him to go to the Lord's table on communion day. What is needed is a christian conscience vital and real enough to damn iniquity even when it would be more convenient to have it taken up into glory. So that if you are a Democrat and hear a Democrat lie, you will be prepared to brand it as a lie then and there. If you are a Republican and know a man is a bribe-giver, you will be prepared to brand him as a bribe-giver, even though he be a Republican and worth a good deal to his party."
>
> If a christian minister, with noble frankness, thus must needs remind members of christian churches of their civic duties, need the churches be surprised if those who are not actually within their fold, but whose whole hearts are engaged in the attempt to establish really free institutions in the New World, look with astonishment upon the lukewarmness of professed christians in matters of such vital and enormous import? Every christian church is a society for the cultivation of the highest and purest ethics; every community in the United States has at least one of these societies; the larger communities are crowded with them. Are these numerous, these busy and well equipped, these dominant societies having the effect they should have upon the standard of public morals? Do known scamps constantly get to be aldermen, mayors, legislators, governors, Representatives, Senators—here where hundreds and thousands of these societies for the culture of the highest ethical standards are sprinkled thickly through the land? Are men of known lack of conscience openly intrusted with the management of local or general elections and election funds? And are political tricksters and notorious corruptionists associated with, trusted, supported, by prominent members of these ethical societies, these christian churches?
>
> If these things are so—if Dr. Parkhurst 's right—to what influence shall we look for the purification of public morals? "Would to God that all the Lord's people were prophets," like Dr. Parkhurst, "and that the Lord would put his spirit upon them."

I make these quotations only to show that the public sentiment is keen upon this subject, earnest in its demands for the bringing about of pure elections, and that demand it is our duty to advance so far as lies in our power by the enactment of a law which shall regulate that over which the Constitution has given us the power, namely, the election of members of Congress.

I come now to the consideration of the second of the propositions involved in the question, namely, whether the so-called Lodge bill meets the requirements of the situation. At first the idea of bringing the judiciary of our Government into contact with politics and political strife was obnoxious to me and I felt the force of the argument of the gentleman from Tennessee at the opening of the debate, when he addressed himself to this point. It is, however, apparent that in any scheme for a Federal election system this power must be vested somewhere, and should be in such individual or official as is least apt to be influenced or swayed by partisan clamor. Of all the institutions of our Government none has commanded and deserved greater respect than the judiciary, and to no set of men has their due meed of praise been as readily accorded.

Impartial observers, like Mr. Bryce, speak emphatically upon this point, and call attention to the fact that in cases where even pronounced partisans have been placed upon the bench, their partisanship has been laid aside and their functions discharged with a full realization of the duty which they owed the whole people. Where else in all our governmental machinery can be found a set of men who give equally striking evidence of that sterling impartiality which is the dominant impulse of the Anglo-Saxon race in its love for fair play? Where else can be found another such body of men who from training and association are as competent to measure out even-handed justice? To them it thus becomes a matter of personal and professional pride that no taint of suspicion shall linger about any of their acts. In occasional instances heretofore have matters of political moment been brought before them for final arbitrament, and in their determination the people have readily acquiesced, content in the consciousness of their rectitude. To them, therefore, can with confidence be left the discharge of the functions imposed on them by this bill.

The duties imposed upon them are of a quasi-judicial nature, not widely different from what under existing laws they have at one time or another been called on to perform, and their position, independent as it is of subserviency to senseless outcry, owing to their tenure upon the bench, places them where they can mete out absolute justice. It is not, as has been asserted, subordinating the legislative branch of our Government to the judicial, but it is insuring through the judicial the untrammeled choice of the legislative by the people.

As pointed out by the learned Speaker of this House in the July issue of The North American Review, the English practice in cases of contested elections in Parliament has undergone a great change in the last century by their reference for adjudication from the House of Commons to the courts; yet no one will seriously argue that as a result of this change the British House of Commons is less free in its action or that it is in any sense under the domination of the courts of law or the judges. By our Constitution each House of Congress is the judge of the election and qualifications of its own members. That power it can not delegate to the courts, though if it could less of partisanship would enter into their adjudication; but we can, as is sought to be done by this bill, require certain of the preliminary steps towards an election to be conducted under the supervision of the judiciary, and thereby in part correct some of the errors which, it is openly charged, are committed on this floor.

Universality of the application of the law is an undoubted essen-

tial, and some of the objections made to it are based upon the statement that this does not in fact exist. If such were in reality the case, it would be a serious objection, enough so to justify every member upon this floor for opposing it. What, then, are the limitations which are supposed to render it obnoxious to this objection? It is this, that there shall be a petition of fifty or one hundred citizens of the district for its enforcement in a given locality, in order to set in motion the Federal supervision. The number is the same in every one of the forty-two States; it is a right inherent in no political party; it may be demanded and obtained by Republicans, Democrats, or Prohibitionists in almost every district in the land, for there are few where even the Prohibitionists can not number one hundred adherents of their views. In fact, the only States or districts where it might be expected to fail of application are some of those in the South where there is "no opposition." And yet the Representatives from these very districts will be found, when the vote shall come, unfaltering in their attitude against the bill. They say they do not want the bill and so will vote against it; yet the measure looks only to the honest conduct of the elections; it abounds in provisions for securing the right to the voters to have their ballots received and counted, but makes no provision for excluding a single honest vote, and yet the cry goes up: "There is no opposition in my district; elections are absolutely fair, relatively pure, but I do not want a law requiring them to be so." The logic of the position I leave to those who assume it to wrestle with.

For myself and my own district I want the law. I, too, believe that elections in my district are relatively pure, but I welcome any statute which shall confirm them as such. For years now Congressional elections in the large cities have been conducted under the existing system of supervisors, and it has been a powerful influence for purity. That which I have thus seen, and the value of which I have learned to appreciate, I would now see extended, that it might be enjoyed by others, in every State and district, its purifying influence extended all over our land.

A further ground of objection advanced by some grows out of the power of certification proposed by the bill, under which the Federal officials render their account of that which it has been their sworn duty to guard and supervise. This is a necessary incident to their office; without it the function of the supervisor would be merely to gain information for possible contests, and it would leave the law in a shape to foment contests, when its purpose is to diminish them. To supervise without the accompanying power to declare the result, would be the same as in a case of a vote through the tellers upon this floor, with no power in the tellers to announce the number who had passed between them. If the certification is to be left to the States, by the same reasoning the entire conduct of the elections should be, but any supervision that does not carry with it the right of certification is almost an absurdity, clearly one if the proposition is to have a national law upon the subject.

Observe clearly what is comprehended in the proposition. We have now and have had for years in all of the larger cities, at all elections for members of Congress, United States supervisors; they have watched the registration; they have been spectators on the day of election. That was all. They might see the count of ballots deliberately falsified, yet possessed no power to check it. They could only come forward as witnesses and give evidence that the will of the people had been disregarded, while he who was the beneficiary of the fraud was enjoying the honor and emolument of a station to which he had never been chosen.

It is now proposed to extend the field within which this supervision shall be exercised, to end the farce of making the supervisor little else than a mere spectator, and to require him under the solemnity of the oath which he has taken to officially declare the result of that over which he has been the appointed guardian, and to give that return the effect of the prima facie evidence of the result. Greater effect might not unreasonably be given, and all the machinery of canvassing boards or district or State returning officers be done away with, but to vest the supervisor with less power would be a sham and a pretense. He is either an official or he is not. If he is he must be charged with the discharge of certain duties or the reason for his existence ceases, and the plain object and intent of this bill is that he shall have certain clearly defined duties and shall perform them.

And it is right at this point that the great merit of the law comes to me. The one desideratum in every election is that the people shall have confidence in the counting of the ballots and honest declaration of the result. If they believe or suspect fraud to exist or that it is likely to be perpetrated, that the ballots are not counted as cast, or that there is any sort of manipulation or tampering with the contents of the ballot-box, one of two results is sure to follow: either an apathy upon matters of public concern which leads to a rule of ballot-box-stuffers, with all that must follow in its wake, or else revolution then and there. The bribe-giver and bribe-taker are coming more and more to be regarded with public abhorrence, the time is fast approaching when public sentiment will no longer countenance the expenditure of vast sums of money at elections, but with it must come a popular confidence in the integrity of those who handle the ballots.

Under the bill before us there will be a double certification: one on the part of State officials to State authority and one on the part of Federal officials to Federal authority. When elections are pure and honest these will agree, and the great mass of the people will hail with satisfaction a result which none can question. When they disagree, it becomes the easier to ferret out the discrepancy and to know whether it is the result of an honest and unintentional error or the deliberately conceived fraud of some party menial who would prostitute the very instrumentality upon which the abiding force of our Government exists.

Let members upon this floor occupy their seats by a title against which neither here nor in any corner of our country can one word of question be raised; let them be known as being in fact the representatives of the people, not the creatures of a band of men linked together by the consciousness of mutual criminality, whose subservient tools they are bound to be, and then to be a member of this body will be a post of honor not surpassed by any in the world. Pass this bill; say to the world that, while in various States laws are being enacted to render more certain the freedom and purity of the ballot, the Congress of the United States recognizes in the pure elections of its members and in the passage of such laws as shall secure that end it is not only performing its most important work for itself and the American people, but for the universal liberty of man.

Federal Election Law.

SPEECH
OF
HON. SAMUEL W. PEEL.
OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 30, 1890.

The House having under consideration the bill (H. R. 11045) to amend and supplement the election laws of the United States, etc.—

Mr. PEEL said:

Mr. SPEAKER: In the limited time that any member has on this floor to-night it would be impossible to discuss this bill in all its bearings. I shall not therefore attempt to go into a general discussion of the character of the objectionable features it presents to my mind.

Sir, this great Government of ours has existed for over a hundred years with the election machinery in the hands of the people, where it properly belongs. During that period our Government has prospered beyond human conception. Our people have been intrusted with the right to elect their own public servants. We have seen parties rise and fall. We have seen great leaders come and go, and no man in the history of this country has ever been bold enough until now to say, "The people can no longer be trusted to select the officers to represent them and to make the laws by which they are to be governed."

It would not be so bad if this political machine was equally divided between the two great parties in this court; but that is not so; it is all on one side—all Republican.

Mr. KERR, of Iowa. If equally divided, would they ever agree?

Mr. PEEL. If equally divided they might not. But they have no business deciding at all. We have law in this country. We have still reverence for that law We have State governments whose integrity is unimpaired, undisturbed; and they will certify the returns to the Clerk of the House correctly.

If you gentlemen think it necessary to have additional bystanders around the ballot-box to see that men vote as they please and have their ballots counted, you can amend the present law and increase the number without transferring it to partisan returning boards to do the counting and the certifying to this House. It is about as fair, Mr. Speaker, to place an illustration by the side of it that I think is about worthy of the combination in this bill, if you, sir, had to engage in a game of poker with a professional blackleg and give him the shuffle, cut, and the deal, with four aces in his hand to draw to. Do you think you would ever win a game? [Laughter.] And yet you would have as much chance of winning a game as a Democrat running for Congress under the provisions of this bill would have before any one of your returning boards. The game is all stocked against you. I hope and trust, for the sake of honesty and integrity in this country and in behalf of the people who sent us here to make laws and not returning boards, that there is conservatism enough left to stop this rash, radical, unprecedented law that you are attempting to place on the statute-books of the country.

Could I face my constituents when I go home and tell them that I voted for a bill which said in terms that they can not be longer trusted? Mr. Speaker, I could not hold up my head and look the people of Arkansas in the face and tell them I distrusted their common honesty and wanted to appoint a set of gentlemen of whom they know nothing to come down and inspect the elections, spy around the voting-places, and tell the country that my people are not honest, that they

are not to be trusted, and that all the virtue in the country belongs to the other side.

Mr. Speaker, I can select judges in my Congressional district, and, all of them being Republicans, I would not be afraid to trust with the certification of any election held there. And at this point let me say that districts in the Southern States have been reflected upon time and again in this debate, and because the entire vote of the district, according to the census returns, has not been polled it has been used as a handle to cast suspicion on the whole vote. We have been told that because the vote was light in some years that all was not well and that there was wrongdoing. My own district has been presented as one of these. I stated before during this debate and I repeat now that I defy mortal man to bring a particle of evidence from a Republican or any one else to show even a suspicion in that district in any election.

I was born and reared in Arkansas. Until we had the unfortunate reconstruction era I never heard of an unfair election. Since we have got rid of that miserable gang and the people of Arkansas who belong to the country have succeeded in controlling their own affairs, I have never heard of a Federal election where there was a disturbance to amount to anything. Of course there are at almost all elections a few trifling local disturbances; but they do not amount to anything, and I suppose they are found in every community throughout the country.

Why, gentlemen seem to expect the South in election matters to proceed as if it was to be absolutely perfect in all respects. That is unreasonable and nonsensical. Why, even our courts are not perfect; our churches are not perfect; our social relations are not perfect.

Mr. KERR, of Iowa. Was it not in your State a man was killed who was elected a member of Congress?

Mr. PEEL. He was killed, but not elected; but I defy you, gentlemen, to bring one particle of proof to show that it was because he was a Republican. Republicans in Arkansas are just as safe, as I have said before, as they are anywhere else in the United States; just as safe as if on this floor. Democrats have been assassinated in Arkansas, but not for political reasons, either. Men will kill each other all over the land until their nature is changed. It is the history of the world.

But they talk of these elections as though they expected perfection. I tell you, gentlemen, if you adopt this bill, and if it becomes a law, and you expect to cure all of the evils that necessarily flow from gatherings of the people at elections or elsewhere you are going to be mistaken.

And you are mistaken in another respect. You seem to think this is applicable to any other district than your own. You seem to think it will not be applied until it is absolutely needed, and that in your own district it will not be put in force. But ask yourself the plain question, is there a district in the United States where you can not find around the saloons and houses of ill-fame, men sufficiently low for the dollars that are in it to bring this law into force in your district? Even if the whole country is against it a hundred men can bring it into force in your district, though all the rest may oppose it.

Mr. Speaker, the bill is entitled "An act to amend and supplement the election laws of the United States," etc. This, Mr. Speaker, is a misnomer. It should be entitled "An act to stir up strife and cause bloodshed in the South and to rob the States and the people of the whole country of the right to elect their own officers," for if it should become a law elections by the people and self-local government are gone forever, at least until recovered by revolution.

What have the people of this country done, what sin have they committed that should deprive them of the confidence of the world? Is it because in 1884 they dared to elect Grover Cleveland President of these United States and a Democratic House of Representatives? Was it this event that causes the Republicans, now in power, to attempt by this bill to take the election of members of Congress from the people and to place it in the hands of a partisan returning board of their own selection, or is it because you are afraid to rely again upon the fat-frying and blocks-of-five system, and prefer whilst you have the power to place the States and the people completely under your own control and then bid them defiance? The latter is your purpose if to be judged by the provisions of this bill.

Mr. Speaker, such a political machine as this was never conceived or written by a statesman or by a man possessing common fairness. Sir, it is an insult to the integrity of the States and to every man, woman, and child in this broad land, and should be denounced and condemned by the civilized world. If this measure is right, then local self-government is a failure, the ability of the people to govern themselves is also a failure, and our form of government, which has been the admiration of the world for over a hundred years, should be torn down and a monarchy established upon its ruins.

What is this bill and what does it do? Its friends pretend that its object is to secure fair elections; in other words, a free ballot and a fair count. Let us see. It provides that the circuit judges of the United States courts only (all Republicans but one or two) shall appoint one chief supervisor of elections, who shall control through his deputy supervisors and deputy marshals all the elections in his circuit at which a Member or Delegate in Congress is to be elected.

Will these chief supervisors, who are to be appointed by Republican circuit judges for life, be Republicans or Democrats? Republicans, of course. No sane man doubts that these life officers, partisan Republicans, are given the power to appoint as many supervisors and deputy marshals as they please to control these elections. The supporters of the bill claim that he can only appoint three for each voting precinct, not more than two of which shall be of the same political party. I beg their pardon. He can appoint all he desires; he can only assign three to active duty at each precinct. The fifth section of the bill will settle the dispute. It is as follows:

SEC. 5. Supervisors of election shall be appointed in the following manner, namely: The chief supervisor of elections in any judicial district who has received any petition provided for in section 2 of this act shall thereafter, from time to time, prepare, present, and certify to such circuit court lists of persons whom he shall believe to be eligible for appointment as supervisors of election in the place or places for which petitions for supervision have been received; in preparing such lists the chief supervisor shall not be confined to the applications he may have received, and lists may be presented for each place from which a petition for the supervision of the registration or the election shall have been received, until the court shall have appointed such number as the chief supervisor shall believe to be sufficient to enable him to properly provide for the filling of all election districts or voting precincts within his jurisdiction and the filling of all vacancies which may from any cause be created or arise, which number shall not, however, be less than double the whole number of supervisors which each such city or town, county or parish, or entire Congressional district is entitled to the services of. From the appointments so made the chief supervisor shall, from time to time, select for duty, and shall designate and assign for each election district or voting precinct in any such city or town, county or parish, or entire Congressional district as they shall have been appointed for, three persons, but two of whom shall be of the same political party; from the three persons so assigned but two of them, who shall be of different political faith, shall be required to perform and discharge any duty prior to the day of election. The appointment of any supervisor of election may be at any time revoked or renewed by the circuit court, and every list of eligible persons presented to such court for appointment as supervisors of election shall, after action thereon by the court, be filed in the office of the chief supervisor of elections, who shall cause the same to be fully entered of record therein in index and tabular form for further reference.

From this it will be seen that the chief supervisor can have appointed such number of supervisors as he may believe sufficient to enable him to properly provide for the filling of all election districts or voting precincts within his jurisdiction and to fill all vacancies which from any cause may arise, which number shall not be less than double the whole number of supervisors which each city, town, county, or parish, or entire Congressional district is entitled to the service of.

Where is the limit? The only one is, he shall appoint not less than double the number required for service, not more than double, but not less than double that is needed for service; there are three to each voting place needed, hence at least six for each must be appointed, and as many more as the chief may desire or call for. All who do duty are to be paid out of the Treasury of the United States.

Again, this fifth section very artfully provides that only two supervisors (one of each party) shall be assigned to do duty prior to the election. Look at it; only two prior to the election, but how many during the election and after? All he wants, all he may think necessary to carry the election for the Republican ticket. And this is called a free ballot and a fair count. Great God, what a fraud and what a lie!

This bill also allows these political henchmen (that is what they will be) to boss registration, absolutely walk over the State boards of registration, and judicially decide for the States who can and who can not vote. Sir, such an outrage will stir the blood of every freeman in this land. Think of it; three political spies at your own expense, standing over a State board of registration deciding who shall and who shall not vote—and vote for what? Members of Congress? No, indeed; for everything in many of the States from township constable to Presidential electors, including members to the State Legislature, who elect the United States Senators.

By this infernal board, backed by all the deputy marshals they want, they can and will, if allowed to execute this law, absolutely control the election of every elective officer in this land to suit themselves, and from whose decision there is no appeal; and this is called a bill to secure a free ballot and a fair count. This bill, if enacted into law and executed, will cost the tax-payers of this country from ten to twenty million dollars.

For one, I ask in the name of my constituents, if you are determined to pass this bill, to stop and create a board of kings, composed of QUAY, Dudley, and for the third I would nominate the Speaker of this House, with power to issue commissions to all needed officers and save the expense of a farcical, pretended election, and call it a free ballot and a fair count.

The greatest safeguard in our form of government is the power of the people, a power higher and greater than that of kings or returning boards; that power is supreme, and should be; the people are our masters, and not our slaves; they have been so in this country for over a hundred years. Who is it that is trying by this infamous measure to bind them to political slavery?

Who is it that is trying by this bill to rob the States and the people of their inalienable and constitutional right to govern themselves and elect their own public servants? Who is it to be the first in this country to proclaim that the people can not be trusted? Who is it that proposes to create a life returning board of one political party, backed by armed deputy marshals, to throttle the people and say who shall vote and who shall not, and who shall serve as public servants and who shall not? The author and supporters of this bill answer.

Mr. Speaker, this is the Fifty-first Congress. We have had fifty before, covering a period of one hundred years. All this long time the States and the people have been trusted to control all our elections, from ward constable to the President of the United States. They have done their duty well. Under that system we have grown from a fragment of poverty-stricken colonists to sixty or seventy millions of people. We have astonished mankind. We have seen great political parties rise and fall, come and go. We have had wars, both foreign and domestic, and the people have never faltered—always true and brave to America and American interests.

Are they to be told now, in the first Congress after a hundred years of loyalty, that they are not to be longer trusted, that "We, the Republican party, though less than half the people of this great Government, now say that this country belongs to the saints and we are the saints? We have all the virtue and all the honesty; all the rest stand aside. Ye Greenbackers, ye Prohibitionists, Woman Suffragists, Farmers' Alliances, and all others, walk under the yoke! We are the chosen, we are the anointed. We, and we alone, from this time on will run this business as we please; a free ballot and a fair count we are going to have. We are going to have the offices, draw the salaries, and you pay the taxes."

This bold and heartless scheme is but the climax of a long and well matured plan of party leaders, protected classes, and gold sharks to abolish free government and to establish a strong, centralized power, so they can grind the great mass of the people at will.

Why do I say this? I judge from the tendency of things for many years, and, when connected with the one-man power displayed in this Congress and this bill, I have no doubt of it.

Sir, we have seen the Speaker of this House, the House of the people, reign king supreme over this body without rules, save his own autocratic will. We have seen his kingly gavel silence the Representatives of the people. We have seen him count votes for and against measures, whether they voted or not. In other words, we have seen him count members as present refusing to vote when they were hundreds of miles away. We have seen him do this over and over, against the protests of the people's Representatives. We have seen him ruthlessly walk over and break down well matured precedents of a hundred years—precedents made world-wide by the distinction and greatness of their authors. We have seen him walk over as of chaff not only the precedents made by all political parties, including his own, but over his own declarations, deliberately made from his place upon this floor.

Was he sincere then when talking as a sworn Representative of the people, as a member of Congress, when not interested in the rules more than other members, or was he sincere when he walked over his own words as Speaker to carry out his party purposes? I leave a candid world to say. After two months of such despotic reign we have seen him crowned by the majority of this House with a set of rules that makes him complete dictator over all legislation.

What are we here for, if one man is to rule the whole? Under these rules the Speaker can declare and hold a motion for the yeas and nays a dilatory motion and refuse to entertain it; at same time hold an appeal from his decision out of order; hence you have the beautiful spectacle of keeping off the record any measure the Speaker wants to cover up. The yeas and nays is the only way to put members on the record so their own constituents and the world can see how they vote. So when a bad measure comes up the party in control of the House can pass it into law without disclosing to the world that they voted for it.

Just think of it! A set of rules that can be used so as to hide the names of the members voting for or against measures. What is the record for, if not to show the world what we do and how we do it? Yet we have a Speaker crowned with a set of rules empowering him to make or not make a record of votes, and therefore the people who elect us can not tell how we vote.

This despotism is in line and harmony with this bill. But, oh! they say, it is all for a free ballot and a fair count, and that we have no right to be alarmed and charge them with an attempt to rob the States and the people of electing their own Representatives; that we should sit quietly by and wait until the halter is around our necks.

Sir, under our criminal law an American citizen is not required to wait until the assassin's bullet has passed through his brain before he can defend himself, but upon the mere motion or attempt to draw a deadly weapon he may take the life of the assailant; and here you are with a bill, deliberately prepared, considered in committee, and, if reports be true, further considered in a Republican caucus, which takes from the American citizen that which is dearer than life, his liberty and the right of home rule. The member that votes for this measure, in my judgment, betrays his trust and records himself against free government and in favor of despotism.

The honorable member from Massachusetts [Mr. LODGE] who reported this bill said in his speech that the black citizens of this country are not here of their own accord, and he seems not to know how and when they came. I can only say to him that if he will consult the history of his own ancestors he will find out how they got here.

He says there is a widespread belief in this country that elections in the South are not what they ought to be. He has doubtless heard this, and he and some of his constituents may believe it, for I see from the papers that a very distinguished constituent of mine—I mean the Hon. Powell Clayton, of Arkansas, delivered a learned lecture to the cultured people of Boston last winter on the Southern question, in which he told them how the poor black man was treated in my State. He posed himself before that refined and philanthropic people as a great lover of human liberty and especially in favor of a free ballot and a fair count. For fear the good people of Boston might think him more of a saint than the colored people of his own State do, I insert an editorial taken from the National Democrat, published at Little Rock, the capital of his own State, edited and published by a colored man who is perfectly familiar with Arkansas politics from reconstruction to the present. Here it is:

We were in hopes when the people of Arkansas, irrespective of party affiliations, repudiated the Clayton government in 1873–'74, that that would be the end of that miserable "gang." But what do we find now? After a penal servitude of nearly seventeen years, not in actual confinement, but on parol, we find them with that hypocrisy and false pretense equaled only by that great bandit and robber, John A. Murrell, standing before a Boston audience preaching and teaching an enlightened people how to conduct the affairs of the South. Let it be understood that we write this without malice, self-interest, or prejudice, but as a duty to our race and country.

Who is Powell Clayton? What has he been from the time he first came before the people of the country? There is one thing certain, he is public property now, and we propose to deal with him as such. During the Kansas troubles he was a Kansas jayhawker, not fighting for the negro then, but to perpetuate slavery. When the war broke out he became a Union soldier and was colonel of the Fifth Kansas Cavalry. Once a jayhawker always a jayhawker. They came to Arkansas and participated in the battle of Helena July 4, 1863. They remained in the State until the close of the war, and that left the colonel upon the soil of Arkansas. His first step was to become governor. In 1868 he became governor. Then commenced one of the worst reigns of terror that were ever known in the history of the American States. No monarch or tyrant ever held power more absolute. Men were murdered for political purposes, not of the South alone, but of their own party if they dared to differ with them even on party management. If a man dared to differ with them he must be put out of the way, if not by sitting down on him, by any means necessary to remove him.

They say this is "scraps of history" and should not be mentioned now after the lapse of fifteen or twenty years. Very good. We would be glad to let them pass by and forever forget them if they would only keep silent and stop their everlasting lying about the condition of the negro. Their hydra heads are forever popping up for the purpose of keeping up strife between the races in order to get such legislation through Congress as will enable them to get into power in this country. But let us say once for all, there is no danger of them ever getting a foothold again. They are well known.

We will give a few facts for the consideration of the American people. Mark you, gentlemen, Mr. Clayton "howls" and dwells at length upon the purity of the ballot in the South. Now, if he is the saint he would have you believe, why did he in person have the ballot-boxes taken from Crittenden County over to Memphis, at the Overton Hotel, and then and there proceed to remove the ballots from said ballot-boxes, the said Powell Clayton and his co-workers, and replace 1,500 ballots in lieu thereof, and proceed to count the same to suit the will and purpose of the said Powell Clayton? Do you want the proof? We have it. If he is the saint he would have a Boston club of business men believe, why did he throw out county after county in the State until he, the said Clayton, could control every branch of the machinery of the State government?

Gentlemen, let us tell you that this was not done against what might be termed at that date rebels and Democrats in many instances, but it was done against genuine, good, and conservative Republicans. If he is the great saint, why did he, the said Powell Clayton, willfully, maliciously, and with felonious intent step down from that high position as governor of Arkansas into the front yard of the capitol at the city of Little Rock, then and there as aforesaid, hand to one Samuel Garrett $4,000, with instructions to pay the same to one Rev. J. T. White, colored, to get out of his way for United States Senator, thereby corrupting and setting the first example in the State of Arkansas to the poor unlettered negro to become corrupt.

Do you want the proof? Saint! Why did he, because E. A. Fulton was on the conservative line of thinking, connive at one of the most diabolical murders (if they had succeeded in their plans) ever perpetrated in the State? Why did the man who did the shooting have a blank pardon in his pocket from the governor of the State and with other assurances that he would not be touched if he succeeded and did his work well? Do you want the proof? We have it. Why was Major or Captain Haynes killed in Crittenden County? Was it not a foul conspiracy to murder an innocent man, a Republican, because he had independent views? Did you not procure one Clarence Collier, of Collierville, Tenn., to do the dirty work (he a mere boy), and then to cover up your tracks fixed up a big reward that was whacked up with the boys who killed Clarence, in order to cover up all traces of foul murder?

Will any one doubt for a moment that there were not hundreds of political murders in the great State of Arkansas under the direct instructions of this same Powell Clayton? Enough indictments for the present. Let him serve out and do time for these offenses, and if he escapes in this life there are others to be made out with proof positive.

With pain we recall these horrors, but why do you still persist in injuring the South? Men like you and Chalmers, who have led men on to a white heat of political passion, have done more to destroy the prosperity of the negro of the South and get more of them killed than all the balance of the politicians we know of. Mr. Clayton would have military rule; so would Mr. Chalmers; so would many of the political men of the South. They would forever vote the negro to put them and their kin in office, but the thinking negro has something else to do.

We want to eliminate ourselves from politics; we desire homes; we desire friendship with our neighbors, but until we can get rid of these political pests we never can do so. Certainly the people of the North are too well posted to believe half of what Mr. Clayton says about the South. There is no trouble in Woodruff County, and, in fact, no other county, but what they have made themselves. Why is it that they have not put a ticket in the field for years in this State? They would have you believe that the Republican party would be bulldozed. Such is not the case. They know too well that neither white nor black would indorse them.

Where do we find the would-be emperor? Now in Boston. Where did we find him in 1864? In Cincinnati, with 1,500 armed deputies in the custom-house for the purpose of defeating the will of the people. We further find him in Oklahoma trying to run the machinery of that Territory. We find him in Washington trying to oust men that were honestly elected in order to advance his own political ends in this State. In short, you will find him everywhere bobbing up, from a cross-roads primary to a Chicago convention.

Just so long as Congress and the people will listen to these men and their miserable advice, just so long will the negro suffer. We, as colored men of this State, live and do better than the average on account of its physical conditions, but just make these gentlemen hands off, and you will see the negro out of politics, into homes, educated, prosperous, and happy.

Mr. Speaker, like the colored editor, I would not allude to the bloody days of reconstruction if my constituent, Governor Clayton, would treat our State fairly.

I am opposed to criticisms on this floor on private citizens, but that distinguished gentleman makes himself prominent in State and national politics. He has been here around this Capitol and in the room of the Committee on Elections, officiating in Arkansas contests, none of which were in his district. He, with his right-bower, Poker Jack McClure—I say Poker Jack because this speech may be read some in Arkansas and they do not know him by any other name; but for the information, of the House and the good people of Boston, Poker Jack is Hon. John McClure, ex-chief-justice of the supreme court of Arkansas under the carpet-bag rule, and who, it is said, can bet as boldly on a pair of deuces as on four aces, and plays politics the same way, especially in contested-election cases—he, too, is for a free ballot and a fair count.

Now, Mr. Speaker, personally I have no ill feelings against either of these distinguished gentlemen. My relations in a personal sense are good with all the people of this country, and it is my desire that they should remain so. I only speak of them in political matters, and when I heard of these two modern reformers being here complaining about unfair elections in my State it sounded to my ears like the devil quoting Scripture, and reminded me of the old-time darky's song about his loud-shouting brother, when he said:

De bigger dat you see de smoke de less de fire will be,
De littlest kind of 'possum is suah to clime de biggest kind of tree,
And de nigger at de camp-meetin' dat can de loudest sing and shout
Is suah to rob some hen-roost befo' de week is out.

Mr. Speaker, we, the people of Arkansas, fully understand these two saintly spirits; we know their tracks in the sand wherever we see them; the ambition of their life is to divide the Democratic party of Arkansas; that party that brought peace out of chaos and war; that party that has regained the credit of the State and made its name honorable everywhere, the State they in four years of misrule disgraced, bankrupted, and ruined. Their party in our State will follow any faction or party, I care not what it is called or what it proposes to do, to defeat the regular Democratic ticket, that is, if they obey these distinguished leaders.

Poker Jack, as he is familiarly called, is now a prominent applicant for the judgeship recently made vacant by the promotion of Judge Caldwell, and if the Administration indorses this bill he ought by all means to be appointed, because the bill allows circuit-court judges to assign their part of the election work to a district judge; and inasmuch as the bill takes the elections out of the hands of the State and the people and transfers it to a gang of Republican party workers, responsible to no one, appointed and selected for their efficiency in that business, Poker Jack would be in the zenith of his glory when in charge, and I recommend him as an expert of rare qualifications in that line; he is truly for a free ballot and a fair count; and I think I can assure him of the appointment if this infamous measure should become a law, for Judge Caldwell is the circuit judge for our State, and he knows that Poker Jack can be relied on in such matters, and that he would perform his duties to the entire satisfaction of his party. He would forever settle the question about which his soul and that of Powell Clayton are so deeply concerned, "A free ballot and a fair count." And friend Clayton, when he next visited his good friends in Boston, could say indeed and in truth that the good work was done, and no mistake, for Poker Jack did it.

Clayton is deputy president at this time for the State he so ruthlessly despoiled. Postmaster-General Wanamaker has turned the postal service over to him in Arkansas while he attends to his Sunday-school. No representative of the people of that great State can get a post-office established until Clayton is consulted. I have been trying for six months to get an office re-established in Searcy County, in my district, and a Union soldier appointed postmaster, but the boss says "No," and I do not suppose he ever was nearer than 50 miles of it in his life.

I beg pardon of the House for wandering off from the bill under discussion.

Now, Mr. Speaker, I want to say that I believe I am conservative in my political views; I feel kindly to every one; but this bill has alarmed me more than anything I have ever seen upon or off this floor. The idea of turning the election machinery of this country over to any one political party, however virtuous, is indeed alarming.

I swear before God I would not vote for a bill to turn the political control of this country for life over to any party on earth. When it leaves the people, farewell to political liberty, and perhaps worse. I say here and now that any party that would ask it ought not only to be kicked out of power, but out of existence. And this attempt upon the part of the majority of this House should sound the death-knell to their rule and stand as a warning in thunder tones to all other parties now and hereafter.

Let the people, one and all, cry out as one man, that we are supreme and will rule this country to the end. It is ours and we intend to rule it.

In conclusion, let me say to the majority of this House, rob the Treasury if you will, demonetize silver if you will, tax our people to death if you must, but in God's name spare the liberties of the people.

Federal Election Law.

For the instruction, meditation, and repentance of mankind it is said in Holy Writ:

"But whoso looketh into the perfect law of liberty, and continueth *therein*, he being not a forgetful hearer, but a doer of the work, this man shall be blessed in his deed." (James I, 25.)

SPEECH

OF

HON. ELIJAH V. BROOKSHIRE,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 30, 1890.

The House having under consideration the bill (H. R. 11045) to amend and supplement the election laws of the United States, etc.—

Mr. BROOKSHIRE said:

Mr. SPEAKER: In no measure which has ever come before Congress, within my brief memory, have I felt so deep and painful an interest. When the rules for the transaction of business in this House were adopted setting aside the constitutional precedents and safeguards of a hundred years, I felt badly, for I then believed, as I now know, that they threw wide open the doors of Congress to the perpetration of the most grievous wrongs ever inflicted upon a free people in a time of profound peace. I saw a tariff bill brought in and passed without proper deliberation or amendment to tax the prime necessities of our people to the last degree. Later I saw the bill passed demonetizing silver. Many other unjust, extravagant, and unwarranted measures of much concern to the masses of our people have passed this session. Not only has this crusade overturned the precedents of a hundred years to carry out its radical purposes, but six Democrats have already been turned out and Republicans placed in their seats, in order that this high-handed programme might be carried out to the letter. One of these Democracts was elected by 13,000 majority. In the Fiftieth Congress this body was Democratic, and though several contests were brought against Republicans in that Congress, not one was unseated.

This House also passed bills to admit as States Idaho, with 1,613 voters, and Wyoming, with 18,008. The district which I have the honor to represent on this floor has over 1,300 more voters than both of these Territories, and which, when admitted in a few days, will give you Republicans four more Senators and two Representatives; yet you never tire of voting against the admission of New Mexico, with 43,000 registered voters, and you do this for no other reason than that the Territory is Democratic.

Did any one ever hear of the majority in this House exercising power so wanton and radical?

I would be discouraged indeed if I did not believe in my heart that the people would rise up in anger and resent such conduct. I can not believe that the people will tamely tolerate such extravagant and unjust measures. Shall the patriotic and beneficent principles of local self-government as taught by Jefferson, Madison, and Jackson fall into utter decay at the end of the first century of our national existence?

Sir, the people have never tolerated with patience, but, on the contrary, they have with vigor resented encroachments on their personal liberty and their right to control themselves. Our ancestors left the Old World to escape the injustice and tyranny of strong centralized governments, and which denied to them the right to govern themselves. For one hundred years the Federal Government apportioned the representation to which each State was entitled in this House on its population, and then each State through its Legislature divided the State into Congressional districts, and also provided by law the time, place, and manner of holding the elections for Representatives in Congress.

Before 1870 it never entered into the mind of anybody that the Federal Government had a right to control the election of Representatives in the States, and I think it is quite evident to any candid and conservative mind that the framers of our Constitution never intended that the Federal Government should be in control of our popular elections. Think of this bill, the purport and object of which, to use its three most conspicuous words, is to "guard," "scrutinize," and "supervise" the elections in the States. Democrats have always believed that the people resident in each political division, be that division a township, county, Congressional district, or State, have the honesty, good sense, and patriotism to manage their own elections, free from outside interference and molestation.

Democrats believe that our people should be encouraged to govern themselves and to be self-reliant. Now, the wisdom of this principle is evident when we reflect that the resident people in a Congressional district, for instance, are pecuniarily, socially, and in every other way interested in having a representative who will do his whole duty. Therefore the people of the district have every reason known to civil government to see that their elections are honest and their representatives competent and faithful. Carpet-bag government in the eleven

Southern States is a painful and suggestive commentary on the denial to the people of local self-government. In about ten years of radical rule in these States, their State indebtedness was increased from about $67,000,000 to $297,000,000. This immense debt, which the people in those States and their childrens' children can scarcely ever pay, was not made for the improvement of the country, but its proceeds were ruthlessly divided among a lot of imported spoliators.

I have before me the CONGRESSIONAL RECORD. I will read a few short paragraphs from the speech delivered day before yesterday by that able and distinguished Republican from the Ninth district of North Carolina [Mr. EWART]. When referring to carpet-bag rule, he said:

> The State governments fell into the hands of the most disreputable gang of thieves and plunderers that ever disgraced a nation, and the very name of Republicanism became a stench in the nostrils of all honest men. By bloodshed, violence, and intimidation these governments were wrested from the thieves and plunderers and to-day without exception are held by the Democratic party. In spite of this long era of misrule and all the evils of reconstruction the South has prospered as never a section prospered before. Go South now, and your journey will be through a continuous and unbroken strain of the music of progress, the whirr of the spindle, the buzz of the saw, the roar of the furnace, and the throb of the locomotive. The next census will show it to be the richest section of our country.

In referring to the colored man, he said:

> As to his political rights, speaking for my own State, I unhesitatingly assert that no Republican in the State, black or white, is prevented from casting his vote. The elections are absolutely fair. [Applause.] Here and there, as is the case in perhaps any State in the Union, local returning boards assume to throw out certain precincts for alleged irregularities, and in that way often wrongs are done. Representatives from other States can speak for their own sections; I only speak positively for my own.
>
> * * * * * * *
>
> I am sick and tired of this talk about the negro problem at the South. There is no negro problem at the South. It is no new question there. It is the same question that existed when the shackles were struck off the limbs of four millions of slaves; it is the same question that existed in 1865, when nearly one million slaves were given the right of suffrage. It is not a problem. Side by side the blacks have been there with the whites since the war, and side by side they will be with them until the last syllable of recorded time. [Applause.]
>
> I know the negro. I ought to know more about him than the distinguished gentleman from Massachusetts. For three generations my people were slaveowners. There are no more faithful, generous, or kind-hearted people upon God's green earth. Give them the education that they are so eagerly striving to obtain, and the country will have no more useful class of citizens than they will prove to be. But instill into their minds that the white people of the South are their enemies, that they desire to crush them, to strip them of their legal rights, and you do the negro a wrong that you can never atone for. I say that the negro is to-day thinking for himself. It is a delusion to suppose that he is voting the Republican ticket solidly. He is doing nothing of the kind. Thousands of them to-day are voting the Democratic ticket as willingly and as openly as the Republican ticket is voted by myself or any of my colleagues on this floor.
>
> It is getting more and more difficult every year for the Republican party to control him. Thousands, as I have stated, openly vote the Democratic ticket. Thousands do not manifest interest enough in an election to go to the polls. He is growing skeptical about certain pledges and promises which have been made and broken by the political organization to which for so many years he has shown his loyalty. Widespread dissatisfaction exists among the colored voters of the South to-day. There never was a proposition as dear to the negro heart as the Blair educational bill. The negro knows the power of education. He looked eagerly to the great Republican party to redeem in honor and good faith the pledge it had made in its platform at Chicago to extend national aid to the common-school system of the country.

A few minutes ago I said I believed the people would resent the passage of this cruel bill. You will remember that the first law affecting Congressional elections was approved July 14, 1870. It introduced the United States deputy marshals on the scene, under the pretense of preserving order at the elections. On February 21, 1871, an act of some twenty sections was approved, which not only provided for United States deputy marshals at the polls, but also provided for Federal supervisors at each voting precinct, to be appointed by a Federal judge, in cities of over 20,000 inhabitants. When this crusade against free government was begun by the Radical party in 1870 the eleven Southern States consisted of five conquered provinces presided over by five generals of the Army. It was in full control of almost every Northern State.

Sir, we certainly have occasion to be profoundly grateful to such noble and conservative men as Horatio Seymour and Samuel J. Tilden, of New York; Governor William Allen and Allen G. Thurman, of Ohio, and Thomas A. Hendricks, of Indiana, and many others, living and dead, whose names I could now mention, who sounded the bugle of alarm and met face to face the enemies of local self-government in the campaigns of 1872, 1874, and 1876. In the year 1876 the people witnessed the overthrow of the Radical party and the placing of the Democratic party in control in every State government in the Union, with the exception of six, the loss by the Radical party of both branches of Congress, and the election of Samuel J. Tilden and Thomas A. Hendricks to the Presidential and Vice-Presidential offices by a popular majority over their Republican adversaries of more than 260,000.

Mr. KERR, of Iowa. May I ask the gentleman from Indiana a question?

The SPEAKER *pro tempore*. Will the gentleman permit a question?

Mr. BROOKSHIRE. Yes, sir.

Mr. KERR, of Iowa. Was not the defeat of the Republican party due to the fact that we failed to enforce the Federal election law?

Mr. BROOKSHIRE. Certainly not. Public sentiment in the North, as everybody knows, drove the soldiers from the polls of the South and restored the conquered country to home rule. Sir, all this proves that the love of home rule in the hearts of our people defies the menace of the sword. [Applause.] And but for the accursed returning boards such as are contemplated in this bill, the two great statesmen and reformers, Tilden and Hendricks, would have been President and Vice-President of these United States at the end of the first century of our independence.

Let us examine into this bill. It not only provides, as did the act of 1871, for deputy United States marshals and supervisors at the polls in cities of over 20,000 inhabitants, but it also goes further and provides for any number of deputy marshals and three supervisors at every voting place in any county where fifty citizens petition for Federal supervision or in any entire Congressional district on the petition of one hundred citizens. These deputy marshals are to receive $5 a day for not to exceed eight days, and the supervisors from $3 to $5 a day, except on election days, when they are to have from $5 to $10 a day, according to population and registration duties; and these supervisors are to be engaged from three to twelve days. The bill also provides for a United States board of canvassers, to consist of three members in each State, at a compensation of $20 a day each for fifteen days' service, and also one clerk for each member of the board at $12 a day for fifteen days. Each circuit judge in the United States is to appoint a chief supervisor for life in each judicial district of his circuit, whose compensation will probably amount to $2,000 per annum. There are about fifty-five thousand election precincts in the United States, and it is estimated that if this bill becomes a law and is generally enforced it will occasion an expenditure at each general election of more than $15,000,000. In Montgomery County, Indiana, my home county, there are forty-two voting precincts; so the application of a Federal election law such as this bill contemplates would increase the cost of a Congressional election in that county alone perhaps $10,000 or more.

Under the judiciary bill which passed this House recently we will have twenty-seven United States circuit judges. The new judges will be appointed by the President and will hold their offices for life. Only two of these judges will be Democrats. When we construe together the many high-handed and revolutionary acts which the radical and violent majority have matured in caucus and rushed through this body in such extreme haste, the purpose of the party in power becomes evident and simple. It proposes to maintain itself in power, though it destroy local self-government. This is the most bitterly partisan bill on record, I have no hesitancy in saying. All the Federal judges, all the jury commissioners, all the marshals and deputy marshals will be Republicans; and when we contemplate the character of the State canvassing boards and the supervisors of election, do we not see involved in this a "machine" for the exercise of the very refinement of tyranny?

A few years ago, when this House had under consideration the proposition to have the United States deputy marshals appointed equally from both political parties, Mr. Garfield said:

> The argument that these officers should not be appointed by the court because they are under the orders of the marshal falls to the ground when the plain fact is known that they serve the supervisors rather than the marshal. But we are told that, if the special deputies be appointed from different political parties, there would be no unity of action in the execution of the law. I am not willing to confess, for I do not believe it to be true, that this country is so far gone into debasement and anarchy that the fair-minded people in any Democratic township or ward can truthfully say: "There is no Republican in this precinct who can be trusted to aid in executing the election laws." Or that they will in any Republican community say: "There is no Democrat in all the borders of this district whom we can trust to carry out a fair election law." When I am compelled to believe this, I shall say that my country is no longer capable of self-government, is no longer worthy of freedom.

It would be an insult to the intelligence of this House for me to presume to comment on the words of this distinguished citizen.

Instead of the people being intrusted with the absolute management of their own elections and instead of the ballots being counted and the result tabulated and officially declared and certified by the officers of the people, elected by the people and directly responsible to the people, it is now proposed to have Congressional ballots counted by Federal officers, and the results tabulated and certified up to the Clerk of this House by United States officers, appointed by a Federal judge, and not dependent upon the will of the people for their official life; and these Federal judges, as we all know, are only punishable for misconduct in office by censure and impeachment at the bar of the Senate, and if the Federal officers appointed by the judge violate the law and trespass upon the rights of the people they are to be tried in the courts that appointed them, far removed from the people whom they have wronged and offended, and to be tried before a jury selected by three jury commissioners, who may all be of one political party. Perhaps no item in this bill reflects its bitter partisan character more than this provision empowering United States Federal judges to select jury commissioners in such a manner. Now, the present law requires that the Federal court appoint a jury commissioner of opposite political faith from the clerk of the Federal court, who, along with the clerk, selects the jurors; but for some reason the radical majority puts it within the power of the court to select a board of jury commissioners wholly from one party. Now, this is without precedent.

Mr. Speaker, the radical party whose ideas we are now combating, has, I think, inherited from the old Federal party which passed the alien and sedition laws, some of its most intolerable and obnoxious ideas, and much of this bad blood was transmitted to the Republican party through the veins and arteries of the old Knownothing party.

Some Republicans occasionally venture to talk about what they term the principles of the party. Has it in fact any well grounded principle for the administration of civil government? Would you call high and exorbitant tariff taxes, laid upon the masses of the people for the benefit of a small class, a principle? Do you call the constant contraction of the currency when the population and the business of the country are constantly expanding a principle? Is the strong, mailed hand of the Federal Government, with which you propose to control the election in the States of this Union, directed by a principle? Do the management and distribution of the offices by the Federal Administration at the behest of QUAY, Clarkson, and Dudley, involve a principle? I assert that these are not principles, and that any party without principle is dangerous to the people and can only maintain itself in power by acts leading on to an absolute despotism.

It is a significant fact that a Knownothing anti-naturalization bill was the twin brother of the Federal election law first passed in 1870. Sir, I propose to show before I sit down that this bill reveals two purposes on the part of its authors, the destruction of local self-government and the vexing of the foreign-born citizen to the last degree.

In 1870 this House passed a bill, No. 2201, to amend the naturalization laws and to punish crimes against the same. Its first section took from every State court the power to grant certificates of naturalization and invested these powers in the Federal courts. Had this bill, which was approved generally by the Republican leaders, become a law, an applicant for naturalization could not have declared his intention to become a citizen in the State court, perhaps located at his very door, but, on the contrary, he would have been forced to go into the Federal courts, at the loss of much time and money, perhaps located hundreds of miles from his home. The bill required that he file notice in the Federal court, or before one of the commissioners, at least one month before making his application for naturalization. All this would likely have required a second journey by him to the Federal court. His evidence to prove his application had to show him a resident of the United States for four years and six months. He could prove his application only by citizens of the United States; no matter how many reputable persons he produced in court, if they were not citizens of the United States they would not be heard to prove his application.

I have referred to this proposed bill of 1870 to show that the radical party was unfriendly then as now to our foreign-born citizen. You will remember how the Federal election law was enforced immediately after its passage in 1872 and how United States deputy marshals took forcible possession of the naturalization papers of citizens in New York and refused to ever return them to their rightful owners. My distinguished and learned friend from New York [Mr. CUMMINGS], when commenting on these outrages on last Saturday, said in this House:

> I say there are to-day hundreds of foreign-born citizens entitled to vote who can not exercise the franchise because they were robbed of their papers at that time—

Meaning 1872.

This bill would have delighted the old Federalist who voted for the alien and sedition laws, which stabbed that party to the heart at the very dawn of this century. Sir, if this bill becomes a law it will not only clothe the deputy marshals with additional means to vex the foreign-born voter, but it expressly empowers the supervisors five weeks before the election to hound him into the most sacred recesses of his home, and there question him and the members of his family about his age, nativity, naturalization, etc., as though he were a criminal. This autocratic power does not stop here, for they are empowered to enter the State courts and there scrutinize the naturalization of citizens. Behold the spectacle of a mere satrap, a ministerial officer, drawing from the public treasury $5 a day, going into the State courts, presided over by judges elected by the people, and there assuming to supervise the naturalization of citizens. Sir, if this we tolerate, let us never boast again of having descended from the patriots of the Revolution. [Applause.]

There is one other point I wish to make before I close. We Democrats have long contended that the East, and especially the New England States, is the part of the Union which prevents the great West and South from having just legislation. Are we right in this? The chief advocates of this bill live in New England, and nearly all this loud talk about a "free ballot and a fair count" is borne on the winds from that section. Are these people saints or Pharisees, which? I shall append to my remarks an article which appeared not long ago in the Baltimore Sun, which very fully and justly sets forth the hypocrisy and absolute insincerity of these bigoted and presumptuous advocates of the worst ideas and traditions of the old Federal and Knownothing parties.

Mr. Speaker, these New England statesmen in the past twenty years have molded and directed the policy of the Republican party as artfully and perfectly as the potter molds his clay. When these Pharisees and money-lenders of New England say "Demonetize silver," it is demonetized. Look at your CONGRESSIONAL RECORD and examine the silver vote and refute this if you can. When these same people ask for a higher tariff, that they may rob the farmers, laborers, and consumers of the West and South of their earnings under the forms of law, is it not done? Again the RECORD will disclose the fact that they contend for the highest taxes possible; and their votes are a solid phalanx for rates of duty as high as those of which the most avaricious would dream.

Sir, I would ask in all sincerity, why are these gold-bugs and high-tax people pressing with such hot haste the passage of this bill? Do they not feel the impending storm beating with fury on these legislative halls? Do they not know that this storm bears the hot and angry breath of an overtaxed and oppressed people in the West and South? Ah, I know your answer, if you would but honestly speak. It is quite evident that it is your purpose here and now, when you have the power, to enact a law to menace and limit the Democratic vote in the whole country, and especially in the South, and in the great labor centers where there is a large foreign population. These New England statesmen, representing an area of country not twice as large as Indiana, propose not only to perpetuate themselves in office and in wealth and to control the lion share of the patronage of this colossal Government, but they propose to rule the destinies of this Republic, come what may; and they, like all oppressors of the past, forever propose to fill their coffers from the earnings of the masses they oppress.

Mr. Speaker, let me say right here that the law contemplated in this bill would be in irreconcilable conflict with the election laws in almost every State in this Union. Our election law in Indiana provides for a secret ballot and for the destruction of the ballots when counted. This bill provides for the supervisors being everywhere present on election day, and for the preservation of the ballots for further use by the Federal "inquisition." On the Congressional tickets, under our State law, also appear the names of persons voted for for the Legislature and for county offices; so this proposed law could only result in interminable conflict between the State and Federal officers.

Is there any member of this body who lays to his soul the flattering unction that the great masses of our people, North and South, East and West, whose lives are a constant reproach to despotism, will tamely submit to the outrages here proposed? Sir, my people, I am sure, desire liberty. They desire the greatest liberty consistent with organized society. They desire, above all things, to be let alone in the management of their own domestic concerns. They desire to nominate and elect their own officers. They believe in their own capacity for self-government, and I know they would despise the man who would distrust their honesty and ability to manage their own elections and select their own public servants. On this issue between local self-government and ultimate tyranny I am forever with my people. [Applause.]

For the instruction, meditation, and repentance of mankind it is said in Holy Writ:

> But whoso looketh into the perfect law of liberty, and continueth *therein*, he being not a forgetful hearer, but a doer of the work, this man shall be blessed in his deed. (James I, 25.)

I submit an extract from the Baltimore Sun, which sets out the inequalities of representation as they exist in some of the States:

WASHINGTON, *June* 10.

Some brief mention has heretofore been made of the remarkably disproportionate influence and power in national affairs exercised by the Republican voters of New England. It is an interesting subject and will well repay entering upon details. The bulk of the political literature which almost ingulfs the CONGRESSIONAL RECORD is contributed by New England Senators and Members, the burden of whose lay is the alleged denial of representation to voters in other sections than their own. Mr. Speaker REED in speeches and interviews and magazine articles in the last six months has clamored without cessation for the doctrine that so many black voters in the South, constituting a certain percentage of the population, are entitled to a proportionate number of Representatives in Congress. It is for securing this end that the election measures which he so earnestly advocates are to be directed. If he will only consent to apply the same principle to his own section the measures to be brought forward would most probably receive a much stronger support than is likely to come to them under existing circumstances.

It is really astonishing that so little comment has been provoked by the condition of political affairs in New England. It is marvelous that the descendants of the Anglo-Saxon race have not risen in revolution at the denial of political rights which has prevailed for more than half a century. No such Congressional and legislative gerrymandering has been continued or enforced elsewhere in the world as that existing in New England for Republican benefit. At the last Congressional elections in November, 1888, the Republicans polled an aggregate of 449,000 votes and the opposition polled 378,477, or very much more than two-fifths, yet the Republicans have all of the twelve Senators from New England and twenty-three out of twenty-six Representatives.

In Connecticut the Republicans were in a minority of more than three thousand, yet they have the two Senators and three of the four Representatives. In New Hampshire the Republicans polled 45,271 votes and the opposition 45,430, yet the Republicans hold on to both Senators and both Representatives. In Rhode Island the Republicans have held on to power not only by unfair apportionments, but by the most wholesale disfranchisement of citizens. That State is bound to slip from them now, and if it is ever possible to receive a reasonably fair apportionment Connecticut and New Hampshire would soon follow suit.

The Republican Senators and Representatives from New England, so many of whom are occupying seats to which they are not justly entitled, have put themselves into positions of commanding influence in both branches of Congress. In the Senate they are at the head of the most important and influential committees, and exercise a control over legislation monstrously unequal. Of the two Maine Senators Mr. FRYE is at the head of the Committee on Commerce and Mr. HALE is chairman of the Committee on the Census. The two New Hampshire Senators respectively head the Committees on Education and Labor and Immigration. The Senators from the insignificant State of Vermont, which hardly contributes enough to the national Treasury to pay its own office-holders, preside over the Committees on Finance and the Judiciary. The Massachusetts Senators have the chairmanships of the Committees on Privileges and Elections and on Indian Affairs. Senator ALDRICH, of Rhode Island, is chairman of the Committee on Rules. The two Connecticut Senators hold the Committees on Territories and on Military Affairs. Mr. DIXON, of Rhode Island, is the only New England Senator who is not a chairman. This is because he only came to the Senate in

November last. But it may be taken for granted that in a short time he will be found at the head of some big committee.

In the House we have Mr. REED, of Maine, whose election is only compassed by wholesale and open bribery, assuming despotic power in the Speaker's chair and at the same time acting as chairman of the Committee on Rules. Of his colleagues, Mr. DINGLEY is a member of the Committee on Ways and Means, which is equivalent to a chairmanship; Mr. BOUTELLE is chairman of the Committee on Naval Affairs, and Mr. MILLIKEN of the Committee on Public Buildings and Grounds; Mr. SPOONER, of Rhode Island, is chairman of the Committee on Accounts; Mr. GROUT, of Vermont, is chairman of the Committee on the District of Columbia; Mr. BANKS, of Massachusetts, is chairman of the Committee on Expenditures of the Interior Department; Mr. LODGE, of Massachusetts, chairman of the Committee on the Election of President and Vice-President, and Mr. CANDLER, of Massachusetts, chairman of the Committee on the Quadro-Centennial.

It need not be supposed that these New England Republicans, who have walked into Congress over the slaughtered political rights of nearly one-half the population of their section, are satisfied with monopolizing the chairmanships of the principal committees. They will be found stowed away in top places of all other desirable committees, so that their influence permeates every species of legislation for every section. Effrontery has long been characteristic of the New England Republican Congressman, but it is difficult to conceive how they, the beneficiaries of the almost complete practical denial of political rights to hundreds of thousands of white voters, can assume to discourse so much upon alleged and imaginary similar instances as to black voters.

Federal Election Law.

SPEECH
OF
HON. ALBERT J. HOPKINS,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,
Monday, June 30, 1890.

The House having under consideration the bill (H. R. 11045) to amend and supplement the election laws of the United States, etc.—

Mr. HOPKINS said:

Mr. SPEAKER: If this bill inaugurated a new principle in legislation or if it contained any principle that had not been practiced for nearly twenty years, the note of alarm from the gentlemen from the Southern States might have some effect upon parties who are interested in and earnestly endeavoring to form such legislation as shall protect the interest of all people, both North and South, rich and poor; but when we turn to the records of our country and find that since 1871 the same principle which is embodied in this bill has been ingrafted upon the law of our country and when we find that it has been practiced in the greatest of all the commercial cities in this country to the entire satisfaction of the Democrats who are in favor of honest elections, as well as Republicans, it seems to me that a large part of the rhetoric which has been indulged in by gentlemen who oppose this bill is unwarranted.

The law of 1871 was opposed by the Democratic party quite as vehemently as the bill under consideration. The most direful results were predicted by the leaders of that party if the law were enforced. The history of the years which have followed has shown them to have been false prophets. The unnumbered woes which they so glowingly pictured time has demonstrated were the "figments of a distempered brain." Honest men, where this law has been enforced, have been protected in the exercise of their political rights, while those who practiced fraud for personal and party gain have met the just punishment which should be meted out to all offenders.

The gentleman from South Carolina [Mr. HEMPHILL] stated in debate the other day that this old supervisor law had been used in certain assembly districts in the city of New York by the supervisors to deprive several thousand naturalized voters of their naturalization papers. That is true, but in every instance it was shown that the naturalization had been fraudulently issued and that the persons who, by means of these false papers, were about to exercise the greatest right accorded to an American citizen were not legal voters. The gentleman has unconsciously borne testimony both as to the need and efficiency of the law. Wherever this law has been enforced it has borne fruitful results in favor of honest elections. New York, Brooklyn, Cincinnati, and Chicago can all bear witness to its necessity and efficiency.

The following letter speaks eloquently for this law and its extension to other sections of the country, as proposed in the pending measure:

WASHINGTON, *December* 10, 1884.

DEAR SIR: We, the Representatives in Congress from Brooklyn, N. Y., unite in asking that you modify your instructions to Marshal Tate, under date of November 19, 1884, which were in part as follows: "Each supervisor is to be paid $5 per day for the number of days served, not exceeding five days in number."

* * * * * * *

We do not believe that in any other city the Government gets as much service from the supervisors or that in any other city the compensation is more honestly earned. We know that in none are the election laws enforced with greater thoroughness or efficiency. * * *

We remain, very respectfully, yours truly,

DARWIN R. JAMES.
FELIX CAMPBELL.
W. E. ROBINSON.
HENRY W. SLOCUM,
Congressman at Large.

Hon. BENJAMIN H. BREWSTER,
Attorney-General, Washington, D. C.

Mr. James was one of the leading members of the Forty-ninth Congress on the Republican side. Messrs. Campbell, Robinson, and Slocum are well known to you all as prominent Democratic Congressmen from the State of New York in previous Congresses. These men had seen the working of this law, and with honest impulses, politically as well as personally, favored its enforcement. They believed that an honest administration of the Government was of the first and highest consideration, and that the way to secure it was to have a fair election and an honest count.

Now, gentlemen from the Southern States, why have you any more fear of an honest administration of this law, if you believe in fair elections, than the citizens of New York, St. Louis, or Chicago? If you believe in permitting all the legal voters of your respective States to vote at Congressional elections and to have their votes counted as they cast them, I ask you where is your danger in this bill? The gentleman from Georgia [Mr. TURNER], when he addressed the House a few minutes ago, asked:

What is there in our situation that invites this new crusade against my section?

Is it a "crusade" to insist upon an honest election in the State of Georgia? Is it a mortal offense to insist that the legal voters of that State shall be permitted to cast their ballots with the same freedom and security on election day from violence or fraud that prevail in Illinois? That is all this bill contemplates. Since the law went into force in 1871 there has never been a Congressional contest to be decided by this House from the cities of New York and Brooklyn. Nor has there been the complaint so often and so truthfully made before the enactment of the law of the issue of fraudulent naturalization papers to secure voters to swell the party strength.

This bill is neither a party nor a sectional measure. It is national. It is as applicable to the Seventh district of Illinois as it is to the Seventh district of South Carolina. Wherever the rights of the humblest citizen are interfered with in the exercise of that privilege which is and should be dear to every American heart, the right to cast his ballot on election day and have that ballot counted as cast, this law is made applicable, and is intended to inflict quick and severe punishment upon all offenders. To those who obey law and respect the rights of their neighbors and all citizens, it has no terrors; but to those who prosper politically by depriving other men of their constitutional rights, who by fraud, intimidation, or murder take from any number or class of American citizens in any State of this Union this proud privilege, it is intended to and will deal with them with an iron hand.

The purity of the ballot-box is the safety of the Republic. He who tampers with it is guilty of a crime as great as treason to his country. Now, Mr. Speaker, it would seem that for a measure so equitable and just there should be no party lines; that a measure which treats all alike and which is to be exercised or enforced only against fraud, corruption, or intimidation, and always in the interest of honest elections, would be supported by members of this House, irrespective of party affiliations. And yet, sir, we have witnessed the strange spectacle since the debate on the bill commenced of the Democratic members of the House being apparently wildly agitated over the prospect of the passage of the bill.

A stranger unacquainted with the provisions of the bill would be led by their talk to believe that the officers named therein are to do all the voting as well as counting at elections. Those who represent constituencies north of the Ohio and Potomac Rivers have even gone to the extent of issuing an address to the public in which they denounce the bill as unconstitutional and even call for "town-meeting" gatherings to denounce it.

Mark the fact, Mr. Speaker, that the Democratic members who join in this address for public meetings to discuss and condemn this measure are not joined by their colleagues from the Southern States and do not appeal to the people from that section of our common country. There is an enlightened public sentiment in the North which is quick to condemn any measure of legislation not in the interest of the people. The Democratic members of the House from Northern States realize and appreciate this, and by issuing their address have endeavored to forestall that sentiment and turn it against the pending bill before a fair and full discussion of its provisions in the House demonstrates to the country not only its constitutionality, but its necessity if we are to perpetuate in all its integrity our republican form of government.

The whole scope and purpose of this bill is to maintain the purity of the ballot-box, the fountain of popular government. The Democratic address has, however, placed in strong contrast the condition of the citizens in the North and those in the old slave States of the South. It is a confession that in the Southern States the people are not consulted in such matters. They are made the "hewers of wood and the drawers of water" for the favored few. You have a class there now, as you had before the days of 1860, who dominate and control the great mass of the voters, regardless of their rights, their sentiments, or their interests.

Why did not these Democratic patriots in their appeal to the people include those of the Seventh district of South Carolina, where the colored voters, with a majority of 25,000, are *misrepresented* on this floor by a Democrat. What a delectable spectacle it would be to see one of the "preservers of the liberties of the people" who signed this address

down in that black belt in South Carolina denouncing the provisions of this bill—a bill which, if it becomes a law, will secure to each of those now practically disfranchised negroes the rights guarantied him under the Constitution. And what is true in this district is equally true in the States of Alabama, Mississippi, and Georgia——

Mr. OATES. Will the gentleman yield?

Mr. HOPKINS. My time is too limited.

This address of the Northern Democrats is at the request and to aid and assist their Southern colleagues. History is repeating itself. The Democratic party is controlled to-day, as it was before the war of 1861–1865, by Southern men. They see that if the provisions of this bill are carried out the "solid South" will be a thing of the past. Their supremacy is endangered. I care not what reasons they may assign on this floor for opposing this bill; the true reasons are given by General CATCHINGS, of Mississippi, in a remakable letter to a friend, published in the St. Louis Globe-Democrat, from which I quote:

You are mistaken, I think, in your idea that good would come from a general election law. In such event I fear that many whites would leave us, destroying our solidity and cementing and making effective that of the negroes. I would regard it as a great calamity. If Cleveland had been elected the Republicans would have offered as a settlement of the question the repeal of the fifteenth amendment.

Ah, gentlemen, that is what you want, the repeal of the fifteenth amendment which guaranties to the colored men of this country the rights and privileges of which they have been so long deprived.

Now, they will not listen to anything, because they think they have satisfied the North and broken the solid South, and it looks as if they had done both. With a coercive election law nearly all the Southern districts would soon be represented by white men largely elected by the negro vote, and the negroes would be even more intense and aggressive than they are in Virginia, for they would be more numerous. We would have race collisions at first, but gradually they would be allowed to vote and would capture everything, and this would cause them to organize in county and State elections also and give us additional trouble. I hope we will never have the law forced upon us.

This letter gives the true reason for Democratic opposition to this bill. It will break up the solid South. It will secure to the colored men of that section the rights of a freeman. Not only this, but it will secure to a large class of white citizens some degree of safety in maintaining their political convictions. The home-rule principle in government so well illustrated in the township organization in the New England and Northern States has ever been unknown in the Southern States.

From the early days of our Constitutional Government to the late war an oligarchy composed of a select few ruled these several States with as supreme a sway as that wielded by any of the monarchies of Europe. The liberation of the slaves and the adoption of the constitutional amendments, which enfranchise them, do not destroy this oligarchy. By methods which are a blot on the civilization of the age they have stifled free speech and fair elections in all sections of the South where the colored men are in the majority. The gentleman from Alabama said in the debate to-day:

There is one chapter in our political history so full of bitter memories that every American would gladly forget it forever, if he could—the era of reconstruction. But it must be opened now for the lessons it teaches.

And then he went on to tell of the enormous State debts incurred in those States during that period by the "negroes and their allies" who were in power. I have no word of justification or excuse for the men who sought political power for corrupt and personal aims or who used the newly enfranchised negroes to oppress or distress those lately in rebellion against their Government. Their experience had been a bitter one, and God knows the people of the North did not wish to humiliate or cruelly or unjustly treat them. They did expect they would accept the results of the war as forever settling the status of the negroes and would interpret the constitutional amendments in their spirit as well as letter. In this they have been sadly disappointed.

The same chapter in American history which the gentleman mentions as showing the "corrupt carpet-bag" government also describes the formation in those States of the ku klux klan, white-liners, and other political organizations, formed to deprive the negroes of their political rights. The record of those political organizations is one of the most bloody and terrible in the history of any country or time. I can not better describe it than by quoting from an argument made by the late Reverdy Johnson in defense of men charged as being members of the ku klux klan in South Carolina. He said:

But Mr. Attorney-General has remarked and would have you suppose that my friend and myself are here to defend, justify, or to palliate the outrages that may have been perpetrated in your State by this association of ku klux. He makes a great mistake as to both of us. I have listened with unmixed horror to some of the testimony which has been brought before you. The outrages proved are shocking to humanity; they admit of neither excuse nor justification; they violate every obligation which law and nature impose upon men; they show that the parties engaged were brutes, insensible to the obligations of humanity and religion. The day will come, however, if it has not already arrived, when they will deeply lament it. Even if justice shall not overtake them, there is one tribunal from which there is no escape.

This is the language of one of the greatest lawyers of his generation and one of the leading Democrats of his time. He had no political sympathy with the negroes of the South, but the crimes of these associations of midnight marauders, as shown at this trial in Columbia, S. C., so shocked and amazed him that when he came to address the jury he gave utterance to the burning words just quoted. Justice to the negro and fair treatment to the white voters of the South who do not believe in the methods which restored the Democratic party to power in many of these States and which now maintain it in its supremacy are all that is asked.

This bill takes away no rights which the Constitution and laws of our country give to an American citizen. On the contrary it seeks to protect him in the enjoyment of those rights.

No bloodshed, no riots, no turmoils, and no disturbances of any kind will occur on the enforcement of this bill if it becomes a law unless it be the wanton act of men who set at defiance all law and all questions of right in their blind opposition to the exercise by the colored men of the South of their constitutional rights. The life and prosperity of the Republic demand honest elections. The proper enforcement of this bill will secure that, and all honest men of whatever political party should unite in upholding it.

The constitutional arguments urged against it are untenable. The Supreme Court of the United States has forever put this question at rest, unless gentlemen feel as the gentleman from Virginia [Mr. TUCKER] expressed himself, who stated, when interrupted in his constitutional argument against the bill and reminded that the Supreme Court, in the case of *Ex parte* Yarborough, 110 United States Reports, page 625, had held directly the opposite doctrine to that for which he was contending—

I say this: That neither the Supreme Court nor any other court can bind my conscience as a Representative of the people as to the construction of the Constitution.

This answer may satisfy the Democrats of this House, but it will not suffice for the people of this country. I contend that it is useless to pay any attention to the claims of our Democratic friends that this bill is unconstitutional in the light of this decision which I have just mentioned. The people of this country are intelligent, and they will not be misled by any talk either upon this floor or elsewhere that this bill is not in perfect harmony and accord with the organic law of the land.

Had I the time, Mr. Speaker, I could demonstrate to the satisfaction of any unprejudiced mind that the other objections urged by the Democratic members of this House against this bill are equally untenable. They carp and criticise, but they have failed utterly to advance any valid reasons why this bill should not be enacted into a law.

The arguments which have been indulged in by the gentlemen from the South against this bill are the arguments which are indulged in by the hardened criminal who seeks to avoid the just punishment of the crime which he has committed.

Mr. CULBERSON, of Texas. That is too rough.

Mr. HOPKINS. It may be rough, but it is true.

Mr. Speaker, the dearest interests of the people of this country demand protection such as this bill affords. It is the boast of an American citizen that he is a sovereign; that sovereignty consists in his right to cast his ballot on election day for the party and persons that his free and unbiased judgment may dictate, and to have that ballot counted as he cast it. If this bill becomes a law it insures him that sacred right. Every impulse of the heart for good government, as it seems to me, should favor it.

I trust, Mr. Speaker, it will become a law.

Federal Election Law.

SPEECH

OF

HON. JOHN H. O'NEALL,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 30, 1890.

The House having under consideration the bill (H. R. 11045) to amend and supplement the election laws of the United States, etc.—

Mr. O'NEALL, of Indiana, said:

Mr. SPEAKER: While I cheerfully accord to those upon that side of the House the right to surrender the principle of self-government—government of the people, by the people, and for the people—the principle of home-rule, for myself I can not do it. I am a Democrat, a Democrat by birth and a Democrat by education. When I use that word, I mean to use it in its best accepted sense. I could not, without doing violence to my education and to my feelings, sit silent and let this bill pass without a protest.

The old gentleman who raised me, and who gave me my first ideas of political economy and of civil polity, not only taught my mind Democracy, but infused into my very soul the spirit of Democracy. That old gentleman was not a lawyer, was not learned in the law, but was a farmer, an old-fashioned Democrat, with a mind well stored with information and, above all, well endowed with horse-sense. Could I but call him from the grave to-night long enough to hand him a copy of this bill and ask him what he thought of it, I know what his answer would be. He would read it—read it carefully—and then cast

it from himself and say: "That, my son, is unconstitutional." When asked why, he would say: "Because it is contrary to the spirit and genius of our institutions."

The history of the adoption of the Constitution, the conduct and arguments of the fathers in adopting it, the circumstances that surrounded them, their conditions, the conditions of the country, and the condition of the several States entering the Union, are all good things to appeal to in a fair effort to determine the constitutionality or unconstitutionality of legislation, such as that proposed in this bill. That side of the House does not believe in looking back to the conditions, the surroundings, and the circumstances that then existed. Their interests are better subserved by turning their backs upon, and by shutting their eyes against, the past.

For the sake of discussing the constitutionality of this bill let us not fuss with them about that. Rather let us call their attention to the sum total of our Government as it is and as it has been, to the product of that sum total, to the growth and workings of that sum total. Let us take an inventory of that sum total, size it up in all its bearings and in all its relations, Federal, State, and municipal.

We have a great country, one of which we are all proud. We have a great and good Government. Its praise is upon the tongues of all. Republicans and Democrats alike extol it, imperfect though it may be. All human government is and ever must be imperfect; hence ours is not without its faults. Many of its supposed faults are not faults, but a failure on the part of the people to live up to the full measure of its requirements. The people in one part of the country do not always have the right, because not in keeping with the spirit of our system, to make the people in every other part live up to the full measure of those requirements.

There is a system about our Government, a most beautiful system, a most admirable system, the system of home rule. Derange not the operation of its workings. The ills we have, so far as our elections are affected thereby, are not the ills of government, not the ills of the system, but are the ills of the people. The remedy is with the people; infinitely better let them work it out. Better bear such ills than fly to others we know not of. Do not become impatient. Conservative methods are usually the best. For the sake of our Government and of our whole people do not make sore the machinery of Government. That machinery, to the extent now being measured, will work best if left to its own lubricating oils. Do not try doubtful and impolitic expedients.

Let us first stop and ask: What is there about our country or our Government that so commends itself to our approbation? Is it because of our broad territory, extending over twenty-five degrees of the latitude and over fifty degrees of the longitude of the earth's surface, all wholly within the temperate zone, and embracing within its limits a good sunshine, an equitable rainfall, a variable and healthy climate, inexhaustible mineral wealth, a fertile and generous soil, and other blessing of nature that surround us? For all these we are, and of right should be, profoundly thankful.

Is it because of our numerous, industrious, and rapidly increasing population, possessing a high degree of christian civilization? Of that we may well be proud. All these would be useful adjuncts to good government in any form. The beauty, the symmetry, and the excellence of our Government consist in and depend upon that great and underlying principle of home rule. In the language of Mr. MCADOO, the eloquent gentleman from New Jersey, in a speech last week:

> The cardinal principles of American liberty evolved in the Constitution were these: Federal unity, local sovereignty, and individual liberty, a heaven-born trinity to bless mankind.

Home rule! A principle for which the people all over the world are struggling. A principle which is growing stronger and stronger every year, everywhere, and with everybody, except with those whose ambition it is to dominate others. Home rule! Who is not for home rule, for the rule that permits, ay guaranties, to the people in the smallest civil subdivision into which our territorial area is divided, largely and in the main, to govern themselves; work out their own salvation and happiness in their own way, without let or hinderance from others?

When we examine the machinery of our entire Government, Federal, State, and local, and fully analyze that machinery, what do we find about it that so commends itself to our approval? What do we find to so admire? We assert: It is the division, the distribution and limitations of power, with checks and balances, all so well provided and so well adjusted that friction in any part shall affect as little as possible regular and healthful movement in the balance and in the whole. A piece of mechanism which constitutes a matchless whole. Disturb not, disarrange not, any of its parts.

What is that mechanism? Let us answer:

A Federal Government with its co-ordinate branches, upon each of which for the Federal purpose is conferred such power as to make those parts complete, such as the people in their sovereign capacity, as the source of all power, were willing to surrender and did surrender for the Federal purpose, for the common good of all and to the common detriment of none, or to secure the greatest good to the greatest number, and to prevent the least injury to the fewest number.

Within the limits and boundaries of that Federal Government are the State governments, with somewhat wider and more general power over the people of the State—with the power to redress grievances and punish wrongs; in short, with powers limited only by those conferred on the Federal Government and by those inherent and inalienable in the people.

Failure on the part of the State to redress grievances and punish wrongs is likely to be remedied by public opinion, public sentiment, and inevitable public criticism.

Again, within the State governments we have our county government, our city government, our town government, and our government for the smaller civil subdivisions, all created by the State, or by the people in pursuance of laws and regulations of the State, and all provided by the State with machinery for the purpose of enabling the people of the county, of the city, of the town, and of the smaller civil subdivisions to attend to their own affairs, elect their own officers, and to select from among themselves the persons they may wish to hold their elections of all kinds.

It is an insult to the people and an indignity to the letter and to the spirit of our system of government to say that the people of a voting precinct, or the people of the township or county in which the voting precinct is located, shall submit to be "scrutinized, supervised, guarded," and bossed by a man ninety-nine times out of a hundred not even a resident of the county, much less of the precinct; by a man living a hundred miles or more away and having no interest in or sympathy for such people; by a man who, generally speaking, would be a professional politician, and in many instances selected because of his partisan bias and partisan activity. Will an independent and liberty-loving people submit to such flagrant and unwarranted interference?

All the parts, the Federal, the State, the county, the town, or other smaller civil subdivision, constitute a complex yet simple whole, whose beauty, symmetry, strength, and healthful mechanism and operation depend on keeping each within its own proper sphere and on requiring each to mind its own business. When the county, the town, or the smaller civil subdivision is organized, the State, and not the Federal Government, should provide the necessary machinery to enable the people of that county, that town, or that smaller civil subdivision to control its own affairs.

Who knows better than the people of that county, that town, or that smaller civil subdivision, or has a better right to say, how the affairs of that county, of that town, or of that smaller civil subdivision shall be managed than the people therein? Or who knows better or has a better right to say who shall be elected to do that managing than the people therein themselves? It may be said that the people of each county in the State are more or less interested in and affected by the selection of some of the officers in every other county of the State. So they are. But is it not better that those in each county should forego interference in every other county than to suffer interference in their own affairs by those from the other counties? It might be that the affairs in many of the counties in many of the States could be better managed by persons living outside of those counties than by the persons residing therein; that persons outside could exercise a wiser discretion in the selection of officers for those counties than the people therein. Yes, might on the outside select from the outside men better, and better fitted, and send them into the county, than any they have therein. Would that make it right? Would that make it politic, best for all interests, best for good government?

If outsiders had the right and were able to do better in some instances, is it not upon the whole better to forego interference and allow others to manage their own affairs than to have to contend with those others when they should want to participate in the affairs of the outsiders? To interfere with others is to invite interference from others. In the long run, it is better not to interfere or tolerate interference. Interference from the outside is calculated to irritate, cause indignation, stir up bad blood, create disorder, and bring about unprofitable and disagreeable conflicts.

How well do I remember the feeling of indignation on the part of myself and Democratic neighbors, at my own Indiana home, when at the Garfield-Hancock election, in November, 1880, we beheld for the first time United States marshals about the polls. There was not a fair-minded citizen of the place, Democrat or Republican, who in his cool moments would have said those marshals were there for any good. Instead of being there for good they were there for actual harm. They were there to intimidate some weak-kneed Democrat, if possible, and prevent him from voting. They were not there for the purpose, and it was not their intention or disposition, to prevent any one from voting, however illegal his vote might be, provided always that he voted the Republican ticket.

At the election in November, 1888, in Lawrence County, one of the strongest Republican counties in Southern Indiana and the only all-the-time Republican county in the district which it is my pleasure to represent upon this floor, the Democrats applied for and procured some United States deputy marshals to "scrutinize and guard" and to secure, as they were pleased to term it, a "fair" election. There was a good deal of excuse for the application, because one of the worst and most successful "blocks-of-five" Dudleyites in the State, an old and

skilled veteran with boodle, was expected to ply his vocation in that county as usual. What effect, if any, was produced by the presence of marshals, is probably not known. But some of the most indignant men the world ever saw were some of the good Republicans of that county. Their exasperation was great.

There may be some excuse for a State or State authority to confer upon officers not resident of a county the power to appoint some of the officers of that county because within the purview of State authority, but such interposition is not without its objections and should be attempted cautiously and under the best regulations; not then, however, by an officer whom the people of that county have had no voice in selecting. When done under such circumstances public opinion, public sentiment, and inevitable public criticism reach in an effectual way the officer who has exercised the appointing power.

Influences are thus brought to bear that make the officer feel his responsibility. Remove that feeling by denying the people any right, directly or indirectly, to participate in these selections, and you at once destroy the greatest check to wrongdoing.

Under the best regulations such methods are more or less in violation of the principle of home rule, and for that reason are objectionable. If objectionable on the part of the State, how much more objectionable on the part of the General Government.

The gentleman from Maryland [Mr. McCOMAS] finds much fault with a Democratic Legislature in his own State for having conferred upon the courts of that State the power to appoint certain school officers. The gentleman grows eloquent in his denunciation of this violation of the principle of home rule. Though a master in the use of language, words fail him to fully express his detestation of the act. After hearing him talk about the laws of his own State as he did one would expect him to jump with both feet upon this bill.

But no; the smaller wrong he condemns in words without measure; the larger wrong he embraces with affectionate zeal and stands and proclaims himself a ready and willing instrument to inflict upon the whole country that which he so condemns when inflicted in a very limited degree upon himself. The little wrong is a Democratic wrong; that makes it all wrong. The big wrong is a Republican wrong; that makes it a consummation most devoutly to be wished. He reminds us of the fellow who strained at the gnat, but hesitated not at the camel. Away with such logic. Away with the statesmanship that can rise no higher. Such statesmanship is little; it is contemptible.

But what are the provisions of this bill? They are that one chief supervisor of elections shall be appointed for each United States court district. Appointed by whom? Ostensibly by a Federal judge, but in reality most likely by Boss QUAY or "Blocks-of-Five" Dudley, answerable to no responsibility except to the whips and stings of conscience and, where there is no conscience, subject to no whips or stings.

Said chief supervisor, if petitioned so to do by one hundred who claim to be legal voters in any Congressional district, may appoint as many subordinate supervisors as he may choose, but it is imperative that he shall appoint at least six for each voting precinct in the district. Or, if petitioned so to do by fifty who claim to be legal voters in any county which forms only part of a Congressional district, then for that county he may appoint as many as he chooses, but it is imperative that he shall appoint not less than six for each voting precinct in the county.

From appointments so made, the chief supervisor shall, from time to time, select for duty, and shall designate and assign for each voting precinct, three persons, but two of whom shall be of the same political party.

No provision is made as to what party the other is to belong or whether he shall belong to any party at all. Two of them may be of the same party faith. These two, it may reasonably be presumed, will be Republicans, and in a matter like this I think the presumption may be fairly indulged that they may and will be political party heelers. The third man may be of any other party or he may be of no party at all. He might, and not infrequently would, belong to the party of sell-outs—always, when the fellow who appointed, either in person or through his party friends, wanted to buy and had the means of purchase.

The duties to be performed by these supervisors are numerous, too numerous for me, in my time, to refer to now. Eight pages of the bill, with an average of two hundred and forty words to the page, are exclusively devoted to their duties. They are given checks upon everybody, except upon themselves.

In cities of 5,000 or upward they are given the power to "verify by inquiry and examination at the respective places of residence of the voters." In cities of 20,000 and upward "they must make a house-to-house canvass" before the election and may exercise a most offensive species of espionage.

These supervisors in cities of 20,000 or upward may each be paid for twelve days' services; in all other places where there is a registration of voters, for six days each, and in all other places, for three days each, and in all cases $5 per day. In cities of 100,000 or upward $10 each on the day of election.

In addition to all this, "special deputy marshals shall be allowed and paid for each day of actual service, not exceeding eight days, $5 per day each. Marshals may be called into service in unlimited numbers.

On top of all and as a cap-sheaf and culmination, a State returning-board is established, a veritable Louisiana affair. The shades of J. Madison Wells! No; but, "angels and ministers of grace defend us," this board is to consist of three persons, who are to be paid $15 per day each and are to be allowed $5 extra per day each for expenses—cigars, lemonade, mint juleps—to which is to be added a clerk at $12 per day.

Uncle Sam is rich, but where does he get his riches? From the sweat of the laboring man is where it all comes from. Who are to constitute this board? Three persons, not more than two of whom shall belong to the same political party. The other man can belong to any other party or to none at all. If we remember history correctly the carpet-bag law of Louisiana provided that not more than two should belong to the same political party, and that the other should belong to the opposite party having the highest number of votes. In that respect the carpet-bag law of that State was a fairer and better law than this bill establishes. Yet we all remember that the J. Madison Wells board, that "counted" Rutherford B. Hayes in and "counted" Samuel J. Tilden out, had none but dyed-in-the-wool Republicans on it.

Who upon that side of the House ever made or offered an excuse for allowing no Democrat to sit on that board? Who ever heard a Republican anywhere apologize for having constituted that board wholly of Republicans. This bill, to insure no friction, provides that two members thereof may "count in" and "certify," and that this certificate shall override the returns from the State authorities.

COUNTING IN.

The Speaker of this House, the honorable gentleman from Maine, affects to think no one honest unless a Republican. Early in the session, by arrangement or otherwise, he was invited down to the little city of millionaires—Pittsburgh, Pa.—to a Republican banquet, gotten up by the rich to give this Republican Congress a good send-off and that gentleman plenty of backbone. At that banquet, in response to the "toast" prepared especially to give him an opportunity, in speaking of Southern elections, he there said:

What, then, is the remedy? Speaking, then, for myself, it seems to me that the only wise course is to take into Federal hands the Federal elections. Let us cut loose from the State elections, do our own registration, our own counting, and our own certification. Then the nation will be satisfied.

"Take into Federal hands" means into the hands of the party in power; just at this time it means "into" Republican "hands."

"Then the nation will be satisfied." If "nation" means Republican party it may be satisfied. But how about the other party? Will it not be badly dissatisfied?

The authority to "count" and "certify"—"counting and certification," is the way the man from Maine, at Pittsburgh, speaking for himself, puts it—the authority to "count" and "certify" is the boon so much coveted. The dexterity of the man from Maine, in the matter of "counting," has become proverbial upon this floor. In his article on contested elections, in the North American Review—just out—he tells the country: "However often the fervid eloquence of some member, who has read the evidence, may exhort the House to act as judges and not as partisans, we are utterly unqualified to do so, and utterly incapable."

Most singular language for a man who believes all honesty is monopolized by himself and his party friends.

The people of this country can not afford to give so much power to any party, and especially a party backed up by the millions of money that the Republican party is able to control. Who believes the gentleman from Maine himself would be safer to trust than the people he so maligns? I am sure among those on this side who know all the parties such a man can not be found; and if party feeling and party bias could be eliminated, very few on that side would so believe.

This man from Maine is the same man who, after the vote on the Lowery-White contest in the Fiftieth Congress, so chuckled in his sleeve at the idea of being able, in a Democratic House, to retain a Republican who was ineligible to his seat. Apropos to that same chuckling, the honorable gentleman, in his article on "Contested elections," in the North American Review, after arguing that in contested elections members usually follow party and committee blindly, without rhyme or reason, uses the following language, to wit:

It is not the intention to assert that the majority of the Committee on Elections is always followed in servile fashion by the majority party. But sometimes the exceptions are more ludicrous commentaries on the House system than the regular cases. One case can be called to mind, not twenty years ago, where all the testimony except the member's own declaration seemed to show that he had not been naturalized. But the question got into such shape that a decision adverse looked like a decision that no man could be regarded as a naturalized citizen who had lost his certificate. As soon as that happened it was amusing to see how many men in districts full of naturalized citizens rose above party and blossomed into language of the loftiest and most disinterested non-partisanship.

All of which illustrates the partisan trend that will be given to any Federal interference.

We all know how a Republican majority of eight in this House has been increased to a majority of twenty, by turning out six Democrats and electing (I will not say seating) six Republicans. How much of this change was inspired by a desire to pass this bill and other partisan

measures can not, of course, be told, but it is pretty evident that this bill could not be passed but for the increase of twelve in the majority. It is also evident to all unbiased persons, cognizant of the facts, that this increase of twelve was secured because the majority party on this floor were "utterly unqualified and utterly incapable of acting as judges instead of as partisans."

APPLICATION OF LAW.

Without going further let us apply this law to the State of Indiana. Indiana is co-extensive with a United States court district and would have one chief supervisor of elections. Who this chief supervisor will be, I do not pretend to predict. While the court will have the power and the name of appointing this very important official, I think it is quite likely that in many instances he would be appointed by the professional politician, and when appointed would himself be a professional politician. Whether a professional politician or not, he would most likely fall into the hands of the professional politicians of his own party.

If presented with a petition from each of the Congressional districts of the State he must thereupon—the command is imperative—he must thereupon appoint at least six subordinate supervisors for each voting precinct in the State. Under our State law—the law enacted by our last Legislature—providing for the Australian ballot system and providing that no voting precinct shall have over 250 voters, there have been made by the boards of commissioners in the several counties in the State, at the June terms just adjourned, about three thousand voting precincts. I am estimating. We polled at the election in November, 1888, 536,900 votes.

A majority of the townships in the State have over 250 voters and less than 400, and hence required division, and when divided will have less than 200. So that three thousand precincts is a fair estimate of the number, basing that estimate upon the presumption that the county commissioners have done their duty. For these three thousand voting precincts the chief supervisor must appoint not less than eighteen thousand subordinate supervisors and as many more as he may choose. Not less than nine thousand of these must be assigned to duty, six thousand of whom will or may be Republicans. And the other three thousand assigned to duty may belong to any other party, not excepting the party of sell-outs.

There are at least six cities in the State with inhabitants in excess of 20,000, namely: Indianapolis, Evansville, Fort Wayne, Terre Haute, New Albany, and South Bend. These will have at least three hundred and fifty precincts, requiring the appointment of twenty-one hundred supervisors, ten hundred and fifty of whom must be assigned to active duty and may perform twelve days' service each, making $60 to each. In Indianapolis, a city of over 100,000 inhabitants, they will be allowed $10 each for the day of election.

Then, counting twenty-six hundred and fifty precincts for the balance of the State, with at least six supervisors each, three of whom must be assigned to active duty and may perform three days' service each, for subordinate supervisors alone it will cost for Indiana at least $200,000 if put in force.

To this are to be added as many deputy United States marshals as the United States marshal and chief supervisor may wish appointed. These deputies may be employed eight days at $5 per day. These deputy marshals may all belong to the same party. No pretense of a provision for division as to them.

As a climax to all is the State returning board, with $15 per day each and $5 each extra for expenses. This returning board is to consist of three persons, "not more than two of whom shall belong to the same political party," the other may belong anywhere or nowhere.

This board, or any two thereof, may "certify" or "count in." Their certificate confers title, the State returns to the contrary notwithstanding. Their certificate, when it reaches the Clerk of this House, must be recorded and the name of the party certified to must be enrolled by said Clerk on the roll of membership. A failure so to enroll him subjects the Clerk to heavy penalties, the certificate of the governor of any State or the law of any State to the contrary notwithstanding.

Has it come to this, that the certificate of the governor of a State—a man in whom the people of the State have expressed their confidence by electing him to the high office—is it possible that the certificate of the governor, backed up by the returns made by the State canvassers, is to pale before the certificate of this mighty trio, or any two of the trio, a trio, perchance, hatched and brought into existence by a midnight junta of professional politicians? Must the people turn their elections over to politicians?

Mr. Speaker, the "Louisiana returning board" has not quit stinking in the nostrils of the Indiana Democracy yet. But pass this bill, appoint this army of officers, establish this "returning board," and a stink may be created that will become so rank that the stink of the Louisiana concern may so pale and be extenuated as to be forever lost to the sensibilities of the olfactory.

Think of it! A quarter of a million of dollars of corruption fund in a State like Indiana, to stimulate and quicken into activity nine thousand ward-heelers and sell-outs, and numerous fat offices and rich postures for the returning board, visiting statesmen, and camp-followers.

Down with home rule and up with centralization! Down with honesty and up with boodle! Do not we all remember how every son of a rascal connected with the Louisiana returning board was given a good fat place?

Oh, what a great aid to the Quays and the Dudleys! What a relief to the Wanamakers and fellows whose oleaginous stuff is to be fried out of them biennially!

Now, Mr. Speaker, I do not know that all I have described would take place in Indiana. That part that calls for and authorizes the appointment of supervisors will certainly be invoked. Not more than ten counties in the State will have less than twenty precincts out of the whole ninety-two counties, and no Congressional district in the State will have less than two hundred. The reward of $5 per day for supervisors will be an inducement, a strong inducement, to stimulate voters in every county and district in the State to petition for them. In fact, sirs, $5 per day for three or twelve days will be no small inducement to a very large number of voters to apply for these positions. The price, $5 per day, is an evidence, to my mind, that the authors of this bill are not caring so much about fair elections as they are about giving to themselves as much boodle as possible and the power to manipulate the elections.

The only qualification required for a supervisor is that he shall be able to read and write. Nine-tenths of our voters can do that. Two dollars per day would secure just as competent men and really better service than $5. Five dollars per day will be a stimulus to induce dishonest fellows to apply and scramble for these positions, while better men will not scramble. Five dollars per day will enable unscrupulous politicians to hunt out the purchasable material for supervisors. Five dollars per day will enable politicians to secure men against whom an assessment of one-half the amount can be made for boodle purposes.

This bill is not only dishonest, but some of its provisions are wicked, brimful of malice. I say full of malice aforethought. You propose by this bill to repeal the law now on the statute-books providing for the selection of jurors, both petit and grand. The law now provides that the clerk of the court and a good man of different politics, belonging to the opposite party of greatest strength, shall act as jury commissioners to select the juries.

To my mind this is just; that anything short of it is unjust. In Indiana our court appoints two jury commissioners of opposite politics. This has been our law for more than ten years and has resulted in giving us good juries. Better than we used to have. I have never heard a man, Republican or Democrat, speak of our method other than with approbation. The United States law now upon the statute-books is substantially the same as our Indiana law. You propose to repeal this provision and vest the whole power in the clerk—otherwise in a Republican—to select the juries. And pray what excuse do you offer?

Your excuse is that, under the law requiring a Democrat to assist the clerk in drawing a jury, a jury can not be drawn that will convict a Democrat. The court appoints this Democratic commissioner, and yet there can not be found a Democrat who will not so far carry his politics into the selection of a jury that the jury when constructed will convict a Democrat. It is a conviction you want, if a Democrat, guilty or not guilty. Hence it is you want a jury "packed" to convict Democrats only.

Think of it! You have a poor Democrat indicted for violating your election law. The court is a Republican; the clerk is a Republican; the marshal is a Republican, and the district attorney, who prosecutes, is a Republican. And you can not convict without a Republican jury, in the selection of which no Democrat is to take any part. I am utterly astonished to hear one of the supposed fathers of this bill defending this repealing provision; equally astonished to hear others frankly advocating it and giving as an argument the reason stated. We have all read about political prosecutions and heard them denounced, but never before heard them defended.

If you can not convict a Democrat with a jury selected as now provided by law, how are you going to convict a Republican who violates this law, with a Republican court, a Republican prosecutor, and a Republican jury? What gall! What wonderful gall! Are you presuming in advance that none but Democrats will violate this law? Or are you preparing to "pack" a jury to convict Democrats and acquit Republicans. To me that seems to be your philosophy.

That side of the House discusses this bill as though all Democrats were rascals and that Republicans can do no wrong.

If you can not trust the white Democrats of the South to "count" and "certify," how do you suppose white Democrats South or elsewhere can trust either white or black Republicans to "count in" or "certify?" Is the kettle not to be allowed to call the pot black? Does a Federal commission make a man any more honest than a State commission? Is a man acting under the laws of a State any more likely to commit crime than one acting under the laws of the Federal Government? You may pretend to think so; yes, you may really think so, and I am inclined to think a good many of you are so prejudiced that you do; but it will be hard for you to convince the great mass of the people of that fact.

Let me quote from the gentleman who says:

For one before I will consent that a minority shall govern the majority—

That is hard to do, for the minority to rule the majority. It is the

majority whose iron heel is felt oftenest; not much danger from minorities—

Before I will consent that a minority shall govern the majority I will favor such legislation as will secure the protection of every ballot by a shooting bullet.

When I say gentleman, I mean the gentleman from the Third Iowa district [Mr. HENDERSON]. What is his language? Let me quote further. He says:

Does it follow that because citizens of your own State hold a Federal commission they are to be called scoundrels, any more than the men commissioned by your State authorities? Where is the logic in any such position? It is not that, gentlemen; it is not that they hold a Federal commission; it is because this well oiled, never-failing State machinery allows a few Southern men to dictate the policy of this Republic. That is what is the matter and that is what we object to.

Now, I would like to ask the gentleman which is the worst, the most dangerous, and the most to be dreaded, "well oiled, never-failing, State machinery that allows a few men to dictate the policy of this Republic," or "well oiled, never-failing Federal machinery" that allows a few men to dictate the policy of this Republic?"

I, for one, say, if the first is wrong, the latter is wrong also, and that the latter, being so much the larger wrong, is the wrong to be more dreaded.

The machinery of a State is much weaker than the machinery of the Federal Government and is incapable of doing more than a small per cent. of the wrong that may be inflicted by the use of the Federal machinery. There is an easy escape from the smaller wrong, but a most difficult escape from the larger wrong. We can not, therefore, afford to place ourselves in the power of that great and overpowering engine of the Federal Government.

Let me follow the gentleman from Iowa [Mr. HENDERSON] a little further. He seems to have worked himself into a white heat over the idea that a minority are ruling a majority, that the white man is ruling the black man. Does he forget that when a minority rule a majority the rule must be just or it will not be and need not be tolerated? It is the rule of the majority that is hard to resist, and for that reason often becomes most tyrannical and oppressive.

Does he forget that the proud Anglo-Saxon will not and can not be ruled by Ethiopian blood? He tells us when the census was taken in 1880 we had over six millions of colored people, that forty Representatives to this House were based upon the colored population of the South, and "that the only Representative of that race here is my friend, Mr. CHEATHAM, of North Carolina." Yes, according to the census of 1880, there were about six millions of colored population in the South, and upon them were based thirty-nine or forty Representatives to this floor.

There were, also, about 610,000 colored people in the Northern States; upon them were based four Representatives upon this floor. Yet in all the ten years that have since elapsed not one colored man has ever been sent to this House from all the North. If forty are based upon the negroes of the South and four upon those of the North, there ought to be as many elected from the North in ten years as from the South in one. Why is it that the gentleman cares so much for the Southern negro and so little for the Northern one? He says that Mr. CHEATHAM is the only Representative of the colored people here. Is he not mistaken?

If, as he claims, the colored people all vote the Republican ticket, then he is surely mistaken. Neither Mr. BROWER nor Mr. EWART—both North Carolina Republicans—would be here but for the colored votes received by them. Where would any of your Republicans on this floor from the South—save TAYLOR and HOUK, of Tennessee—have been had it not been for the colored brother? Besides HOUK and TAYLOR, of Tennessee, you have on this floor from the South twenty-one Republicans, including your Brother CHEATHAM.

From the North there are a number of Republicans here whose legs would never have won had it not been for the colored friend. Four, if not six, from the State of Ohio; six, counting the two Cincinnati districts. As to those two, I am not certain. As to the other four, I am. From other Northern States, Republicans are here instead of Democrats by the assistance of the man and brother. The gentleman might do more to advance the standing of the colored race if he loved the Northern negro more and the Southern one less. The colored man has reason to complain, but mainly at his white Republican master. Surely the gentleman should keep mum.

New York, Ohio, and Indiana were all carried for Harrison by the gentlemen of African descent. But for them Grover Cleveland would now be in the White House. Harrison is the colored man's President to-day. Yet no one has discovered any special zeal manifested by him to show that he appreciates their friendship and devotion. Gentlemen upon that side should show their faith by their works. Teach more by example and less by precept. Fully one-fifth of the gentlemen upon that side are there by reason of the colored man and are specially accredited representatives of the colored man, yet Mr. CHEATHAM is the only one who bears his credentials in his face.

Why should the gentleman from Iowa scold so loud about the minority ruling a majority? But for the suppression of a Democratic majority of 3,000 in the county from which he comes—Dubuque—he would not be here to scold. Dubuque gave Bois for governor 4,324 majority in 1889. It is always largely Democratic, with counties adjoining on the north and on the south which are largely Democratic.

GERRYMANDER.

By a gerrymander that is not surpassed, if it has a parallel, Dubuque was made to go west to grow up with a Republican majority. I have given this question of what is called gerrymandering some thought and feel myself fully competent to speak. I have taken maps of several of the States, and in connection therewith studied the politics of the different counties and localities and applied the law of permutation to the different groupings that have been and might have been made. If there be in the whole United States anything that equals the Second and Third Iowa districts I have failed to find it.

It requires but little mathematics and but little analyzation to see that the gentleman from the Third Iowa district could never have occupied the seat he now warms had the Legislature of his own State had an eye to contiguity and symmetry of territory, rather than to political results. Without any intention of being personal, I hope I may be pardoned for calling the attention of this House and of the country to the configuration of the Third Iowa district. That all may make a map and easily understand, let me state, Dubuque County, the home of the gentleman, gives a Democratic majority of from three to four thousand. It lies on the east side of the State and is bounded by the Mississippi River. Adjoining on the north and adjoining on the south are strong Democratic counties, giving a thousand majority or more each.

In fact, the territory to the right and to the left of Dubuque is strongly Democratic. It requires an expert manipulator to get that county into a Republican district, a true disciple of the elder Gerry. Evidently there was that character of man or men in the Iowa Legislature that stood godfather to that district. That any one may make a map of the district, let me premise. The most of the counties in Iowa, and especially in that district, are rectangular in form and are approximately square. There are nine counties in the district, which, for simplification, I will designate by numbers from 1 to 9. Dubuque I will designate No. 1; No. 2 lies immediately west of 1, and 3 immediately west of 2, and 4 immediately west of 3, while 5 is just north of 4, 6 is immediately west of 5, and 7 immediately west of 6, 8 immediately west of 7, and 9 immediately south of 7.

Make the counties an inch square on the map, follow the directions, and you have it full-fledged like Pallas from the brain of Jove. When completed, behold the picture—"hold the mirror up to nature"—and say that an Iowa Legislature is not "up to snuff." Why Dubuque was not attached to the Democratic counties running down the river and made to include the first four of the six Democratic counties in the Democratic Gibraltar—the Second—represented here by our friend HAYES, can probably be told by the gentleman from Dubuque or some Republican of Dubuque who was ambitious to come to Congress.

That all may know that the Legislature of Iowa did not exhaust its knowledge of permutation or power of combination in the making of the Third district, they need only examine a map of the six counties in the Second district. Take note of the large Democratic majorities in each and observe how those counties are made to wind around so as to leave for utilization all counties giving Republican majorities.

Beginning with the county right south of Dubuque and running down the river one county wide until four Democratic counties are taken in and a Republican one is reached, and there turning, and still going it one county wide, to the west, northwest, and north, like the half of a letter S, so as to include nothing but Democratic territory, and blocked together, because not able to overcome the Democratic vote, and carefully leaving out all Republican territory that it might be utilized elsewhere, these two Iowa districts, the Second and Third, so far as symmetry and configuration go, are perfect monstrosities. Nothing in the United States can possibly surpass them. The brand of Cain is upon them.

Again, look at the Iowa session laws for 1888. Examine how the State is apportioned for legislative purposes. After fixing 24,000 inhabitants as the basis of one representative see how dozens of little Republican counties in the northwest part of the State with less than 10,000 inhabitants each are given a representative, while Democratic counties in the eastern part of the State with four times the population are only given one representative. But for this unequal apportionment, not the Hon. WILLIAM B. ALLISON, but a Democrat, would be representing Iowa in the other end of the Capitol to-day.

ILLINOIS.

Let us now cross the Mississippi River and stop in the Sucker State. Illinois in point of territory is about as wide east and west as Indiana. It extends farther north and some little farther south than Indiana. If a line be drawn from the northwest corner of Indiana straight west to the Iowa line the territory to the north of that line, including Cook County, with its four Congressmen, and the Fifth, Sixth, and Seventh Congressional districts, will contain the Republican majority of the State. The territory to the south of that line, a trifle larger than Indiana and having the same number of Congressmen, thirteen, is and has been Democratic. Anything like a fair apportionment of that part

of the State would give the Democrats a majority of those Congressmen.

But the skill of the Illinois Legislature in the power of combination and in the knowledge of permutation piles the Democratic majority in that part of the State into the Twelfth, Thirteenth, Seventeenth, and Nineteenth districts. Take a map and examine the shape of some of these Illinois districts; especially examine the Eighteenth, Nineteenth, and Twentieth. When you do, keep mum about the districts just east of the Wabash.

But we must pass on. Let us journey to the East and see if the same methods prevail there.

NEW YORK.

How is it in the Empire State? If we are correctly informed, the five counties of New York, Kings, Westchester, Queens, and Richmond, all contiguous and in the same circle, including the cities of New York and Brooklyn and the New York environs, always Democratic, and the county of Albany, with its more than 200,000 people, always Democratic, have fully if not more than one-half the population of New York State and have had for some time. This, to say nothing of a county here and there that is Democratic, like Schoharie, Chemung, Seneca, Greene, Rockland, etc. Yet only fifteen out of thirty-four Congressmen upon this floor are Democrats, and proportionately no larger number of Democrats in the State Legislatures that have been elected from year to year. And why? Because a less representation is given the same population in Democratic territory. To prevent justice from being done, the Republican Legislatures of that State have for years refused to make any new apportionments. While the State for the last twenty years has gone Democratic oftener than it has Republican, yet by the suppression of the Democratic vote in the legislative apportionment two Republican United States Senators continue to misrepresent the people of that State in the highest deliberative body in the world.

Gentlemen upon that side who are opposed to a minority ruling a majority can find a good field for missionary work here in this great center of population.

CONNECTICUT.

How is it with the State of Connecticut, the State of "steady habits?" At the biennial elections for the last twenty years the Democratic candidates have passed under the string ahead of the Republicans oftener than Republicans have passed under ahead of them. At but one election in all that time, at the election in 1874, have the Democrats been able to carry the Legislature. That Legislature elected William W. Eaton a long-term Senator and William H. Barnum a short-term Senator, the only representation the Democrats of that State have been able to get at the other end of the Capitol since the war.

In 1876 the Democratic candidate for governor had a handsome vote over his Republican opponent, yet in the Legislature on joint ballot the Republicans had 37 majority. In 1882 the Democrats elected the governor, but lost the Legislature. Again in 1884, 1886, and 1888 the Democratic candidate for governor had a plurality over his Republican adversary, but because that plurality was not a majority over all combined opposition the election went into the Legislature and each time the Republican was chosen over the Democrat.

But let us give the gentleman from Connecticut [Mr. RUSSELL] an opportunity to be heard. He says:

> But plurality to Republican or Democrat, it makes no difference, except a majority vote be cast for some one candidate; the Legislature—the representative body of local government—elects the State officials in Connecticut.
>
> However much some gentlemen may criticise this form of State elections in my State, yet none can point to a single instance where the State has been misgoverned or oppressed by its State officials, or where the people of either party have failed to accord honor and respect and obedience to the political results attained under the constitution of the State of Connecticut. Our constitution in its present form is the direct descendant of that notable instrument which in 1639 bore the stamp of a settlement in Connecticut and was the first written democratic constitution on record.
>
> This Connecticut constitution of 1639, to use the expression of the writer on Connecticut in the series of American Commonwealths, Professor Alexander Johnson, "was the starting-point for the democratic development which has since gained control of all our Commonwealths and now makes the essential feature of our Commonwealth government." The good old Commonwealth of Connecticut has stood firm to her constitution and has grafted her traditions and principles upon the vast territory of the West, until they have been embodied in larger and mightier Commonwealths. She can not now be construed, after her peaceful and prosperous experience of two hundred and fifty years under her present form of legal government, into an excuse or a palliation or a precedent for Southern operations during the last twenty-five years. These operations in crime and trickery have attempted the subjugation of all government, local and national. In effect these operations have oppressed a free citizenship and have destroyed a free suffrage.
>
> * * * * * * *
>
> The town representation which the State of Connecticut has and always had in the house branch of its Legislature, that form of local representation is an old, an honored, and respected one in my State. It has much to recommend it, and I believe it is admitted to be the most complete recognition of the principle of local government. "In Connecticut it was the towns that created the Commonwealth." The Commonwealth still continues a combination of towns, and in each member of the combination remains to-day the political power for the exercise of which the State must first establish its clear and just right. The towns of Connecticut stand in much the same relation to the Commonwealth as the States do to this Union, and it seems strange for gentlemen contending against what they imagine may be an infringement or subversion of local government by the Federal Government to instance Connecticut as a place where there is a misrepresentation of home rule, as they call it.

"The Legislature, the representative body of local government, elects the State officials in Connecticut," says the gentleman. "The representative body of local government," remember you. We will analyze that later on. But, says the gentleman:

> However much some gentlemen may criticise this form of State elections in my State, yet none can point to a single instance where the State has been misgoverned or oppressed by its State officials, or where the people of either party have failed to accord honor and respect and obedience to the political results attained under the constitution of the State of Connecticut.

Certainly, the method of government in the South is much better than that which existed under the carpet-bag régimes, much better than is likely to be brought about by this Federal interference.

Gentlemen, as I understand them, do not so much complain of the method of self-government at the South so long as confined to their local affairs. Speaker REED, in his article in the June number of the North American Review, says:

> Every Southern man knows that there is no possibility of negro domination in the United States. No Federal taxes will ever be imposed by the negro. No Federal control is within his power. If all this wrong at the ballot-box be needed to preserve a proper local State government to keep the Caucasian supreme in the State, not a living soul can dare to say that the same wrong or any other is necessary for Caucasian supremacy in the United States.

What gentlemen seem to complain of is the fact that the power or supremacy of party here is affected by what they affect to believe so very wrong in the South. The poor negro they care nothing about. It is only to the extent that they are denied the power to use him to pull the chestnuts out of the fire that they feel any interest in him. The South may count him out as much as they please in matters purely local, but they must not shift or affect the party strength here.

We may retort, we do not so much complain of the methods of Connecticut or New York Republicans or Republicans in other States so long as confined to Connecticut, New York, or other States, but only when our party strength is affected or party supremacy is shifted in either branch of Congress.

In fact, sirs, I do not believe that this side of the House is disposed to criticise or find fault about these matters at all. For one, I believe that what Connecticut does is none of our business. We call your attention to these matters, however, not for the purpose of complaining, but for the purpose of showing you that your demands are unreasonable and unjust, and that your complaints are without proper foundation, and can not be assented to.

But we are not done with the gentleman from Connecticut [Mr. RUSSELL]. In his judgment all States represented in the Congress of the United States by Democrats are all wrong and all represented by Republicans are all right, and that chiefest among the elect is Connecticut. In 1888 Cleveland carried Connecticut over Harrison. The Democratic candidate for governor had more votes than his Republican competitor, but not over that competitor and the Prohibition candidate too. The Legislature elected at the same election was Republican. By how much majority? In the senate 17 Republicans to 7 Democrats were elected. In the house 152 Republicans to 96 Democrats. Majority on joint ballot, 66. The Legislature put the Republican in for governor.

To show something of the workings of the town system (in Indiana we call them townships), of which the gentleman boasts so highly, we have prepared a table, showing the number of voters—Republican, Democratic, Prohibition, and all others all told—in 31 towns, each of which elected 2 representatives to the lower branch of the State Legislature, in all 62, all Republicans; in 49 towns, each of which elected 1 representative—49 more—to that Legislature, all Republicans—in the aggregate, 111 legislators—and showing the number of voters—Republican, Democratic, Prohibition, and all others all told—in 4 towns, each of which elected 2 representatives to the same Legislature, in all 8, all Democrats—80 Republican towns, with 31,624 voters all told, electing 111 Republicans, while 4 Democratic towns, with 44,431 voters, 12,807 more votes than in the 80 Republican towns, yet elect only 8 Democrats. It takes 5,554 voters in these Democratic towns to elect 1 member to the Legislature, while in these Republican towns that many votes elect between 19 and 20 members.

I take it the statistics I use are reliable. I get the whole number of voters in each town from the annual Connecticut State Register and Manual for 1890, as found on pages 324 to 332, inclusive, and the persons elected and their respective politics from same book, pages 66 to 77, inclusive.

Following is the table showing number of votes of all parties:

Republican towns.

Name of county and town.	Voters.	Representatives.
HARTFORD.		
East Hartford	929	2
Glastonbury	924	2
Suffield	763	2
Windsor	699	2
East Windsor	647	2
Wethersfield	424	2
Granby	389	2
Hartland	169	1
Berlin	587	1
Canton	570	1
Plainville	497	1

Republican towns—Continued.

Name of county and town.	Voters.	Representatives.
HARTFORD—continued.		
West Hartford	407	1
Marlborough	89	1
Thirteen towns	4,924	21
NEW HAVEN.		
Guilford	690	2
Orange	865	1
Branford	863	1
Seymour	711	1
North Haven	395	1
Madison	377	1
Southbury	299	1
East Haven	231	1
North Branford	221	1
Woodbridge	199	1
Middlebury	129	1
Prospect	117	1
Wolcott	108	1
Thirteen towns	5,222	14
FAIRFIELD.		
Fairfield	845	2
Ridgefield	503	2
Redding	331	2
Huntington	807	1
Bethel	755	1
New Canaan	613	1
Wilton	413	1
Brookfield	248	1
Easton	241	1
Weston	207	1
Sherman	190	1
New Fairfield	168	1
Twelve towns	5,321	15
NEW LONDON.		
Colchester	585	2
Lebanon	399	2
North Stonington	382	2
Griswold	549	1
Old Lyme	268	1
Sprague	210	1
Voluntown	210	1
Franklin	147	1

Andover	117	1
Seven towns	1,754	12

RECAPITULATION.

Hartford County, thirteen towns	7,074	21
New Haven County, thirteen towns	5,222	14

Republican towns—Continued.

RECAPITULATION—continued.

Name of county and town.	Voters.	Representatives.
Fairfield County, twelve towns	5,321	15
New London County, eight towns	2,750	11
Windham County, ten towns	4,153	15
Litchfield County, nine towns	2,941	13
Middlesex County, eight towns	2,409	10
Tolland County, seven towns	1,754	12
Total, eighty towns	31,624	111

Democratic towns.

New Haven	17,894	2
Hartford	11,419	2
Bridgeport	9,187	2
Waterbury	5,931	2
Four towns	44,431	8

When a Democratic candidate for governor or for any other State office, with a pluralty over all his competitors only, is compelled to go before the joint ballot of a Connecticut Legislature, the lower house of which is elected by a rotten-borough system, such as shown above, the gentleman from that State says, "The Legislature, the representative body of local government, elects."

Where can the gentleman go in this country to find such a mockery of representative government? Yet, if it suits him and his people, I do not see that we have a right to complain, even though it does result in keeping two Republican Senators in the other end of the Capitol, with power to assist in forging chains upon the balance of us. For one, I say, go it; the people of Connecticut are more interested in the system than I am. Connecticut would be a grand field for the gentleman from Iowa to bring out his "shooting bullet."

The honorable member from Connecticut tells us that this represents the equality of the towns, but he tells us the senate is the "popular branch" of their Legislature; that the "senate is based on population;" that "the division of the State into twenty-four senatorial districts is as equitable as is possible according to population."

In this assertion how is he borne out by the facts? Though the Democrats carried the State for Cleveland in 1888, as above stated, the Republicans elected seventeen and the Democrats only seven senators. How "equitable as possible" the State is divided for senatorial districts may be seen by studying the votes polled—Democratic, Republican, Prohibitionist, and all others all told—at the election of 1888. In that "equitable" division not only the knowledge of permutation and power of combination is shown in a marked degree, but even that was not enough, and Democratic districts must be made much more populous than Republican districts—on an average almost twice as populous. The total vote—Republican, Democratic, Prohibition, and all other—polled in the several senatorial districts of the State at the election in 1888 is as follows:

REPUBLICAN DISTRICTS.

	Vote polled.
Second	6,014
Third	6,011
Fourth	7,442
Seventh	8,009
Tenth	5,358
Eleventh	4,677
Twelfth	6,868
Thirteenth	6,973
Fifteenth	7,789
Sixteenth	3,733
Seventeenth	3,889
Eighteenth	4,331
Twentieth	3,819
Twenty-first	4,106
Twenty-second	4,104
Twenty-third	2,784
Twenty-fourth	2,585

The other seven districts, the first, fifth, sixth, eighth, ninth, fourteenth, and nineteenth, were Democratic, and the total vote in them was as follows:

	Vote polled.
First district	11,160
Fifth district	8,138
Sixth district	7,929
Eighth district	17,645
Ninth district	8,845
Fourteenth district	9,094
Nineteenth district	4,132

It will be seen that the eighth district, which is largely Democratic, polled more votes than all the five Republican districts numbered from twenty to twenty-four, inclusive; and that the first district, which is also Democratic, has as many votes as the sixteenth, seventeenth, and eighteenth, all Republican.

It will not do to say that such division is as equitable as it is

possible to make it. To be convinced that it is as inequitable as it is possible to make it, one only need take the town map of the State of Connecticut, found in the Connecticut State Register and Manual for 1890, page 425, and give it a little study as to the population and politics of the several towns. He will readily see that not only a disciple of Elbridge Gerry had a large hand in the districting, but to that was added the injustice of inequality of population.

MASSACHUSETTS.

Adjoining Connecticut and made out of much the same kind of cloth is Massachusetts, the grand old Commonwealth, a Commonwealth that gives this Congress a LODGE, instead of lodging him in some vast wilderness. And LODGE lodges this bill here and wants to lodge its machinery all over the country. A true representative of his State, a State that has produced many learned men, but few statesmen; many narrow treads, but few broad gauges.

Foolish in her own self-conceit, she is cranky in the belief that everybody is a heathen except herself; that she knows what is good for the heathen and that she is the chosen instrument of God to proselyte the heathen. Her old-time reliable Republican majorities may have led the unwary to overlook the fact that her statesmen need to or would deal in anything but fair apportionments. A glimpse of the Congressional Directory, showing the disproportion of votes polled in the different Congressional districts, coupled with the further fact that it was necessary to put parts of Suffolk County into four Congressional districts, parts of Middlesex into four, parts of Worcester into four, parts of Hampden into four, parts of Norfolk into three, and parts of Essex into three, and parts of still others into two, should suffice to convince the thoughtful.

This thing of fairness and honesty in elections Massachusetts seems to think is good medicine to prescribe for others, but very poor medicine for herself.

Her anxiety to adopt any method to beat the balance of the world may be gathered from the following, taken from the Boston Herald last winter, when the Republican party were trying to establish a protectorate over the State of Ohio to prevent the Democratic Legislature of that State from seeing a former Republican Legislature on the subject of gerrymandering and going it one better:

Massachusetts has probably used a greater variety of methods in choosing her Presidential electors than any other State has tried. The first method tried was that of choosing them by popular vote. The State was divided into eight districts for the choice of Representatives in Congress and Presidential electors. Each district selected two candidates, and the general court, by joint ballot, selected one of the two, adding two electors at large, chosen by the Legislature, making the ten votes to which Massachusetts was entitled.

At the next Presidential election another method was adopted. The State was entitled to sixteen electors. Four districts were created, two having five electors each and two districts having three each, no electors being chosen at large. Each district voted for its own electors only. Only five electors succeeded in securing an election by the people, and the Legislature chose eleven to fill the vacancies.

In 1796, the number of electors being sixteen, as before, the State was divided into fourteen districts, each choosing one elector by popular vote, while the Legislature chose two at large and also filled nine vacancies in districts where the people failed to make a choice.

When the fourth Presidential election took place a still different plan was adopted. The Legislature assumed the power to choose the electors, and selected one from each Congressional district and two at large. The electors were authorized to fill any vacancies which there might be when they came together. This plan was a political scheme to get a solid electoral vote from Massachusetts for Mr. Adams, which could not have been accomplished if the electors had been chosen by districts, for Mr. Jefferson had many friends in the State.

Four years later a still different plan was adopted. It is said to have been devised by the friends of Mr. Adams. The people were dissatisfied with the Legislature for having taken away their right to choose electors in 1800, and in order to satisfy them, and still hold the solid vote of the State for Mr. Adams, a law was passed providing for the choice of the electors—nineteen in number—by the people on one general ticket. When the votes were counted the friends of Mr. Adams were astonished to find that the entire Adams ticket had been beaten and that Jefferson electors had been chosen.

When the election of 1808 approached it found the Legislature in the hands of the Federalists, who were determined to secure the electoral vote of Massachusetts for Mr. Jefferson's opponent. They accordingly did not pass any law authorizing the people to choose electors, but adopted a joint order providing for an election by the Legislature. If they had passed a law for this, Governor Sullivan would have vetoed it, but the legislative order did not require his approval. The Legislature then chose a solid Pinckney electoral college.

For the choice of electors in 1812, the State was again divided into districts, six in number, having from one to six electors each. The plan was a compromise, the senate and house being of different political complexion. The electors chosen were all Clinton men, however.

At the next Presidential election the Legislature selected the electors, and in 1820 the people again chose them. Each Congressional district selected one elector and two were chosen at large. In 1824 the electors were all voted for by the voters of the whole State, the entire fifteen being upon one ticket.

A glimpse of a county and Congressional map of other States controlled by Republican Legislatures will disclose the work of the gerrymander. But time will not permit a further analysis now.

INDIANA.

I must, however, before leaving the subject not overlook Indiana, my own State. Indiana seems to be a thorn in the flesh of gentlemen upon that side. Even the great Speaker, who holds in the hollow of his hand the Lilliputians upon that side and who by a wink or nod, or, if that is not observed, by the use of a page as messenger, can bring to time any failure to servility, in the North American Review for June said:

Our apportionments of Congressional districts, are by no means utterly fair, but there is a limitation to injustice, beyond which no party dares to go, except in Indiana, where 4,000 majority in the State gives the Republicans three out of thirteen Congressmen.

What seems to Dr. REED so wanting in equality in Indiana, when made a rule of conduct by Republicans, to him would be evidence of fairness and statesmanship.

A study of a county and Congressional map of Indiana, with the Democratic and Republican vote therein, as compared with a study of like maps and votes in Illinois, Iowa, or the Ohio arrangement that sent its sixteen Republicans and five Democrats to this Congress, will be to the favor of Indiana every time. Or if compared with the last apportionment of the State made by the Republicans of that State it will appear as the very embodiment of fairness. Indiana is somewhat more favorable to an apportionment to secure Democratic members than it is to secure Republican members, growing out of the fact that on the east side of the State are four counties, Wayne, Randolph, Delaware, and Henry, lying in a square with an aggregate Republican majority of near ten thousand.

These counties by reason of location, contiguity, and symmetry of territory, naturally go together, in any fair apportionment of the State, from a territorial standpoint, in the making up of a Congressional district. Randolph and Wayne are bounded by the Ohio State line, while Delaware and Henry adjoin them on the west. Any apportionment that separates these from counties does violence to territorial arrangement. These counties are in the Sixth district, so ably represented for years by Hon. THOMAS M. BROWNE. Though in 1876, and again 1878, the first two times Mr. BROWNE was elected, Delaware and Henry were not in the district, but only Randolph and Wayne, the Republicans in 1873, to utilize the Republican vote of Delaware and Henry elsewhere and to the end that the large majorities of Randolph and Wayne might be put where they would do the most good, put them with Union, Franklin, and Dearborn Counties, three counties on the Ohio State line to the south, and which with Randolph and Wayne formed a line five counties long from north to south, and running from the northeast corner of Randolph south on the Ohio State line to the Ohio River, forming a sort of shoestring district.

For symmetry of shape and contiguity of territory the district would not compare at all with the present districting.

Taking this Sixth district out, and the territory composing the other twelve districts as a whole was Democratic at the election in 1888 by more than 7,000 majority and has been Democratic at every election for more than twenty years. At the election in 1888 the Republicans carried the State for President and for governor by about 2,300 plurality, but without this Sixth district they would have lost the State by more than 7,000. (This district, because of its Quaker influence and abolition sentiment in *ante bellum* days, was dubbed the "Burnt district.") The territory to the south, to the west, and to the north is Democratic.

In Indiana we apportion our State for legislative and for Congressional purposes every six years, in pursuance of a provision of our State constitution. The apportionments with which I am familiar are those made by the Republicans in 1867 and 1873 and those made by the Democrats in 1879 and in 1885. Of these I know whereof I speak. I was in the Legislature of 1867. In 1879, and again in 1885 I did some of the figuring upon which were based the apportionments then made. And I know that skill in the power of combination, when applied with a knowledge of permutation, was not only not exhausted, but the limit was not nearly reached ineither of those last apportionments.

In several places in the State transfers could be made of counties from district to district, and without any violence to contiguity or symmetry of territory or equality of population, that would greatly strengthen some of the districts that elected Democrats to this Congress by meager majorities. I think I know that in the last Republican apportionment, the one made in 1875, the limit of Republican ingenuity was not only reached, but exhausted.

I have already said that Republican and Democratic majorities were so distributed in the counties throughout the State as to make it easier to make Democratic districts than Republican districts. Yet at the election in 1876, the first election after the last Republican gerrymander, the Democrats elected their governor and State officers by majorities ranging between five and six thousand; they gave Tilden for President a majority of over 6,000 and had an aggregate majority on Congressmen of over 7,000. Still the Republicans secured nine out of the thirteen Congressmen. Only two of the nine had less than 1,000 majority. Those two had majorities of 276 and 332, respectively. So if the Democrats had carried the State by a majority of 10,000 it would not have overcome the two smaller majorities of 276 and 322 and would not have secured more than the four members out of the thirteen.

Again, in 1878, the Democrats carried the State by 13,736 on State officers and by 13,255 on Congressmen. In the face of this big majority the Republicans elected seven and the Democrats only six Congressmen. By a close shave the Democrats obtained a working majority in the lower house, and by the assistance of one Greenbacker, of Republican antecedents, had twenty-six out of the fifty members in the senate—the least number under our Constitution, all voting "yea," that can pass a bill.

This being the year for redistricting, the Democrats apportioned the State, but were compelled to do it by the grace of the Greenbacker in the senate. At the next election, 1880, the Republicans carried the State by a majority of 6,000 (about the same majority the Democrats had in 1876), elected eight out of the thirteen members of Congress, and fifty-seven out of the one hundred members of the lower house, while the Greenbackers held the balance of power in the senate. On joint ballot, however, the Republicans had a majority of 12 over all and easily elected Benjamin Harrison to the United States Senate.

Again, in 1885, the Democrats, having a working majority in both branches of the Legislature, apportioned the State, but possessed with a spirit of fairness unknown to their opponents so districted it that the Republicans at the next election, 1886, elected seven out of the thirteen members of Congress and a majority in the house branch of the Legislature on a majority of less than 2,500 in the State. The Democratic hold-overs in the Senate gave them one majority on joint ballot.

The house unseated a Democrat and the senate unseated a Republican, leaving still one majority on joint ballot. That one majority lost Harrison his own successorship and made Hon. DAVID TURPIE United States Senator. At the next election, 1888, on the same apportionment, the Democrats captured ten out of the thirteen Congressmen. And this is spoken of and criticised as unfair with about as much bitterness of feeling as the supposed, so-called frauds in the South. Had the Republicans' majority been 900 greater, their membership here would be five instead of three, and had it been as large as the Democratic majority was in 1876, in proportion to the votes cast, they would have seven, if not eight, on this floor; yet in 1876 the Democrats got four out of thirteen.

Sir, since the days of Elbridge Gerry all parties have endeavored to make the most that could reasonably be made out of an apportionment Had I made the Indiana apportionment I could easily have placed the Republican majorities in two districts, and instead of ten we would have had eleven Democrats, members in the Fifty-first Congress. This could have been done with less ingenuity than that shown in the last Republican apportionment. In so doing equality of population and symmetry of territorial configuration could have been maintained better than our present districting, better than the Illinois or Iowa districting, and much better than the last Republican emendation in Indiana.

These methhods may be unfair and to that extent wrong, but they will continue as long as men remain selfish. They are largely, if not fully, offset by each other, so far as parties are concerned, as are all other fraudulent methods. These wrongs should be corrected, but not by centralizing the power to correct. That only strengthens and makes one-sided the power to perpertate and perpetuate wrong. If we ever lose our liberties it will not be by local irregularities, here and there, but by centralizing the irregularities all along the line.

Pass this bill, Mr. Speaker? What does it mean? What is it intended to mean? Centralization; more power in the few and less power in the many; the use of Sambo and Pomp to pull the chestnuts out of the fire for Eastern Republicans and the money power. And that means bondholders in the saddle and the Western and Southern farmers afoot; the monopolist on top and the laboring man on the bottom; higher taxes to enrich the millionaire, build up the rich, oppress the poor; silver demonetized, to continue a commodity, not money; gold the sole standard of values, and it continuing to increase in value.

That, Mr. Speaker, is what is intended by the passage of this bill. Its intention will miscarry. The yoke is getting too galling. The Western Republican is beginning to see that he had better dissolve his partnership with the Yankee and go into business with the white Democrat of the South, his supposed late foe, but now beginning to be recognized as his friend, because having a common interest.

And now, in conclusion, I hope there will be no objection to my inserting the following article taken from a recent issue of The Baltimore Sun:

WASHINGTON, *June* 10.

Some brief mention has heretofore been made of the remarkably disproportionate influence and power in national affairs exercised by the Republican voters of New England. It is an interesting subject and will well repay entering upon details. The bulk of the political literature which almost engulfs the CONGRESSIONAL RECORD is contributed by New England Senators and Members, the burden of whose lay is the alleged denial of representation to voters in other sections than their own. Mr. Speaker REED in speeches and interviews and magazine articles in the last six months has clamored without cessation for the doctrine that so many black voters in the South, constituting a certain percentage of the population, are entitled to a proportionate number of Representatives in Congress. It is for securing this end that the election measures which he so earnestly advocates are to be directed. If he will only consent to apply the same principle to his own section the measures to be brought forward would most probably receive a much stronger support than is likely to come to them under existing circumstances.

It is really astonishing that so little comment has been provoked by the condition of political affairs in New England. It is marvelous that the descendants of the Anglo-Saxon race have not risen in revolution at the denial of political rights which has prevailed for more than half a century. No such Congressional and legislative gerrymandering has been continued or enforced elsewhere in the world as that existing in New England for Republican benefit. At the last Congressional elections in November, 1888, the Republicans polled an aggregate of 449,090 votes and the opposition polled 378,477, or very much more than two-fifths, yet the Republicans have all of the twelve Senators from New England and twenty-three out of twenty-six Representatives.

In Connecticut the Republicans were in a minority of more than three thousand; yet they have the two Senators and three of the four Representatives. In New Hampshire the Republicans polled 45,271 votes and the opposition 45,430; yet the Republicans hold on to both Senators and both Representatives. In Rhode Island the Republicans have held on to power not only by unfair apportionments, but by the most wholesale disfranchisement of citizens. That State is bound to slip from them now, and if it is ever possible to receive a reasonably fair apportionment Connecticut and New Hampshire would soon follow suit.

The Republican Senators and Representatives from New England, so many of whom are occupying seats to which they are not justly entitled, have put themselves into positions of commanding influence in both branches of Congress. In the Senate they are at the head of the most important and influential committees and exercise a control over legislation monstrously unequal. Of the two Maine Senators Mr. FRYE is at the head of the Committee on Commerce and Mr. HALE is chairman of the Committee on the Census. The two New Hampshire Senators respectively head the Committees on Education and Labor and Immigration. The Senators from the insignificant State of Vermont, which hardly contributes enough to the national Treasury to pay its own office-holders, preside over the Committees on Finance and the Judiciary. The Massachusetts Senators have the chairmanships of the Committees on Privileges and Elections and on Indian Affairs. Senator ALDRICH, of Rhode Island, is chairman of the Committee on Rules. The two Connecticut Senators hold the Committees on Territories and on Military Affairs. Mr. DIXON, of Rhode Island, is the only New England Senator who is not a chairman. This is because he only came to the Senate in November last. But it may be taken for granted that in a short time he will be found at the head of some big committee.

In the House we have Mr. REED, of Maine, whose election is only compassed by wholesale and open bribery, assuming despotic power in the Speaker's chair and at the same time acting as chairman of the Committee on Rules. Of his colleagues, Mr. DINGLEY is a member of the Committee on Ways and Means, which is equivalent to a chairmanship; Mr. BOUTELLE is chairman of the Committee on Naval Affairs, and Mr. MILLIKEN, of the Committee on Public Buildings and Grounds; Mr. SPOONER, of Rhode Island, is chairman of the Committee on Accounts; Mr. GROUT, of Vermont, is chairman of the Committee on the District of Columbia; Mr. BANKS, of Massachusetts, is chairman of the Committee on Expenditures in the Interior Department; Mr. LODGE, of Massachusetts, chairman of the Committee on the Election of President and Vice-President, and Mr. CANDLER, of Massachusetts, chairman of the Committee on the Quadro-Centennial.

It need not be supposed that these New England Republicans, who have walked into Congress over the slaughtered political rights of nearly one-half the population of their section, are satisfied with monopolizing the chairmanships of the principal committees. They will be found stowed away in top places of all other desirable committees, so that their influence permeates every species of legislation for every section. Effrontery has long been characteristic of the New England Republican Congressman, but it is difficult to conceive how they, the beneficiaries of the almost complete practical denial of political rights to hundreds of thousands of white voters, can assume to discourse so much upon alleged and imaginary similar instances as to black voters.

Federal Election Law.

SPEECH
OF
HON. JOHN A. BUCHANAN,
OF VIRGINIA,
IN THE HOUSE OF REPRESENTATIVES,

Monday, June 30, 1890.

The House having under consideration the bill (H. R. 11045) to amend and supplement the election laws of the United States, etc.—

Mr. BUCHANAN, of Virginia, said:

Mr. SPEAKER: Before I begin to discuss the provisions of this bill I want to say a word in reply to the charges made this morning by the gentleman from Michigan [Mr. BURROWS] against the Democratic party, against the great body of the white people of Virginia. I shall not say anything in bitterness nor unkindness. I do not think that the differences between the people of the North and the people of the South upon the race question or upon any other question can ever be settled by denunciation of men or by misrepresentation of sections.

The gentleman from Michigan in his speech this morning attempted to give a history of the political condition of Virginia from the year 1879 to the year 1883, as well as to make charges against her people. But his statement of facts (some of which are matters of record and where it would seem there should be no mistake) are incorrect. He says the white people of Virginia "outnumbered the blacks two to one," when the census of 1880 shows that there were 880,858 whites and 631,616 blacks. He says the Readjuster party was successful in the State in the year 1882, carrying the executive, when, as a matter of fact, there was no election for the executive that year. So much for his history.

Now, as to his charges. He says that the Democratic party of that State deliberately raised the race issue in the year 1885, and "for no other purpose than to influence the passions and prejudices of the people and under its sway to subvert popular government" and that "Danville was selected as the scene for drawing the race issue by the Democracy, to be drawn, as the sequel shows, in blood."

In the very short time (ten minutes) allowed me in this discussion it is impossible to give a history of the political contest of the year 1883 in Virginia or of the causes which brought about the Danville race difficulty, but in behalf of the white people of Virginia and of the city of Danville I wish to say that the charges made by the gentleman from Michigan against them are not true, and that if he had taken the trouble to look into the facts as they are he would have known it. They are slanders upon the people of Virginia, which are reiterated from time to time for partisan purposes and as often shown to be false.

The white people of Virginia deliberately going to work to "subvert popular government," and in order to accomplish it murdering the colored people, their fellow-citizens! Who that knows anything of the history or the character of the people of that old Commonwealth, in peace or in war, believes any such charges? What other people in this country or on the earth has done more or suffered more for civil liberty or popular government than Virginia and her people? I append to my remarks some extracts from an address issued to the people of Virginia a few days after the election of the year 1883, by the Hon. John S. Barbour (now United States Senator from Virginia) and others, which show the causes of the Democratic victory of that year in Virginia, and also the facts as to the Danville race troubles.

Now, a word as to her treatment of the negro. Slavery and many of the evils that have followed it were brought upon her by outside interference, by men, like the authors of this bill, who desired to regulate the affairs of other people, of which they were ignorant. African slavery was forced upon the people of Virginia over their protest. From the year 1699 to the year 1772 her General Assembly passed twenty-three acts to discourage and prohibit the importation of slaves. These acts were all vetoed by the King of England or his colonial governors. The last act was accompanied by a petition to the throne urging the King "to remove all restraint which inhibited his majesty's governor from assenting to such laws as might check so very pernicious a commerce as that of slavery." This petition was disregarded, and so deep was the indignation of the people against the King for his conduct that the preamble of the constitution of Virginia of 1776 complains of this as one of the "acts of insurmountable and detestable tyranny" of the King of Great Britain, that he had prompted our negroes to rise in arms against us, "the very negroes whom by an inhuman use of his negative he refused us permission to exclude by law."

In the year 1778, as soon as Virginia obtained control of her own affairs, she prohibited the importation of slaves either "by land or water" under the penalty of £1,000 and the freedom of the slave, and thus gave to the world the first example of abrogating the African slave-trade. This was thirty years before England prohibited it or New England was willing to have it prohibited; and but for the fact, when she declared her independence in 1776, that two-fifths of all her population were slaves and one-third of all her property consisted in slaves, slavery would have been abolished at once.

The gradual emancipation of all her slaves would have been accomplished before the terrible struggle of 1861 but for the outside interference of our New England friends, whose zeal was without knowledge [applause on the Democratic side] then as now; who, by their fanatical agitation of the question, then, hindered their emancipation in a peaceable manner and brought on the civil war of 1861, with all its evils.

Mr. Bancroft, in his history of the Constitution, says that "Virginia, more than any other State in the Union, was opposed to the slave-trade." But for the whole of New England and the extreme Southern States the slave-trade would have been prohibited upon the adoption of the Constitution and not allowed to continue until the year 1808.

The very State in which the gentleman lives who makes these charges against Virginia was once a part of that old Commonwealth, acquired by the foresight, the genius, and the courage of her sons, and ceded, along with all of her northwest territory, to the United States as a free gift in the interest of "popular government." Not only did she do this, but, knowing the evils of that slavery which had been forced upon her, she, by her grant of that territory to the Federal Government, declared that it should forever remain free territory and that its citizens should never suffer the curse of slavery. In the face of all these facts the gentleman from Michigan charges the descendants of the Virginians of that day with a deliberate purpose to "subvert popular government" in Virginia, when their only offense is that they are and have been, and I trust will ever be, unwilling that their State shall be turned over to the control of the Republican party as now organized in Virginia and their property wasted and their civilization destroyed.

The white people of Virginia are paying taxes and providing schools for the black children as well as the white and doing all that they are able to fit them for the duties of citizenship. If outside people will only allow Virginia to manage her own affairs, she will do it much better for all of her people, both white and black, than it can ever be done by the alien or the stranger.

This bill is another effort to interfere with her local affairs, which interference has postponed and will continue to postpone the settlement of the race question, which has kept alive and will continue to keep alive and aggravate race prejudices, and may produce race conflicts.

I shall not discuss the question of the power of Congress to enact a Federal election law, nor the question of the necessity for it. These questions have been fully and ably considered by the gentlemen of the committee and others who have preceded me. But suppose it be true, as is claimed, that Congress has such power and that the necessity for the exercise of that power has arisen, because corruption has licked its way into the great popular heart, because violence and fraud are abroad in the land, because the State governments are no longer able or willing to conduct their elections fairly and honestly, because local home rule is a failure and fair elections can only be had through the intervention of the Federal Government (none of which do I believe) will the bill under consideration accomplish that object? Is it fair and just in its provisions? Or is it not a partisan measure, framed in violation of sound principles and in the interest of the party in power? Ours is a government of laws, not a government of men. In all free governments this must be the case. Civil liberty is only possible when regulated by law and not left to the discretion of rulers. The duties of the officers who are to execute the laws must be clearly defined and their powers rigidly limited. That government is best, other things being equal, which leaves least to the discretion of its officers.

This bill violates those great principles. The powers it confers upon the chief supervisor of each judicial district are very great, not clearly defined nor regulated by law. He alone determines how many supervisors of election and how many special deputy marshals shall be appointed. The court can appoint no one unless he is recommended by the chief supervisor, so that practically he not only determines the number, but he selects the men. They are not selected for nor from any particular precinct, but can be taken from any place and assigned to duty at any other place in the same Congressional district, without any regard to the wishes of the people or of the supervisors. Roughs and rowdies can be sent from the cities to the country to watch over and take charge of the elections at country precincts.

All supervisors are under the absolute control of the chief supervisor. He details them for duty as the commander of an army does his soldiers. His instructions and directions are their chief, if not their only, guide in the performance of their duties. If he is a partisan, as he is almost sure to be, he can disfranchise all the supervisors taken from the party to which he does not belong by assigning them to duty on election day at precincts where they do not live and at which they can not vote. He can use his power in this and in many other ways to strengthen his own party and to weaken the opposition. He can use the money raised by taxation from all the people in such a way as to corrupt the voter and control the elections in the interest of his own party, and thus perpetuate its power and defeat the real will of the people. All these things can be done under the forms of law, under the provisions of this bill, and there is no remedy for the wrong, no punishment for the wrongdoer.

No election law is just that provides for or allows such things. It is useless to say that such wrongs will only be done where bad men are appointed to office and that such will not be appointed. The history of one section of this country for the last twenty-five years shows how, in many instances, the Federal judges have prostituted their offices to the basest purposes and Federal officials have used their power for oppression and wrong. Our rights and privileges ought not to be made to depend upon the character of men appointed to office. They should be secured by laws which even bad men must obey or suffer swift and certain punishment for violating. A wise people do not trust their rights nor their condition to the happy accident of favorable times or good hands. They are jealous of power. They know that of all earthly things power is that thing most likely to be abused, and therefore they have always defined the duties and limited the powers of those who are to execute their laws.

The author of this bill seems to have had no knowledge of or no regard for the rights of the States. By its provisions it attempts to override State laws in matters where the States are supreme and Congress has no power whatever. It authorizes Federal supervisors to count the ballots for officers of the State and directs State officers what they shall do in reference thereto. It authorizes and requires Federal supervisors to take the property of the State, the poll-books furnished for her own officers and for her own purposes, and to hold the election for Congress to the exclusion of the officers of the State in some instances. It imposes heavy fines and long years of imprisonment upon State officers for violating the provisions of this bill, many of which are in direct conflict with State laws, which they are sworn to obey and for the violation of which the State inflicts its own punishment. It punishes illegal voting for State officers, which is clearly beyond Federal power and belongs to the States alone. It appropriates, without the consent of the States, the penitentiaries and jails of the States in which to confine men convicted under its provisions in the courts of the United States in direct violation of the rights of the States and the express language of the Revised Statutes.

The enforcement of this bill will inevitably result in conflict between Federal and State officials. Our wisest and best men at all periods in the history of the country have endeavored to so legislate and act that such conflicts might be avoided. The theory upon which our Government is founded is a very complex one, two sovereignties to which the people owe allegiance, each supreme in its own sphere. The Federal Government exercises certain powers with which the States as such have no concern whatever. The State governments exercise powers with which the Federal Government has no concern.

There are certain other matters in respect to which both the Federal and State governments have power, but the right of either to exercise such power is determined by the fact that that government exercises the exclusive power whose jurisdiction is first invoked, and the other government in such cases never interferes.

There are certain other powers which the States have exercised,

which the Federal Government has a right to take jurisdiction of whenever it determines to do so, but until it does so they are left with the States. Whatever right the Federal Government has to regulate the elections for members of Congress belongs to this last class of powers.

If these powers are exercised as above described, serious conflict can be avoided, and only by such exercise can it be done. Chief-Justice Waite, in the case of the United States vs. Cruikshank, 92 United States Reports, page 550, says:

The people of the United States, resident within any State, are subject to two governments, one State and the other national; but there need be no conflict between the two. The powers which one possesses the other does not. They are established for different purposes and have separate jurisdictions.

But by the provisions of this bill there are two sets of officers, one Federal and the other State, acting together in the conduct of elections in which both Federal and State officers are to be elected. In the election of the State officers the Federal Government has no power whatever, yet under this bill the Federal supervisors have the right to challenge voters who desire to register, or, if registered, who desire to vote, and if the State officers do not decide challenges as promptly as the supervisors think they should, they (the supervisors) decide the question and say whether or not such challenged voters are entitled to vote, and that, too, when the said voters may not wish to vote in the Congressional election at all, but only for other persons then being voted for.

Federal supervisors are authorized to guard, scrutinize, and supervise the action of State officers, in every election at which a member of Congress is voted for, in everything, to the minutest details, as if they were a set of thieves. No such mongrel body can work harmoniously. No right-thinking man would wish to take an oath to faithfully perform his duty and then to see another placed over him whose chief business is to see that he does not commit fraud and perjury.

This bill not only disregards the rights of the States, but the rights of the citizen as well. Any citizen may be appointed a supervisor, whether he is willing or not, and when notified of his appointment he is required to qualify. When he has qualified the chief supervisor has the power to transfer him "from service in one election district to another in the same city or town, in the same county or parish, or in the same Congressional district." And until his resignation is accepted he is not relieved from duty, no matter how onerous or objectionable the duties assigned to him may be. Citizens can thus be compelled to perform duties which they are unwilling to perform, and by the performance of which they may be deprived of their own right to vote.

A Federal returning board for each State is created by this bill and clothed with dangerous powers. Their powers are not merely ministerial, as are those of a State returning board—the power merely to add up the returns, and from those returns determine who is elected—but this Federal board can consider not only the returns, but also all statements and papers sent by the precinct supervisors to the chief supervisor's office, and in some instances can summon witnesses and hear parol proof in order "arrive at the facts." Was it not intended to give it judicial powers or powers so great and so indefinite that it would exercise judicial power where party exigencies might demand it? The certificate of this board takes the place of that of the State returning board and practically is conclusive of the result——

Mr. BOOTHMAN. Will the gentleman yield for a question?

Mr. BUCHANAN, of Virginia. Certainly.

Mr. BOOTHMAN. Is not that certification simply *prima facie* evidence?

Mr. BUCHANAN, of Virginia. *Prima facie* evidence simply, when the man who gets the certificate takes his seat upon this floor, and in a contest over it here that contest is decided, not according to the rules of evidence or the right of the case, but by party lines, by this aisle which separates the two parties. I am not claiming more credit for the Democrats than for the Republicans in this respect, but I am contending that the rights of the people of this country ought not to be made to depend upon the act or the decision of one man or set of men whom the people have no voice in choosing, no matter to what party they belong or from what part of the country they may come. [Applause on the Democratic side.]

This right to be governed by laws, not by men, has cost our race five hundred years of bloodshed and toil, and we should not allow it to be taken from us. [Applause.]

Mr. BOOTHMAN. Will the gentleman yield for another question?

Mr. BUCHANAN, of Virginia. Certainly.

Mr. BOOTHMAN. Does not your position assume that when the member comes here with the *prima facie* right, derived from certification, that *prima facie* right, whether right or wrong, will be sustained by a majority of this House?

Mr. BUCHANAN, of Virginia. I assume that if his party is in the majority, and I am sorry to have to assume it. When I came here I supposed that the Committee on Elections would come into this House, like the judges in the English House of Lords, and deliver their opinions with judicial fairness and in judicial language and temper upon the questions of law and fact involved in the contest; but in many instances their opinions have been more bitter and extreme than the expressions of the avowed partisans on this floor, and unfortunately some on this side of the House have followed that bad example. [Applause on the Democratic side.]

To allow a returning board to go behind the returns or hear parol proof is a most dangerous power. From the exercise of such power the will of the people in some of the Southern States during the carpet-bag régime was defeated and the most shameful proceedings were had. The temptation to do wrong is so great in the midst of high party excitement that no such power should ever be conferred. The true rule is laid down by McCrary on Elections when he says that such boards should never be allowed to go behind the returns for any purpose and that they must decide all questions from the face of the returns themselves without other evidence.

In Virginia the only instructions election officers receive is a copy of the laws of the State. They are sworn to execute those laws, and they are furnished them for their guidance. Under the provisions of this bill the chief supervisors furnish the instructions and directions for the Federal officials. There is no provision that such instruction shall be made public, so that the people may know what they are, yet fines and imprisonment are imposed upon any one who willfully disobeys any lawful command of a supervisor of election. The people are not only to be punished for violations of law, but for disobeying the commands of Federal supervisors.

One of the provisions of this bill is to repeal the act known as the Thurman act for the selection of jurors for the United States courts. Under that act, which is now in force, jurors are selected by the clerk of the court and by a jury commissioner of a different political party from that of the clerk, so that there may be no packed political juries for the trial of any case. But this bill proposes to put the whole power of selecting the juries in the hands of a partisan clerk, so that if he desires to do it he can pack juries to acquit his political friends and to convict his political enemies. Not only does it contain these and many other unconstitutional, illegal, and tyrannical provisions, but it further provides that the President of the United States, or such person as he may empower for that purpose, may employ such part of the Army or Navy or militia as may be necessary to prevent the violation and enforce the due execution of the provisions of the bill.

The execution of the laws by soldiers or their presence at the polls has always been regarded by the people of this country as an outrage and a wrong for which there can be no apology or excuse in times of peace; but it is in this way that the rights and the liberties of the people have been taken from them.

If we are to have a Federal election law give us a fair one. Let the officers who conduct it be governed, not by their own discretion, not by the direction or instructions of higher officials, but by the law of the land. Let there be no conflict between State and Federal laws or between State and Federal officials. Let there be no returning boards with judicial powers. Let there be no packed political juries. Let there be no invasion of the rights of the States or of the people. Let there be no army at the polls. [Applause on the Democratic side.]

[Here the hammer fell.]

APPENDIX.

ADDRESS OF THE DEMOCRATIC STATE COMMITTEE TO THE PEOPLE OF VIRGINIA.

The State central and executive committees desire to congratulate the Democratic party of Virginia upon a great and signal triumph at the polls. This is their formal duty, but, to give full rein to the feelings of the hour, their congratulations must extend further and embrace all the people of this State and all the friends of republican government in every part of the Union, for an ancient Commonwealth has been redeemed; a travesty of free institutions will no longer disgrace the earliest home of political liberty in America; Virginia has shaken off the degrading chains of a corrupt and corrupting tyranny.

The late election illustrated many of the best features of popular government. Nothing ever more deeply stirred the hearts of the voters; yet, in substance, the peace was nowhere broken.

A revolution in the government was effected; yet the machinery of the election was under the control and absolutely in the hands of the party now driven from power.

The colored race, inflamed by ambitious demagogues, with unreasoning prejudice against their white fellow-citizens, were led, with rare exceptions, in solid battalions to cast their votes against the party now triumphant; yet no trace of passion or resentment against the colored people will find any place in the conduct or the legislation of that party. The liberal declaration of principles to which the Democratic party pledged themselves in July last, when they asked the votes of the people, will not cease to be their guide in the hour of victory. Every pledge of that declaration will be fulfilled as the most sacred promise.

These general statements would suffice in Virginia, where the facts are known, to give the only answer needed—an indignant denial—to the unfounded charges against the good people of this State contained in a recent address from the leader of the Coalition party. But, as that manifesto was meant to affect the opinion of distant communities, its principal allegations must be noticed in detail.

It is not necessary, however, to expose minutely the mistakes in figures and fallacies in argument which pervade and vitiate all the boastful claims therein made as to what the Coalition party has accomplished for Virginia.

It is sufficient to say that the public schools, both in the acts establishing them and the later legislation which prevented a diversion of the funds rightfully their own, are the creation of the Democratic party.

The railroad and industrial progress of the last few years has been achieved in Virginia in sympathy and co-operation with the great movement of energy and enterprise which has enriched neighboring States during the same period, and in spite of bad laws and worse administration. The boastful utterances of the Coalition manifesto may be thus dismissed with a few words, but its charges of intimidation of voters and systematic violence and bloodshed shall have a more careful and detailed refutation.

If the voters were intimidated, as alleged, the result ought to appear in a diminished total vote, or, at any rate, in a diminished Coalition vote.

What are the facts?

The total vote cast in Virginia in 1876—the largest ever cast before this year—was 235,228.

The total vote cast this year was 272,654, or 37,000 more than in 1876.

In 1876, as at this election, the payment of a capitation tax was not a qualification of voters.

In 1880 the entire vote cast was 21,000 less than the vote of this year. In 1882 it was 75,000 less. One-sixth in number of the entire population, white and black, minors and adults, male and female, voted in the late election.

Upon these figures alone the question may well be asked, where are the voters who were deterred from voting? Intimidation at elections by secret ballot must operate almost exclusively to prevent voters from voting at all. Now, the enormously increased aggregate of the total vote must alone go far to remove the suspicion of such undue influence; but, when it further appears that the Coalition party actually increased their vote by more than 13,000, if the comparison is with the election of 1881, and by more than 26,000—that is, by more than one-fourth—as compared with the Coalition vote of 1882, it may be fairly asserted that all the general indications which ought to disclose intimidation of voters are absent from this election. In truth, the only ground on which the charge rests is the partisan necessity of suggesting some reason other than the natural reason to explain the defeat of the Coalitionists at the polls. Now, it is fortunately possible to analyze the votes of certain counties in which the perfect purity of the election, so far as the Democrats are concerned, has never been impugned, and in which the negro element is comparatively unimportant. Take the votes of the counties shown in the following table, many of which had been strongholds of the Coalitionists:

Counties.	1882.		1883.	
	Coalitionists.	Democrats.	Coalitionists.	Democrats.
Buchanan	200	47	396	199
Dickenson	170	27	258	320
Giles	499	426	578	686
Highland	500	287	482	519
Botetourt	683	1,008	701	1,640
Craig	39	105	74	630
Patrick	497	886	708	1,154
Pulaski	554	562	661	290
Rockingham	3,699	1,998	2,677	2,633
Scott	1,022	277	1,595	1,291
Shenandoah	1,608	1,308	1,912	1,794
Smyth	864	534	1,054	1,051
Tazewell	1,349	409	1,615	983
Washington	1,052	1,625	1,943	2,630
Wise	407	206	702	437
Wythe	887	502	1,229	1,521
Total	12,951	10,309	16,675	18,578

SUMMARY.

Coalition majority 1882	2,642
Democratic majority 1883	1,903
Democratic gain 1883	4,545

It here appears that in the election of 1882 the Coalition majority in these sixteen counties was 2,642 and that in the late election they gave a Democratic majority of 1,903, making a Democratic gain of 4,545, which is about one-fourth of the Democratic majority in the State, and nearly one-fifth of the total Democratic gain as compared with the last election. These counties contain only about one-eighth of the population of the State. One-eighth of the State, then, in counties where the purity of the election is not impeached by the wildest Coalition partisan, has contributed nearly one-fifth of the total Democratic gain. What caused this revolution of public opinion in these sixteen counties?

That is a story which the public will never hear from General Mahone. It may be well for the representatives of the Democratic party briefly to recite it. In the first place, Virginia is by history and conviction a Democratic State. The miscarriage of the Democratic party in the elections of the last few years was solely due to a division in its ranks which had been produced by difference of opinion on the State debt. That vexed question alone gave a plausible reason for the formation of the Readjuster party. But the State debt is no longer a political issue. By the resolution of the Democratic party at their last State convention to acquiesce in the settlement made law by the last Legislature and pronounced constitutional by the Supreme Court of the United States, that question has been taken out of politics in Virginia. With the removal of this issue the only proper reason for the existence of the Readjuster party disappeared.

What, then, could be more natural than the immediate return of all the Democrats in its ranks to their old party allegiance?

But that return was quickened by the spectacle of the unnumbered woes the ambition of one man had brought upon the State, and the apprehension of worse evil to come, from which accident alone had just saved the Commonwealth.

A Legislature pledged by its majority in advance to obey every mandate of a party caucus; that caucus sitting only to register and transmit the decrees of its master; the executive and judicial offices greedily seized by the dictator's personal adherents; blind loyalty to one man set up as the sole test of fitness for positions of trust; the asylums for the insane, those touching monuments of the public charity, and the free-school system, that nobler monument of the public wisdom, thrown in to swell the dirty heap of party spoils—so much of this wild revel of mock statesmanship has passed into history. What was threatened—rearrangement of Congressional districts and judicial circuits, repeal of municipal charters and usurpation of the powers long vested in chancery courts to control, through their own commissioners, judicial sales of land—all this was intended to fix, confirm, and perpetuate the power of the autocrat, this new Dr. Francia.

Well, here are the causes of the revolution of public opinion among one-eighth of the purest and best voters in the State. Is not the inference irresistible that the same causes produced a like change in the remaining seven-eighths?

Why go about to look for secondary causes when these great primary causes are staring all the world in the face?

The truth is that all the conditions concurred which thinking men recognized as the necessary forerunners of the downfall of the coalition. The uprising of the people of New York and Pennsylvania last year against "bossism" and other vicious methods in politics; the marked success of the Democrats in the local elections last spring in this State; the recent Democratic triumph in Ohio; the steady and predestined march of the Coalition party into the arms of the Stalwart Republicans; the patriotic fervor animating the Democratic ranks and kindling in old and young a very contagion of public spirit—all the portents of the political skies plainly foretold that Virginia would prove true to her Democratic traditions.

The peaceful revolution has come. To doubt its coming would have been to despair of free institutions, to doubt the justice of the final judgment of the people.

* * * * * * *

8. Town of Danville.

The public has already read the temperate and convincing statement made by a committee of forty citizens of Danville, of which Maj. W. T. Sutherlin was chairman, after examining under oath thirty-seven witnesses of the street fight of the 3d of November, who were personally known to the committee, including the two policemen present. It is therefore only necessary briefly to recapitulate the testimony accompanying this report, the whole current of which negatives the idea of any preconcerted plan on the part of the whites to attack the blacks or to provoke an attack from the blacks. The white people of Danville will, on the contrary, be found to have displayed the utmost forbearance and self-control under the most trying circumstances. This, coupled with the absence of any reasonable motive to bring on a bloody conflict in the midst of their wives and children, ought to predispose every fair-minded man to that rejection of so unnatural a charge to which he will surely be led by the irresistible logic of the facts.

Let these undisputed facts speak.

It must be premised that since the election of May, 1882, Danville has been under negro government, with negro policemen, and that a belief had grown up in the minds of the negroes that, as against white men, they would, in every case, receive the support and protection of the municipal government. In consequence they had become rude and insulting to the whites, and bad feeling had been mutually brought about. This tendency to race excitement had been aggravated by the heated canvass of the last few months, and had been specially intensified on the night of the 2d of November by an incendiary speech delivered by a Coalition leader (Sims) to an audience of five hundred negroes. In this fevered state of feeling, on the 3d of November, between 2 and 3 o'clock, a fist fight, the second of that day, between a white man (Noell) and a negro (Lawson) struck the spark which kindled a violent but brief explosion.

And here it is important to observe that both of these fist-fights were brought on by insults first proceeding from the negro Lawson and his companion, and the negro Lawson is the same who had on the 1st of November offered an unprovoked insult to a white man (Taylor) who was quietly passing through a crowd of colored people.

A little after midday on the 3d of November Noell, passing down the street, had without any provocation been insulted by Lawson and his colored companion. This Noell resented with blows, and passing on determined to let the matter drop and go into the country, expressing his determination to keep out of further trouble on account of the prevailing excitement. But afterwards, as he was driving along in a buggy, he was, without provocation on his part, three times defiantly jeered at by his late assailant, Lawson, who followed him with a crowd of negroes. Not able to brook these insults, Noell rapidly called to his side, to secure fair play, his friends, Lea and Taylor, white men, to whom he declared he would strike Lawson only with his fists, and again got to blows with the negro.

A great crowd of blacks were now pressing around, and Lea and Taylor bade them stand off, as it was a fair fight and the two men should be left to fight it out. To enforce this Lea and Taylor drew their pistols.

Shortly afterwards, as the testimony of B. F. Williamson shows, a negro named Adams ran up behind Lea and attempted to snatch his pistol from him. In the scuffle which followed the pistol was discharged. This pistol-shot, for which the negro George Adams, as the aggressor, is distinctly responsible, seems to have wrought up the crowd of 100 to 150—some say 300—negroes to an uncontrollable pitch of excitement; and though the colored policeman Withers and his white comrade, and Booth, Oliver, and other white citizens, entreated the colored people to disperse and keep the peace, cries were now heard from the negroes—outnumbering the whites by certainly five, and probably ten, to one—that "they might as well have it out there as anywhere," firmly answered by the little band of whites, "We are ready for you. If you won't disperse, we'll settle it." Then a negro jumped up in the crowd and, holding up a pistol, shouted, "Damn you, come on." At that moment the firing began—from which side can not be ascertained—and was kept up from both sides, though the negro policeman (Withers) testifies that "at first the white people shot up in the air as if to scare the people away, and then the firing seemed to be on both sides at each other."

What seems certain is that if the ten or fifteen brave white men, standing there and facing that angry crowd so enormously outnumbering them, had flinched for an instant, or retreated one foot from the ground they occupied, they themselves would have been butchered, and the town would have been at the mercy of an infuriated mob. That there was a predisposition on the part of the negroes and their Coalition leaders to bring on a disturbance is shown by the unprovoked insult offered to Taylor on the 1st of November, and twice repeated on the 2d to Noell; by the declaration of Epp Barksdale, an active white Coalitionist, on the night of November 2: "We have got the negroes solid against you, and I'll be damned if we can't turn them loose on you in five seconds;" by the statement of Arrington (colored) that he heard Taliaferro, a leader of the negroes, say about 12 o'clock on the 3d of November, "There will be a difficulty here to-day;" and, lastly, by the inflammatory speech of Sims on the night of the 2d.

During the fight all the leading white men of Danville were gathered in a public meeting in the opera house. A few of them reached the scene of the conflict towards its conclusion, and by their aid peace and order were immediately restored by the local authorities, so that on election day there was not a quieter town in the country than Danville. But before quiet was restored two whites and seven negroes had been wounded. Of the negroes, four afterwards died. One of the white men wounded was certainly shot by a negro, and the other most probably also. A third white man, patrolling the streets as a special policeman, was shot on Saturday night by a hidden assailant.

On Sunday and Monday preceding the election prominent citizens and the superintendents of both political parties published circulars guarantying to all citizens, without regard to color or party, a free and undisturbed opportunity to vote. As a matter of fact there was not thereafter the slightest disturbance of the peace. Upon this head the testimony of James Wood, Coalition sergeant of the town, and many others, is absolute. So is that of the negro policeman, Withers, who says: "I did not vote, but I was not afraid to vote. I was at the polls, and everything was quiet."

That the negroes mainly abstained from voting in this town was the result of an order from their leaders designed to effect a party maneuver—namely, to lay a foundation to contest the seats of the Democrats which the county of Pittsylvania, embracing Dan ville, was certain to elect, it being well known that the whole negro vote of Danville would not avail against the overwhelming Democratic majority in the county, with which it must be reckoned.

The news of the riot did not reach the remoter parts of the State till after the election. It did immediately reach and consolidate the negro vote of the Coalition party in what is known as the "black district."

In the counties of Accomac, Northumberland, Westmoreland, and many others, where these troubles were not heard of till after the election, the Democrats made large gains of votes—a fact which conclusively controverts the Coalition leader's suggestion that the news of the riot was a controlling influence for the Democrats at the polls.

It will, indeed, always remain a question of doubt which party obtained an increased vote in the State in consequence of this accidental and deplorable encounter.

So much it has been necessary to say in detail in recital of the few, isolated, and fortuitous breaches of the peace, upon the strength of which General Mahone has lightly propagated libelous charges against a brave and generous people. It remains to declare that the only intimidation practiced in Virginia was the intimidation of Coalition negroes upon negroes. All their social and religious organizations were used to this effect with ruthless power, and proofs are not wanting that the leaders of the Coalition party knew how to employ negro preachers for such coercion.

The election machinery, as has been said, was almost without exception in the hands of the Coalitionists. Their registrars and judges committed many illegal and fraudulent acts which in due time will be brought to light. They registered illegal and fraudulent voters; they allowed men to vote who were not registered or duly transferred, the judges of election sometimes declining to examine the registration-books to ascertain whether men offering to vote were registered, their only test being the voter's Coalition proclivities.

To sum up, a fairer, a more peaceful, a more legal election—so far as the Democratic party is concerned—was never held in Virginia than the election whose results are now proclaimed.

These results, as ascertained by a returning board composed exclusively of Coalitionists, are a popular Democratic majority in the State of over 17,000, and a majority of 8 in the senate and of 22 in the house of delegates.

In bringing about this great work the Democratic party have had the active support of nearly all the native Virginians, who constitute by their mind, their moral worth, or their intelligent labor that civilization which is the life of the State, and of nearly all the adopted Virginians of Northern birth in every field, from the ingenious mechanics, who have made the city of Roanoke spring up in a day like a creation of magic, to the capitalists, manufacturers, and engineers who have brought their money and skill to share in the development of the Old Dominion.

They have in like manner had the sympathy and good wishes, without regard to party lines, of a large majority of the most progressive, liberal, and enlightened people of the North and West. It is therefore distinctly a triumph of light and civilization in full accord with the best progress of the age, and not the victory of a reactionary party, which is here announced.

In conclusion, the real truth of the matter is that on the 6th of this month of November the people of Virginia rose, as patient, long-suffering, law-loving American freemen will always rise against outrage and oppression, a majestic spectacle for all lovers of civil and political liberty in every part of this abounding land. The fullness of time had come, the petty dictator had played out his selfish and treasonable game till even the blind could see that bitter end which a short time ago only the wise could predict.

Then came the uprising of the people in their might. Then came that resounding voice of Virginia, uttered with all its volume, with all its power, with all the earnestness of men who know and felt that the struggle was for good government, for honest administration, for the peace of their homes and the security of their rights. Let the people jealously guard the liberties thus restored to their keeping.

RICHMOND, *November* 28, 1883.

Federal Election Law.

SPEECH

OF

HON. EDWARD LANE,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 30, 1890.

The House having under consideration the bill (H. R. 11045) to amend and supplement the election laws of the United States, etc.—

Mr. LANE said:

Mr. SPEAKER: The measure under consideration, called the Federal election bill, is a misnomer.

It should be called "A bill to perpetuate Republican ascendency in this country by placing the machinery of elections in the hands of partisan United States supervisors and marshals, backed up by partisan United States judges who will sustain them in whatever they do." I wish briefly, Mr. Speaker, to call attention to some of the provisions of this measure and to state some reasons why it should not be enacted into a law.

The bill requires the appointment of a chief supervisor of election in every judicial district of the United States, and, on the application of 100 voters in any Congressional district, it is the duty of such chief supervisor to take charge of, manage, and practically control the election. He is authorized to appoint three supervisors for each voting precinct in the district, who, if there be a registration law, may be employed six days at $5 per day each. It is the duty of the United States marshal, on the application of the chief supervisor, to appoint as many deputy United States marshals as the chief supervisor may want, who may be employed as much as eight days and paid $5 per day each. These are the provisions for the rural districts. In large cities such officers may be employed a longer time. The effect of this is to permit the chief supervisor to appoint thousands of Federal officials in each Congressional district, who are to be paid out of the Federal Treasury. As to supervisors, not more than two shall be of the same political party. As to deputy United States marshals, they may all be of the same political party.

It then authorizes the President to use the Army and the Navy to preserve the peace at the polls or to aid in the enforcement of the law. Under this provision the President may, prior to any election, order troops to any State in the Union for the ostensible purpose of aiding in the enforcement of the law, and they may be used, as they have in the past been used, to influence and control the elections.

The bill then changes the methods of obtaining juries in the Federal court. Ever since 1879 the law requires that the judge shall appoint a jury commission who shall be of different political faith from the clerk of his court, and those two persons shall select the names of citizens qualified to serve as jurors in the Federal courts.

This statue was passed to create confidence in the administration of justice and in order to secure an impartial jury.

This bill repeals that statute and allows jurors to be selected by the clerk of the court alone. This provision is evidently intended and designed to obtain partisan jurors in the Federal court for the trial of persons who may be charged with violation of the election laws, and of course the same jury will have to be used for the trial of all civil causes in such courts, so it necessarily becomes a partisan and corrupt jury, and for that reason, if no other, this measure should not become a law.

Then, again, if this bill becomes a law, Federal officials will supervise and scrutinize all registration of voters, the casting of the votes, the counting of the ballots, the making of returns, and the certification of the result. True, the State officers are permitted, under such a supervision, to discharge their duties, but wherever there is a conflict the return of the Federal officers prevails. In other words, the governors and secretaries of state and other local election officers are to be set aside and subordinated to the Federal officers. The governors of our States are selected by the people of the whole State, and they are generally men of learning and ability, selected with a view to their fitness for that exalted office; yet by this bill their acts and judgments are to be ignored and overridden by three persons appointed by judges of the United States circuit court, who are required to have no qualification other than that they shall be able to read and write and I suppose must be faithful to the Republican party.

And this is what is called a "returning board." This returning board receives the returns from the precincts in the counties, and may hear evidence outside of the returns and certify under their hands and seals who was elected to Congress. Two members of the board constitute a quorum, and not more than two shall be of the same political party. The individual holding their certificate is to be by the Clerk of the House of Representatives placed upon the roll of the members elected and thus authorized to participate in the organization of the next House.

The bill then provides for the manner of registering the voter, of receiving the vote, of counting the ballots, and of certifying the result. The manner and method is different from that now established by the laws in the several States. In the rural districts it will be difficult to conform to the law, and men honestly striving to carry it out will often fail in many particulars.

It is evident that the bill is not framed for the purpose of obtaining a fair election. It puts in the hands of the party in control of the Government such power as will enable it, even against the will of the people, to retain control. The great number of Federal officials that may be appointed and paid out of the public Treasury is one of the chief objections to the bill. We may reasonably expect all deputy marshals to be partisans of the Republican party. Hundreds or thousands of them will be appointed in each district. They may be employed eight days at $5 every day each, and they can and doubtless would be used to advance the interest, not of a free election, but of the Republican party. If generally enforced, the cost of an election under this bill could not be less than $8,000,000 or $10,000,000. The report of the minority of the committee places it at the last-named sum, but no person is able to form a correct estimate of the cost, and it may amount to $12,000,000 or $15,000,000 for each election.

The committee in their report find that there are 54,649 election precincts in the United States. It is quite safe to say that if this law is fully executed there might be from 400,000 to 450,000 persons employed whose pay is fixed by the bill from $5 to $15 per day, and the latter class are to have $5 a day additional for expenses. In the present depressed condition of the country and the burdens now resting on the people this new expenditure is simply appalling, but I suppose we must provide more places for the few remaining Republicans now out of office.

Mr. Speaker, there is really no necessity for the passage of any such law. For more than one hundred years States which prescribed the qualification of the voters have also prescribed the manner and place of the election. The sentiment of the people of each State on the question of elections is illustrated by their laws. There is not a State in the Union to-day where statutes can not be found to enable the voter to deposit his ballot, and provision for an honest return of the same. These laws may sometimes be violated, but so are laws enacted for the protection of human life and property, both national and State.

There is no reason to suppose that an act of Congress would not be violated as soon as the statute of a State, and any person who so insists simply reflects on the honesty and integrity of our State laws and their administration.

The returning-board feature of this bill is most obnoxious. Three citizens are to be appointed to certify the result. Not more than two of them shall be of the same political party, two to constitute a majority, whose certificate is conclusive. The individual holding that certificate is entered upon the roll of Representatives-elect and participates in the organization of the House. Corrupt or venal returning boards can, against the will of the people, return as elected a Republican majority. We have had in this country some experience with such boards—in Louisiana and in Florida in 1876. Certificates which were untrue in fact were given. On these certificates Hayes was counted in as President, and the venal and corrupt members of these returning boards were rewarded by the Republican party by high and lucrative Federal appointments.

I will give details further on, but I am quite confident that with the power to appoint venal boards, with the patronage of the Government to reward them for villainous conduct, with an expressed design to do their own registration, counting, and returning, if this bill becomes a law the people may confidently expect a repetition of frauds of 1876.

The purpose of the bill evidently is to destroy the power of the States and centralize all power in the General Government and keep the Republican party, with all its offensive methods, in power I think this is clearly indicated by the Speaker of this House in his Pittsburgh speech, lately made before the Americus Club of that city. He used the following language on that occasion:

Let us cut loose from the State elections, do our own registration, our own counting, and our own certification.

The Speaker has been doing the counting and voting of members during this Congress, and now he wants an enlarged sphere of operations, where he can do the counting and certification for the entire country.

Will the people sustain any such a measure? I think not.

I wish now, sir, to assign in detail some reasons why this bill should not become a law. The report of the minority of the committee finds that the passage of this act by Congress would be unconstitutional. With this position I fully concur.

This is the language of the Constitution on this subject:

The times, places, and manner of holding elections for Senators and Representatives shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators.

Gentlemen on the other side of the Chamber insist that under this section Congress has full power to deal with the election of Federal Representatives; that it has power not only to make the regulations as to the manner of holding the elections, but to authorize the appointment of officers by the President to pass upon the qualifications of voters, receive and count the votes, and declare the result of the election.

I believe that the advocates of this measure further admit that the Constitution is their authority for the passage of this act.

The Constitution is the will of the people, or, in other words, a contract between the ruled and the rulers that no powers shall be exercised except those specially granted by the Constitution.

To properly understand the Constitution we must, therefore, look to the whole instrument to learn their will, and that it should be so construed that all its provisions will stand, and not one section to the destruction of another.

Section 2, Article I, reads as follows:

The House of Representatives shall be composed of members chosen every second year by the people of the several States.

It will be noticed here that it is "the people of the several States" who are to choose their Congressional Representatives, not the "people of the United States."

The power to elect is therefore "in the people of the several States."

Mr. Story, in his valuable work on the Constitution, says:

What is a power but the ability or faculty of doing a thing? What is the ability to do a thing but the power of employing the means necessary to its execution.

Who, then, is authorized to exercise the power to choose? Clearly the people of the "several States." It would, then, be a perversion of this rule of interpretation to say that while the people of the several States possess the power to choose their Congressional Representatives they lack the power to regulate the machinery by which, and the conduct at the polls at which, the choice is made.

Section 2, Article I, of the Constitution is as follows:

The electors of each State shall have the qualifications requisite for electors of the most numerous branch of the State Legislature.

Then under this clause who can vote for members of Congress? Clearly those who are qualified electors for members of the most numerous branch of the State Legislature. Who alone has the power to pass upon the qualifications of the latter class? Who alone can determine who can or who shall vote for members of the State Legislature? Unquestionably the State inspectors or judges of election, and nobody else. But the determination of this fact is the determination of who is qualified to vote for members of Congress. In a word, the qualifications of a person to vote for members of the most numerous branch of the State Legislature is a condition-precedent to his qualification to vote for a Congressional Representative; and the power to determine this condition resides alone in the State officers.

When, then, can the authority of the Federal Government be exercised? By section 4, Article I, of the Constitution, it is very clear that a primary and general power is conferred upon the State Legislature to regulate in all respects the times, places, and manner of holding Congressional elections, and also a secondary and conditional power to make regulations for those purposes, and to change them, and that the permissive and contingent power of Congress is to be exercised according to section 8, Article I of the Constitution, which provides that Congress shall have power "to make all laws which shall be necessary and proper for carrying into execution the foregoing power."

I therefore fully agree with the minority of the committee that, if the States shall have performed their duty and exercised the general power of regulating the question, the contingency upon which Congressional action depends will not have occurred. In case a State shall have neglected to enact laws for the election of Congressmen by its people or shall have enacted laws in hostility to the General Government, either to deprive its people of representation in Congress or to prevent that right from being exercised in a reasonable manner and at proper times, then Congress is permitted to intervene and to establish regulations which will secure representation to the people of such State.

What was given to Congress as the law-making power of the Government in this case was a defensive power against State hostility or negligence, by which popular representation would fail and the necessary power of the Federal Government would be impaired or paralyzed for a want of representation in the House.

This view of the Constitution is not mere matter of opinion begotten by the necessities of debate, nor a novel view introduced to support a foregone conclusion dictated by party interest or passion. It is a view supported by the most decisive proofs drawn from the history of our country at the time of the making of the Constitution and the organization of the Government of the United States.

In most of the States opposition was made to the ratification of the Constitution because it was alleged that this particular provision was liable to perverted and dangerous construction, extending national power to interference with State elections. In other words, those opponents apprehended the very abuse of construction which is embodied in and illustrated by this bill, but the friends of the Constitution met them in debate and gave to this provision the construction above stated, vindicating this construction by substantial and satisfactory reasoning which convinced our fathers and ought to convince us.

Without considering the questions upon the construction of this provision of the Constitution which have been heretofore debated in Congress and considered by commentators upon constitutional law, relating to the manner and extent to which Congress may act in case of State default or hostile action, I am prepared to say that this bill is plainly unconstitutional because the States have not failed to pass laws for the representation of their people in Congress, nor made laws hostile to such representation and to the Government of the United States in connection therewith. On the contrary, their legislation upon this subject by the States has been apparently enacted in good faith to this Government and to their own people.

I am willing to admit that Congress may make the regulations as to the manner of holding the elections, but must not withhold from the people the incidental powers conferred by section 2, Article I, necessary to the exercise of their choice of Representatives, because the Constitution says the people shall choose, and the canons of interpretation say that with the power to choose is coupled the exercise of the means necessary to the choice.

Congress may alter the State regulations as to the manner, but should remember that no man can vote for a member of Congress unless he is qualified to vote for a member of the State Legislature. There is but one class of electors, and they are the electors for the most numerous branch of the State Legislature. There is but one enumeration of qualifications, and those are the qualifications requisite for electors of the most numerous branch of the State Legislature. In fact, there is but one condition of qualification for an elector for members of Congress, and that the State alone has the power to fix, and the State judges or inspectors of election alone the power to determine.

In exercising its powers, Congress must remember that the Constitution of the United States does not confer the right to vote, but it is a right derived alone from the State constitutions, and it would be a violent assumption of power for Congress to attempt the regulation of a prerogative the Federal Constitution does not create.

It also must be remembered that section 4, Article I, confers upon Congress the same power "to make or alter" the regulations for the election of Senators as of Representatives, except as to the places of choosing Senators. If, then, Congress can authorize the appointment of Federal officers to take charge of and conduct the election of Representatives, pass upon the qualifications of the voters, receive and count their votes and declare the result of the election, then would it not have the power to authorize these same officers to take charge of a State

Legislature assembled to elect a Senator, decide what body is the State Legislature, and hence pass upon the qualifications and election of its members?

The exercise of the power to elect members of Congress at the same time both by the State and the Federal Government is impossible of execution. It must be done by the one or the other.

Under the law of the State of Illinois, the election board are required to file all papers and ballots connected with the election with the county clerk of the proper county, and they are to be sealed up and be by him preserved for a certain time. This is enforced by a penal statute. Now, under section 11 of this bill the Federal board of elections have a right to take possession of some of these papers and ballots and file them with the Federal board of canvassers. So if the State board surrender the papers to the Federal board and do not file them with the county clerk they are liable to indictment under the State law, and if they do not surrender them to the Federal board they are liable to indictment in the Federal courts. It could not be the intention of the framers of the Constitution that any citizen should be placed in such a position.

The whole measure is absolutely vicious from beginning to end. The exercise of the powers mentioned in this bill would nullify the entire Constitution by depriving the people of all sovereignty and vesting absolute control in a faction of Congress in conspiracy with the Executive. If the people of the States can not select honest men to register them, to count their votes, and to make the returns; if that power is to be turned over to politicians bent on re-electing themselves to office by legislating in one Congress to control the election for the next, the ballot is necessarily a fraud and popular elections are a farce. It would bring the judiciary of the country into politics and would thus destroy its independence.

Every judge of the Federal or district court is an aspirant for promotion, and under our law the President of the United States has the appointing power and the power of promotion, and there would be great danger under this bill that the judge might be tempted to serve the man who could help him. Temptations of this character should be avoided. If there had been no apples in the Garden of Eden our first parents could not have eaten thereof, and possibly now we would not require an election law to defeat the will of the people.

Mr. Speaker, if this bill is enacted into a law it means revolution, and, I fear, bloodshed. The Federal election officers have a right to supervise the action of the State election officers and determine who is a qualified voter under our State law and who is entitled to vote, and yet as to our State law they are not sworn officers. The returns of the Federal election officers have priority over the returns of the governor of the State, and the Clerk of this House is required to place the name of the Representative so returned by the Federal board on the roll of members to Congress under a penalty of from $1,000 to $5,000 or of imprisonment for not less than one nor more than five years, or of both fine and imprisonment. This is the point to the whole measure; that is, to keep the Republican party in power.

By section 8 the Federal supervisors are authorized to go into the State courts and actually dictate to the judges on the bench as to their duty in naturalization and revise their acts. There are many other equally offensive provisions, but I will mention but one more. If the bill becomes a law as it is, it will only be operative and in force in cities of 20,000 inhabitants and over. If it is desired to put the law in force in a single county or parish in a Congressional district then it can only be done on the petition of fifty citizens of such territory. The bill does not provide that even these fifty persons shall be able to read and write. They may be jail birds, ex-penitentiary convicts, slums of saloons, or ward bummers. Possibly fifty such characters can be found in any county in the country. It is a sad condition of affairs, gentlemen of the majority, when you delegate the power of making laws to such characters.

I hold, Mr. Speaker, first, that Congress has not the constitutional right to delegate the power of making the laws of this country to any person. Congress may create a corporation with certain powers to pass by-laws and regulations touching its own domestic affairs, and a State may charter a municipal corporation which can pass or enforce by-laws or domestic statutes, but I deny the right of any legislative body to delegate its right to pass laws.

What authority would Congress have to pass a law that would give the force of a statute to all measures passed by any of the committees of this House? Suppose that under such a law a committee would enact a statute to bind the people, would any person say that such a statute would be constitutional? What is the difference, then, in the case before us? By the terms of this bill it is not a law until enacted into a law by the petition of fifty persons. I insist that a law can not be put in force in that way. The Constitution declares that Congress shall have the power "to make all laws which shall be necessary and proper for carrying into execution the foregoing powers." Congress must pass the laws, not delegate this right to political bummers, who can thereby have the people of the United States taxed for the expenses of conducting an election in a single county from $4,000 to $5,000.

This question has been before the courts of the country, and I mention particularly in Illinois. The supreme court there held that a legislative body can not delegate this authority; that it is a personal trust that they and they only can execute.

This provision of the bill is simply ridiculous, for if the right can be delegated to fifty persons, then the same right can be delegated to one person, and thus the people of an entire county be placed under the domination of one man. If this bill is to become a law it should apply to the whole country and all its parts alike. But gentlemen of the majority would not dare do that. The people of Ohio, Indiana, and Illinois would not tolerate it, and would unseat every member from those States who would support it. They would regard it as a reflection on their intelligence and patriotism, and it would be.

For over one hundred years the people have been capable of self-government. Are they now less intelligent and patriotic than they were fifty years ago? Has the degeneracy supposed to exist among the people been brought about by our public and private schools and the millions of dollars that have been expended in the education of the people? If so, we had better wipe out our educational system and confess to the world that the American people are not capable of self-government, and the passage of this bill would amount to such a confession.

Mr. Speaker, in making these remarks as to the constitutional objections to this bill I have not been unmindful of the decisions of our Supreme Court on a kindred question to the one presented by the passage of this bill. I have read those cases with care, and I find that in the leading case two of the judges dissented from the opinion of the majority, and I suppose that I have the same right to dissent that the two judges had. Some of the judges who concurred in the opinion are now dead and new members hold their places on the bench, and it is impossible to say what the views of the court now might be.

But that is immaterial; the people of this country are not willing to surrender their liberties even to the Supreme Court, especially in view of two of its latest decisions, in the first of which they held that a United States judge who invaded a sovereign State accompanied by an assassin who murdered a citizen of that State was not liable to the laws of such State and rescued the assassin from the operation of the laws of said State against murder. The other case is the original-package decision in the Iowa case, where they held that the Constitution of the United States authorized the shipment of such packages into the State and then held that Congress can grant relief in such case and that the Constitution can be repealed by act of Congress, and there is a measure now on our Calendar, known as the Wilson bill, for that purpose.

I am unable to say what view the Supreme Court might take of this question now if it was brought before it, but every expression that comes from the people denies the right of Congress to take from them the right of self-government.

But, Mr. Speaker, I will now pass from this branch of the measure and discuss the reason why this bill should not become a law on the grounds of public policy.

The friends of this bill say that the purpose of the measure is to secure a "free ballot and a fair count." They roll these words over and over under their tongue as a sweet morsel and would have us believe that the Republican party and the Republican party only was all the party in this country that was in favor of a free ballot and a fair count; in other words, that the Republican party is possessed of all the honesty, virtue, and patriotism of the country, and this bill is brought forward in order to suppress some fraudulent practices of the Democratic party claimed to exist in the South.

Gentlemen, people who live in glass houses should not throw stones. The record of the Republican party will not bear inspection. Its history for the last twenty-five years has been a history of fraud. I mean the leaders of the party, and not the great masses of its people who have been deluded into supporting that ticket. Where are the frauds of 1862 and 1863, when that party sold out the financial policy of the country to Wall street? How about the fraud in demonetizing silver in 1873, when that party sold out to the gold bugs of the country and within the last few days refused to remonetize silver? What about the frauds in Louisiana, Florida, and South Carolina in 1876, when the Republican party stole the Presidency? How about the frauds of Montana last year, when two Republican Senators were fraudulently returned to the United States Senate? Why did the Republican party reward with high offices the parties who were assisting in the frauds of 1876? How about the wholesale bribery and corruption of the Republican party in the last election? Where is Dudley and his blocks of five? What party sold a cabinet position and the Vice-Presidency for money?

Gentlemen of the majority, you began this quarrel by bringing this measure forward and showing to the world that you would rather destroy the liberties of the people than suffer the defeat of the Republican party. The very principle of the Republican party, namely, protection, is a living fraud.

What did your Republican Senator from Colorado [Mr. WOLCOTT] say the other day in the Senate when he was discussing the silver bill?

This is his language:

I wonder how long the Republican majority in Rhode Island, for instance,

would last, if the interests upon which the people depend for their livelihood were no longer fostered and protected by the party in power.

This expresses the whole thing.

The Republican party is held together in Rhode Island and other protected States by the cohesive power of public plunder. It says to its followers, Vote for protection and it will be money in your pockets. Whose money? Why the money of the toil, sweat, and labor of the country. Not the money of the foreigner, because whatever is gained to one man in this country by protection is paid by some other man. The manufacturer is induced by the Republican party to vote for protection, and he in turn compels the men in his employment to vote the same ticket on penalty of losing their work, and then the Republican party fries the fat out of the manufacturer to carry the next election. But the honorable gentleman from Ohio [Mr. McKINLEY] calls this "results."

So when the highway robber obtains the money of his victim at the point of a pistol that is also a result, and when the pirates at the Straits of Gibraltar robbed every ship that passed through the straits in the way of a tariff, they also obtained results, but it was the result of some other person's labor.

But, Mr. Speaker, I will pass from the frauds of protection to the frauds of the Republican party in the manner of conducting its elections, and will give a few of the methods of that party in securing a free ballot and a fair count, or what it calls a free ballot and a fair count.

Is there a doubt that the election of 1888 was bought by the Republican party through the monopolies and trusts created by that party? What did James P. Foster, president of the Republican League of the United States say in his circular letter when the first gun of the campaign was fired? Here is a part of it:

[Confidential.]

HEADQUARTERS REPUBLICAN LEAGUE OF THE UNITED STATES,
New York, May 25, 1888.

MY DEAR SIR: The Republican League of the United States desires to bring you face to face with the startling fact that the coming Presidential election is not to be fought on the old party lines which have heretofore divided Democrats and Republicans, but upon the direct issue of free trade *vs.* protection. We will win this fight if you will do your share and help us to finish what we have begun. We want money and want it at once.

It may not be of your personal knowledge, but it is a fact nevertheless that the manufacturers of the United States who are most benefited by our tariff laws have been the least willing to contribute to the success of the party which gave them protection and which is about to engage in a life-and-death struggle with free trade.

* * * * * * *

The campaign which we are about to enter will concern, more than anybody else, the manufacturers of this country. They have hitherto been very laggard in their contributions to the Republican cause. In fact, if I could punish them without punishing the cause of protection itself, I would consign them to the hottest place I could think of on account of their craven parsimony. If this class of people do not care to contribute to the success of the Republican party they are welcome to try their chances under a Democratic Administration; I can stand it as long as they can.

In fact, I have it from the best possible source that the manufacturers of Pennsylvania, who are more highly protected than anybody else and who make large fortunes every year when times are prosperous, practically give nothing towards the maintenance of the ascendency of the Republican party. Of course I shall not violate what I consider to be a proper principle of action, but if I had my way about it I would put the manufacturers of Pennsylvania under the fire and fry all the fat out of them.

This is a sample of a free ballot and a fair count.

The Republican party wanted money, and, as Mr. Foster declared:

We want money and want it at once.

The fat was fried and money was obtained, and money purchased the election of 1888 and defeated Grover Cleveland.

Mr. Wanamaker, who holds a Cabinet position because of money, in explanation of his connection with this matter, said:

When QUAY sent for me I was surprised. I had no more idea of what he wanted with me than you might have if he telegraphed for you. But I knew he was not the kind of man to send for me unless he had important business with me, so I went. Then he told me that the national Republican committee needed money and his scheme for my raising it.

The country is acquainted with the balance of the disgraceful scheme. Thousands of dollars were raised by Wanamaker, and voters were corrupted and Wanamaker received his reward—a place in the Cabinet—and still the Republican party want a free ballot and a fair count.

Now, as to how the money was used we have some testimony from The New York Mail and Express of date November 22, 1888, as follows:

Of the money so liberally contributed by the Republicans in this city for election expenses, three very large sums were paid out which brought in only about 1,350 votes as the result of these expensive negotiations. The Coogan Labor vote cast for Harrison and Miller amounted to 1,200; the James O'Brien Protection Democracy vote, 50; the John J. O'Brien vote, beyond what is the normal vote in the Eighth district, to 100 votes. On Saturday before election there was paid by the national committee for use in this city to a Republican State leader, as we are informed, the great sum of about $150,000, and as none of this went to the county committee, it is fair to presume this very large sum was used in the three negotiations referred to.

The Manufacturers' Record, of Philadelphia, of April, 1889, contained this statement in regard to Mr. Wanamaker's services in the election:

It is, therefore, to the men that give the cash that a large, if not the largest, share of success is due. These, almost always, are the business men. We make the assertion that the money contributed by this (Manufacturers') club last year had more influence upon the result of the national election than all the skill, the ingenuity, the labor, and the wire-pulling of all the professional politicians in the city of Philadelphia. We believe this proposition to be capable of positive proof. If, therefore, control of patronage is rightly the reward of victorious effort, the right of this club to name the Federal office-holders of Philadelphia rests upon solid grounds. * * * The leaders, we suppose, will claim that they are the men who win victories and that their generalship entitles them to special consideration. But they can win no triumphs without strong backing in money and votes from the best members of their party. If the politicians had had to fight single-handed the battle of last November Mr. Cleveland would now be in the White House. They were literally smitten with paralysis until the manufacturers and other business men came to the rescue, not only with abundant supplies of money, but with a determination to carry the day by hard work and actively exerted influence. That was how the fight was won.

I will make but one other reference in this disgraceful drama of fraud and corruption, and that is to the letter of W. W. Dudley and his letter to those in charge of the Republican campaign in Indiana in 1888. This statement is contained in that letter:

Fourth. Divide the floaters into blocks of five, and put a trusted man with necessary funds in charge of these five, and make him responsible that none get away and that all vote our ticket.

Through the instrumentality of Judge Wood, of the Federal court at Indianapolis, and Chambers, the district attorney of that court, Dudley was never prosecuted for this crime against the ballot-box, and it was shown by the public press of the country that the Administration did not desire the prosecution, and he is to-day one of the trusted admirers of that Administration.

Many more similar instances of what I have mentioned could be produced, but I deem this sufficient to show to what extent the Republican party appreciates a free ballot and a fair count, especially if it is counted on the Republican side. Now, Mr. Speaker, let us see how the Republican party regard a free ballot and a fair count in Illinois, for example. In that State 348,000 Democratic votes elect seven Representatives, while 370,000 Republican votes elected thirteen Representatives. The average number of Democratic votes to one Representative is 49,000; the average number of votes to each Republican Representative is 28,000. Thus it takes 21,000 more Democratic votes in Illinois to elect a Democrat than it does to elect a Republican. Yet under their gerrymandering laws the Republican party think this is all right.

In Iowa, 179,000 Democratic votes elect one Representative, while 211,000 elect ten Republican Representatives. The average number of votes to the Representative on the Democratic side is 179,000, while the average number of votes to each Republican Representative is 21,000. In other words, it takes 158,000 more Democratic votes in Iowa to send one Democratic Representative here than it takes to send one Republican Representative.

In Maine 73,734 Republican votes have chosen four Representatives, while 54,516 Democratic votes have chosen no Representatives at all. In other words, there are four Representatives here from Maine representing 73,734 people and there is not one man here from Maine representing 54,516 people.

In Michigan 213,469 Democratic voters elect two Representatives, while 236,387 Republicans elect nine. Average number of votes to the Representative: Democrats, 106,734; Republicans, 26,625; difference, 80,469.

In Minnesota 142,492 Republican voters have five Representatives; while 120,793 voters not of that party have no political representation.

In Nebraska 108,425 Republican voters have three Representatives, while 94,228 voters not of that party have no political representation.

In the great State of New York it takes to elect a Representative: Democrats, 42,389; Republicans, 34,105; difference, 8,284.

In Ohio it is as follows: Democrats, 79,251; Republicans, 26,003; difference, 53,248.

In Pennsylvania it is as follows: Democrats, 63,805; Republicans, 25,052; difference, 38,853.

These figures are given by The New York World, and their accuracy is supported by the Congressional Directory, and they are not questioned by gentlemen on the other side of the Chamber.

The result of the figures, then, is that in fourteen Northern States there are 3,386,000 Republicans, who elect 126 Representatives, the average being not quite 27,000 to each Representative, while 3,074,000 Democrats elect in the same number of States only 47 Representatives, or an average of 65,000 Democratic votes to elect a Representative.

Thus it will be seen that about one-third of the Democratic votes of these States are suppressed by fraudulent gerrymandering laws. This seems to be all right in the eyes of our Republican friends, as it tends to keep the grand old party in power, but if a colored vote in the South is supposed to be suppressed what a dismal howl goes up for a free ballot and a fair count. "Why beholdest thou the mote that is in thy brother's eye, but considerest not the beam that is in thine own eye? First, cast out the beam out of thine own eye; and then shalt thou see clearly to cast out the mote out of thy brother's eye." Gentlemen, consistency is a jewel, but it has no abiding place with the Republican party this year.

In 1877, when Senator CULLOM was governor of Illinois, in his message to the Legislature of that year he used the following language:

As citizens of the State of Illinois we claim the right to hold our elections in our own way, giving all our people a fair and equal chance to cast their votes. We claim the right to prescribe the manner in which our polls shall be purged of fraudulent votes and how and by whom the result of our elections shall be ascertained and announced. All these things we regulate by the laws made by our State Legislature, and when the result is so ascertained and announced, we expect it to be respected, as well by our own citizens as by others. We claim

these rights for our own State, we concede the same to every other State in the Union.

If this was good doctrine in Illinois in 1877, why is it not a good law now. It is to be presumed that the thirteen Republican Representatives from Illinois now in this House indorsed that doctrine then, but now they seem to discard it and do not think that the States are entitled to equal rights under the Constitution. We will see what Senator CULLOM himself thinks of this measure when it goes to the Senate in a few days. There should be no other ground assumed in this country than that assumed by Senator CULLOM in his message, that the people of the several States are capable of self-government. The measure under consideration assumes that they are not and will not enforce the law.

The people have for more than eighty years proven themselves capable of self-government in the several States. But this measure is revolutionary in this, that it changes all existing systems, and it enables the party in power to intrench itself in permanent power by seizing the machinery through which the will of the people is expressed. No party actuated by a love of liberty would seek to put such a law on our statute-books. Its evident intent is to strike a death blow at local self-government and transfer all power to a central despotism.

The horde of supervisors, deputy United States marshals, spies, and informers created by this bill will not owe their appointment to the people and therefore will not be liable to the people for their action.

The people do not make such offices and therefore have no power to unmake them, nor will the judges of the Federal court be responsible to the people.

This Congress has created eighteen more officers for Federal judges at a salary of $7,500 each per annum, and of course these positions will be filled with eighteen Republican judges who will hold their office for life, as well as the supervisors, and they will not be responsible to the people, not having been elected by the people, and the great political prizes of the country will seem constantly within their reach, and the danger is that they will debase these high offices for partisan purposes.

The functions conferred on the judges by this bill are not judicial, but are essentially political and partisan. They will disgrace the judiciary rather than exalt it. They will be expected in great public crises to stand with their party, and it is certain they will do so. Heretofore the Government has been divided into three great divisions, the legislative, judicial, and executive, each being a check on the other; but this will blend all these in one. The Executive will appoint the judges and they, through the supervising "returning boards," will take charge of the Congress or the legislative department, and thus the Government in the end will be in charge of the executive or administrative department, and this, in turn, means the Republican party.

The report of the Federal supervisors are to have priority over the return of the governors of the several States, and this is for the purpose of defeating the will of the people as expressed at the polls. The people of the North will not tolerate this usurpation of their rights whatever the people of the South will do.

We will find in the free cities of the North greatly increased majorities in the coming election, and the Republican party will not dare apply this law there. You may send your satraps from door to door with their pockets filled not with money fried from the fat of the manufactories, but taken from the public Treasury, as contemplated by this bill, and it will do you no good.

The people will not be corrupted by the base minions sent out by this measure, but will resent the act as an insult to their patriotism and love of country. They will not long endure the treacherous spy and the base informer, those loathsome wretches created by this bill for party purposes and under the pay of the Government. The liberty of ancient republics was based on free cities and freedom of the republic, but the freedom of our Government is based on individual, personal freedom and local self-government, and without this our institutions of Government could not endure.

The history of the Anglo-Saxon race for more than two thousand years, with the blood of conquest coursing in their veins, establishes their right to dominate all other races of the earth and makes their posterity, the people of this country, the foremost race that ever lived in all the tide of time. For over a century this people have maintained the greatest and freest government known to civilization in all ages, and its turret and foundation-stone rest on the right of local self-government, which form of government that grand old statesman Gladstone has been trying to secure for suffering Ireland for the last quarter of a century; and now, while that people are enduring untold hardships to secure self-government, this bill if passed will destroy that form of government in America and sadden the hearts of the true lovers of liberty throughout the world.

I pray you, gentlemen of the majority, as you love the liberties of your country, do not enact this measure into a law. Discard all strange gods and new and untried methods of government and let us preserve the Government as created by our fathers and hand it down to our posterity unimpaired with all the exalted and priceless blessings which it bestows. Let us trust the people with local self-government, and, my word for it, our God-given liberty will be safe in their hands.

Federal Election Law.

SPEECH
OF
HON. SYDNEY E. MUDD,
OF MARYLAND,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 1, 1890.

The House having under consideration the bill (H. R. 11045) to amend and supplement the election laws of the United States, etc.—

Mr. MUDD said:

Mr. SPEAKER: As one of those who have felt somewhat the force of the evils aimed at by this bill I believe in the wisdom and the efficacy of its passage, and shall state briefly the reasons for my faith.

I submit, sir, that there is a Government of the United States. It is said to be a republic in form. We call it a Government of the people, or, as high authority has phrased it, a Government of the people, by the people, and for the people. If it be ordained that such a government shall exist in reality and in substance, and not merely as the echo or the shadow of a name, the voice of the people and the whole people must be heard in the administration of that Government and the legislation through its representative bodies, that furnish the life, the vigor, and the potentiality for good or evil of the organism which we honor by that name.

At the foundation of all that constitutes government as the function creative and the right preservative of the form, the theory, and the character thereof, is the question of the elections by which the agents of that government are chosen and by which its powers are executed.

I shall not enter, Mr. Speaker, into the question of the constitutionality of the legislation now pending before this body.

In the very forefront of the instrument which we call a Constitution, under which we derive the right to sit in this Chamber, and which in the fondness of our faith we have called the supreme law of the land, the powers which we are here seeking to exercise are clearly and specifically set forth.

The highest judicial authority of this country, the Supreme Court of the United States, a tribunal in the character of its organization and its dignity second to none perhaps on the face of the earth, has passed upon and declared the constitutionality of such laws. I may remark, in passing, Mr. Speaker, that my respect for the decision in the leading case rendered (that of *ex parte* Siebold) is none the less intensified because the malefactors of the law against whom was aimed that decision came from Maryland, from the seventeenth ward of Baltimore City and my own district, and from a section thereof where there is no fear or possibility of "negro domination."

I shall not enter either, Mr. Speaker, upon a discussion of the harrowing details of fraud and forbidden practices that at this day and hour furnish the condition and the necessity that call for the exercise of the powers that are embraced in the provisions of this bill.

Upon the facts in that particular we are not left to conjecture. They exist in all portions of the country in a greater or less degree.

They exist in a larger and more general and systematic sense, I say it more in sorrow than in resentment, in that section of the country which we designate as the South.

The managers of this bill have predicated its necessity upon the desire for the prevention of frauds in elections all over the country, and for the curtailment of the power for wrong-doing of its beneficiaries; gentlemen of the other side, hailing from the section called the South, arise with alacrity and promptness and utter the cry of pain that comes from one who is hurt.

We say we will stop fraud in this country, and blast its dominion all over our broad land; gentlemen arise and complainingly say, "You utter malediction upon our section." So be it, gentlemen, if you will.

You place the *locus* of this legal battle where other battles have waged before. Constitutionally we will meet it and root it out if possible in that quarter.

Two gentlemen from two noble old States, one of them basing his very becoming love for his State largely upon what she has done in the past and the glory that was and is gone, have made fearless, argumentative, able, and eloquent speeches. They are brave men, both of them. I honor them for their valor and their frankness. There has been no traverse, and they made none, of the facts upon which are founded the justice and the necessity of our action through this bill. They have pleaded by way of confession and avoidance, or, as the gentleman from Virginia [Mr. TUCKER] expressed it, have demurred.

There is a propriety in the term "demurrer." The lawyer demurs when he wishes to admit the facts. The gentleman from Virginia is a lawyer. He knew he had no standing on an issue of fact before the jury of his countrymen, and with the lawyer-like habitudes of his mind he, no doubt wisely, entered a demurrer.

In sustaining his cause, which he did in a manner worthy of a better one, he found himself obliged to deny the obligation upon his con-

science of any binding effect of the decisions of the Supreme Court of his country, and intimated as a contingency in which Federal authority might conflict with State rights, the significant event that the State might, as it had a right to, he said, prescribe a property qualification for voting.

I will say here, Mr. Speaker, that Democracy, or so-called Democracy, ever had a fancy and an affinity for the aristocracy of property as a qualification for political prestige.

The untitled in mock dignity and the unpossessed of fortune find no proper alliance after all in the traditions and the policies of so-called Democracy.

The gentleman from South Carolina [Mr. HEMPHILL] said, as near as I can remember, "We are going to rule, or we must rule that country, or we must leave it," and with an apotheosis that was almost touching, if it were not so serious, of the grandeur of his State, he declared, "We are not going to leave it."

No man would have him leave it, Mr. Speaker; but would rather hope that in the unquestioned brightness of his intellect he should remain there as a leader and a light to his people, and, touched with more liberal views, he should build them up on the high plane of equal and exact justice to all people in the complete enjoyment of political rights.

This, then, Mr. Speaker, is the situation which we must confront and which we must deal with. This, then, is the vision upon which our eyes are asked to feast in revelry. This the political banquet of which we are invited to partake or go hungered of our rights.

We must see the Constitution of our country, in the interpretation placed upon it by the highest tribunal of the land, set at naught and defied.

We must let the operation of such ignoble restrictions as property qualifications for suffrage or other proscriptions, if need be, forbid the passage of laws needed for the protection of our national life, to permit the exercise of prerogatives which gentlemen apostrophize as the embodiment of local self-government.

We must let the agencies that enthrall and dominate many of the fairest sections of the country rule, as they do rule, as they have ruled, and as they will rule, against majorities, against the people, against the Constitution and the laws which we call the supreme law of the land.

The official returns made out by Democratic sources for members of Congress from the majority of States south of Mason and Dixon's line, other than those denominated Border States, show that the average number of votes cast for members of Congress in the bulk of the districts therein rank less than one-half of those returned in the great majority of districts in other portions of the country, in many cases less than one-third, in some less than one-fifth, and the average population of those districts is about the same as elsewhere.

The question then to be considered by this Congress, and it is our sworn and bounden duty to consider it, is whether in elections for members of the National Legislature the vote of one man South is to count as much the vote of two men in the North or East or West, or in Maryland or Virginia; and for our attempting to act upon this question, to the end that the evil complained of may be removed, we are told that we are nullifying that Constitution which is based upon equality of rights.

The measure of public estimation of candidates for elective office is gauged, or supposed to be gauged, in large measure by the proportionate number of votes that each receives; and yet the fact remains, and the question for us to determine is shall it continue to remain, that men from those sections of the country are returned elected to Congress by one-half, and, as I have said, in some cases by one-third or one-fifth the votes, receiving which in other sections party candidates are defeated, and squarely and admittedly defeated.

It will not do, Mr. Speaker, to say that people in those sections of the land do not care to vote. As a matter of fact, sir, the people of the South by temperament, both the old and the newly enfranchised, take a keener and more intense interest in politics than in any other section of the country. I know whereof I speak in this regard. Men do not resign the exercise of their political rights through choice.

The colored man of the South treasures his right of the elective franchise with a sanctity not less than that with which he clings to the religion that binds him to his God. He ceases to vote only when not permitted to vote, or because his vote is not counted save to make up a representation for the benefit of a minority that robs him of his right.

We are told, Mr. Speaker, that all these things are necessary and are justified because of the fear of negro domination in certain sections of the country. This is not the case, sir, in all respects. It is not alone a revolt against alleged negro domination, in my judgment.

The negro who votes the Democratic ticket there is allowed to vote, and protected in the exercise of the largest and completest enjoyment of that right.

It is only when he votes the Republican ticket and helps to make up Republican majorities that this domination becomes offensive, and then it is that gentlemen invoke the departed spirits of their forefathers to nerve their arms in the work of compulsion that preserves the precious heritage of local self-government.

For my part, Mr. Speaker, I should not want to disturb the manes of my ancestors unless in a cause more holy than that of a spoliation of the sacred rights of the humblest citizen.

The spirit that inspires these assaults upon the purity of the ballot-box is a sentiment of hostility to Republicanism and the fraud-committing and fraud-loving tendencies of the Democratic party. It is in great part, sir, the spirit fed upon memories of the past that vents its hostility to-day against the man and the party that stand for the nationality of the Government and the supremacy of the Constitution thereof against the counter-claim and theory of so-called State sovereignty.

Look, for instance, at the condition of things in my own State of Maryland as an illustration of the truth of the proposition for which I am contending.

The city of Baltimore, under Democratic auspices, for many years past has witnessed the commission of frauds as gigantic and offenses as rank against the freedom of the ballot as any other portion of the habitable globe. The population of Baltimore is overwhelmingly white. The Seventeenth ward of Baltimore City in my own district has for many years been the Gibraltar of unterrified Democracy. Equally and coextensively it has been the Gibraltar of flagrant and most stupendous frauds. There is not a handful of colored men in that ward.

In the face of all these things, Mr. Speaker, gentlemen ask us to let them alone. Let them alone for what? Let them alone to snatch from defenseless people the benefit of representation based upon suppression of votes, and double in extent to that enjoyed by other sections of their common country; let them alone not only to commit fraud, but to do it in the name of liberty and under the guise of the privilege of local self-government; let them alone when outraged constituencies send to this body contests, most of them well founded, equal in number to the number of Representatives from that section upon this floor; let them alone when fresh done barbarities, as detailed before committees of this Congress and upon this floor, indicate the existence of conditions unsurpassed in the disorders of Warsaw, under the dominance of that "solitude" which men have called "peace."

Mr. Speaker, when the great Roman orator in his grand philippic against the arch-conspirator of his country portrayed the evils that had fallen upon her, the splendid and tremendous power of his language was not more masterful in the description of the wrongs that had been done than in that of the times, the places, and the manner of their doing.

It was not so much that Catiline had conspired against the peace of the state, but that, so conspiring, he came within the circle of the senate, under the eyes of the consul, took part in the deliberations of the body, and marked out the downfall of those who were the defenders of the city.

Not less, Mr. Speaker, has it come to pass that here in this Western Empire, in this age of civilization and peace, men, in effect, have borne a part in the commission of outrages upon the Constitution and the laws of their country, have set up the reign of fraud almost within the shadow of the sacred circle of this Capitol—shining temple, as it ought to be, of justice and of terror to evil-doers—and then have come within the sanctuary thereof, taken part in deliberations of this body, to pass laws for the guidance of the people. I will not carry the analogy further.

Mr. Speaker, I challenge any man to go before me in weight of sincere regard and friendship for all that relates to the prosperity of the section from which I hail.

I love the State of Maryland and her people, among whom I was born and reared and among whom I expect to die. I thank God for Maryland, sir, that she is ridding herself of the conditions that prevail, I regret to say, among her less fortunate sisters. She is ridding herself of Democracy as well.

I love the people of the South that possess the affinities and habitudes of sentiment and action and industries akin to my own State. I have respect for the government of my State and the modified sovereignty thereof, but I owe a greater allegiance to the Government of this country.

I have a greater admiration for the more exalted rank of grandeur and boundless enterprise that belong to us under the enlarged nationality of free government that in a higher sphere we enjoy as citizens of the United States.

And as Representatives of the country and the people thereof, and not alone of the States, we each have the right to expect and the duty to demand the enforcement of equal civil and political rights over every the humblest citizen in every the humblest and remotest corner of this broad land. And because I have an aspiration for the good of my section and of that South of which I rank myself a son, I would have her take her proper place in the enjoyment of the munificent blessings that God and nature have bestowed upon her.

I would have her uplifted above the charge and suspicion of fraud, which false friends have brought upon her, to go forward in alignment with the progressive tendencies of other sections in their march to a greater and higher destiny among the peoples of the earth.

I know full well, Mr. Speaker, that he who stands here in his place and speaks the plain, unvarnished truth about these things, which all

men know and all good men lament, will be censured by some as being the maligner of his people and an enemy of his community. So be it, sir, if such shall be my fate.

That man, sir, in my judgment, is less the enemy of his people who states the naked fact about them and pleads for their deliverance than he who brings the blight and tarnish of these things upon them; than he who, in apologetic tones, dwarfing the full measure and the seriousness of the facts, stands forth as a champion of fraud and the brazen defender of his country's disgrace and the pleader for its continuance.

The pathway of our duty in the premises is plain to my mind, Mr. Speaker. That Government is a farce and itself a fraud which permits high-handed lawlessness to go unrebuked and unwhipped of justice, and that fails to extend the full measure of its strong-armed protection to him who, in suppliance bent, asks and pleads for it.

Hesitation in such cases is turpitude, and timidity itself is cowardice.

The Republican party for these many years past, sir, in its treatment of this question has hovered close to the border line of cowardice.

We clothed the colored man of the South in the habiliment of equal rights and bade him exercise them. It is our sacred and solemn duty to stand by him and protect him in the exercise of those rights.

For what was it that we led him out of the land of bondage and placed him on the high mount of hope and political promise, if, forsooth, we abandon him at the entrance of that promised land in which we bade him go when we clothed him with the insignia of the ballot?

Better had we left him in his semi-barbaric happiness and contentment down among the cotton fields and corn, where in his chattel condition he received at least kind treatment, than to have led him out of the thralldom of slavery into the pitfall of a political serfdom.

There stands in this city, Mr. Speaker, a few squares from this Capitol, if I mistake not, a statue more striking in its form and more significant in its teachings of a great idea than any I remember to have seen.

I remember well a few years ago, when a student in this city, I came out one evening from college, buoyant in the glow and ardor of youth that sees in the sculptured marble the image of immortal thought, to witness the unveiling of that statue. It represented the form of Abraham Lincoln, standing erect and noble as in life, with his outstretched arm over the bended head of a kneeling slave. The hand that drew the veil was the hand of Grant. I have sometimes wondered, Mr. Speaker, if that picture were a dream or if that statue should not again be veiled.

And I suggest that when this bill shall have been defeated, if it shall be, and aught that remains of hope of the realization of the dream of Lincoln or the vision of Grant in the equal protection and complete enfranchisement under the law of the former slave shall be gone, this Congress or the Republican party should cause that statue to be veiled and the gentleman from North Carolina [Mr. EWART] should be master of ceremonies upon that occasion.

If gentlemen, Mr. Speaker, may not relish the situation in which they find themselves under the enactment of such a law as this they must commend to their own lips the chalice which they have prepared for others in forcing upon us the necessity for calling it into power.

If the things which are said and charged as to the conditions which prevail in the South do not in fact exist, then it is for you gentlemen from that section to remove the suspicion which a thousand evidences point to, and which has become so widespread that it is no longer safe to disregard its monitions.

From all over the country comes the complaint of frauds against the ballot-box in the South. The people here and there and everywhere say that you do not permit fair elections. The voice of distress that comes from that quarter and the wail of political desolation that wells up from the downtrodden therefrom have become too loud to be drowned in mere denial. The testimony has become too strong to be discarded in the tribunal of public opinion.

We have listened to the voice of the siren that would bid us shut our ears to that cry already far too long; the lullaby and gush about peace and good-will and the prosperity of the negro there we have heard enchanted, lo! for these many years. The time has come for action. The time has come for an assertion of the powers and the full powers of the Government under the Constitution, which under God and justice, we must, perforce, invoke if we would be true to our fellow-man and be not recreant to ourselves. It is due not only to the black man, but to a host of wronged and injured white men as well.

There are thousands of those in the South to-day who would break away from the thralldom of the Democratic party could they count upon the Government's protection in the exercise of their rights when the ties and associations that bound them to Democracy have been severed. They are kept there now by the false cry of negro supremacy. They are kept there because in the suppression of the voice of the negro in his Republicanism and all who side with him across the pathway that leads to him in the domain of his politics there stands inscribed the warning, "Let all who enter here leave hope behind."

There are those among the young men of the South who, born beneath the star of secession, down in the darkness of the night of war and threatened disunion, beheld the flag of nationality born by the Republican party, as they believed, to a better and a higher life, and they followed it as a tutelary god, because they believed it was right.

Down among the barren fields of their own fair land made desolate and upon the banks of their streams that bore no commerce to the seas, they saw in the operation of your policies and your principles the opening of a roadway to a higher progress and prosperity for a new and regenerated South. They adopted the slogans of your party faith and called them their own.

They yearned for participation in the homogeneity of nationality, that under the operation of just laws and the equal and unstinted protection thereof they fondly hoped would have followed in the wake of your creed, overspreading all the sections of this country, North and South alike.

They cherish that hope to-day. And they ask that you extend to them the full protection of your Constitution under the broad panoply of your Federal power, commensurate with the loyalty which they gave to you.

They can only get it through fair elections. Full nationality can not be secured without it. The right of a free and fair and untrammeled ballot stands at the base of all others.

It will not do, Mr. Speaker, and it is no excuse for us to say that the laws which we shall pass and which no man dares to say are not right, in their prevention of cruel, crying wrongs, will cause irritation and excite bad blood and ill-feeling among the people against whom they will have to be executed.

The aims of great justice will not permit or tolerate the adoption of such a halting, timid, hesitating policy as that, in the face of a solemn duty.

In the prosecution of our rights under the law, sir, I should make the political atmosphere of our country so hot for evil-doers against the ballot that, in the language of Daniel Webster, "they can not breathe the air thereof and live."

It will not do for us to falter in the discharge of a great and solemn duty because, forsooth, it may be contended that we have not the power or the capacity to secure practical enforcement of the law.

Great Government that we are, we should render ourselves contemptible in the eyes of the nationalities of the earth by the avowal of so humiliating and so cowardly a confession as that.

On such reasoning as that we should hand over society to the unbridled license of the evil-doer in every field of crime; and the shackles that fell from the limbs of the helpless slave at the touch of the wand of freedom under the great soul of Lincoln would have weighed upon his body to-day had sentiments of the stamp voiced by the gentlemen of the South on this side of the House found lodgment in the hearts of the brave men who wrought his liberation. There is no sense in such a plea, no justice in the sentiment that gives it birth.

But it is said, sir, that the experiment of this legislation is costly, and gentlemen pause to enter into estimates of expense.

The blessings of free government, sir, are not measured in dollars and cents, and the aims of nationality are superior to considerations of revenue.

When the people of this country struck the blow for independence of a foreign power they did not stop to calculate the cost of the maintenance of the cause of freedom; when the men of a later day went forth to battle for the suppression of the rebellion they did not halt or hesitate to conjure with arithmetic or weigh the estimate in dollars and cents that would be expended to preserve liberty and union in the land.

Blood-stained tracks of veterans that left their impress upon the mountain slopes and valleys of a thousand battle-fields; eyes bedewed with tears of many a sorrowing widow or stricken orphan that wailed the sacrifice of loved ones lost, reckoned not of the quantum of expenditures that sustained the struggles fought and won for liberty and law.

These were struggles for nationality, Mr. Speaker, for wide-spread, practical, priceless liberty, whose legitimate expansion finds its only logical result in complete and unstinted enfranchisement as voiced in universal manhood suffrage. It is that for which we are contending to-day. The victory is not complete without it.

There is no middle ground between civil and political liberty in a republic. There is no political liberty that does not stand upon and find its fullest expression in the ballot.

I understand, Mr. Speaker, that there are a few in the South that call themselves Republicans—and I hope that they believe that they are—who stand against us and against their people in that section in their opposition to the passage of this bill. I understand that, sir. It is hard to speak for the defenseless and the disfranchised of the people at all times. It requires nerve and courage and sometimes sacrifice to do it. All men are not endowed with these qualities.

I understand that there are some Representatives from the South whose districts—like my own, perhaps, in Maryland—do not need this law. But I had thought they would be more mindful of their brethren of other States and districts who do need this law, and need it because they can not get justice without it.

There are those again, Mr. Speaker, who love to luxuriate in the favors of what is called the "aristocracy" of society, and feel the friendly fawning of what is known sometimes as the chivalry of the South. Stalwart Republicanism gives no sesame to those who foster and feed upon such agencies.

There are those who, because of the profit and the policy thereof, are lip-serving in their own politics and, because of dalliance with Democracy, grow faint in the avowal and weak in the expression of their own creed to bask in the sunlight of some pleasant ballot scoundrel's smile. There are some of these among the Republicans of that section, sir. We have all seen them and feel a tinge of shame in their comradeship whenever we see them, and it is the sentiment or the want of it that comes from such as these that finds its fit indorsement in the phrases, honeyed of apology for fraud and pregnant of encomiums upon its doers, in the utterances that fell from the lips of the gentleman from North Carolina.

There is another element, sir, self-portrayed, that will not fail to have been noticed in connection with the opposition on this side to this bill—a grievance against the President, the Speaker of this House, or the action of a committee of a co-ordinate branch of this body.

For my part, Mr. Speaker, I want to say that I place my Republicanism and my patriotism and sense of public duty on higher grounds than these. The President of the United States exercises his duty under the Constitution in the light of his own conscience and according to his own best judgment as we may assume. And though he may err in individual cases, and I have no doubt he has done so, I believe in the long run, and in the calm and sober judgment of the great majority of the people, he will be found to have discharged the functions of his high office upon policies and public questions, as well as in the recognition accorded to public men, with sound discretion and discrimination. But whether he has or not, sir, I shall endeavor for my part to discharge the independent responsibility of my Representative position here regardless of what I may conceive to be the lack of judgment or neglect of duty on the part of co-ordinate branches of this Government.

The gentleman from North Carolina does himself injustice when he parades the views of defeated aspirants for district attorney, or those of some black-faced Iscariot, himself hungry for appointment, in support of his own views.

Doth the wild ass bray when he hath grass, or loweth the ox over his fodder?

Mr. Speaker, in the language of Roscoe Conkling, at the close of a memorable speech upon a subject somewhat akin to this, there is a sentiment which I would fain adopt and make my own. He said:

One of Rome's famous legends stands in these words:

"Let what each man thinks of the Republic be written on his brow."

I have spoken in the spirit of that injunction. I have spoken frankly of the things that are and yet ought not to be, because I would stamp them out of existence in the section where they prevail and look to the dawning of a better and a brighter day for the South.

Richard W. Townshend.

REMARKS
OF
HON. CHARLES E. HOOKER,
OF MISSISSIPPI,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 15, 1890.

The House having under consideration the resolutions of respect to Hon. Richard W. Townshend, late a Representative from the State of Illinois—

Mr. HOOKER said:

Mr. SPEAKER: When requested by the gentleman from Illinois [Mr. WILLIAMS], the immediate successor of our deceased friend, to take part in these obsequies of our lamented brother, I responded that I would regard it not only as a duty to do so, but one which, in view of the relations which existed between Mr. Townshend and myself, I should feel myself remiss if I did not consent to perform. And though I have no written speech to deliver commemorative of the virtues and public services of our friend and brother, I have a word to say in reference to my connection with him in the rendering of those services.

Sir, death to the old or those whom Providence has afflicted with infirmities seems natural, but when it comes to those who are in the meridian of life and at the very acme of their usefulness it is hard for frail humanity to exclaim, "The Lord gave, and the Lord hath taken away; blessed be the name of the Lord." Mortality is the fate of all, but he whose magic hand swept across the chords of the human heart with a touch probably never equaled by another has told us that even in this case—

> The weariest and most loathed worldly life
> That age, ache, penury, and imprisonment
> Can lay on nature is a paradise
> To what we fear of death.

That sentiment of the great English poet may be true, Mr. Speaker, but there is another equally true: that to him who has met the duties and obligations of life and discharged them faithfully death comes but once, and once only to the brave, come when it may. Thus it came most unexpectedly to our deceased brother.

I was associated with him in many Congresses in which he served, and in the Fiftieth Congress, which had just closed. Only a few days before his death I met him in these Halls and had familiar social intercourse with him. He looked the picture of health, and he was animated, as his distinguished colleague, General HENDERSON, has said, by the hope, the elastic spirit, and the fine temper which always distinguished him, little apprehending that he in his turn, and in a few days, must pay the debt of mortality which all humanity must pay. And I was grieved ere yet I had reached my home to learn by the telegraphic wire that he whom I had left in such robust health, in such vigorous physical condition, and such hopeful frame of mind had, alas! passed away in the prime of his manhood.

It was my fortune, Mr. Speaker, to be associated with Mr. Townshend from his first entrance into these halls. The history of his life has been given by his distinguished successor from his own Congressional district and given, too, by my friend from Maryland [Mr. Compton], who represents the district in which Mr. Townshend was born. At an early age he left the home of his nativity and came to this city, exhibiting even in his boyhood those marvelous traits of his character—zeal, intrepidity, energy, fidelity, and honesty in the discharge of whatever duty was devolved upon him.

Moved by the spirit which moves so many of our young men in the Eastern and Middle States, he sought his fortune in the great West. Making his home in the State of Illinois, he was there the recipient of many honors. Admitted to the bar at the age of twenty-two, elected to the responsible position of representing his constituency in the central executive committee for several years; elected as a delegate to the convention which met in 1872; and then, sir, the same spirit that animated him in the discharge of these duties recommended him to the constituency in whose midst he lived, and he had the honor to be selected by a large majority to the Forty-fifth, the Forty-sixth, the Forty-seventh, the Forty-eighth, the Forty-ninth, the Fiftieth, and the Fifty-first Congresses. In all these positions he discharged the duties that devolved upon him with wonderful zeal and fidelity.

When he was nominated by the Speaker of the last House of Representatives as chairman of the Committee on Military Affairs I must confess that I felt some anxiety, some trepidation as to how he would meet the responsibilities of the grave position to which the Speaker had assigned him; for I had not understood that he had been so situated as to acquire knowledge of military affairs. But I was more than gratefully disappointed when I, as an humble member of that committee, associated with him in the last Congress, found that he brought to the discharge of the duties of the chairmanship of this great committee, having in its care the Army of the United States and the laws which govern it—I found that by zeal and industry and study and familiarity with military men, whose society he always courted, he had made himself pre-eminently familiar with the questions coming before him in the position to which the Speaker of the last House had assigned him.

No man has exhibited on this floor a greater knowledge of the laws which should govern the country in providing for its soldiers and officers. He familiarized himself most thoroughly with all the laws that had been enacted on this subject. In the debates on this floor when he imagined, and probably imagined correctly, that the particular jurisdiction of his own committee was invaded by others, he defended it with all the zeal and earnestness, and even, I may say, aggressiveness, which characterized him whenever he spoke upon any subject. No public position was ever filled with greater honor, fidelity, zeal, and courage than his chairmanship of that committee.

The honorable gentleman [Mr. CUTCHEON] who has now the honor to preside over that committee was associated with us in the last Congress. The best wish that I can make for him is that in the administration of his great duties he may imitate the zeal, the ability, the learning, and the bravery which distinguished our deceased comrade in the discharge of those responsible duties.

Others have spoken of Mr. Townshend's private and social virtues. It was my fortune to be with him in the Forty-fifth Congress, the Forty-sixth and the Forty-seventh, and to be with him again in the Fiftieth Congress. It is a source of profound regret to me that I can not have the pleasure of being with him in the present Congress.

But early as he departed this life, soon as the great destroyer mowed him down, he has left behind him a name and a record upon the Congressional history of this country that will cause him to be forever remembered in the estimation of those with whom he associated and the constituency whom he served so faithfully and bravely.

Long as was my association with him, Mr. Speaker, I did not discover that he had a single vice or fault. If he had, intimate association for several years never disclosed it to me. We may now commit his remains to the bosom of our common mother, the earth, with the declaration that no man knew him so intimately as to discover that he was ever afraid to speak his sentiments, ever afraid to announce his

views. Performing faithfully all the duties of life, if he had any faults I did not know them; and if there were such we commit them with him to the judgment of that Great Author of our common being who holds the scales of justice to weigh us all with even balance and omnipotent power. We commit them to the keen gaze of Him "who hath measured the waters in the hollow of His hand, and meted out heaven with the span, and comprehended the dust of the earth in a measure, and weighed the mountains in scales, and the hills in a balance."

Federal Election Law.

SPEECH
OF
HON. EDMUND WADDILL, JR.,
OF VIRGINIA,
IN THE HOUSE OF REPRESENTATIVES,

Monday, June 30, 1890.

The House having under consideration the bill (H. R. 11045) to amend and supplement the election laws of the United States, etc.—

Mr. WADDILL said:

Mr. SPEAKER: That the present measure is one of great importance to the people of this country no impartial person will dispute. The authors of the bill claim for it that it will secure to every citizen in the land the right to cast one honest ballot and to have that ballot counted. If it shall succeed to only a limited extent in that particular it is a measure that the American people should hail with delight. Far, in my judgment, does the importance of such a proposition exceed all others before this House. What do we care for silver bills, for tariff bills, for copyright bills, and such like questions in the light of a measure that has for its purpose and object the guarantying to every citizen in the land—rich or poor, lettered or unlettered—the free and untrammeled use of the ballot?

It is alleged by the authors of this bill that a necessity exists for its passage, and that in many sections of the country elections are controlled by fraud, perjury, violence, and bloodshed, and a general suppression of the popular will, and to that charge there is not always a denial, though not unfrequently a justification of such things is made. I say here from my seat on the floor that if such things exist then all other questions fade into insignificance beside it. Little do your laws to protect property amount to, little do your laws to protect persons amount to, if in a free and enlightened age you fail to protect what alone gives us our manhood. The ballot has been truly said to be the right preservative of all rights. And without it, in its simplicity and purity, our Government, in its present form, must in the near future tumble and fall to the dust. It will truly be a repetition of a house built upon the sand, and which the floods and the rains soon overcame.

Least of all, Mr. Speaker, is it a bill as to which there should be any sectional dispute or quarrel? I say for the Southern people, as one of them, that I am ashamed to know that any Southern Representative will intimate upon this floor that the people of the South do not want honest elections. This bill is entitled to a fair consideration, and, after the quiet, cool, able, non-partisan, non-sectional speech of the distinguished gentleman from Massachusetts [Mr. LODGE] in its behalf, I am sorry and surprised to know that sectionalism should be dragged in here, so that in this House for the last three days we have heard what ought to make the heart of every American patriot bleed. We have seen that side and this side of the House indulge in violent sectional tirades, each side to blame somewhat, but you gentlemen on the Democratic side started it—speeches that would have done credit to 1863.

Now, Mr. Speaker, I appeal to any Democrat here to put his hand upon any word of a sectional character uttered by the gentleman from Massachusetts [Mr. LODGE], the author of this bill.

Our distinguished friend from South Carolina [Mr. HEMPHILL] who led off on the other side cracked the sectional whip, gave notice to the world that this bill if it became a law could not and should not be operative in his section. Why, Mr. Speaker, what is the excuse? I ask my Democratic brethren to stop and reflect a moment. The only defense you urge against this bill is that your section should be "let alone;" that you should be allowed to "attend to your own business." That is your demand. Why, sir, to be "let alone" was all that the South asked in 1861. This bill applies to every section of the country alike. In this particular it is substantially the same as the present law. I am surprised, Mr. Speaker, that a gentleman of intelligence who undertakes to represent a constituency on this floor should by his very declaration admit or claim that his section is not a part of the Union.

What is South Carolina going to do about it? Why, sir, whatever affects South Carolina affects every other portion of this Union in respect to elections for members of this House. Whatever affects Virginia, whatever affects Iowa, affects every portion of this common country. The cry, then, of "Let us alone," "Let us attend to our own business," is child's play when dealing with the subject of elections for the whole country. Think of the folly and nonsense of the people of Virginia getting into fever heat every two years as to who shall be their Congressmen, if, for illustration, in the State of Massachusetts as many Congressmen can be counted or otherwise illegally selected as is desired. If they thus have Republicans returned would not the voice of our Democratic Representatives be stifled and *vice versa?*

Sir, I listened to that beautiful outburst of eloquence of the gentleman of South Carolina when he spoke of his fatherland and his determination to hold it and not leave it. Sir, in the memory of some of us, there was another period of this nation's history in which South Carolina led the van. I do not want to talk about the war; I do not want to revive its memories or to apologize for what was then done. We believed we were right and we acted. But I am not untrue to the Southern Confederacy when I say that her people do not want any more war. Her people are tired of it. Sir, there are too many unpleasant reminders of that conflict. Ruin and devastation on all sides. Go North, go South, go East, or West, and the vacancy at the family hearthstone is a monument to the rash words of South Carolina before. [Applause.] A stricken father, a widowed mother, a missing boy, a widowed daughter, whose husband sleeps beneath the turf, are sad reminders of the danger of rash and hasty action.

Now, my friends, be careful, be prudent, move slowly; and do not forget this: that nullification in 1890 may do what secession did in 1860. Let the Southern people reflect. Let them ask before opposing a measure of this kind, is it honest and right? I say the Southern people can not be excelled in the civilized world for honesty and fair play. Is it right to accept the increased representation based upon the negro vote and then suppress that vote? The Southern people ought not to do it. The "sober second thought" of the Southern people will not do it.

The gentleman from South Carolina makes a great mistake. In his discussion of this question he ignores grave matters involved in the controversy, and particularly one of the most important features of this proposition. He has brought the "Solid South" here, he has brought sectionalism here. I want to ask him what he is going to do with the white Republicans of the South when he proposes to exterminate the negroes or rule by force? He says that they, the Democrats, are their fathers' sons and that the blood shall not first turn back in their veins.

We, too, sir, are our fathers' sons, and we stand upon our native heath. I represent in part a State that has in it 75,000 white Republicans, as pure, as honest, as good citizens as any men who occupy seats on this floor. I say now we want peace; we want honest elections; and I tell the gentleman that we are our fathers' sons too. He wants to know whether the blood is expected to turn back in his veins. I tell him no; but if he proposes to rule the Republicans of the South by force, if he proposes to exterminate them, then the blood will flow back in the veins of the white Republicans of that section not until the last drop of it shall have been shed. [Applause.]

I am sorry, Mr. Speaker, that this question could not be considered calmly and without any partisan feeling. Now, what is it? What do you say about this law?

THE ORIGINAL LAW.

I want to remind Republicans in this House, some of you who have some doubts about this measure, that not a single objection is now urged against this bill that was not urged twenty years ago against the law providing for national supervision of elections. At that time the leader of the Democratic party, Senator Bayard, said:

> It will either be rendered a nullity by the sentiment of the people of the United States, the sober second thought that politicians can not reach, or else I can not see how it can help provoking a conflict of which God alone can see the end. (See Appendix to Congressional Globe, second session, Forty-second Congress, volume 81, pages 416, 418.)

Hon. J. S. Smith, of Oregon, in the House of Representatives May 27, 1870 (Appendix to Congressional Globe, volume 81, page 416), among other things, said:

> But this bill, if passed and enforced, will effect an entire and most pernicious revolution in the practice of the Government, one fraught with danger to every citizen and subversive of liberty.
>
> * * * * * * *
>
> Why, sir, with this bill as a part of the law of our land, with the hordes of hungry, interested officials provided for in other sections prowling about the country seeking for victims, with the inducements and opportunities offered to the mercenary and the malignant, it will not be safe for men to discuss political questions with their neighbors or to transact the ordinary business of life with each other about election time. It will have a tendency to breed universal distrust and uneasiness, to encourage litigation, to promote the gratification of spite and greed of gain by unfounded accusations and prosecutions.

Scarcely an objection either as to constitutionality or otherwise has been urged at this time against the passage of this bill that was not urged against the passage of the present law. All sorts of dire predictions were made as to its dangers and the evil effects to follow its passage. The above extracts from speeches of Messrs. Bayard and Smith give an idea as to the then feeling and apprehension. But with twenty years' experience all these predictions are shown not only to be ill founded and that the law in its conception and operation was and is

in every way wise and conservative, operating everywhere, as it does, to insure fair elections and nowhere doing any harm; but in many places it has proven to be the only safeguard afforded for a free and fair election. Nowhere, so far as I have been informed, has this law operated otherwise than to facilitate fair and honest elections.

I say there is no danger from this law. Naught but the facilitating of honest elections will come from it, as has been the case with the original law. At the passage of that law danger might well have been apprehended; it was a new and untried path, but now the way is blazed and marked for us. None but those who will not heed can get hurt.

CONSTITUTIONALITY OF THE LAW.

At the time of the passage of the original law grave doubts as to its propriety and expediency might well have been entertained. Indeed, the constitutional question had not then been settled and the then lawmakers had only the opinions of the framers of the Constitution to guide them. The Supreme Court had not then, as now, passed upon and settled this imaginary trouble.

WHAT THE FRAMERS OF THE CONSTITUTION SAW.

The possible necessity of this or a similar law was seen by our forefathers, the framers of the Constitution, and although the clause now under consideration, namely, section 4 of Article I of the Constitution of the United States, which is as follows:

The times, places, and manner of holding elections for Senators and Representatives shall be prescribed in each State by the Legislature thereof; but Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators—

was the one over which more controversy was had than any other; nevertheless they in their wisdom adopted it, and full record is made of the views of many eminent statesmen to show what their meaning and intent was. They apprehended that a day or a time might come when passion and prejudice would override cool judgment; when men's local interests and their ambition might overcome their love for their country; when State and local affections and imagined duties might outweigh their national love.

Surely naught but great wisdom and a prophetic vision could have portrayed the events of the future as they did.

In the Federal convention Mr. Madison said:

The necessity of a General Government supposes that the State Legislatures will sometimes fail or refuse to consult the common interest at the expense of their local convenience or prejudices. The policy of referring the appointment of the House of Representatives to the people, and not to the Legislatures of the States, supposes that the result will be somewhat influenced by the mode. This view of the question seems to decide that the Legislatures of the States ought not to have the uncontrolled right of regulating the times, places, and manner of holding elections. These were words of great latitude. It was impossible to foresee all the abuses that might be made of the discretionary power. Besides, the inequality of the representation in the Legislatures in particular States would produce a like inequality in their representation in the National Legislature, as it was presumable that the counties having the power in the former case would secure it to themselves in the latter. What danger could there be in giving a controlling power to the National Legislature? Of whom was it to consist? First, of the Senate to be chosen by the State Legislatures. If the latter, therefore, could be trusted, their Representatives could not be dangerous. Secondly, of Representatives elected by the same people who elect the State Legislatures. Surely, then, if confidence is due to the latter, it must be due to the former. It seems as improper in principle, though it might be less inconvenient in practice, to give to the State Legislatures this great authority over the election of the Representatives of the people in the general Legislature, as it would be to give to the latter a like power over the election of their representatives in the State Legislatures. (Madison Papers, pages 401, 402.)

And Rufus King added:

If this power be not given to the National Legislature, their right of judging of the returns of their members may be frustrated. No probability has been suggested of its being abused by them. Although this scheme of erecting the General Government on the authority on the State Legislatures has been fatal to the Federal establishment, it would seem as if many gentlemen still foster the dangerous idea.

And Gouverneur Morris observed:

That the States might make false returns and then make no provisions for new elections.

A prophetic observation.

Patrick Henry said in a speech in the convention of Virginia:

Congress is to have a discretionary control over the time, place, and the manner of holding elections. The Representatives are to be elected, consequently, when and where they please.

SUPREME COURT DECISION.

A discussion of the question of the right to pass the bill, in the light of the decisions of the Supreme Court of the United States, seems almost an insult to this House, and I would not venture even to mention the question of constitutionality but for the remarks of my Democratic friends who seem to have grave and serious doubts on the constitutional question.

And I shall be content to quote the decision of the Supreme Court as a sufficient answer to Democratic doubts. In the case of Siebold (*Ex parte* Siebold, 100 United States, 371), Mr. Justice Bradley delivering the opinion of the Court, Justices Clifford and Field dissenting, the following passages give the views of the Court upon this important power of Congress:

It seems to us that the natural sense of these words is the contrary of that assumed by the counsel of the petitioners.

After first authorizing the States to prescribe the regulations, it is added, the Congress may at any time, by law, make or alter such regulations. "Make or alter!" What is the plain meaning of these words? If not under the preposession of some abstract theory of the relations between the State and National Governments, we should not have any difficulty in understanding them. There is no declaration that the regulations shall be made either wholly by the State Legislatures or wholly by Congress. If Congress does not interfere, of course they may be made wholly by the State; but, if it chooses to interfere, there is nothing in the words to prevent its doing so, either wholly or partially. On the contrary, their necessary implication is that it may do either. It may either make the regulations or it may alter them. If it only alters, leaving, as manifest convenience requires, the general organization of the polls to the State, there results a necessary co-operation of the two Governments in regulating the subject. But no repugnance in the system of regulations can arise thence, for the power of Congress over the subject is paramount. It may be exercised as and when Congress sees fit to exercise it. When exercised, the action of Congress, so far as it extends and conflicts with the regulations of the State, necessarily supersedes them. This is implied in the power to "make or alter." (Pages 383, 384.)

This decision alone would seem to be conclusive of this question. But later still and more explicit even, if possible, we have another decision of the same high tribunal.

In *Ex parte* Yarborough (110 United States, 651), Mr. Justice Miller, delivering the unanimous opinion of the court, said:

That a government whose essential character is republican, whose executive head and legislative body are both elective, whose most numerous and powerful branch of the Legislature is elected by the people directly, has no power by appropriate laws to secure this election from the influence of violence, of corruption, and of fraud is a proposition so startling as to arrest attention and demand the gravest consideration.

If this Government is anything more than a mere aggregation of delegated agents of other States and governments, each of which is superior to the General Goverement, it must have the power to protect the elections on which its existence depends from violence and corruption.

If it has not this power it is left helpless before the two great natural and historical enemies of all republics, open violence and insidious corruption. (Pages 657, 658.)

Will it be denied that it is in the power of that body to provide laws for the proper conduct of those elections? To provide, if necessary, the officers who shall conduct them and make return of the result? And, especially, to provide in an election held under its own authority for security of life and limb to the voter while in the exercise of this function? Can it be doubted that Congress can by law protect the act of voting, the place where it is done, and the man who votes from personal violence or intimidation and the election itself from corruption and fraud?

* * * * * * *

If the Government of the United States has within its constitutional domain no authority to provide against these evils, if the very sources of power may be poisoned by corruption or controlled by violence and outrage without legal restraint, then, indeed, is the country in danger, and its best powers, its highest purposes, the hopes which it inspires, and the love which enshrines it are at the mercy of the combinations of those who respect no right but brute force on the one hand and unprincipled corruptionists on the other. (Page 667.)

DUTY OF STATE OFFICIALS.

The court in *Ex parte* Siebold also ruled very plainly in regard to the power of Congress under this clause of the Constitution to treat State officers conducting elections as officers of the United States:

It is objected that Congress has no power to enforce State laws or to punish State officers, and especially has no power to punish them for violating the laws of their own State. As a general proposition this is undoubtedly true, but when in the performance of their functions State officers are called to fulfill duties which they owe to the United States as well as to the State, has the former no means of compelling such fulfillment?

In view of the fact that Congress has plenary and paramount jurisdiction over the whole subject, it seems almost absurd to say that an officer who receives or has custody of the ballots given for a Representative owes no duty to the National Government which Congress can enforce, or that an officer who stuffs the ballot-box can not be made amenable to the United States. If Congress has not, prior to the passage of the present laws, imposed any penalties to prevent and punish frauds and violations of duty committed by officers of election it has been because the exigency has not been deemed sufficient to require it, and not because Congress has not the requisite power. (Pages 387, 388.)

VIRGINIA BILL OF RIGHTS.

And in this connection section 3 of the Virginia bill of rights seems apropos:

That the Constitution of the United States and the laws of Congress passed in pursuance thereof constitute the supreme law of the land, to which paramount allegiance and obedience are due from every citizen, anything in the constitution, ordinances, or laws of any State to the contrary notwithstanding.

May we not affirm in the light of these authorities that the power of Congress in the premises is supreme? To contend otherwise would be to deny facts too plain to admit of controversy and would be an acknowledgment that the National Government was powerless to prevent its own overthrow at any moment.

Now, Mr. Speaker, we have the constitutional provision, we have the construction given it by its authors, and we have the decisions of the highest courts in the land, leaving no question as to the meaning of the Constitution. Now, what as to proposed law?

PROPOSED LAW.

I have listened with the deepest interest to all that has been said, and do not hesitate for one moment to say that if I in the slightest particular feared the operations of this law, as many of my Southern brethren appear to do, or believed that it was exclusively aimed at the South and would injuriously affect its interests and harshly and unjustly bear upon its citizens, then I should vote and work against the passage of the measure; but I have studied this bill in vain to see if there is any cause for all this fear and apprehension, and my deliberate conclusion is that there is not a provision in it that can even hurt the hair of the head of an honest man in America.

PEOPLE OF VIRGINIA.

And right here I want for one, at least, to remove the imputation sought to be cast upon the people of Virginia by those who affect to

speak for her here, when they imply by their conduct that any law looking to an honest election will ever injuriously affect her people.

The people of Virginia are a law-abiding people, a law-loving and God-fearing people, and in no land, in no clime upon which an all-wise Creator has allowed the light of His countenance to shine is there a better, a nobler, and a purer people than hers. Many, and an overwhelming majority, of her sons are as true, as honest, as loyal, as law-abiding, and as patriotic as any citizen to be found anywhere in the Union, and her women are to-day, as ever, the very highest and purest type of the American lady, noted the world over for their virtue, refinement, and christian simplicity of character.

HONESTY IN ELECTIONS.

That, however, there is in our midst unfortunately too large a number of persons upon whom the reflection as to lack of honesty in elections is properly cast there is no doubt. More unfortunate it is that there is a large class of our people who wink at and condone election frauds. And that this unfortunate state of affairs is to some extent carried on in high life and high places, so to speak, is also sadly true; but for the class of these individuals, small comparatively in numbers, who participate in crime, apprehension as to the effects of this bill is not ill founded. Fortunately, though, this class—prominent as they sometimes are—do not and should not represent our people. Let there be a fair and effective law passed and this lawless class—for lawless they are, whether their station be high or low—will disappear as sora in frost time, and in the end will live to despise themselves. Cowards they are; criminals they should be, unless for pity sake.

But, Mr. Speaker, there are bad people in all communities, and you should not and can not charge what they do to a whole people.

I have the honor to represent on this floor a large white district having 2,516 white majority and was elected on an honest count by about 1,000 majority. And for the white people and for the colored people who voted for me I say we want absolutely fair and honest elections, and I believe I can say the same thing for a large majority of my Democratic fellow-citizens. Hence, I believe all the talk about this law injuriously affecting the South is merely political clap-trap seeking to prejudice the people against it.

The operation of the law of which this is an amendment has proved of value and has done much to facilitate a fair ballot and an honest count, and I insist that the people of Virginia make no objection to Federal supervisors. Both parties always, as a rule, under Democratic and Republican administrations alike, ask for their appointment, and the rule in Virginia has shown that the Republicans always do better with supervisors than without them, and I do not believe the present system would operate differently from the old law.

THE APPEAL TO PASSION.

Why attempt to array the prejudices of the people and to fire the Southern heart on account of this measure?

The Southern people are to be put in the position of taking its passage to themselves. I for one protest against this imputation on the Southern people. The original bill was not passed on our account, but mainly on account of frauds in certain large Northern cities, notably the Democratic city of New York, and that it was a necessity and operated wisely there no one will question. The statistics show that in some wards in the city of New York, prior to the passage of the supervisor's law, more votes were polled than there were inhabitants, men, women, and children, all together. Not so, however, after the passage of that law.

But it is solely aimed at the South, it is insisted; to show that this is not true, some thirty-odd Northern Democratic members of Congress have, within the last few days, published an address setting forth that the law was aimed at the overthrow of their party in the large cities of the North. You, my Democratic brethren, disagree among yourselves as to where this bill hurts. I tell you it does not bear specially on any one section, but operates to facilitate honest elections everywhere, and I doubt not that fraud committed by both parties, for all parties sin enough in this particular, will be lessened.

NOT A FORCE BILL.

But they say it is a force bill. Why call it a force bill? This is another mean effort to arouse the passions of the Southern people and make them place themselves in a false light. This name is seized on because unpopular in the light of the past. If nothing is done wrong, what is there to force? If things are crooked, a little force possibly will not be hurtful; but there is no force about this measure. It merely provides for Federal supervision and a plan whereby the supervision may become of use in the event of fraud or crime by the State election officers; in a word, to make them watch and see everything that is done, as at present; and, in the case of wrongdoing, to keep a record of what goes on, and that that record may be effective in certain named contingencies.

It is insisted, however, that it is a sectional law because not operative everywhere, and the Southern people are falsely told that it applies to the South, and not to the North. This sort of reckless talk is a shame.

Identically like the present law it applies to the whole country, but to no part of it unless petitioned for by so many voters. This is known to be the case by every one, and in this way is the present law used.

In many of the counties of my State the supervisors are petitioned for and appointed, in many others it is never thought of. Under the present law ten citizens in any county can ask for the supervisors. Under the proposed law fifty citizens can ask for it, and it is, as at present, thus put in operation in any and every part of the United States. What our Democratic friends seem anxious for is that there shall be an absolute appointment of supervisors everywhere, whether petitioned for or not, whether necessary or not. This apparent anxiety for Federal interference, which they seem so much to abhor, is a little too transparent, and will hardly fool the most credulous or scare the most timid.

PROVISIONS OF THE ACT.

I will here refer to some of the leading provisions of the bill, as to many of which it seems to me there can be no valid objection.

1. The provision providing for three instead of two supervisors is certainly wise.

2. To require these supervisors to keep a record of what they do and to make such record effective in certain named contingencies.

3. Another clause is to supervise the registration of voters' names and the striking of names from the books, so that reckless and lawless men can not, as was done in Virginia last election to an extent hard to believe and realize, strike in some cases well-nigh the whole population at many precincts from the poll-books. Surely no honest person will object to this provision.

4. Another clause is to provide against fraudulent naturalization. This is certainly desirable.

5. Another clause is to provide for special canvass in large cities for illegal voters on the eve of an election. Surely this is desirable.

6. Another clause is to keep a list and record of voters illegally rejected on the day of election.

7. To provide for compensation of supervisors in the country as well as in cities.

8. A returning board is provided, composed of men of different parties, to which supervisors are required to make returns. And it is provided that in the event of dispute between the State election officers and the supervisors the supervisors' returns are to be accepted; and the returning board of the State, created by the act, shall certify the result of the supervisors' returns to the Clerk of the House of Representatives, who shall accept the same, etc. This is one of the provisions about which so much complaint is made. Let us see if there is any serious foundation for the objection. The bill expressly provides that any party interested, when there is a difference between the judges of elections' return and the supervisors' return, may apply to the circuit court of the United States, and that the said court shall hear said case and determine and certify the correct result to the Clerk of the House of Representatives, who shall accept such certificate and enter the name of the party so certified upon the roll of members elect. This determines simply the *prima facie* right to the seat, and of course is subject to be changed by a regular contest for a seat, as at present.

Objection is urged against this plan. Grant, as is the fact, that there is some objection to it. Is there half as much objection as there is to the present plan? Under the law as it now exists the local State judges of election are the sole tribunals to determine who shall have the *prima facie* right to a seat in Congress. There is no intermediate tribunal to review what they do, however wrong or corrupt it may be, for bear in mind that the returning boards, county and State, are mere ministerial bodies; they have only the compilation of the returns as made by the judges of election. Surely if judges of election at the several precincts throughout the United States, ignorant often, corrupt frequently, are competent to determine the *prima facie* right to a seat in Congress, then a judge of a United States circuit court ought to be, and at last he but reviews the action of these judges and supervisors and determines which are right.

Something is necessary to be done. The organization of the present House demonstrated that. For some time it was not known which party would organize the House, and finally the dominant party had only three majority, but on the side of the minority there sat at least ten members who had no claim whatever to a seat in the body further than on State returns, based upon what the judges of election chose to certify. Can this be more clearly shown than in the case of Hon. George D. Wise, of Virginia? He was regularly returned as elected by the State officials and took part in the organization of the House, and for over thirteen out of a term of twenty-four months acted as a member of Congress and accepted the emoluments thereof; yet seriously no person could claim that Mr. Wise had any right to a seat in Congress. His own party friends presented and voted for this resolution.

Resolved, That the seat now held by George D. Wise as the Representative in the fifty-first Congress from the Third Congressional district of Virginia be, and the same is hereby, declared vacant.

And this is signed by CHARLES F. CRISP, CHARLES T. O'FERRALL, J. H. OUTHWAITE, R. P. C. WILSON, LEVI MAISH, and L. W. MOORE, viz, every Democratic member of the Election Committee.

The proposed bill will in large measure prevent outrages of this character. Something is necessary to be done.

9. Various penalties are prescribed for defeating the popular will and no unreasonable punishment is prescribed; no objection surely can be had to this by people who do right. No more objection should be made

than to any other criminal statute. Bad people never like punishment by law; good people care nothing about it.

JURY CLAUSE OF THE BILL.

10. Now, a word to the gentleman from Virginia, who lays great stress upon the jury system. I have had some experience myself in the jury business. It has been my fortune or misfortune to prosecute in the United States courts in that State, and I surely would not have a packed jury. I do not believe in them. No just person does. But I do say that under the present system you can not convict any one, North or South, certainly not in the South, of political crimes. The present plan is absolutely inefficient so far as political crimes are concerned. The present plan insures a jury of partisans. This certainly will not answer. Of course juries should not be formed of only one political party. Such a thing might possibly happen, but would not likely occur anywhere. The selection of men of different parties is a very different thing from a selection of strikers and partisans of either party. I would have no serious difficulty in finding a jury of Democrats in my town who would not hesitate to convict a man of their own party of a political crime, but such men rarely get on juries under the present régime.

Now, we must do something, and what shall be done? Let us return, in the language of Mr. TUCKER, to the days of John Marshall. We have gone back in this bill to the jury system that was in vogue when John Marshall was Chief-Justice.

Mr. CULBERSON, of Texas. I think you are somewhat mistaken in that.

Mr. WADDILL. Possibly, but I think not. I say that the present bill proposes a system in reference to juries substantially like that which was in practice in Virginia until 1883. In Virginia up to that date the county courts appointed the judges of election and the county courts selected the juries. The county courts tried the criminals whether they were election criminals or other criminals.

Mr. CULBERSON, of Texas. Will you permit a question?

Mr. WADDILL. No; I have but twenty minutes.

Mr. CULBERSON. Let me suggest then that under the bill as you propose it the clerk fixes up the jury.

Mr. WADDILL. Well, the clerk is but the arm of the court. The court appoints the clerk and there is not a man on this floor who believes that the judge of a United States court would submit to a packed jury anywhere. I do not believe it; you do not believe it.

Now, that is the system that we had. That is the system we will have under this bill. That is the system we lived under in Virginia up to 1883, when for partisan ends the plan was changed and election officers were chosen by commissioners elected by the Legislature, and I say here that we have had more election frauds in that State since 1883 than in the two hundred years of its previous history.

HOW THE SUPERVISOR SYSTEM HAS WORKED IN VIRGINIA.

My colleague [Mr. TUCKER] asks:

Who wants this law? Who calls for it?

Right here let me say that my colleague forgot himself. I will do him the credit to say that he would not make a false statement on this floor intentionally about anything; but in his excitement, when he was asked whether Virginia was not pretty nearly a Republican State, he forgot himself and said that in 1888 the Republican supervisors suppressed the vote, and that accounted for the difference between the 1,500 majority against Harrison and the 41,000 against us last fall. The gentleman had not thought what he was talking about. In 1888, 19,494 more votes were cast than in 1889, thanks to the supervisor system. I can go back in the history of Virginia for a period of years commencing with 1882, and I will show you that Republicanism has come to the front whenever there were supervisors to give us a square and honest count; and when there were not the result was different. In 1882, with supervisors, Republicans carried Virginia by over 5,000 majority. In 1883, without supervisors, the Democrats took the State, not fairly, I claim, and counted themselves a two-thirds majority in each branch of the General Assembly.

In 1884, under the supervisor system and on a Democratic count, Virginia was returned against Mr. Blaine by only 6,003 votes, whereas, in 1885, without supervisors, on the gubernatorial vote, a return of 16,034 Democratic majority was made.

Again, in 1886 we had another election supervised by Federal authority, and the result was Virginia rolled up the handsome majority of 20,000 for the Republican party.

Mr. BOWDEN. Twenty-two thousand.

Mr. WADDILL. Twenty-two thousand I am reminded.

In 1887 another election was had without supervisors, and while the return was close on the popular vote nevertheless care was taken that a Democratic majority was returned of well-nigh two-thirds in each house of the General Assembly.

In 1888 the election with supervisors came around, and again Virginia, on a Democratic count and returns, was Democratic by only 1,535 votes. And we come finally to 1889, and Democracy, without supervisors, asserts itself, and the result is a Democratic majority of 40,908 was rolled up.

VIRGINIA A REPUBLICAN STATE.

Now, Mr. Speaker, I will answer the question asked Mr. TUCKER, and I say that upon a fair vote and an honest count Virginia is a safely Republican State. Had the vote been allowed to be polled in 1888 the State would have been returned for Harrison instead of Cleveland. At some eight or ten different voting precincts in Virginia enough voters remained in line at sunset demanding the right of the ballot to have changed the apparent plurality of Cleveland of 1,535. This does not take into account that in the Fourth Virginia district, where we have a majority of about 8,000 votes only, some 3,000 majority was returned owing to a party dispute in that district and the advantages taken thereof by the ever-alert Democratic election officials.

All Republicans in Virginia want to win is a fair election and an honest count.

Now, Mr. Speaker, who demands this?

1. The many contests considered by the House would seem to call for some remedy.

2. The election crimes of all conceivable grades and kind shown by these contests would seem to indicate the necessity for some relief.

3. The fact that one contestant was murdered while making his contest speaks louder than words in behalf of some measure. [Applause on the Republican side.]

4. The fact that in the entire country election crimes are too prevalent shows that something ought to be done.

NECESSITY FOR SOME LAW.

The following proceedings in reference to Jones's Store precinct, in my own county, as well as the two tables, A and B, showing something as to the vote in some of the Southern States, will show some necessity for this law and serve to easily account for the falling off of the Republican vote between 1888 and 1889.

MANDAMUS PROCEEDINGS.

At the registration day, October, 1889, just ten days before the election, some three hundred names were stricken from the registration books of Jones's Store precinct without any authority of law and without any proper notice. A new registrar had to be selected to do the work. All this is shown by the record. An appeal was attempted to be taken, but without avail; a mandamus was applied for, but with like results. The order of the circuit court of Henrico County of November 2, 1889, is here inserted, as the petition would be but for lack of space. It will be observed that a demurrer, which admits the facts, was interposed to disfranchise nearly two hundred voters:

ORDER OF COURT.

This day came Ned Anderson and one hundred and ninety-five others, and filed their petition praying the Commonwealth's writ of mandamus to compel P. R. Carrington, registrar at Jones's Store voting precinct, in the county of Henrico, Virginia, to place the names of said petitioners upon the registration book of said precinct, because, as alleged, the names of said petitioners had been illegally stricken from the said registration book. And thereupon the said P. R. Carrington appeared in court by counsel and entered a general demurrer to said petition, in which demurrer the said petitioners joined; and the matters of law arising upon the said demurrer being argued, the court is of opinion that the said petition is not sufficient in law to entitle the petitioners to the writ and the relief prayed for. It is therefore considered that the said demurrer be sustained and the said petition be dismissed, and that said respondent recover his costs about his defense in this behalf expended.

Memorandum. The petitioners excepted to the opinion and judgment of the court, and leave is given them to prepare and tender within ten days their bill of exceptions.

Copies. Teste:

W. S. LEAKE, *Clerk.*

Special complaint is not made of the action of the court, as technically speaking the decision may have been right, but think of the outrage of a registrar coming forward and interposing a demurrer, a mere technical defense, when one hundred and ninety-six of his fellow-citizens, many known by him to be good voters, were claiming to have been disfranchised by his act. Where was the oath he had taken?

The following two affidavits made at the time will give an idea of this outrage:

AFFIDAVITS.

A.

STATE OF VIRGINIA, *City of Richmond, to wit:*

This 29th day of October, 1889, personally appeared before me, William Flegenheimer, a notary public in and for the city aforesaid, in the State of Virginia, William Allen, Edward (or Ned.) Anderson, Andrew Allen, William Allen, J. W. Booker, William Bland, J. F. Bonaparte, Eustes Bonaparte, William Brookins, William Brown, J. C. Braxton, Walker Brown, Fountain Boxley, Andrew Carter, L. Curtis, Henry Edwards, John Fountain, John H. Gaines, Dandridge Green, Robert Graham, Anderson Gates, Simon B. Howard, Christopher Harris, Joseph Johnson, George Jackson, Thomas Jackson, Albert Lewis, Arthur Morton, Jorden Owens, Lewis J. Payne, Andrew Price, Frederick Richardson, Charles Finsley, Solomon Syphax, Henry Strother, C. H. Smith, E. Tunstall, Robert James Thornton, G. H. Washington, Thomas Watson, Grant Williams, Thomas Woodson, John Whiting, Archer Woodfork, and Thomas White, and each of them severally made oath according to law that they and each of them are citizens of the United States of America and of the State of Virginia; that they and each of them reside in Brookland district, in the county of Henrico, State of Virginia; that they were legally registered voters at the voting precinct known as Jones's precinct, in said county; that for many years they, or most of them, have been registered voters and have regularly voted at said voting precinct; that many of them are property-owners within said precinct and in said county; that all of them live within a short distance of said polling place, and most of them within a few squares thereof; that on Sunday, the 27th day

of October, 1889, a day after the regular registration day, they and each of them were surprised to learn of a proposition that their names would be stricken from the registration book; that the registrar, Payton R. Carrington, of said precinct, had adjourned the hearing of said cases until this morning; that these affiants and others in a body appeared at said place of registration in said precinct at the appointed time; when, to their surprise, they found that the said registrar had posted their names as struck off from the registration book and that he had left, and thereby, as far as lay in said registrar's power, had deliberately disfranchised them. Affiants and each of them claim that they are legal voters of said election precinct and are entitled to cast their votes at the election to be held on the 5th day of November, 1889.

Given under my hand this 29th day of October, 1889, in my corporation aforesaid.

WILLIAM FLEGENHEIMER,
Notary Public.

B.

STATE OF VIRGINIA, *City of Richmond, to wit:*

This day personally appeared before me, William Flegenheimer, a notary public in and for the city aforesaid, in the State aforesaid, Jacob Banks, John Cooke, William C. Christian, Charles H. Clay, Newton Hughes, David Crafton, Madison Dandridge, Beverly Ford, Stephen Davis, Mitchell Fountain, R. T. Gates, Garland Hooper, Newton Hughes, jr., Solomon Jones, John W. Kemp, Scipio Lomax, W. O. Lewis, Joh. H. Lewis, William Lomax, Hampton Lomax, W. H. Minor, Thomas Ryland, David Ross, Sil. Robinson, Absalom Terry, Pleasant Sully, Thomas Smith, Lucian Tyler, Pat. Winston, Edward Roy, Peter Cloyd, G. L. Brown, Scott Butler, Dandridge Green, Royal Price, Sam. Kemp, James Tompkins, and John J. Williams, and each of them severally made oath according to law that they and each of them are citizens of the United States of America and of the State of Virginia; that they and each of them reside in Brookland district, in the county of Henrico, State of Virginia; that they were legally registered voters at the voting precinct known as Jones's precinct, in said county; that for years they or most of them have been registered voters and have regularly voted at said precinct; that many of them live near and close by said precinct, and are well known; that on Sunday, the 27th instant, a day after the regular registration day, they were surprised to learn of a proposition that their names would be stricken from the registration book; that the registrar of said precinct, Peyton R. Carrington, had adjourned the hearing of cases of this kind until Tuesday morning, the 29th instant; that quite a number of affiants and others appeared at said place of registration in said precinct at the appointed time and learned that said registrar had posted a list of the names of these and other voters as struck off from the registration book, and that he left, and thereby as far as lay in his power had deliberately disfranchised them. Affiants and each of them claim that they are legal voters of said election precinct, and as such entitled to vote at the election to be held on the 5th day of November, 1889.

Given under my hand this 30th day of October, 1889, in my corporation aforesaid.

WM. FLEGENHEIMER, *Notary Public.*

The following table, showing the falling off of the Republican vote in the Southern States between 1870–1876 and 1886–1888, would seem to indicate that there is some strange and unaccountable disposition on the part of many persons not to vote, and if this failure to vote is not voluntary, but results from some other cause, then relief of some kind is needed:

TABLE A.

States.	Republican vote, 1870–1876.	Republican vote, 1886.	Republican vote, 1888.
Alabama	(1872) 90,272	21,916	56,197
Georgia	(1870) 69,822	1,860	40,496
Louisiana	(1872) 71,634	20,986	20,663
Mississippi	(1872) 82,406	7,180	30,096
South Carolina	(1876) 91,870	85	13,736
Totals	406,004	52,027	171,188

The following table shows the colored majorities in twenty-six Southern districts, and the statistics as to said districts will be valuable as establishing one of two states of facts: either that the negro vote is shamefully suppressed or that it is cast for the Democratic candidates. If the former is the cause some relief is needed. If the latter be the correct view, then there is no danger in this bill, and this talk of negro domination is a mere delusion. But in any event the exhibit shown by this table should shut the mouths of the Democratic statesmen in their boasted talk of a white man's party.

TABLE B.

State and district.	Representative.	Term.	Negro majority.
ALABAMA.			
First district	R. H. Clarke, Democrat	First term	2,858
Second district	H. A. Herbert, Democrat	Seventh term	249
Third district	W. C. Oates, Democrat	Fifth term	3,149
Fourth district	L. W. Turpin, Democrat	First term	26,612
GEORGIA.			
Second district	H. G. Turner, Democrat	Fifth term	3,763
Third district	Charles F. Crisp, Democrat	Fourth term	2,431
Fourth district	T. M. Grimes, Democrat	Second term	2,947
Sixth district	J. H. Blount, Democrat	Ninth term	8,229
Eighth district	H. H. Carlton, Democrat	Second term	4,180
Tenth district	G. T. Barnes, Democrat	Third term	6,145
LOUISIANA.			
Fourth district	N. C. Blanchard, Democrat	Fifth term	5,752
Fifth district	C. J. Boatner, Democrat	First term	22,154
Sixth district	S. M. Robertson, Democrat	Second term	4,545

TABLE B—Continued.

State and district.	Representative.	Term.	Negro majority.
MISSISSIPPI.			
Second district	J. B. Morgan, Democrat	Third term	2,468
Third district	T. C. Catchings, Democrat	Third term	14,720
Fourth district	Clarke Lewis, Democrat	First term	5,773
Fifth district	C. L. Anderson, Democrat	Second term	1,570
Sixth district	T. R. Stockdale, Democrat	Second term	1,327
Seventh district	C. E. Hooker, Democrat	Sixth term	6,440
SOUTH CAROLINA.			
First district	Samuel Dibble, Democrat	Fourth term	2,236
Second district	G. D. Tillman, Democrat	Fourth term	6,643
Third district	J. D. Cothran, Democrat	Second term	1,210
Fourth district	W. H. Perry, Democrat	Third term	1,590
Fifth district	J. J. Hemphill, Democrat	Fourth term	2,610
Sixth district	G. W. Dargan, Democrat	Fourth term	3,296
Seventh district	William Elliott, Democrat	Second term	24,899

The charitable view is that these Democrats secure their seats fairly, and with twenty-six districts averaging 6,453 colored majority, all represented now, as in years past, by Democrats, surely they ought not to complain of the negro or be afraid of his supremacy.

DEFENSE.

Now, what is the answer to all this? What is the alleged assault on this bill, and the reason for it?

Mr. HEMPHILL answers, charging that Northern States gerrymander, and Mr. TUCKER is exceedingly apprehensive on account of alleged bribery of voters in the North. Think, Mr. Speaker, of such answers to a grave and serious accusation affecting every portion of our common country and striking at its very foundation stone. We have no explanation as to why the vote of South Carolina has dwindled from 170,956 in 1880 to only 79,750 in 1888, a decrease of 91,206, more than 53 per cent. And worse still was it in 1886. Only 39,077 votes were cast in the entire State, but this sufficed to elect seven Congressmen, when in the State of New Jersey, a Northern Democratic State, it took 229,373 votes to elect seven Congressmen.

But the State of Georgia presents a more glaring spectacle than in South Carolina. In the year 1886 only 27,520 votes were cast at an election at which ten members of Congress were returned as elected.

THE NEGRO QUESTION—THE OVERTHROW OF OUR CIVILIZATION.

Let me say to you here, my Southern brethren, that the only two alleged reasons for resisting this bill will not answer, namely, the negro question and the overthrow of our civilization in the South.

Let us for a moment consider these two questions in the order named.

THE NEGRO QUESTION.

What of this? That in many respects it presents a serious problem I will not deny, but I do deny that the dread apprehension of negro supremacy is a reality anywhere in the South; and I further aver that it is a mere bugaboo, a fraud, and a sham, whereby the present Democratic oligarchies that are holding sway in the several Southern States hope to retain power.

NO DANGER OF NEGRO SUPREMACY.

I say unhesitatingly that there is no such danger, and, for one, I should be entirely opposed to such a thing; but there is no fear of it. The colored people have never shown a disposition to take charge of affairs, and this pretext of a fear of their supremacy, at least so far as Virginia and well-nigh the whole South are concerned, is a mere subterfuge whereby the doctrines of the Democratic party are sought to be kept alive, and many of these States, especially Virginia, Georgia, Tennessee, and West Virginia, kept in line politically with that organization and the solid South combination, although their every business interest is opposed to the principles advocated by the Democracy of the country.

In all the South how many colored Representatives have we? But a very small number comparatively. On this floor, according to Democratic returns, we have only one colored member, and there were but three colored contestants. And this in the face of the immense colored majorities in the many districts of the South. Does not this sufficiently remove all fear of attempted negro domination? Mr. CHEATHAM, of North Carolina, the only representative of the 6,000,000 of his race in the country.

NOW, HOW HAS IT BEEN IN VIRGINIA?

We have thirty-one counties with colored majorities in them, some with very large colored majorities. Yet have the colored people assumed to take charge of any of the said counties? I think I can safely affirm that in a majority of said counties the Democrats hold nearly every office, and where with only a few exceptions Democrats do not hold the offices white Republicans hold them, and white Republicans, I take occasion to say, are just as good as the white Democratic officials in that State. Look for a moment to the condition of the Fourth Virginia district, and on this subject I desire to quote from a Democratic author, Mr. Lewis H. Blair, of the city of Richmond, Va. Mr. Blair is one of Richmond's prominent citizens, is a man of wealth, high character, prominent in business and social life there, a native "to the manner born,"

and a Democrat to the core. He has recently published a work on the Elevation of the Negro; and from him I shall quote. His work has much in it to commend, and would have done great good, in my judgment, but for his advocacy of mixed schools. This, however, he advocates mainly on economic grounds; but the doctrine was so unpopular that it prevented his work being read to any considerable extent, as might have been anticipated. Such a thing is entirely impracticable, and, in my judgment, not desirable, and is not wished for even by the colored people.

I quote from page 80 of Mr. Blair's work on the danger of negro domination:

Now, are there any counties in Virginia where negroes are in the majority? Referring to United States census 1880 we find there are forty-two counties in Eastern Virginia where the negroes are in an absolute majority, and where, being free to vote, there is consequently negro rule, *in posse* if not *in esse*.

But let us take the example of the Fourth Congressional district, where the negro majorities are so large that negro rule exists not only *in posse*, but also *in esse*. Thus:

Counties.	White.	Black.
Amelia	3,037	7,340
Brunswick	6,022	10,685
Dinwiddie	14,457	18,428
Greenesville	2,787	5,650
Lunenburg	4,611	6,924
Mecklenburg	8,222	16,388
Nottoway	3,012	8,144
Powhatan	2,726	5,091
Prince Edward	4,754	9,914
Prince George	3,256	6,799
Sussex	3,861	6,701
Total	56,214	102,064

Now, nobody can dispute that, if the negroes are not intimidated, that if they vote freely, and that if, generally, they vote in a solid body, here must be negro rule; or, if they deny negro rule here, where else in the South can they possibly fear negro rule? If nearly two negroes to one white does not, with a free ballot, constitute negro rule, then ten negroes to one white does not mean negro rule; or if negro rule is escaped where this proportion of the colors exists, then negro rule will be escaped anywhere and everywhere in the South. Or if negro rule does not mean destructive government, where is the sense of representing negro rule as a return to reconstruction days, where not government, but almost anarchy reigned?

If negro rule means all, or nearly all, the economic, political, and social ills, or even partially, that the opponents of negro suffrage delight so much in picturing, then this Fourth Congressional district must be in a most lamentable condition, must be a cancerous spot on the fair form of Virginia that saps her whole prosperity. The Fourth district may be in this condition, but before deciding let us compare it with the Ninth Congressional district, a strictly white as the Fourth is a strictly black district, which contains, per census of 1888, whites, 133,055; blacks, 17,549; total, 160,604; and with some facts contained in report of auditor of public accounts for the year ending September 30, 1886. The population of the two districts is very nearly the same. Negro rule being the logical and necessary result of unrestricted suffrage, we, of course, find in this Fourth district material ruin and moral degradation, and the annual report of the financial officer of the State must show both conditions to prevail, or, if it does not, then the report must be of no value, or those who talk so glibly and so mournfully about negro rule are false guides and erring prophets.

If the Fourth district is ruined financially it can pay no taxes, but the auditor either falsifies the returns or the two districts pay into the State treasury as follows:

	State.	Schools.	Total.
Fourth district—black	$74,988	$55,770	$130,758
Ninth district—whites	65,609	50,862	116,471

So, then, it would appear that negro rule, which is synonymous with unrestricted suffrage, does not ruin to such an extent that it can not contribute its fair share to public burdens and to public schools.

But, then, negro rule or unrestricted suffrage means official robbery and general demoralization, and perhaps this is the state of affairs in the Fourth district, and, if so, the criminal charges ought to be very large. The auditor of the State reports in Table No 19 the amounts paid out for such expenses in 1885, and the following comparison is made: Fourth district $22,173; Ninth district $33,376.

So, then, it would seem that an unrestricted vote and a fair count—or, in other words, negro rule—renders the Fourth district not much worse off either financially or morally than the Ninth district, where the negroes are few, and although of late years we hear of little else than of the great boom in Southwest Virginia, it must be confessed that if the figures of our auditor are correct the Fourth district is as happy, moral, and well off as the great Ninth district.

Those who go around wearing the frightful scare-face of negro rule are doubtless honest in their apprehensions, but they are nevertheless doing an untold amount of evil to the South, which they love well but not wisely.

The fear of negro rule in the sense of the alarmists is a wild and pernicious chimera, and the experience in the Fourth district ought to convince any honest man that it is. The negro appears to have no ambition to rule, for when he has the majority his almost invariable practice is to give the offices to the most capable white men in his party, and when he can not get good men from his own ranks he selects worthy Democrats, and remains contented with the crumbs that fall from the official table or with the bones and fragments his white leaders throw him.

The six Southern States have no more to fear from a free and fair ballot than has the Fourth Virginia district, and if they are wise they will not only permit, but they will encourage the negroes to vote; for it is only by inspiring all the people with interest in public affairs that they can expect prosperity. The three States of Virginia, North Carolina, and Tennessee, where the opposition cast its full vote in 1886, are no less prosperous than are the six Southern States where the opposition cast only 13 per cent. of its vote in 1886; but, on the contrary, they exhibit greater progress and prosperity, and certainly as much moral and intellectual development.

The negroes are against us simply because we treat them not as citizens, but as creatures who have no rights we are bound to respect. But let us respect their rights, and they will gladly co-operate with us. But as long as public affairs are conducted on the color line, which is in reality simply an appeal to passion, prejudice, and selfish interests of the lowest kind, the negroes will remain solid. Wisdom and statesmanship can then have little voice in their management, for the color line deliberately banishes them from the council chamber and the Legislature alike.

I repeat there is no danger of negro supremacy, nor is there fear of negro domination. The following table from the census of 1880 will show that there are only two States in the United States where negroes are in the majority:

State.	Males of voting age, 1880.		
	White.	Colored.	Total.
Alabama	141,461	118,423	259,884
Arkansas	136,150	46,827	182,977
Florida	34,210	27,489	61,699
Georgia	177,967	143,471	321,438
Louisiana	108,810	107,977	216,787
Mississippi	108,254	130,278	238,533
North Carolina	189,732	105,018	294,750
South Carolina	86,900	118,889	205,789
Tennessee	250,655	80,250	330,305
Texas	301,737	78,639	380,376
Virginia	206,248	128,257	334,505
Total	1,741,325	1,085,518	2,827,043

What a feast we are invited to, namely: Because in South Carolina the negroes have a considerable majority, in Mississippi a small majority, we are invited into a solid South combination with all the other States of the South and are to dance to the music of the war of races, absolutely destroying all hope of internal peace and happiness and placing a blight upon our fair land.

Virginia, with her well-nigh 100,000 majority of white voters, is invited to dance to the music of the war of the races, and that is to be the only issue before her people. I say we are not afraid of it. I say it is a shame that such a thing should be done. I beg of you, my countrymen, to disband the solid South combination. That is the menace to the stability of this Union to-day. It is kept up by wrong; it is based on no principle; it is contrary to the interests of all our people. Think of little West Virginia, part of our old State, God bless her, having 6,000 negro and 150,000 white voters, and she to be afraid of negro supremacy. [Laughter on the Republican side.] Think of that great domain of Texas, which by the last census had 301,000 white voters and only 78,000 negroes. I speak in round numbers; and by the present census I verily believe that Texas will have a half million of white voters, and they are afraid of the 78,000 negroes. Then think of Kentucky, that loveliest of States; that State rich in everything; rich in men, rich in talent on this floor. She, with 170,000 white majority, is told to dance to the cry of the war of races. I say to you, my countrymen, you are making a mistake; you are making an awful blunder; you are making one that only goes to your own section and that you must suffer from.

Shame it is that such a state of affairs exists. These figures show that there is nothing in the alleged claim of negro rule.

In my humble judgment nothing is so destructive of our real peace and happiness as this race issue forced upon us by the Democratic managers. It is so much easier to arouse the prejudices of people than to appeal to their judgment, and hence we see this horrid state of affairs and an effort made by the Democratic party to set itself up as the white man's party, and with that as its shibboleth, and with practically no other issue, to whip everything and everybody into line. With a brazen, pharisaical air they set themselves up as whiter than other people and they assume to occupy a "holier than thou" attitude, and hence by this sort of unmanly procedure to check all opposition and resist every tide against their omnipotent sway; even to prejudice the hearts of the women and poison the minds of the young against everything save their pretended necessity for supremacy, namely, to keep the negro from taking charge.

No, Mr. Speaker, that is not the trouble.

WHAT IS THEIR FEAR?

It is not fear of negro rule; it is of Republican rule. The Democrats certainly in Virginia care nothing about the negroes being Republicans, but it is of white men being Republicans, and they affect great uneasiness on account of the Republican rule in consequence of certain misdeeds and acts of omission and commission that took place twenty-odd years ago under the then reconstruction and carpet-bag régime. No such danger is really feared; it is but another vain effort to appeal to prejudice, to the end that a minority may override a majority. Not at all unnatural that a party that lives only by arraying the strong against the weak should go back twenty years to find a pretext for existence.

GOOD GOVERNMENT GIVEN.

If Republicanism means bad government I, for one, am opposed to it, but I say it means no such thing in the South now, and I am prepared to prove what I say, and I am likewise prepared to show that

it is the desire to keep white men out of the Republican party, or, if they can not be kept out, then in some way to destroy their vote and influence, and not the real fear of negro domination that is the cause of alarm and that makes the necessity for the white man's shibboleth. By the following tabulated statement can be formed an idea of the white vote received for Harrison and of the negro vote received or counted for Cleveland in Virginia.

White counties.

Counties.	Voting population, census 1880.		Presidential vote, 1888.	
	White.	Colored.	Harrison.	Cleveland.
Floyd	2,421	224	1,482	992
Patrick	2,017	441	1,022	1,238
Carroll	2,521	63	1,147	1,322
Grayson	2,430	166	1,250	1,288
Montgomery	2,684	768	1,516	1,335
Roanoke	1,869	942	1,252	912
Rockingham	5,871	644	3,175	2,395
Shenandoah	4,029	226	2,063	2,164
Page	1,973	224	1,333	1,195
Lee	2,826	140	1,295	1,479
Scott	3,241	129	1,800	1,550
Wise	1,496	17	742	722
Buchanan	1,036	5	427	492
Russell	2,593	231	1,333	1,601
Washington	4,539	893	2,548	2,933
Smyth	2,234	421	1,228	1,310
Bland	1,934	45	509	537
Wythe	1,514	505	1,643	1,462
Pulaski	1,425	489	993	1,070
Rockbridge	3,306	1,038	2,074	2,030
Highland	1,044	86	440	454

Now, on the other hand, look at these counties:

Colored counties.

Counties.	Voting population, census 1880.		Presidential vote, 1888.	
	White.	Colored.	Cleveland.	Harrison.
Goochland	993	2,199	674	985
Halifax	3,054	3,814	3,570	2,473
Charlotte	1,398	2,055	1,720	1,066
Prince George	854	1,577	661	1,018
Greensville	692	1,165	714	893
Brunswick	1,396	1,924	1,289	1,521
Lunenburg	1,055	1,222	1,215	806
Nottoway	759	1,471	611	1,116
Amelia	785	1,425	704	1,036
Powhatan	707	1,007	561	767
Prince Edward	1,180	1,972	1,130	1,569
Essex	853	1,315	774	1,088
King and Queen	998	1,092	958	829

Observe, further, that in that First Virginia district, represented by Mr. BROWNE, Republican, there is a white majority of 3,223 voters, yet BROWNE was elected in 1886 by some 1,900 majority and in 1888 by between four to five hundred majority. In the Second district, also represented by a Republican, Mr. BOWDEN, while the colored majority is only 226 Mr. BOWDEN was elected by over 6,000 majority.

In the Tenth district, represented by Mr. TUCKER, Democrat, there is a white majority of 10,089, yet TUCKER in 1888 received only 594 majority, and in 1886 the same district was carried by the Republican nominee, Mr. Yost, by 1,654 majority.

In the Ninth district, the great white district, where there is 24,121 majority, Mr. BUCHANAN, Democrat, was elected by only 488 votes, whereas in 1886 Colonel Bowen, Republican, carried the same district by 3,620 majority.

Another illustration can be given of this purpose to keep the white vote down. In Jackson ward of Richmond City there is a large colored vote, and the Republican majority has averaged about 1,800 to 2,000, and for years past there has been no trouble in polling this vote. But recently the white vote has left the Democratic party in large numbers, and at once the Democratic managers set to work to offset this loss in their ranks and went over into the colored ward and by wicked and lawless methods kept the colored men from voting, thereby killing the vote of the white men that had left; and so far did this infamous procedure go that in 1889 only some 700 or 800 Republican votes were allowed to be cast in the entire ward, containing a registered vote of over 4,000. And the Democratic party came within about a hundred votes of capturing this large Republican ward. But 1,500 votes were allowed to be cast.

TO PRESERVE OUR CIVILIZATION.

This is another battle cry, and it is heard far and wide. Is there danger of its destruction? I answer yes; but only by the methods you are pursuing. Your present régime, my Southern brethren, can not and ought not to last. It is conceived in error, founded on wrong, and held together by a combination destructive of our every interest. In a word, Mr. Speaker, can and ought the solid South to stand? I say emphatically no, if we are ever to have real reconciliation and peace in our borders again. If we are to live in the present and in the future, instead of in the past; if we want to put an end to the smoldering embers of civil war, then disband. I know my Democratic friends will say that it is not the South that keeps alive the memories of that sad strife, and in this they are not entirely wrong. But this is the situation, that the South remains solid, and I insist that as long as the States that seceded remain practically as solid now as they were at the time of secession, the rest of the country having long since ceased so to stand together, there is no real justification for our charge against others. At all events remaining solid, as a section we will be always misjudged on this account, and doubly is this true when the result of the conflict was to well-nigh double our representative strength, and it is publicly charged, and not seriously denied, that much of that additional strength is retained and held by unlawful and wrongful methods.

No, Mr. Speaker, whatever else may work, certainly this plan will not, and as one whose feelings are intensely Southern, and who has no interest to subserve or political aspirations, at least for the near future, to misguide him, I appeal to you, my Southern brethren, to quit ere it is too late.

I quote again from Mr. Blair from pages 126 to 133. He is a Democrat, and I think the most prejudiced who know him will give him credit for unselfishness and for disinterestedness in what he says. He, like myself, has at least all to lose and nothing, for the present, to gain by these views, for scarcely will they be appreciated by many at the present time.

DANGERS THREATENED FROM THE PRESENT CONDITION OF THE NEGRO.

Although sectional divisions on the line of slavery are gone, sectional divisions on the line of geography and interest are still in full vigor. There are yet New England, Middle States, Western, Northwestern, and Pacific sections, all more or less united in interest and blood, and there is yet the Southern section, which is diverse in interest and lineage from the other sections.

* * * * * * *

Having, then, still to deal with sections and sectional interests, let us inquire what are the prospects of the South for increasing, or even holding, her own in this sectional race or strife. Taking only the present thirty-eight States and adding Delaware, Maryland, West Virginia, Kentucky, and Missouri to the eleven Southern States, the population in 1880 was, respectively, 17,622,381 and 31,748,352, and the area is, respectively, 901,740 and 1,185,020 square miles. Present representation in Congress is: Senate 32 and 44, and House 121 and 204.

Now, granting an equal ratio of increase of population in the two great sections, the poportion of the Representatives in 1890 will, on the basis of 30 per cent. increase in population, be 157 and 265, and in 1900, on the same basis, 203 and 344, or the majority against us now of 83 will be increased to 108 and 141.

But this is not all. Back of the States lie a number of Territories, and before long they will be taking their places in the halls of legislation. Let us see how they will naturally divide as for or against the South:

FOR THE SOUTH.		AGAINST THE SOUTH.	
Arizona	113,000	Dakota	149,101
Indian	64,690	Idaho	84,802
New Mexico	122,580	Montana	146,083
		Utah	84,974
		Washington	69,185
		Wyoming	97,896
Total	300,270	Total	632,020

In course of time, therefore, certainly within ten years, the South, as a section, will be still further weakened—that is, relatively, as one to two, for at the most she can only expect to gain six Senators and 300,270 square miles, while the opposing section gains twelve Senators and 632,020 square miles. If Dakota succeeds in being divided the gain will be six to fourteen. In the House our relative increase will not be any greater and most probably much less. As showing that the new States will likely be anti-Southern, we note that nine States have been added to the Union since the annexation of Texas, and all except West Virginia are bitter Republican States. These are the opposing forces the South will have to meet on questions of a sectional character; and what is she going to do if they should arise, as they are sure to do?

* * * * * * *

Let us see and let us take for example the denial of suffrage to the blacks. The South makes no denial of the charge, but defends it on the plea of necessity. This plea may satisfy us, and it will, because it appears to be for our benefit; but suppose the other sections are not satisfied, and that they demand a free vote and a fair count in the South, as well as everywhere else; and suppose, further, that the Republican party gains the House, as it already controls the Senate, what may it do? We will take for example the State of Georgia, and suppose that after the House is organized contestants from some or all the districts allege intimidation, what may follow?

Looking at the returns and finding that less than 30,000 voters elected in 1886, ten Congressmen, or, indeed, without looking at them at all, the House may unseat every Congressman, and who, Supreme Court, Senate, President, can prevent? And what can prevent them from doing the same to every Southern State, and it completely deprive them of representation, or let them be represented by Republican contestants? Nothing except the public sentiment of their own section. And all the Senate has to do is to refuse every Southern Senator on the ground that the Legislature of his State was not elected by a fair vote. The South will then be in a bad dilemma, either unrepresented or misrepresented, and there will be no limit to the arbitrary or revengeful legislation that may be enacted, and never again will a Democratic President be elected by her vote. To be weak and right is miserable; to be weak and wrong is deplorable. In the first case, one's right will be a powerful defense against wrong; in the last case, one has no defense, and his misfortune will excite no sympathy, but, on the contrary, the verdict will be, served him right.

If the South wishes to bring this evil upon herself, let her continue in her present course, and she will have her wish gratified by the year 1900. The whites may by that time see themselves disfranchised by rejection of their representatives or they may see themselves misrepresented by contestants who are most likely to be incompetent and revengeful. But if the whites wish to retain control of affairs they can not begin too soon, not only to permit, but to encourage, the blacks to use their franchise freely and fully. Some Congress-

men and legislators will undoubtedly be lost thereby, but better many of them be lost and thus mitigate the just enmity of the negroes and disarm sectional majorities only too eager for pretexts. Sectionalism is powerful and irresistible when founded on right, but when founded on error, time and discussion will rob it of its venom.

While we disfranchise we give sectionalism a powerful lever to root us up, but when we give a free vote to every citizen and a fair count we need not fear sectionalism or anything else, for our right will be a panoply to protect us from all assaults. No man, no party, no section, can afford to plant itself upon a fallacy, much less upon a wrong; and when the South takes her stand upon practical denial of suffrage to her negro citizens she commits a monumental wrong, which must be atoned for by many tribulations. The people, the world, we ourselves, though nursing and defending our own wrongs, are opponents and enemies of the wrongs of others, and on this principle we shall have not only the violent opposition of the other sections, but they will be upheld by the sympathies of the world. * * * When the other sections simply demand that the South shall allow the same unrestricted vote and the same untampered count in the election of Congressmen and of legislators that elect Senators, we can not say in reply, "Oh, the bloody shirt!" but we shall be speechless.

The South would make a tremendous ado, and very rightly, too, if a Northern oligarchy of half the population was to claim and assume the right to vote for the whole population in the election of national Representatives, and it would make a greater ado still if an oligarchy of manufacturers were to exercise this right; but there is no substantial difference between this and what the South does in relation to negro suffrage. The other sections will see, if they do not already, that they are right, and they will not cease their efforts until the South yields voluntarily or is forced, and then, after the South yields through compulsion, we can not blame others if we are forced to take back seats until we have gone through a long probation. Better surrender now with the honors of war, or rather with the honors of right, than to wait for years and then surrender at discretion. If there is any truth in experience these are the only two alternatives.

* * * * * * *

What reason can we give for our present stand but the fear that something may occur that would be injurious to the present order of affairs? But this is no better reason, but is the very same that has been offered since man assembled into a rude community, by all abuses, by all tyrants, by all despots. All these oppose change solely on the ground that the pleasant order of affairs of which they are the principal beneficiaries may be altered to their disadvantage, and to maintain the *status quo* they resort to stripes, imprisonments, dungeons, and scaffolds.

Some of Mr. Blair's prophecies have already come true. We have four of the new States and will soon have others. All the new States are Republican. We have a Republican Congress—House and Senate—a Republican President, and Republican Supreme Court. We have coming up from the South, as he suggested, on account of this suppression of the vote, many contests.

One of his fears, however, of an indiscriminate seating of contestants has not been carried out. Thus far, so prudent, careful, diligent, and conscientious has this Congress been that out of seventeen contests nine only have been disposed of and of that number five contestants have been seated and four Democrats allowed to retain their seats. Indeed, in only one case have they turned out a Democrat about which serious question could be raised, and even Mr. BRECKINRIDGE, of Arkansas, whose seat was contested by John M. Clayton, who was murdered while making his contest, has been allowed to retain his seat.

WHAT ARE WE GOING TO DO?

Let us reason together on this subject; let us reckon whither we are drifting; let us cast anchor and reflect; what are some of our troubles? Let us see.

Dr. Thomas Nelson Page, of Virginia, known the world over, and whom all Virginians love, admire, and respect, and a prominent Democrat, spoke thus within the last ten days in delivering the address before the societies of Richmond College:

THE PENDING QUESTION.

This is the question which ever confronts the South, no matter which way she shall turn her face; the question which in her waking hours looms dark and threatening and in her sleep still grows apace; the question which after twenty-five years of peace and prosperity still keeps the South one section and the rest of the nation the other. This is the ever-present, ever-menacing, ever-growing negro question.

It is to-day the most portentous as well as the most dangerous problem which confronts the American people, for it splits the nation into two sections, keeps the Caucasian American divided into parties which hold irreconcilable tenets, renders impossible perfect union, and contains the germ of a discord which may finally burst all bounds and plunge us again into dreadful strife.

The question is so misunderstood that even the terminology for it in the two sections varies irreconcilably. The North terms it simply the question of the civil equality of all citizens before the law; the South denominates it the question of negro domination. More accurately, it should be termed the race question.

Whatever its proper title may be, upon its correct solution depend the progress and the security, if not the very existence, of the American people.

QUIETUDE AT HOME.

We live in so much quietude and have become so accustomed to the condition of affairs that we are sensible of no apprehension, but rest content and calm. So rest Alpine dwellers who sleep beneath masses of snow which have accumulated for years, and yet, quiet as they appear upon the mountain sides above, may at any time without warning, and by the breaking of a twig or the fall of a pebble, be transformed into the resistless and destroying avalanche. Are there no signs of impending peril about us? They are not wanting.

THE WRITTEN LAW.

It is charged that the written law is not universally, fully, and freely executed at the South in matters relating to the exercise of the elective franchise, and I do not understand that the defense is a denial of the charge; it is rather a confession and avoidance. To the charge it is replied that the written law, when subverted at all, is so subverted only to a higher law, founded on the instinct of self-protection and self-preservation.

If it be admitted that this is true, then is it nothing to us that a condition exists which necessitates the subversion of any law? Is it not an injury to our people that the occasion exists which places them in conflict with the law and compels them to assert the existence of a higher duty? Can law be overridden without creating a spirit which will override law; a spirit ready to constitute itself the judge of what shall and what shall not be considered law; a spirit which eventually substitutes its will for law and confounds its interest with right?

This is a grave matter, and is to be considered with due deliberation, for on its right solution much depends. The first step to cure is ever comprehension of the disease. When the patient has swallowed deadly poison the physician may not treat the trouble with levity or indifference; apprehension of the condition and application of the remedy alone can arrest dissolution. The first step therefore towards the proper solution of our trouble is to secure a perfect comprehension of it. To do this we must first comprehend it ourselves, and then only can we hope to enlighten others.

Obedience to law, willing and invariable submission to law, is one of the highest qualities of a nation and one of the chief promoters of national elevation; antagonism to law, a spirit which rejects the restraints of law, retards national progress and may prove its destruction.

MORAL SENSE.

Can any fraud, evasion, or contrivance whatever be practiced or connived at without by so much impairing the moral sense of a people as well as of an individual? Can any deflection whatsoever, no matter how inexorable the occasion, from the path of absolute rectitude be tolerated without inflicting an injury on that sense of justice and right which, allied to unflinching courage, constitutes a nation's virtue? Who will say that the moral sense of our people now is as lofty as it was in the days when men voted with uplifted faces for the candidate of their choice?

The press of a portion of the land is filled with charges of injuries to the negro. The real injury is not to him, but to the white.

The physical peril is not more real than this which impends above our moral force, but it is more apparent. The most obvious danger is the rapidity with which the African race is multiplying in the South. It is true that the exact rate of increase can not be given until the ensuing census shall have been completed, but the most careful estimates based on wide observation of careful observers indicate a prodigious increase. Fifty years ago it was the slavery question; twenty-five years ago it was the negro question; to-day it is the race question.

THE SOLUTION.

The solution of this problem is of more importance to us than to the negro. And its solution depends upon us. Whatever the means by which it shall be solved may be, however the political and social status of the negro may be determined, as determined it will be by the inevitable logic of events, we can not absolve ourselves from the responsibility which lies upon us to aid, inspirit, and elevate him. We may not admit him as a law-giver, but we must uplift him as a man and a christian. We owe this duty to ourselves, to him, to posterity, to our country, and to God. We brought him here under the providence of God; he will stay here or hard by here; whether it shall be as an enemy or as a friend, as a pariah or as a man, depends not so much on himself as on us.

KINDLY CONSIDERATION.

He is entitled to kindness and consideration at our hands by virtue of the long years of kindly intercourse, by virtue of the patience he has exhibited, the friendship, the affection he has in the past borne us, and most of all by virtue of the loyalty with which he has served us and, what was more, stood for us during those lone years of war when the men were at the front and an enemy was within our borders, when the women and children were left at home defenseless on the lone plantations. By virtue of all these he is entitled to our utmost kindness and our firmest friendship. In all that record of four years there is no single act of treachery or horror. Every cabin was a barrack, every servant a body-guard ready to defend his mistress. We owe them a debt; it is due that we should repay them with kindness, with consideration, with equity.

ANOTHER CONDITION.

As old Carlyle, who thought many things worse than African slavery, said on this subject long ago, "There is another condition wanted: That your relation to the negroes in this thing called slavery (with such an emphasis upon the word) be actually fair, just, and according to the facts; fair, I say, not in the sight of New England platforms, but of God Almighty, the maker of both negroes and you. That is the one ground on which men can take their stand. In the long run all human causes, and this cause too, will come to be settled there."

Let the South but take this ground and she must eventually triumph. On her doing so depend the perpetuation of Constitutional Government and the salvation of her people.

Innumerable references of this sort might be given, but this will suffice. They speak for themselves; and what is admitted to be the situation we are in is nothing more than the natural outcome of a forced solid South, nothing more than is natural when everything is to be conducted on the race issue.

PROSPERITY OF THE SOUTH.

I appreciate that it is urged as another reason why this bill should not pass that the South is prosperous and that this measure may to some extent arrest that condition. I insist that it will not in the least check our prosperity; the facilitating of fair and honest elections can never hurt us. But are we prosperous?

That we have made wonderful strides since the devastation of war was upon us no one will deny, and we are entitled to the admiration of the world for what we have done, and I trust will receive the sympathy of all mankind in the struggle we are making.

But we might and would have accomplished much more but for the condition of which I complain.

Our natural advantages are wonderful, our location in every way desirable, our climate salubrious, and naught but our own folly can hurt us.

Think for a moment of the folly of a policy which informs the world that we are constantly in fear of the overthrow of our civilization; that the negroes are about to take charge, and that society is about to be overturned; and to maintain the race-issue policy of the Democratic party this question has to be raised and considered seriously at every election, at least once a year and not unfrequently oftener.

Can we ever expect real prosperity under this state of affairs? Will strangers ever come into our midst and risk their fortunes and their lives? Will that class of outsiders that it is desirable to have come among us ever select a section where such a state of affairs exists as one desirable in which to live and raise their children? Would we ever select such a place in which to settle? I say a thousand times, no.

The people who raise this issue are the South's real enemies; the people who bring about this condition of affairs and who by apologizing for the wrongs it necessarily involves us in putting our people in the attitude of defending dishonest elections and condoning election crimes are our enemies, it matters not how sincere their motives may be.

Our section is improving, but slowly; many of our people, particularly the country people and farmers, are exceedingly poor, while the cities and mining districts are prosperous and some of them "on a boom." Real prosperity, I insist, will not come under the existing order of affairs.

WHAT IS THE REMEDY?

1. We must abandon the race-issue in politics.
2. Must see that every man is guarantied his full rights under the law.
3. Must have an honest ballot and a fair count.
4. We must have free thought and speech, and no proscription for one's political or religious opinions. Let one be as free as the other is.
5. With these the solid South will end and real reconciliation will begin.

Now, Mr. Speaker, my time is about out. I have listened to speeches on that side of the Chamber with interest. I have been greatly interested in the position New York City takes in regard to keeping up a solid South. I want to say to you that New York City is a little more interested in this law than is the South. And right here, my Democratic brethren, let me remind you that you have fallen out among your selves on this question. Your Northern members say it is intended for the large cities in the North, while the Southern members say it is intended for the South. I tell you it is intended for honest elections everywhere in this country.

And in conclusion, Mr. Speaker, I thank gentlemen on that side and on this for the kind references they have made to the South and to the State of Virginia. I listened to the beautiful close of the gentleman from New York [Mr. COVERT], who pleaded for the protection of the property brought in our midst. To that I say "Amen." But the Republicans want more. We have a country that God has blessed, perchance beyond its deserts. We have a country in which we have almost perpetual sunshine. No cold and sterile climate besets us. Our land is interspersed with fertile valleys and lovely seas. Our mountains are laden with the precious treasures of the earth, and through them and by them flow magnificent rivers to bear their products on to the sea, and thither to the world.

We welcome the peoples of all nations to our section, and do not merely want to protect what they bring, but to demonstrate that peace and good order reign in our midst, that we have no race wars or other wars, and that within our borders freedom of speech, freedom of politics, freedom of thought, and freedom of religion, a free ballot and a fair count, and absolute protection of person and property are assured.

This done, the Sunny South will flourish and prosper and will indeed be the garden-spot of the earth.

Original-Package Bill.

SPEECH

OF

HON. DAVID B. CULBERSON,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 18, 1890.

The House having under consideration the bill (S. 266) to limit the effect of the regulations of commerce between the several States and with foreign countries in certain cases—

Mr. CULBERSON, of Texas, said:

Mr. SPEAKER: The decision of the Supreme Court of the United States, which has called forth the proposed legislation, settles definitely and beyond all controversy that distilled liquors, ale, and beer are subjects of commerce recognized by the laws of Congress and the decision of the courts, and are not subject to the jurisdiction of the police powers of the States.

It follows, from this condition of the law, that Congress has exclusive jurisdiction and power under the Constitution to regulate the commerce of these articles among the States, etc., and that the laws of the States that assume to regulate the traffic in intoxicating liquors within their respective limits that amount to a regulation of commerce or which interfere with or infringe upon the right of an importer to sell the article in the "original package" in which it was introduced into the States are null and void.

THE EFFECT OF THE DECISION.

The States had supposed from the organization of the Government, until this judgment was rendered, that the regulation of the sale of distilled spirits within their respective limits was within the jurisdiction of their police or reserved powers, and such condition of the law had been confirmed from time to time by decisions of the courts and commentators upon constitutional law.

In pursuance, Mr. Speaker, of this supposed power, each of the States has legislated in some way to regulate the traffic in distilled liquors within their own territory. A few of the States have, by constitutional provisions, prohibited the manufacture and sale of intoxicating liquors within the limits of their territory, while perhaps all of the other States have enacted laws establishing a license system that subjects this traffic to official supervision, thus limiting and regulating the traffic as far as they deem practicable, and at the same time deriving therefrom a valuable revenue.

As in some degree illustrating the law upon this subject as recognized by the courts and understood by the people for many years, I desire to read to the House the short but learned and comprehensive opinion of Mr. Justice Grier in the celebrated license cases, determined a great while ago by the Supreme Court:

Mr. Justice GRIER:

I concur with my brethren in affirming the judgment in this and the preceding cases on the same subject, but for reasons differing somewhat from those expressed by the other members of the court; and as I concurred mainly with the opinion delivered by Mr. Justice McLean in the case of Thurlow *vs.* Massachusetts, I had concluded to be silent, and therefore am not prepared to express my views at length. I take this occasion, however, to remark that the true question presented by these cases, and one which I am not disposed to evade, is whether the States have a right to prohibit the sale and consumption of an article of commerce which they believe to be pernicious in its effects and the cause of disease, pauperism, and crime. I do not consider the question of the exclusiveness of the power of Congress to regulate commerce as necessarily connected with the decision of this point.

It has been frequently decided by this court "that the powers which relate to merely municipal regulations, or what may more properly be called internal police, are not surrendered by the States or restrained by the Constitution of the United States; and that consequently, in relation to these, the authority of a State is complete, unqualified, and exclusive." Without attempting to define what are the peculiar subjects or limits of this power, it may safely be affirmed that every law for the restraint and punishment of crime, for the preservation of the public peace, health, and morals, must come within this category.

As subjects of legislation they are from their very nature of primary importance; they lie at the foundation of social existence; they are for the protection of life and liberty, and necessarily compel all laws on subjects of secondary importance, which relate only to property, convenience, or luxury, to recede when they come in conflict or collision. "*Salus populi suprema lex.*"

If the right to control these subjects be "complete, unqualified, and exclusive" in the State Legislatures, no regulations of secondary importance can supersede or restrain their operations on any ground of prerogative or supremacy. The exigencies of the social compact require that such laws be executed before and above all others.

It is for this reason that quarantine laws which protect the public health compel mere commercial regulations to submit to their control. They restrain the liberty of the passengers, they operate on the ship which is the instrument of commerce, and its officers and crew, the agents of navigation. They seize the infected cargo and cast it overboard. The soldier and the sailor, though in the service of the Government, are arrested, imprisoned, and punished for their offenses against society. Paupers and convicts are refused admission into the country. All these things are done, not from any power which the States assume to regulate commerce or to interfere with the regulations of commerce, but because police laws for the preservation of health, prevention of crime, and protection of the public welfare must of necessity have full and free operation, according to the exigency which requires their interference.

It is not necessary for the sake of justifying the State legislation now under consideration to array the appalling statistics of misery, pauperism, and crime which have their origin in the use or abuse of ardent spirits. The police power, which is exclusively in the States, is alone competent to the correction of these great evils, and all measures of restraint or prohibition necessary to effect the purpose are within the scope of that authority. There is no conflict of power or of legislation as between the States and the United States; each is acting within its sphere and for the public good, and if a loss of revenue should accrue to the United States from a diminished consumption of ardent spirits, she will be the gainer a thousand-fold in the health, wealth, and happiness of the people. (5 Howard's Reports, pages 631, 632.)

It will be observed, Mr. Speaker, that this learned judge, and such was the effect of the decision of the court, held that the exclusiveness of the power of Congress to regulate commerce among the States, etc., was not necessarily involved in a contention between a municipal or internal police regulation of the States and the power of Congress to regulate commerce; that the powers which relate to merely municipal or police regulations had not been surrendered by the States or restrained in any degree by the Constitution of the United States; and that it followed that the authority of the States was complete, unqualified, and exclusive.

Without attempting to define the subjects or fix a limit to the jurisdiction of the police power of the States, it was certainly affirmed that "every law for the restraint and punishment of crime, for the preservation of the public peace, health, and morals" was embraced by that jurisdiction. These great subjects of legislation were declared to be of primary importance, lying at the very foundation of social existence, and before which all laws that relate only to "property, convenience, or luxury" recede when they come in conflict or collision.

The restrictive legislation, police or municipal regulations, of the States in respect of the traffic in intoxicating liquors is not based upon any supposed power in the States to regulate commerce or to interfere with regulations of commerce, but they are grounded upon the inherent and inalienable right of the States to preserve health, prevent crime, and protect the public welfare.

This doctrine has been overturned by the recent decision of the court, and all such laws of the States, enacted for the purposes stated, which prevent, hinder, or limit the right of an importer to sell distilled liquors in the original packages in which they may have been introduced into

a State, are nullified and made void by the operation of the judgment of the court.

As a proximate result importers, claiming to be protected by the law, are selling intoxicating liquors in original packages in some, if not all, of the States in despite and in defiance of the laws of such States, which forbid their sale or which require a license to be obtained before such articles are offered for sale.

The evil effects of the unregulated and unfettered traffic in intoxicating liquors to this extent and deprivation of the accustomed revenue from this traffic are made possible and common to all the States.

I desire to call the attention of the House to the following extract, taken from the dissenting opinion made in this case in behalf of three of the justices, and delivered by Mr. Justice Gray.

The learned judge said:

If the statutes of a State, restricting or prohibiting the sale of intoxicating liquors within its territory, are to be held inoperative and void as applied to liquors sent or brought from another State and sold by the importer in what are called original packages, the consequence must be that an inhabitant of any State may, under the pretext of interstate commerce, and without license or supervision of any public authority, carry, or send into, and sell in any or all of the other States of the Union intoxicating liquors of whatever description, in casks or kegs, or even in single bottles or flasks, despite any legislation of those States on the subject, and although his own State should be the only one which had not enacted similar laws. It would require positive and explicit legislation on the part of Congress to convince us that it contemplated or intended such a result.

This is an extraordinary and deplorable condition, and Congress is appealed to from all quarters to apply some remedy to the grievous mischiefs and local disorders wrought by this unfortunate opinion. I have read this extract, Mr. Speaker, to show that I have not misstated the scope of the effect of the judgment of the court, and for the additional purpose of showing that the consequences of the judgment were considered and contemplated by the court.

So far as I am informed, the opinion is universally entertained that each State, by the proper and reasonable exercise of its police or reserved powers, should be permitted to determine for itself the manner in which the traffic in intoxicating liquors should be conducted within its own territory, and that the Congress of the United States should have no control over it.

It is, therefore, desirable that the former condition of the law on this subject should be restored.

The grave and important inquiry which Congress is now called upon to make is how that object may be attained without exceeding its authority, or rather whether it can be attained by Congressional legislation without doing violence to the Constitution.

Before proceeding to discuss the authority or the power of Congress over the subject, I desire to say that I have not the slightest doubt that the Supreme Court itself will in due time, uninfluenced by Congressional legislation, modify its rulings or correct the abuses which seem to be covered and protected by its decision.

In this way, often followed by the courts, the original status or condition of the law might be restored; or, failing in that, the States may be relieved from restraint and interference in the exercise of their police powers by retail liquor-dealers under the guise and device of importers vending "original packages."

There would be, I am sure, Mr. Speaker, no great sacrifice of opinion required of the members of the court to bring about this desirable and becoming result, as it is difficult to perceive how the States can be deprived of a reserved power absolutely essential to the protection of its population against the evils of unlicensed and unregulated traffic in distilled liquors.

Under our system of government there is no other power adequate to that purpose.

If, however, this decision shall ripen into a fixed and accepted interpretation of the Constitution, it will be the duty of Congress to address itself earnestly to an inquiry into its authority and power to arrest, in whole or part, the operation of the judgment of the court.

The influences now being exerted upon Congress to provide some relief against the exasperating evils resulting from the condition of the law are so exacting and commanding that the Constitution is in danger of greater violence from Congress in the effort to arrest the evils than was inflicted upon it by the judgment of the court.

The most serious results of the decision in this case flow from the facility, claimed to be authorized by it, with which an importer may set at defiance the license laws of the State by so constructing the "original packages" as to enable him to retail intoxicating liquors. It is the unregulated, unlicensed retail dealing in ardent spirits by means of so-called original packages which has produced such universal remonstrance against the operation of the judgment.

It can scarcely be true, Mr. Speaker, that importers may, under this decision, pervert the obvious meaning of interstate commerce, overturn the established usages and customs of commercial intercourse by the use of non-commercial original packages, so shaped and constructed as to enable them to carry on a retail trade in liquors despite the license laws of the State, and to the utter destruction of the revenues derived from that source.

The right secured to the importer to sell intoxicating liquors in the original packages in which they may be introduced into a State would not carry with it the means of destroying the license system of the States if importations were regulated and restricted to commercial packages after the manner of importations from foreign nations. A judicial interpretation of what is meant by an original package, within the meaning of interstate commerce, might effectually destroy original-package saloons, which are now being conducted under a "device" unworthy the protection of State or Federal laws.

But if Congress can not await the correction of these disorders by the courts, why may not its power and authority over the subject of commerce among the States be exerted in a proper and lawful way by prescribing a rule or regulation by which to govern and regulate the commerce of intoxicating liquors among the States? The Supreme Court holds that the power of Congress is exclusive, and without words of limitation. A rule or regulation of commerce in these articles, defining what a commercial original package may consist of, in view of the license laws of the States, enacted in the exercise of their police or reserved powers, would effectually destroy the most serious evil which has resulted from the decision of the court. Such a rule or regulation would be uniform throughout the United States, would not be a harsh or unjust exertion of the power of Congress, and would enable the States to exercise their police powers over this subject-matter of commerce.

It is claimed, however, that the Supreme Court has invited Congress to restore the former (supposed) condition of the law by placing this subject-matter of commerce under the jurisdiction of the police or reserved powers of the States by Congressional legislation, and the following remarkable expressions of the court are relied upon to support the proposition:

And while by virtue of its jurisdiction over persons and property within its limits a State may provide for the security of the lives and limbs, health, and comfort of persons, and the protection of property so situated, yet a subject-matter which has been confided exclusively to Congress by the Constitution is not within the jurisdiction of the police power of the State, unless placed there by Congressional legislation.

And again the court declares that—

The conclusion follows that as the grant of the power to regulate commerce among the States, so far as one system is required, is exclusive, the States can not exercise that power without the assent of Congress.

The Senate bill, as well as the substitute proposed by the Committee on the Judiciary, rests on these remarkable and inapt utterances of the court while delivering the opinion on the questions presented by the record of the case before it.

The Senate bill reads as follows:

Be it enacted, etc., That all fermented, distilled, or other intoxicating liquors or liquids transported into any State or Territory or remaining therein for use, consumption, sale, or storage therein, shall, upon arrival in such State or Territory, be subject to the operation and effect of the laws of such State or Territory enacted in the exercise of its police powers, to the same extent and in the same manner as though such liquids or liquors had been produced in such State or Territory, and shall not be exempt therefrom by reason of being introduced therein in original packages or otherwise.

It will be observed that this proposition would apply the laws of a State already enacted, or such as might hereafter be enacted in the exercise of its police powers, to all fermented, distilled, or other intoxicating liquors transported into such State or remaining therein for use, consumption, sale, or storage therein.

This is a proposition simply to turn over to the States the entire and complete power to regulate the commerce among the States, etc., as to this subject-matter of commerce. Each State is to be invested with power to regulate the commerce of this article between itself and all other States.

Where does the power to regulate the commerce of these articles among the States now reside? The Supreme Court, in the decision referred to, holds that Congress has the exclusive power to regulate the commerce of these articles among the States, etc. If this interpretation of the Constitution is correct, how can Congress be divested of a power exclusively vested in it by the Constitution? There is but one mode provided, and that is by an amendment to the Constitution.

The laws of the State to which these articles of commerce are to be subjected, if the Senate bill becomes the law, have been declared unconstitutional and void by the decision of the court, so far as they interfere with the right of an importer to sell intoxicating liquors in original packages.

The Senate bill provides that the laws of the States to which this commerce must be subjected shall have been enacted by the several States in the exercise of their police powers respectively. Yet the court decides that this commerce is not subject to the jurisdiction of the police powers of the States.

If the States, as the court decides, did not reserve this power; if no such police power was reserved by the States when the Constitution was adopted; if the States conveyed, delegated, or vested this great and essential power to protect and shield its population from the evils of unlicensed freedom in the sale of ardent spirits, how can Congress reconvey or delegate it to the States? I do not understand how or by what authority Congress can assent to the exercise of a power by the States which was confided exclusively to it by the Constitution. nor do I understand where Congress gets the power to place "by Congressional legislation" a subject-matter of commerce under the jurisdiction

of the police power of the States which has been placed by the Constitution exclusively under the jurisdiction of Congress.

No one, Mr. Speaker, seems bold enough to admit, in advocacy of the Senate bill, that the Senate proposition amounts to a delegation of power by Congress, the exclusive custodian of the power, to the States who parted with it upon the adoption of the Constitution, but they seek to evade the obvious and inevitable effect of the proposition by the assumption that Congress for the time being adopts the laws of the several States as a regulation or regulations by which the commerce in this article among the States may be governed. This would not be in any proper sense a regulation of commerce prescribed by Congress, but it would be an exercise of power belonging to Congress by the States by the permission of Congress.

The object of Congressional regulation of commerce among the States was to secure "one system" applicable to all the States.

Can the object of the framers of the Constitution be attained by allowing the States, with the "assent of Congress," to exercise the power? Instead of having "one system," we shall have as many systems as there may be States. The laws and regulations prescribed by the States would be as various as the characteristics of their population and wholly wanting in uniformity. The Senate bill, Mr. Speaker, rests on the false theory that the States must rely upon Congress for the grant of the great and essential police power to regulate and control the traffic in intoxicating liquors within their own territory as each of them may deem best.

Instead of Congress being the grantee of powers from the States, it assumes to become a grantor of power. The old rule is reversed; the creature becomes the creator.

For one, Mr. Speaker, I am unwilling to vote for a measure which makes the great State that I have the honor to represent in part a mendicant at the footstool of Federal power for the permission of Congress to exercise a police power never delegated to Congress and which was reserved by the States as essential to the welfare of their population.

It is said, Mr. Speaker, that this proposition is a concession to State rights, and therefore a Democrat ought to accept it with thanks and alacrity.

The fundamental principle of the Democratic party, as I understand it, is to preserve the boundary between State and Federal authority as fixed by the Constitution.

If the States have parted with this great police power, as the court decides, what right has Congress to reconvey the power to them? If Congress can delegate this power to the States, why may not Congress disposed of other powers in the same way?

I am aware, Mr. Speaker, that the opinion prevails that inasmuch as this police power has been erroneously drawn from the jurisdiction of the States, the effect of this measure will be to restore the power and no harm will be done by accepting it. This is called practical politics.

Gentlemen do not pause to consider that power wrongfully delegated may be resumed at any time; nor do they apparently appreciate the fact that, having assented as representatives of the States to the false doctrine that the States must exercise this police power with the permission of Congress, it will be difficult to reject such conditions as Congress may impose hereafter upon the exercise of the right.

Such arguments and suggestions assume that Congress will stultify itself by an attempt, direct or indirect, to reverse the theory of the Government by granting a power, or the right to exercise a power, to the States by an act of Congress for the purpose of correcting or avoiding an erroneous ruling of the Supreme Court made possible by overruling its own decisions.

I do not think it will. The substitute for the Senate bill submitted by the Committee on the Judiciary reads as follows:

That whenever any article of commerce is imported into any State from any other State, Territory, or foreign nation, and there held or offered for sale, the same shall then be subject to the laws of such State: *Provided*, That no discrimination shall be made by any State in favor of its citizens against those of other States or Territories in respect to the sale of any article of commerce, nor in favor of its own products against those of like character produced in other States or Territories; nor shall the transportation of commerce through any State be obstructed except in the necessary enforcement of the health laws of such State.

It will be observed that by the terms of this proposition it is proposed to confer power upon each State in the Union to regulate the commerce between it and all the other States and Territories, and foreign nations as well. Whatever product, being a legitimate article of commerce, is imported from one State into another, or from a foreign nation, for sale, is subjected to the local laws of such State, whether such laws are enacted in the exercise of the police powers of the State or not, or whether the subject-matter of the import contains any element, constituent, or ingredient which demands official supervision in the exercise of police power.

The proviso is simply declaratory of existing law, which is that no State shall discriminate in favor of its own products against those of like character produced in other States or Territories. In all other cases full power is given each State by the terms of the substitute to discriminate against the products of every other State, or to forbid their importation or sale altogether for the purpose of destroying competition with their own products, or for any other purpose. Lard compounds would be expelled from every State in which pure lard is manufactured, because they are not products of like character and would not fall within the exception. There might be many other illustrations given of the injustice and wrong which would result from the operation of such a law.

Mr. Speaker, if this substitute should become the law we might as well strike from the Constitution the commercial clause altogether. There will be no further use for it. Commercial chaos, as it existed during the Confederation, would return to blight the great commercial prosperity of the country.

The absolute necessity for well regulated freedom of commerce among the States was the great moving, overshadowing cause of the adoption of the Constitution. The grandeur of the unsurpassed commercial greatness of the United States rests upon the freedom of commerce among the States.

It has inspired the genius and aroused the industry of our people. It has made us a nation of traders and fastened our family of States together with cords of business, friendship, and rivalry. Let Congress abdicate the power to regulate commerce and commit the vast commercial interest of this country to the caprice and greed of State regulation, and the splendid fabric of our commercial greatness will topple to its fall.

I can not, Mr. Speaker, better illustrate and present the results which will follow the enactment of such a law as is proposed by this substitute than by quoting the following from an opinion delivered by Mr. Justice Matthews:

Can it be supposed that by omitting any express declaration on the subject Congress has intended to submit to the several States the decision of the question in each locality of what shall and what shall not be articles of traffic in the interstate commerce of the country? If so, it has left to each State, according to its own caprice and arbitrary will, to discriminate for or against every article grown, produced, manufactured, or sold in any State and sought to be introduced as an article of commerce into any other. If the State of Iowa may prohibit the importation of intoxicating liquors from all other States, it may also include tobacco, or any other article the use or abuse of which it may deem deleterious. It may not choose, even, to be governed by considerations growing out of the health, comfort, or peace of the community. Its policy may be directed to other ends. It may choose to establish a system directed to the promotion and benefit of its own agriculture, manufactures, or arts of any description, and prevent the introduction and sale within its limits of any or of all articles that it may select as coming into competition with those which it seeks to protect. The police power of the State would extend to such cases as well as to those in which it was sought to legislate in behalf of the health, peace, and morals of the people. In view of the commercial anarchy and confusion that would result from the diverse exertions of power by the several States of the Union, it can not be supposed that the Constitution or Congress have intended to limit the freedom of commercial intercourse among the people of the several States.

Finally, Mr. Speaker, it would be far better and wiser to mark the boundary between the police powers of the States and the Federal power to regulate commerce by a proposition to amend the Constitution than wound and mangle it by temporary statutory make-shifts, which the Supreme Court must hold to be unconstitutional.

The Tariff—Sugar Duty.

SPEECH

OF

HON. WILLIAM W. MORROW.

OF CALIFORNIA.

IN THE HOUSE OF REPRESENTATIVES.

Tuesday, May 20, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

Mr. MORROW said:

Mr. CHAIRMAN: In the report of the Committee on Ways and Means, submitted to the House explanatory of the provisions of the bill now under discussion, we find the following statement:

We are advised from the annual report of the Secretary of the Treasury that the ordinary revenues of the Government, actual and estimated, for the fiscal year ending June 30, 1890, will be $385,000,000 and that the expenditures for the same period, actual and estimated, will be $293,000,000, leaving a surplus of $92,000,000. The estimated amount required for the sinking fund will be $48,321,116.99, leaving an estimated net surplus of $43,678,883.01.

This estimate, it will be observed, is for the year ending June 30, 1890. For the year ending June 30, 1891, the committee submit the following estimate:

The excess of revenues over expenses estimated for the fiscal year ending June 30, 1891, we are advised from the same source, will amount to $43,569,522.30, which, with the amount of cash now on hand and available, reaching nearly $90,000,000, the committee believe will justify a reduction of the revenue in the sum contemplated by this bill.

That is to say, the estimated surplus for two years is about $90,000,000, or an average of say $45,000,000 per annum. This estimate is based upon the present rate of expenditures and does not take into consideration any probable increase for pensions, postal service, fortifications and defenses, or naval construction. It assumes that the expenditures for the

current year and for the year ending June 30, 1891, will continue substantially as ascertained for the year 1889, as follows:

Total ordinary expenditures ascertained for the year 1889	$281, 996, 615. 60
Total expenditures, actual and estimated, for the year 1890	293, 000, 000. 00
Total estimated expenditures for the year 1891	292, 271, 404. 70

The actual and estimated expenditures for the year 1890 are placed at $13,000,000 in round numbers in excess of the expenditures for the year 1889, and for the year 1891 there is an estimated reduction of expenditures of nearly $1,000,000 from the year 1890. From these premises the committee proceed to discuss the provisions of the bill and arrive at the following conclusion:

Your committee conclude, therefore, that the proposed bill, if enacted into law, will certainly reduce the revenue from imports at least $60,936,536, and probably more, and from the internal revenue $10,327,878, or in the aggregate $71,264,414.

My colleague [Mr. McKENNA] has just explained that he does not approve of that provision of the bill which places sugar on the free-list, and he bases his objection with great force on the ground that it violates in a most flagrant manner the beneficent principle of protection to home industry. It seems to me that his argument is unanswerable. He has, however, proposed a reduction of about 33 per cent. of the rate of duty so that the duty may conform substantially in the ad valorem equivalent to the rate of duty proposed to be levied on other imported articles coming in competition with home products. I am in favor of this amendment, believing that it is a fair and reasonable reduction of the rate, while at the same time it preserves the principle of protection for which we are contending as our guide in the revision of the tariff. We should not only retain a reasonable protection for the benefit of the sugar-cane product of Louisiana, but also for the benefit of the beet-sugar industry now being successfully developed in the Western States and on the Pacific coast. In my judgment, under proper encouragement in the way of protection all the sugar required in the United States would in the near future be our own product.

I am also in favor of the amendment and opposed to placing sugar on the free-list, because I do not think the Government can spare all of the present revenue derived from the duty on that article.

But the bill goes further than merely placing sugar on the free-list. It proposes to pay a bounty out of the Treasury of 2 cents per pound on all sugar of a specified grade made from cane, beets, or sorghum produced in the United States. The Government is therefore to be deprived not only of all the revenues derived from the duty on imported raw sugar, but the expenditures are to be increased by the amount required to pay a bounty on all the sugar produced in this country. Can we afford to do this? Let us see what the effect will be. I find by reference to the statistical abstract for the year 1889 that during last year 2,762,302,967 pounds of sugar were imported at an average duty of 2.3 cents per pound, making the total amount of duty collected $54,896,437.38.

I find, further, that the sugar produced from cane in Louisiana last year amounted to 377,933,124 pounds. To pay the bounty of 2 cents per pound on this production would require the payment out of the Treasury of the sum of $7,558,662.48. In other States the sugar produced from cane amounted to 20,229,440 pounds, which at 2 cents per pound would require the payment of $404,588.80. In California the sugar produced from beets amounted to 5,600,000 pounds, which at 2 cents per pound would require the payment of $112,000. The product of sugar from sorghum amounted to 1,500,000 pounds, which at 2 cents per pound would require the payment of $30,000. The total cost to the Treasury of free foreign sugar with a bounty of 2 cents per pound for the home product may be tabulated as follows on the returns for the year 1889:

Duties on sugar imported during the year ending June 30, 1889, 2,762,202,967 pounds, at an average specific rate of duty of 2.03 cents per pound	$54, 896. 437. 38
Sugar produced in Louisiana during the year ending June 30, 1889, 377,933,124 pounds, at 2 cents bounty	7, 558, 662. 48
Sugar produced in other States, 20,229,440 pounds, at 2 cents bounty	404, 588. 80
Beet sugar produced in California, 5,600,000 pounds, at 2 cents bounty	112, 000. 00
Sugar from sorghum, 1,500,000 pounds, at 2 cents bounty	30, 000. 00
Total cost	63, 001, 688. 66

The bounty on the sugar product of 1889 would be as follows:

Domestic cane product	$7, 963, 251. 28
Domestic beet product	112, 000. 00
Domestic sorghum product	30, 000. 00
	8, 105, 251. 28

The sugar schedule of this bill would, therefore, cost the Treasury, in round numbers, $55,000,000 in deduction of revenue and $8,000,000 in bounty, or a total of $63,000,000. Let us see what effect it would have had on the revenues for 1889:

The total ordinary revenues of the Government from all sources for the year 1889 were	$387, 050, 058. 84
If we deduct the amount of revenue received from sugar	54, 896, 437. 38
We have a balance of	332, 153, 621. 46
The total ordinary expenditures of the Government for the year 1889, including the purchase of bonds for the sinking fund, were	329, 579, 929. 25
If we add to this sum the amount that would have been required to pay the 2 cents per pound bounty on domestic sugar	8, 105, 251. 28
We would have a total expenditure of	337, 685, 180. 53
Deduct the receipts as above	332, 153, 621. 46
Leaving a deficiency of	5, 531, 559. 07
To this sum must be added the amount of the deficiency appropriation bills passed at this session for the year 1889	24, 708, 777. 49
Making a total deficiency of	30, 230, 336. 56

This would have been the state of the account had the provisions of this bill relating to sugar been in force during the year 1889. We would have had a deficiency of a little over $30,000,000. The reply to this claim would be that in the expenditures for the year 1889 is the sum of $47,583,313.65, expended for the purchase of bonds for the sinking fund and for the redemption of notes and fractional currency; that this expenditure was made because of a surplus in the Treasury, but would not have been made had the receipts been reduced as proposed in this bill. This is true, and disposes of the possible actual deficiency that might have occurred under this bill in the year 1889, but this method of avoiding a deficiency would be satisfactory only to those who deem it advisable to suspend the purchase of bonds for the sinking fund, and I am not one of those. I think we should continue to provide for the payment of the public debt. We should discharge every obligation at maturity, and if the national-bank system must be continued let it be upon some other basis than the public debt for its security.

But when we turn to the years 1890 and 1891 and succeeding years, and examine the probable receipts and expenditures for those years, we are confronted with an increase of expenditures that can not be avoided or suspended. We are pledged to additional pension legislation. What amount of money will be required to meet the demands of such legislation can not now be determined, but it will not be less than $30,000,000 for next year, with an increase for several years to come. We must meet our obligations to the veterans of the war fairly and honorably, and we must not reduce the revenue to such an extent as to cause us to hesitate in that direction. We must pay the national debt, provide for fortifications and defenses, and continue the construction of a navy. We should improve our rivers and harbors for the benefit of our commerce, increase our postal service, and extend aid to the shipping industry, that our products may be carried on American ships to every quarter of the globe.

The Committee on Appropriations has been proceeding with great care and economy in providing for the necessary expenses of the Government for the year 1891. We have reported a number of bills which are in no way extravagant, but, on the contrary, they carry every possible safeguard against waste and every needless expenditure. Some of these bills have passed both Houses; some have passed this House only; others have only been reported from the committee, and three bills, the agricultural, Indian, and sundry civil, have not been reported. But we have proceeded far enough with the business of providing for the expenses of the Government for next year to discover that the expenditures are going to be largely increased. Seven of the appropriation bills, namely, District of Columbia, fortification, Navy, pension, Post-Office, river and harbor, and deficiency (1889), increase the expenditure of the Government $55,492,763.40 over the current year.

Four bills, namely, Army, diplomatic and consular, legislative, etc., and Military Academy, reduce the expenditures in the sum of $1,118,103.58. The net increase is $54,374,659.82 over the present year, and arises mainly in the river and harbor bill, where the increase is $21,000,000, and the pension bill, where it is nearly $17,000,000. There is also an increase in the Post-Office appropriation bill of $5,000,000, and in the fortification bill an increase of $3,000,000. I append a statement of the appropriation bills for the year 1890–'91 as far as they have progressed, compared with appropriation acts of 1889–'90.

From this statement it will be seen that the present ascertained ordinary expenses of the Government for the year 1891 will be at least $50,000,000 in excess of what they were for the years 1889 and 1890. It must be remembered, furthermore, that this increase does not take into account any additional pension legislation. If we extend the pension laws so as to increase the number of those entitled to receive pensions or if we increase the expenditures to pensioners on any account we must add such increase to the already ascertained excess of $50,000,000. If we make any additional provision for fortifica-

tions and defenses, an increase in the postal service, or for the construction of a Navy we must add such increased appropriation to this sum of $50,000,000.

But whether we do or not we know now that we will require the amount of the sugar duties or nearly so much to meet our existing obligations. And it seems to me to be the part of wisdom to withhold sugar from the free-list for the present and try the effect of a reduction of 33 per cent. without a bounty. In doing this we protect the Treasury and retain a measure of protection for one of the most important and promising industries of the country. Let us be just to all classes and, treating the responsibilities of the Government with a fair and honorable consideration, leave the wisdom of our action to the judgment of the people.

Mr. HEARD. If this duty is taken off sugar will it not have to be placed on something else?

Mr. MORROW. There is no question about that in my mind. As I have already shown, the revenue is required to meet the ordinary expenses of the Government as now ascertained. If you remove the duty it will be necessary to place the burden (if so designated) somewhere else. The Government requires for its support about $400,000,000 per annum. The sugar duty supplies about $55,000,000 of this sum. The revenue must be obtained from some source. The duty on sugar has always been primarily a revenue duty. It is collected cheaply and effectively, and in my judgment it would be unwise for us to attempt at this time to procure this amount of revenue elsewhere. [Applause.]

† Deficiency bill for current year.

Federal Election Law.

SPEECH
OF
HON. WILLIAM MUTCHLER.
OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 30, 1890.

The House having under consideration the bill (H. R. 11045) to amend and supplement the election laws of the United States, etc.—

Mr. MUTCHLER said:

Mr. SPEAKER: The gentleman from New York [Mr. RAINES] who has just taken his seat, like all others who have preceded him in advocating the passage of this bill, has attempted to give reasons why the bill should become a law, but has failed to show and has not undertaken to show by what power Congress can enact so revolutionary a measure. It is claimed by the committee that reported the bill that the necessary power is to be found in section 4, Article I, of the Federal Constitution, which is as follows:

The times, places, and manner of holding elections shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators.

Prior to the passage of the act of 1871, elections for members of Congress were held at different times. Some States elected in August, some in September and October, and others in November, but since the passage of that act all elections for members of Congress are held on the same day, in November. In 1872 Congress provided by law that the manner of holding elections should be by ballot. Elections of members of Congress were not uniformly by ballot prior to that time.

Now, I submit that when Congress passed these laws it exhausted its power under the provision of the Constitution I have cited. It has never been claimed that Congress had any other power over elections of Congressmen than it has heretofore exercised, nor that the power to prescribe the manner of holding elections included the right to select the officers to conduct the elections. The Legislatures of all the States in the Union, in obedience to the Federal Constitution, have prescribed the manner for holding elections for Representatives in Congress. That manner is by ballot, and this bill does not alter it. What it does do or will do if enacted into a law is to place the elections in every State under the absolute management of Federal officers, appointed by Federal authorities, who shall be the sole judges of the qualifications of voters and whose returns are to be accepted to the exclusion of those made by the State officers. There is no such power given to Congress by our Constitution.

Now, let us examine this bill briefly and see what it is. In the first place an officer, who is called a chief supervisor of elections, is to be appointed in each judicial district of the United States by the judge of the circuit court of such district. This officer is to be one of the United States court commissioners, now in office, and is required upon petition of one hundred citizens of any city or town having a population of 20,000 inhabitants, or of one hundred citizens of any Congressional district, or fifty citizens of any county or parish, to prepare, present, and certify to such circuit courts lists of persons to be appointed supervisors. Three supervisors are to be selected for each voting precinct, and as two are always to be of the same political party it is fair to presume that in nearly every instance the two will be Republicans. The third may be a Democrat of the mugwump order, but, no difference what or who he may be, he can have no power, because the whole power of the board is granted to the majority. These precinct supervisors are to be at all times subject to the order of the chief or district supervisor. He can assign them to duty in any place within his district he pleases. All orders issued by him and relating to registration, naturalization, and the holding of elections and making of returns, must be obeyed. In the language of the bill, registration and naturalization of voters, as well as the election, shall be guarded, scrutinized, and supervised by them. When required to do so by their chief or "boss," as he should be designated, in cities and towns having 20,000 inhabitants and upward, they shall make a list of all persons naturalized in any State court, showing the date of their naturalization, their residence, place of nativity, and the names and residence of their witnesses, and for this purpose they are to have access at all times to and the right to examine all applications for naturalization. These lists are to be sent to the chief supervisor, for what purpose the bill does not state, but it is to be presumed that this is to be done to assist the local organizations of the Republican party in making their canvasses of voters. On the day of the election these agents of the chief inspector are to be in the room where the election is held and there keep a tally of the votes polled. They are required to make a return to him which they may supplement with any statement with respect to these elections they may see fit to make. These returns and statements, not made under oath, are sent to the chief supervisor, who makes up a return to a board of canvassers, consisting of three persons appointed by the circuit judge, and this board makes out a return which is sent to the Clerk of this House, who must receive it and place the name of the person certified to be elected upon the roll. The certificate of the State authorities, unless it conforms

with that of this board of canvassers, must be disregarded by the Clerk of the House under pain of fine and imprisonment.

Now, Mr. Speaker, it is evident to the mind of every intelligent man who has studied the provisions of this bill that it is a well concocted scheme by which the Republican party hope to retain the control of this House. It is not the work of the amiable gentleman whose name is linked with it. It became painfully evident while he was attempting to explain it that he was not the author of it. Oh, no; it is not possible that a gentleman whose only profession is that of literature and whose moral instincts and high mental culture lead him to detest the queer ways of professional politicians could have conceived such an abominable measure as this is, a measure designed to take from the people the power to choose their own Representatives and place that power in the hands of less than a score of Federal office-holders.

It has been frequently charged upon this floor and not denied that this scheme emanated from the brain of that celebrated expert in the manipulation of voters, Mr. John I. Davenport, of New York, and the fact that he has been seen in company with leading gentlemen on the other side of the House here in Washington gives some color of truth to this charge. He is a gentleman of great experience in matters pertaining to elections and election returns and knows exactly what kind of a law is needed to enable his party to win.

But what else do we find in this bill? By section 8 the chief supervisor may order his subordinates to personally inspect the registration lists of voters and to be present at all times and places fixed for registration, and when required to do so by their superior officers they shall visit every house in their districts or precincts, ostensibly for the purpose of verifying the registry lists, but really for the purpose of influencing the voters and making a canvass of all such as may be bribed or intimidated. This work may be done in towns or cities having 20,000 inhabitants and upward five weeks before the day of election, in order to give ample time to Republican campaign committees to operate upon such voters as shall be reported to be doubtful or purchasable. The object of this provision of the bill is to enable the chief supervisor to obtain a complete canvass of the voters at the expense of the taxpayers.

Under the fourteenth subdivision of this section these supervisors are required to attend and aid the courts in preventing fraudulent naturalizations, and it is provided that this duty shall "apply only to such discreet or special supervisors as shall from time to time be directed and detailed by the chief supervisor of elections." This provision is intended to be enforced only in the cities and mining regions in the North where there is a large foreign element, and it will be the duty of these discreet Federal officers to object to the naturalization of every foreigner who will be likely to vote the Democratic ticket, but to make no objection to any one who will surely vote the Republican ticket. These "discreet" agents of the chief supervisor may also enter the office of the clerk of the court and demand to be shown all applications and affidavits pertaining to naturalizations on file.

Now, Mr. Speaker, I would like to know under what particular clause of the Federal Constitution Congress is given the power to enact or the Executive the authority to enforce this provision of the law? Congress is given the power to enact a uniform rule of naturalization, but not the power to provide for the appointment of officers to scrutinize and amend the decrees of the State courts in making naturalizations. The power to naturalize is in the judiciary, and when an alien has been made a citizen by the decree of the court he can not be deprived of his right of citizenship by a Federal supervisor of elections. It can not be contended that the power to regulate elections of Representatives to Congress carries with it the power to supervise naturalizations. The two things have no relation to each other. Citizenship is only one of the qualifications of a voter, and when that is shown by the production of the certificate of a court his right to vote can not be questioned unless he is not otherwise qualified.

This part of this bill is not intended to purify the ballot, but it is intended to draw from the Treasury of the United States a part of the funds necessary to conduct Republican election campaigns. It will not be executed. It ought not to be executed, because it is not in the power of Congress to enact it. Imagine one of these discreet gentlemen assuming the authority of a satrap, getting a salary of $10 a day paid by the tax-payers, marching into the office of a Democratic prothonotary or clerk of the court and ordering him to lay before him all the naturalization papers in his office, in order that he may obtain information of a political character for the Republican managers of elections. I do not believe his order would be obeyed. I am quite sure I know some clerks who would be most likely to say that they had no time, and would not have at least until after the election, and if the supervisor should persist and threaten to use force they would probably invite him to go, and might give him such assistance in enabling him to accept the invitation as would make it uncomfortable for him to stand upon his going.

There are several sections of this bill, notably the thirty-second and thirty-eighth, which are obscure to most readers of it, and doubtless intended to be so in order that their outrageous provisions may not be detected until after the bill has passed. The thirty-second section reenacts section 2002 of the Revised Statutes, which is that portion of the act of May 31, 1870, that provides for the use of the Army and Navy to keep the peace at the polls. I shall not comment upon this part of the bill any further than to say that the political party that makes use of such means to maintain its power must and will be regarded by the civilized world as the enemy of civil liberty and free institutions. Can it be possible that at this time, being more than a quarter of a century since peace and fraternal relations were renewed between all sections of our great country, and when there is not one disloyal citizen to be found within its confines, the party in power finds it necessary in order to continue its existence to destroy our boasted freedom by the use of the Army and Navy? Such would seem to be the case.

Under existing law United States jurors are selected by the clerk of the court and a jury commissioner appointed by the court, who must belong to a different political party from that of the clerk. This is a wise provision of the law, because it makes it impossible for any one political party to select only members of that party as jurors. Now, section 38 of this bill repeals this law by abolishing the office of jury commissioner and leaving the selection of jurors with the clerk alone. Now, it may well be asked, Why is this done? My colleague [Mr. BUCKALEW], who prepared the minority report on this bill, in my judgment gives the true explanation. He says:

> As this amazing and objectionable provision appears in an election bill with which it has no apparent relation, the question arises as to the purpose of its insertion. Is it intended to insure an efficient execution of the law against offenders or is it intended to shield the party agents appointed under this bill from indictment or conviction for fraud or outrage which they may commit in the course of their employment? If a district supervisor shall make a willfully false return of an election in his district, with the corrupt purpose of seating a defeated candidate, shall he have furnished to him a packed jury of his political friends to investigate his offense? And is it possible that to reach a desired object of party policy or advantage under this bill the entire plan of selecting mixed juries in the United States courts, in which all people are interested, shall be swept away?

As the clerks of the United States courts are, with but few exceptions, Republicans, we have no difficulty in seeing the reason for this proposed radical change in the law regulating the selection of United States jurors. It is done to give assurance to the district supervisors and deputy marshals, who, as a rule, will be selected from the criminal classes (at least such has been the case heretofore, as I shall presently show), that, though they may perpetrate any fraud or outrage they please in the interest of the Republican party, they shall not be convicted, because the clerk of the court, who has the selection of the juries, will see to it that none but their friends shall be summoned as jurors to try them.

Now, it is said by the friends of this bill that it is necessary in order to have a free ballot and a fair count, and it is alleged that without some such law as will place the holding of elections entirely in the hands of Federal officers an honest election can not be conducted, especially in the South. This has been asserted over and over again by gentlemen on the other side of the House who never set a foot upon Southern soil. Is it true? The gentleman from Louisiana [Mr. COLEMAN] and the gentleman from North Carolina [Mr. EWART], both of whom were born and raised in the South and who claim to be as good Republicans as their Northern allies, say it is not. [Applause.] These gentlemen represent Southern constituencies and were elected by Southern Republican votes. They have both addressed the House with reference to this bill and have both denounced it in unqualified terms. They are opposed to it and will vote against it, because they say there is no necessity for it and that if it is passed and executed it will surely make trouble where none now exists.

If this law is put in force in the North, and it will be, because there will be found in every Congressional district a sufficient number of impecunious individuals who will petition for it with the hope of being selected as district supervisors, it will be received with as little favor as it will be in the South. The people of the North, as well as those of the South, are jealous of Federal interference at their elections. Their election boards are non-partisan and their elections are conducted in fairness to all parties. It is by the unscrupulous use of money and the "blocks-of-five" system that the people are debauched and defrauded, and not by their election officers. In the State of Pennsylvania, as in all the other States, the election officers are chosen by a vote of the people.

Mr. SPRINGER. Each party has an equal number.

Mr. MUTCHLER. No, sir; our boards are composed of five members, one judge, two inspectors, and a clerk for each inspector, who is appointed by the inspector. The majority party usually has three and the minority two members of the board. These officers are all sworn to a faithful performance of their duty, and it is very seldom that they disagree as to the proper returns. Their returns are made to the judges of our courts, who examine and certify them to a board of return judges, composed of one from each county of the Congressional district, who meet at the county seat of one of the counties in the district and make up the final return which they certify to the secretary of the Commonwealth.

Sir, under the electoral system of the State which I have the honor in part to represent upon this floor, there is no disturbance at the elections. Every citizen qualified to vote can vote and have his vote counted and returned. Then why shall we be annoyed with Federal

supervisors and deputy marshals in every election precinct of the State? What have the people of my State done, what great wrong have they perpetrated or do they intend to perpetrate in conducting their elections that calls for this extraordinary remedy? If elections there are conducted fairly and honestly—and no one will dare to say that they are not—then why shall the people be burdened with the expense of executing this law? There may be thirteen thousand Federal supervisors appointed in my State and an almost unlimited number of deputy marshals, and the cost of holding our elections in addition to what we now pay will not be less than a half million of dollars.

Sir, the people of Pennsylvania do not want this law; there is not the shadow of necessity for it; and my colleagues on the other side of this House know what I say to be true as well as I do, and yet they will vote for it. Why? Simply because it has been approved by a majority of Republican Representatives in caucus, who hope that it can be executed in such a way as will give their party an advantage and continue it in the ascendency in this House. The fact that it is wholly unnecessary, that it will humiliate our people, because it implies dishonesty in them in the management of their elections, and that it will greatly and unnecessarily increase the burdens of taxation, goes for nothing. The only question with them is, will it help the Republican party to control Congress. It has been determined by a caucus that it will, and that settles it.

Now, Mr. Speaker, it may be interesting to know what kind of people will be selected by the chief supervisor as guardians of the ballot-boxes throughout the country. Of course they should be men of intelligence and unquestioned honesty. They should be men who have the confidence of the people in the districts where they are to perform their official duties, and should be free from any suspicion of being dishonest. Will such men be selected? This question can best be answered after we have examined the character of the supervisors and deputy marshals appointed in Philadelphia and New York in 1870 and 1878. I hold in my hand a list of persons appointed in those cities, but as my time is limited I will not read the whole of it, but will insert it with my remarks in the RECORD.

Mr. TUCKER. Will the gentleman from Pennsylvania state what document that is from which he proposes to read?

Mr. MUTCHLER. Yes, sir. It is a summary of the testimony taken by a subcommittee of the Senate in 1878. Marshal Kearns, of Philadelphia, testified before that committee that in that year he appointed seven hundred and seventy-three deputy marshals in that city, and there were about thirteen hundred appointed in the city of New York. Now listen while I read some of the testimony showing the character of the men then appointed, and you may be able to judge of the character of those who will be appointed under this bill if it becomes a law.

PHILADELPHIA MARSHALS.

Charles Oliphant, marshal second division, Twentieth ward, drunk on election day and insulting voters; seized Mr. Hackenberg without cause.

Charles Herr, marshal second division, Twenty-ninth ward, character and reputation bad, had been arrested for crime. On election day he arrested a voter, who was released by Judge Hare and voted. Herr wore a badge and solicited votes as a Republican.

Arthur Vance, marshal eighth division, Fifth ward, arrested Hutchinson, a voter, without cause. Vance was a notorious Republican worker.

John Homeyard, marshal sixth division, Sixth ward, drunk, and arrested voters without cause; drew a club on a Democrat for challenging a negro repeater. The police blocked up the poll, acted in concert with Homeyard, and brought voters to the polls. Homeyard vouched for Republican voters and distributed Republican tickets. Shriver, a United States revenue officer, kept Republican window-book.

J. R. Desano, marshal first division, Fifth ward, drunk all day; too drunk to arrest any one. There were five policemen at these polls. Desano never voted in that division before that day.

James Brown, marshal fourteenth division, Fourth ward; record of his conviction in 1872 for voting illegally produced. Proof was made that he voted twice on the same day.

William Augustus, fourth division, Eighth ward, acted as marshal, assuming authority as such, but was not on the list; a Republican worker.

Joseph Hilferty, marshal twenty-first division, Second ward, held the Republican window-book all day and electioneered; threatened to arrest the Democratic United States supervisor for procuring bail for a legal voter who had been arrested.

William McGowan, marshal twenty-third division, Second ward. A policeman blocked up the voting-window, and a Democratic United States supervisor ordered him away, when McGowan and the policeman seized him and locked him up in the station-house on a charge of interfering with officers. The case was never tried. McGowan is employed in the gas office and paid by the city.

Charles N. Miller, detective, testified that in the seventeenth division of Nineteenth ward a gang of repeaters were brought to the polls by a letter-carrier; he had one of the gang arrested.

Philip Madden, marshal Fourth ward, one of the most dangerous men in the city; has been in prison twice, once for highway robbery and the second time for shooting a colored boy.

Francis McNamee, marshal Eighth ward, had been arrested for five different robberies.

Andrew Lenoir, marshal First ward, a warrant has been issued for him for larceny.

Daniel Redding, marshal First ward, a bad and dangerous man; had been tried for murder.

Henry Pitts, marshal Seventh ward, a colored man who keeps a gambling-house and been arrested twice; distributed Republican tickets and vouched for voters.

R. S. Stringfield, marshal Fifteenth ward, had been tried for shooting a man; character very bad.

Michael Slavin, marshal Fifth ward, a thief and notorious repeater; had been arrested for subornation of perjury, but never tried.

William Glenn, marshal Nineteenth ward, superintendent of Norris square, and paid by the city for his duties.

Enoch Baker, marshal second division, Third ward, arrested John Carroll, a legal voter, without cause, and locked him up; Carroll was discharged after a hearing.

J. Roberts, marshal sixteenth division, Third ward, arrested John Johnson, a legal voter, and locked him up all night; case never tried. Roberts electioneered for the Republican ticket; was a clerk in the gas office and paid by the city; there were also twelve or fourteen policemen at that poll all day, and they blocked up the poll.

Andrew Jackson, marshal twenty-second division, Thirtieth ward, employed in the gas works under the city. Ackerman, Republican, judge of elections, acted as United States supervisor and judge, and refused to vacate the place of judge after written orders by Marshal Kearns and Judge Elcock. Jackson arrested Feeny, who had been legally appointed judge, and took him away from the polls. Did not return to get possession until 2 p. m.

C. A. Pinnexson, marshal Thirtieth ward, aided in arresting Feeny.

Taylor, marshal fifteenth division, Third ward, arrested Sweeny for illegal voting and locked him up; charge was found to be false and he was released and voted.

James Calligan, marshal eighth division, Sixth ward, so drunk in the afternoon he could not walk; seized a qualified voter by the collar and staggered with him against the wall; policeman brought a repeater to the polls, who was arrested, as was the policeman.

Henry Scott, marshal second division, Seventh ward, a man of bad repute; colored; keeps a low drinking house; electioneered and gave out tickets and tax receipts; was inside at the counting of the vote, and took tickets out of the box; only 5 votes came out for the Democratic candidate for Congress; Democratic overseer contested this, and Scott allowed 17 to be counted for him.

Thomas Donlan, marshal seventh division, Sixth ward, an habitual drunkard and a graduate of house of correction for this; was drunk all day.

William D. Barth, marshal, same place, blocked up the voting window and would not allow legal voters to come to it; there were two United States marshals and six policemen at the poll.

John Archer, marshal twenty-seventh division, Nineteenth ward, acted as United States supervisor; was on both lists and paid as both officers; when a marshal wanted during the day to arrest a Republican repeater he did not make known that he was a deputy marshal; had no badge; heavy Republican division; no policemen there.

Joseph T. Fuller, marshal sixth division, Twenty-third ward, a guard in the house of correction, and paid by the city.

William Stringfield, marshal thirty-second division, Twenty-fourth ward, arrested a legal voter and took him to the magistrate's, where he was discharged; Stringfield was discharged from employment the day before election for stealing.

Charles Male, marshal seventh division, Eleventh ward, keeps a house of prostitution.

Abraham Hoffman, marshal Eleventh ward, a repeater, and had kept a house of prostitution within a year; a thief.

William Eckenbrim, marshal Eleventh ward, arrested for larceny; bill ignored.

David Beckman, marshal thirty-second division, Nineteenth ward, held the Republican window-book and electioneered; threatened to put the Democratic United States supervisor out of the room for challenging a voter; the vote was rejected, and the voter did not return.

William B. Ahern, marshal ninth division, Twelfth ward, employed in the United States revenue office.

Fleming, marshal sixth division, Eighteenth ward, distributed Republican tickets and challenged voters; a legal vote was rejected on his challenge; intimidated many Democratic voters.

William Boehm, marshal eighteenth division, Twenty-ninth ward, plug inspector, and paid by the city; electioneered and distributed Republican tickets.

Charles Prenderville, marshal seventeenth division, Fifth ward, arrested a legal voter; case never tried; electioneered for Republicans all day.

This was the record of a two days' investigation at Philadelphia.

NEW YORK MARSHALS.

J. F. Baderhop, appointed by this estimable Judge Woodruff, at the instance of some of my friend's "bucket-men" in New York, some of those "shoulder hitters" and "rat-pit heroes."

Theodore, *alias* Mike Anthony, *alias* Snuffey, of 24 Cherry street, a laborer thirty-five years of age, married, and can not read or write. Anthony was arrested by Detective James Finn, of the fourth precinct, on July 24, 1870, for larceny from the person, and was held in $2,000 bail for trial by Justice Hogan. He was indicted by the grand jury on the charge on the 23d of August last.

Joseph Frazier, of 279 Water street, is a thief and confederate of thieves.

That is, a union thief. [Laughter.]

James Miller is the keeper of a den of prostitution in the basement of 339 Water street.

James Tinnigan keeps a similar den in the basement of 337 Water street.

James Sullivan, alias Slocum, keeps a house of prostitution at 330 Water street, which is a resort for desperate thieves.

Frank Winkle keeps a house of prostitution at 337½ Water street. The police are frequently called in to quell fights in Winkle's place, and it bears a hard reputation.

Now I come to a good fellow, a great chap. Of course it could not be supposed that the present chief of the supervisors in New York could appoint now any character holding as high a position as this one evidently does in that fraternity:

The radical authorities have appointed one John, alias "Bucky," McCabe a supervisor of the eighth district, Fifteenth ward. He is now under indictment for shooting a man with intent to kill. This precious "supervisor" originated here, and was first known to the police for his dexterity in robbing emigrants. His picture is in the rogues' gallery at police headquarters in this city, No. 225. He was known as Pat Maddon, alias "Old Sow," alias Honsey Nichols, alias Dennis McCabe. His real name is Andrew Andrews. His wife resides in North Pearl street, and the "supervisor" of the eighth district, Fifteenth ward, New York, is down in the directory as a citizen of Albany.

Joseph Hurtnett, supervisor Eighteenth ward. Arrested June 3, 1869, as accessory to the murder of Richard Gerdes, a grocer, corner of First avenue and Twenty-fourth street.

Henry Rail, supervisor Eighth ward. One of the principals in the Chatham-street saloon murder; went off West to escape punishment, and has only been back a few weeks.

James Moran, supervisor third district, Eighth ward. Arrested on Sunday last for felonious assault.

William (alias Pomp) Harton (colored), marshal Twenty-second ward. Arrested a few days since for vagrancy.

Theodore Allen—

It appears to me my colleague and myself have a sort of recollection of that name—

Theodore Allen, marshal Eighth ward. Now in prison for perjury, and keeps a house, the resort of panel-thieves and pickpockets, on Mercer street.

He is in jail to-day for murder, or is out on bail, being charged with murder. Now, who is this man The. Allen? He has been exported from New York into my State in order to interfere in the elections of Connecticut, not I agree by any Government action, not by action of the United States officers; far be it from me to make a charge of that character; but he is well known in our State. One of his brothers served a sentence of six or seven years in the State prison of

Connecticut. Another one of them staid in the inside of our jail at Hartford on a charge of burglary longer than he cared to, and so one night he left, and they have not heard of him since in Connecticut. His name is not in this list, but the family are a rising family of honest Republicans!

Richard O'Connor, supervisor seventh district, First ward; has been for years receiver of smuggled cigars from Havana steamer.

L. H. Cargill, supervisor ninth district, Ninth ward; tried in United States court for robbing the mail.

John Van Buren, supervisor twelfth district, Eighth ward; was at one time in sheriff's office and discharged for carrying a load of seized goods from the establishment of Richard Walters in East Broadway.

Mart Allen, marshal Eighth ward; served a term of five years in the Connecticut State prison; sentenced to Sing Sing for five years by Judge Bedford. His case was appealed, and while waiting for decision he managed to get out on bail. His case has been decided against him, and he has fled to parts unknown to ply his vocation and help the radicals elsewhere.

John McChesney, supervisor fourth district, Ninth ward; associates with thieves; bears a bad character generally.

William Cassidy, supervisor twelfth district, Ninth ward; is a street bummer, without any visible means of support.

Thomas McIntire, marshal Eighth ward; has been frequently arrested for beating his aged mother; sent several times to Blackwell's Island.

Timothy Lynch, marshal sixth district, First ward; a Washington-market lounger.

Peter Mose, marshal Sixth ward; habitual drunkard.

John Conner, supervisor first district, First ward; keeps a disorderly gin-mill, resort of lowest characters.

Francis Jordan, supervisor sixth district, First ward; lives in New Jersey; was turned out of the post-office by Postmaster Jones for bad conduct.

Bernard Dugan, supervisor eighth district, First ward; habitual drunkard. His wife left him on account of his drunkenness, and procured a divorce on that ground.

John Tobin, supervisor ninth district, First ward; arrested about six months ago for grand larceny.

Patrick Murphy, supervisor fourth district, Sixth ward; two years ago distributed fraudulent naturalization papers, and would furnish them to anybody that would promise to vote for Grant.

Edward Slevin, jr., supervisor second district, Fourth ward; has an indictment now pending against him in court of general sessions for cutting a boy named Kilkenney.

Michael Foley, supervisor fourth district, Fourth ward; well known repeater, voting for anybody that will pay.

James F. Day, supervisor seventh district, Fourth ward; shot at a man in a fight between the Walsh association and a gang from Water street.

John Conners, "alias Jockey," supervisor third district, Fourth ward; a well known desperate character.

* * * * * * *

Michael Costello, marshal Sixth ward; bounty-jumper during the war.

Harry Rice, supervisor thirteenth district, Sixth ward; was connected with the Chatham street concert saloon murder, and fled to Nebraska to escape punishment.

Thomas Lane, supervisor seventeenth district, Sixth ward; formerly keeper of a notorious den at Five Points, headquarters of thieves and robbers.

John Lane, supervisor twenty-second district, same ward; was indicted for receiving stolen goods. Has served a term in Sing Sing.

Edward Foley, supervisor sixth district, Ninth ward; arrested last year for stealing a watch.

These are a few specimens of the kind of men who will be selected to supervise our elections and certify the returns.

Now, Mr. Speaker, I have already described the manner of holding elections and of ascertaining the result in Pennsylvania, and I believe systems very similar obtain in nearly every State in the Union; a system by which the votes of the citizens are received, counted, and certified by officers elected by the people from both political parties, by which the State courts tabulate the returns and certify them to a board of return judges representing the different counties composing the Congressional district, who, in turn, certify them to the secretary of the Commonwealth, and he to the governor, who makes his certificate declaring that the person named therein received the highest number of votes and is therefore duly elected, and, after pressing the broad seal of the Commonwealth upon it, sends it, as he is required to do by law, to the Clerk of the House. That document has never yet been discredited. It always has entitled and ought to entitle a member to a seat here, at least a *prima facie* right to it; but the advocates of this bill say: We will not receive it if it certifies the election of a Democrat. It must seat a Republican or it is no good. If it does not seat a Republican then we prefer the certificate of "Bucky" McCabe, or of Madden alias "Old Sow," alias Honsey, alias Dennis, or some other dog-fighter, rat-pit hero, or thief, whose picture hangs in the rogues' gallery. [Laughter and applause.]

Now, the Clerk of the House must under pain of fine and imprisonment place the name of the person certified to be elected by the Federal officer on the roll. The act will be an outrageous fraud, but the perpetrator of the fraud will not be punished, because, as I have already shown, if he is prosecuted he will be tried by a jury of his political and possibly personal friends.

One of the most serious and well founded objections to this bill is that it takes from the people the power to regulate the manner of electing their Representatives, subject of course to the Constitution, and places that power in the Federal judiciary. The three great co-ordinate departments of the Government, the framers of the Constitution believed, should be independent of each other. The power to execute or administer a law is not one which properly belongs to the judiciary. The functions of that co-ordinate department of our Government are exclusively judicial, and should always be kept so. It has been our proudest boast, since the foundation of our institutions down to the present time, that our judiciary is wholly independent of the other departments. It is to it that we look for the vindication of our rights, for the redress of our wrongs, and for the preservation of our liberties. Every citizen of this great country, whatever may be his political convictions or party affiliations, is interested in preserving the independence and purity of our courts, and ought to protest and, if he be a patriot, will protest against this proposition to drag our ermine through the slimy pool of party politics and make it the hateful instrument for the pollution of the ballot-box and the destruction of the most sacred rights of the people.

But, Mr. Speaker, looking at this bill from the standpoint of gentlemen on the other side of this House, it may be regarded as a necessity, I mean a party necessity, and it should be entitled "A bill to continue the existence of the Republican party." That party, like all its predecessors that have antagonized the great Democratic party since the formation of the Government to the present time, must die. The agony of dissolution is rapidly approaching. Its existence has been prolonged to the present time by a stimulant commonly called "boodle," but this is becoming exhausted. The Treasury surplus is gone, the revenues of the Government are no longer sufficient to cover its expenditures, and the Wanamakers and other contributors to campaign funds, who have been made many times millionaires through a system of tariff taxation, may not consent to having the "fat fried out of them" every two years. The leaders of the party have concluded that something else must be done, and they have adopted the plan of this bill, and if it is passed they will have all they want, because they can then count the votes and can afford to be entirely indifferent as to how they are cast. The electoral fraud of 1876, the stealing of two United States Senators from Montana by the present Senate, and the unseating of eight members of this House, all of whom were lawfully elected, leave no doubt as to what that party will do if it is given the power to count the vote. It will then be invincible.

The bill, too, is designed to capture the entire negro vote of the South. The party must have it. It can not exist without it, because if it were not for the negro vote it would not carry a dozen States. [Applause on the Democratic side.] The colored people of the South are becoming very indifferent as to how they vote or whether they vote at all. We are told by the gentleman from North Carolina [Mr. EWART] that in his State not three-tenths of them will go to the polls, and that many of those who do go there vote the Democratic ticket. The Republican party can not stand this. It must have the negro vote or it will cease to exist. Supervisors and deputy marshals as numerous as the locusts of Egypt will be sent among them, and they will be told that unless they vote the Republican ticket the Army and Navy will be used to compel them to do so. But whether they vote or not will make but little difference, they will be counted all the same for the Republican candidates. That has been the rule in the contested-election cases and will continue to be the rule so long as the Republican party is in power.

Mr. Speaker, if this bill becomes a law I hope it will be put in force in every precinct of every Congressional district in the United States. I know that it is intended to be enforced only in the South and that it is made to apply to the North only to give it the appearance of fairness. If it is enforced in each State of the Union it will cost this Government not less than $10,000,000 at the first election; $10,000,000 of the people's money to be used in defrauding them and depriving them of the right of choosing their Representatives on this floor. This is a cunning scheme, but it will not succeed. The people are still the sovereigns of this mighty nation, and they will see to it that the priceless inheritance left to them by their fathers shall not be wrested from them to perpetuate the existence of a corrupt political party. [Applause on the Democratic side.]

The SPEAKER. The time of the gentleman from Pennsylvania has expired.

Federal Election Law.

SPEECH

OF

HON. RICHARD H. CLARKE,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 30, 1890.

The House having under consideration the bill (H. R. 11045) to amend and supplement the election laws of the United States, etc.—

Mr. CLARKE, of Alabama, said:

Mr. SPEAKER: This bill is aimed at the cities of the North and West and at the Southern States, and at them alone.

So far as the South is concerned it is not my purpose to enter upon any extended discussion of the truth or falsity of the charges of fraud and violence upon which it is predicated. The time allotted me is wholly insufficient for any fair discussion of the issue.

The negro vote has not been wholly free in the South. In some precincts it has been kept from the polls by the domination of the whites. In others it has not been counted as cast.

These conditions exist now to a limited extent, much less general

than in the past, and are constantly narrowing. That vote will be suppressed in some measure in sections where the whites are in considerable bodies, but are largely outnumbered by the negroes, so long as the latter remain as now the easy dupes of men who work upon their passions and prejudices and use them to establish corrupt and oppressive governments.

At the same time elections in the South are, upon the whole, as free and fair as in the North and West, and infinitely freer than the voting on the other side of this Chamber. In many of your Republican Congressional districts votes are notoriously bought.

In this Hall voters are terrorized. Have all gentlemen of the Republican side voted their honest convictions and wishes upon the tariff and silver questions? If all of you who have privately expressed your strong disapproval of this bill shall vote as you feel it will be overwhelmed. Yet, who expects you to do otherwise than demonstrate here the irresistible force of intimidation?

VIOLENCE AND FRAUD IN THE SOUTH EXAGGERATED.

That these charges are grossly exaggerated does not rest only upon the assertion of Democrats. You have had the testimony of the gentleman from North Carolina [Mr. EWART], a Southern Republican. In support of him I read the following, clipped from a late issue of the Washington Post:

Mr. M. L. Fox, who was senior editor of the Advance-Herald, Asheville, N. C., during the last campaign, and has been a life-long Republican, warmly indorses Representative EWART's position on the Federal election bill. "While elections are not fair in many parts of the South," said he, "ballot-box-stuffing and the much-talked-of violence and bloodshed are of rare occurrence, and usually the facts are distorted and exaggerated beyond recognition in reaching the North."

If I am correctly informed, the only person from Alabama who appeared before the committee reporting this bill was Threet, the contestant of my seat in this Congress. His notice of contest formulated numerous charges of both violence and fraud, from which I select only one or two of each class.

The vote of Jefferson precinct, in Marengo County, was returned as 191 for me and 168 for him. His notice of contest alleged this to have been a fraudulent count of a true vote of 269 for him and 90 for me.

Among his witnesses to sustain this charge was Garner, the United States supervisor at that poll, appointed upon Threet's nomination. He was the most material witness, and while he did not swear to knowledge of fraud, it was his evident wish to create the impression that it had been practiced; he swore to his belief of it, and that he did not know as many as ten colored men voting for me, whereas, upon the basis of the returns, there should have been about one hundred.

Upon his cross-examination the following letter was produced to him:

NOVEMBER 8, 1888.

N. W. TRIMBLE:

SIR: I hav attend the election. I did not see ennything rong abou the ejection. All that I that saw was verry correct. The Dimocrats beet us by so meany negros voting the Dimocrat tiects. Jafferson went Dimocratic by 191 to 168 Republic.

JOSEPH H. GARNER,
Supervisor of Jafferson, Marengo County, and Mobile, Ala.

To the chief supervisor of the United States,
N. W. TRIMBLE.

He acknowledged he had written it without suggestion from any one and said its statements were true.

Contestant was a third candidate for the Forty-seventh Congress, Gillette, an ex-Union soldier, being the Republican candidate and Herndon the Democratic.

Gillette contested Herndon's seat, and the latter examined Threet as a witness. He testified as to this same Jefferson precinct as follows:

Q. What was the relative strength of yourself and Gillette at that precinct?
A. Major Gillette had more supporters in that precinct than I did, although I did not poll my full strength at that precinct on account of the intimidating influences brought to bear on my supporters by the supporters of Major Gillette.
Q. What is the usual Republican vote at Jefferson precinct?
A. The Republican vote at Jefferson usually ranges from 75 to 100.
Q. What has usually been the Democratic vote at that precinct?
A. About twice as much. I speak of the previous elections.
Q. Do you think that the comparative strength of the Democratic and Republican parties was fairly represented at the last election at that precinct?
A. I do; except that I think that my own vote should have been a little larger than it was.
Q. State the vote at that precinct for Congress, if you know it.
A. Herndon, 229 votes; Threet, 10 votes; Gillette, 108 votes—total, 347 votes

It will be observed that but 12 more votes were cast in the precinct in 1888 than in 1880. The relative numbers of the two races had probably changed as little, yet the same man who declared a return of 229 Democratic and 118 Republican votes fair in 1880 denounced 191 Democratic and 168 Republican votes as fraudulent in 1888. He charged a fraudulent count at Dixon's Mills, in the same county, whereby 101 ballots cast for him and 86 for me were fraudulently counted as 118 for me and 69 for him. He did not examine a witness to sustain this charge, but himself testified as to the precinct in the Gillette-Herndon contest:

Q. Do you know, and if so state, the comparative strength of the Democratic and Republican votes at Dixon's Mills, in Marengo County?
A. I do. The Republican vote there at previous elections has not been over 20. Most of the colored men there are influenced by white men and vote the straight Democratic ticket. The Democrats have usually voted about 100 to 125. At the time I was elected to the Legislature, in 1872, I did not get a vote in that precinct, my competitor, Mr. Kimbrough, being a resident of that place.
Q. How were the colored people influenced by white men to vote the Democratic ticket?
A. By persuasion and not by any improper means.

Another of his charges might well have been the basis of a set oration in the Senate or in this House, suggesting, at the safe distance of hundreds of miles, the torch and the dagger to the negroes of the South:

SEC. 12. That in the county of Clarke, at the precinct commonly called Gainstown, the board of county election supervisors appointed inspectors and other officers of election to hold the election in said precinct.

All of these officers were present on the 6th day of November, 1888, with the necessary boxes and papers, and all the other necessary appliances for holding an election for said office, but all of said officers failed and refused to open the polls at said precinct, except one of the inspectors, L. E. Taylor by name, a colored man, and the returning officer, who was a white man and a Democrat, and your political friend. The other two were Democrats, and friends and partisans of yours. Finding that the two Democratic inspectors would have nothing to do with the election and would not open the polls, the said Taylor, who was one of the inspectors regularly appointed, called in two qualified electors of said precinct and opened the polls; all the formalities required by law were complied with, and the voting began. Four votes were polled for you and 175 votes were polled for me for said office, and 125 other legal and qualified electors were there present, ready and offering to vote for me for said office, when said returning officer, who was a Democrat and your political friend and partisan, backed by a number of others of like political faith, seized the ballot-box and refused to allow any more voting, drove the people away, and broke up the election; and the result was, no returns were made to the county board of supervisors of the election at said precinct.

The only testimony taken to support it was that of three witnesses offered by Threet, two of the inspectors and one of the clerks, who held the election. One of them, Blackwell, a colored man, was the person to whom Threet had intrusted his tickets for distribution in that precinct. Their testimony established that none of the white inspectors appointed were present at the hour for opening the polls, but that the white Democratic returning officer was on hand; that there was a rumor no election would be had; whereupon Blackwell said he had the tickets and the polls must be opened; that upon his demand the returning officer appointed him and two other colored men, Rembert and Washington, inspectors, and two colored men clerks, all of whom were selected by Blackwell; that they opened the polls and the voting proceeded quietly until about 3 o'clock, when, as detailed by the witness Dandridge, one of the clerks, the polls were closed by reason of the discovery of the inability of the inspectors to read the ballots. I quote from his testimony:

Q. What time did the polls close up there?
A. Somewheres about 3 o'clock.
Q. What caused that?
A. The voters got scarce for a while and we began to discuss who would count the tickets out from the box, and while consulting we found that our inspectors were not competent, so were at a loss how to proceed; we read some law about managing the polls, but we could not find where the clerks had any power outside of the returning officers and the inspectors, and as our inspectors were incompetent, I told Mr. Norris that our inspectors could not read the names on the tickets, and we did not know what to do, and that he being a returning officer ought to do it for us, and Mr. Norris said it was not his business.
Q. Was the box open there?
A. No, sir; we did not open it to take ballots out.
Q. What became of the box?
A. When the announcement was made that there was no election we did not know what to do.
Q. The announcement was made that there was no election?
A. Yes, sir.
Q. Who announced that?
A. Both white and colored.
Q. Was there any disorder around the polls?
A. Not that I know of, until we hung up; and then whites and colored gathered around us and told us it was not law, and said nothing we had done was legal.
Q. Had you stopped then?
A. Yes, sir; just had stopped.
Q. Were men there to vote?
A. Yes, sir; still coming.
Q. What became of the box?
A. I don't know; Mr. Norris said the box had to be taken charge of by him.
Q. When did you last see the box?
A. About 3 or 4 o'clock that evening.
Q. Did you leave the polling place then?
A. Yes, sir; I went home.
Q. The box was on the shelf?
A. I left the box on the table.
Q. You don't know what became of it?
A. I left the box on the table.
Q. You don't know what became of it?
A. No, sir.
Q. Was there any return made of that box?
A. No, sir; not that I know of.

* * * * * * *

Q. Was there any intimidation or threats of any kind made?
A. No, sir.
Q. Any violence offered?
A. No, sir; everything went on smoothly.

* * * * * * *

Cross-examination:

* * * * * * *

Q. When the colored men brought their tickets up and handed them in were they open or folded?
A. Folded.
Q. They were put in the box folded?
A. Yes, sir.
Q. They were never taken out of that box?
A. No, sir.
Q. You don't know what was on those tickets?
A. No, sir; our inspectors were found unqualified to read them; it was said that the box had to go to Mr. Norris, but for what I don't know.
Q. Did anybody whatever interfere with the conducting of that election up to the time of the closing?

A. No, sir; it was as quiet as anything I have ever seen.
Q. When the inspectors concluded to count the ballots they found that neither one of them could read or write?
A. Yes, sir.
Q. So they could not count?
A. That's it.
Q. They asked Mr. Norris to count for them?
A. I asked him to do so.
Q. He said that was not his business?
A. Yes, sir.
Q. What happened then?
A. We just stopped and talked.
Q. What did the inspectors do?
A. They remained where they were, talking.
Q. To whom were they talking?
A. Any and every body.
Q. Both white and black gathered around?
A. Yes, sir.
Q. Near the polls?
A. Yes, sir; we were on the inside and they were leaning from the outside.
Q. Was not the crowd a good humored one?
A. Yes, sir; everybody made fun of it.
Q. Both white and black?
A. Yes, sir.
Q. Both colored and white said it was no election?
A. Yes, sir.
Q. Did any of the whites tell you that you should not go on holding the election?
A. No, sir.
Q. Did any of them prevent the inspectors from counting the ballots if they could do it?
A. No, sir; we all said we would quit.
Q. Did not you all say that as you could not count the ballots that you would just quit the election?
A. We had stopped before the question come up; we were consulting together as to who would count the votes.
Q. When the inspectors could not count the ballots, and could not get Norris to count them, did not they then say they would quit and not go on any further with the election?
A. Before they said that, Rembert said so, but I don't know whether Blackwell and Washington said so or not.
Q. Did not they all leave and go off?
A. Yes, sir; every one of us disbanded.
* * * * * * *
Q. Was not the substance of the whole thing that the inspectors could not count and could not get Norris to do it, and they therefore quit?
A. That was the whole matter.

Blackwell testified that the returning officer took the box after "the confusion," without objection from the inspectors, and was in possession of it when the testimony was taken. Washington testified thus:

Q. They concluded to count them?
A. Yes, sir.
Q. While consulting about counting they found out that neither one of the officers could read and write?
A. Neither one.
Q. And they asked Mr. Norris to do it?
A. Yes, sir.
Q. He said it was not his duty?
A. Yes, sir.
Q. He had been registering voters all day?
A. Yes, sir.
Q. He was the returning officer?
A. Yes, sir.
Q. When he refused to count the votes did not they say to come on, they would just quit?
A. I don't know; when the confusion started I walked off.
Q. Were you afraid anybody would hurt you?
A. No, sir; I was not afraid anybody in Gainstown would hurt me.
Q. Nobody ever talked about hurting any one?
A. No, sir.
Q. What made you walk off; you were getting tired of the whole thing and just quit?
A. Yes, sir.
Q. Was not there a good deal of laughing going on by both whites and blacks about the men not being able to count the votes?
A. Yes, sir; the whites were all laughing and some of the colored people laughed.
Q. If the inspectors could have read the ballots was there any difficulty in the way of their counting them right then?
A. I don't think there was.

The returning officer was, under the laws of Alabama, strictly in the line of his duty in appointing the inspectors, registering voters, and taking charge of the ballot-box.

I have referred to these charges and their disproof, not because of my personal connection with them, but because their author was the one man from all Alabama heard by the committee.

In the formulation of the indictment against the South there is a singular incousistency between the real and the putative fathers of the bill. The former, in his Pittsburgh speech, and in his North American Review article says, terrorizing has passed away giving place to the easier and safer methods of ballot-box stuffing and cheating in the count. The latter [Mr. LODGE] attaches to his speech tabular statistics of population and Congressional votes. Like tables are paraded by other gentlemen on his side as their own discoveries and as establishing the guilt of the Southern whites.

A gross error as to the Congressional vote of Alabama for 1888 runs through these tables. It is stated by the gentleman from Massachusetts [Mr. LODGE] as 173,214, by the gentleman from Pennsylvania [Mr. BROSIUS] as 171,934, and by the gentleman from Ohio [Mr. KENNEDY] as 173,175. The last is the only one who states the vote by districts, so as to show how the aggregate is arrived at. He states the vote of the First district as 11,594 and that of the Second as 14,041. These were the respective numbers of votes cast for the sitting members, and he leaves out altogether the vote for the Republican candidate in each district, 7,105 in the First and 7,203 in the Second, making 14,308 votes ignored.

It is evident that the other two gentlemen are equally inaccurate. I have not attempted to verify the tables upon other points. If there were time to do so it would be useless, since the bill is founded upon a supposed political necessity rather than upon facts.

The gentlemen from Pennsylvania and Ohio [Mr. BROSIUS and Mr. KENNEDY] have selected the States of Alabama, Georgia, Louisiana, and Mississippi for their tables. Taking their figures for 1888, correcting the error as to Alabama, and Table VII of the gentleman from Massachusetts [Mr. LODGE], we have the following results:

State.	Males of voting age, 1880.		Vote for Representatives, 1888.	
	White.	Colored.	Democratic.	Republican.
Alabama	141,461	118,423	117,583	68,659
Georgia	177,967	143,471	96,046	35,476
Louisiana	108,810	107,977	86,432	26,827
Mississippi	106,234	130,278	86,814	25,609
South Carolina	86,900	118,889	63,915	10,031

These figures establish conclusively that there was no general stuffing of ballot-boxes with ballots not cast, or fraudulent count of the negro vote. It is known that the white vote of each of these States is practically solidly Democratic. If it be conceded that no negroes voted that ticket, still in no one of the States did the Democratic vote come up to 85 per cent. of the white voting population. With this large reserve of over 15 per cent., easily brought to the polls, if made necessary by a close election, there could have been no motive for stuffing or fraudulent counting.

The logic of the tables relied upon by you gentlemen therefore disproves the assertion of your leader and establishes that negro districts are carried by the whites of the South, not by cheating, but by reason of a very large percentage of the negro vote not being cast. You are driven by them to charge the suppression of that vote to intimidation rather than to fraud. Recognizing this, you have chosen to make the fight on that line in this debate.

The gentlemen from Iowa [Mr. HENDERSON] and Michigan [Mr. BURROWS], with the others, rave of butcheries.

NEGRO VOTE NOT SUPPRESSED BY VIOLENCE.

There are silent but unanswerable witnesses that support the speaker in his assertion that the negro vote is not suppressed by violence.

In 1876, when the last Southern State passed under Democratic rule, the cotton crop of the Southern States was 3,214,632 bales; this year it is over 7,000,000 of heavier bales.

In 1880 Alabama had 16 mills with 49,432 spindles, consuming, 14-702 bales; in 1889, 23 mills with 141,904 spindles, consuming 36,806 bales. In 1870 that State's output of coal was 10,000 tons; in 1889, 4,000,000 tons. In 1880 it had 10 furnaces, producing 132,000 tons of pig-iron; in 1889, 41 furnaces, producing 785,521 tons.

It exports timber to Europe, Africa, and South America. Its other products, agricultural, mineral, and mechanical, have increased in like proportion, and its wonderful industrial development within the last ten years has probably attracted the attention and excited the wonder of the world more than that of any other State in the Union. The timber kings of the Northwest, and particularly those of the State of Michigan, are eagerly seeking the pine lands of Alabama, Mississippi, and Louisiana. They now own hundreds of thousands of acres of those lands, the very cream of them, and upon them are erecting their mills and constructing their logging railroads. They can not look at us with the blood-shotten eyes of their Representative [Mr. BURROWS].

Millions of Northern capital, even of Massachusetts money, have been poured into Alabama and into the other Southern States since our Democratic governments have controlled them. These are not the reckless boasts of one interested. The Vice-President visited the South last winter while you were threatening us with this bill and had already set your "outrage mill" to grinding. Upon his return he spoke of our growth in stronger terms than I have used, saying:

I have noticed with great satisfaction the courage and enterprise which have been exhibited by the people of the Southern States and the amazing rapidity with which their fallen fortunes have been retrieved since peace was restored to our common country. That achievement is without a parallel in the history of the world. And again, the development in agriculture and in the manufacturing and industrial interests during the past quarter of a century will stand as a monument to the enterprise of the people of this section.

Your great crop, cotton, has increased to more than 7,000,000 bales. The number of cotton mills in the South ten years ago was 160, with 14,000 looms. To-day there are 14,000 mills and 215,000 looms. The mileage of railways in the South, which ten years ago was less than 20,000, is now more than 40,000. I might go on to extend these comparative figures to other industries, but those I have used fairly indicate the marvelous development of the industrial interests of this section of the country. That great development is a source of great gratification to all the other sections of the country, because the progress of the South is a material factor in the general welfare of the Union.

Can it be conceived that industry is thriving thus in States where violence rules and murder stalks abroad unreproved; where, in the ensanguined language of the gentleman from Iowa [Mr. HENDERSON], our fellow-countrymen are "butchered on 'the altar of liberty?'"

What stronger evidence can there be of the existence among us of wise, honest, and just governments, protecting "life, liberty, and property?" Have gentlemen who make such serious charges ever asked themselves how it happens that the negroes remain where they are hunted like wild beasts?

They are absolutely free to go. They move from one plantation to another, from county to county, as unrestrained as any white man in any State; sometimes they go in large bodies from North Carolina, Georgia, and Alabama, and almost invariably to Mississippi and Louisiana, where, if you are to be credited, the carnival of blood holds highest riot.

It is impossible, gentlemen, that you can believe yourselves. If you do, it is because of an ignorance that can only rest upon a willful blindness to proofs "strong as Holy Writ." Neither ignorance, nor party exigencies, nor sectional hate, hidden behind a smile and professions of friendship, can justify your war upon the peace and prosperity of the South.

SUPPRESSED VOTE OF REPUBLICAN STATES.

I have been told by gentlemen of that side of the House, for whose opinions I have respect, who would be conservative but for the intimidation of the party caucus, or perhaps I should say of the party ruler, that the Northern conscience is shocked by the suppression of the negro vote as shown by these statistics and ascribes it to the shotgun policy. I think that has been shown to be untenable in view of the industrial progress of the South. I am conscious, however, I should not content myself with disproving the theory advanced by the supporters of the bill, but should endeavor to place upon rational ground the cause of the negro's withdrawal from the polls.

Before doing that, however, it may be well to inquire whether the same condition does not exist in other States in the Republican column, and, if so, why it is not referred back to the same cause. For that I use again Table VII of the gentleman from Massachusetts [Mr. LODGE], correcting the error as to the vote of Alabama, which I have pointed out, though that inaccuracy reduced the State's proportionate vote only about 5 per cent.

States.	Males of voting age, 1880.	Vote for Representatives, 1888.	Vote cast, to males of voting age.
			Per cent.
Massachusetts	502,648	341,028	67
Vermont	93,621	68,251	71
Rhode Island	76,898	35,369	46
Nevada	31,255	12,603	40
Alabama	259,884	187,522	72
Eleven Southern (seceding) States	2,827,043	2,053,832	*73

* Nearly.

Now, if violence is the logical conclusion from the fact that 28 per cent. of the vote of Alabama remained away from the polls, how will you explain the suppression of 29 per cent. in Vermont, of 33 per cent. in Massachusetts, of 54 per cent. in Rhode Island, and of 60 per cent. in Nevada, States that send here fifteen Republicans out of seventeen Representatives?

CAUSES OF THE SMALL NEGRO VOTE.

1. The negro has been disappointed in his expectations of the Republican party and of the material benefits to follow from his exercise of the right of suffrage. At first he was eager to vote. He had been led by the agents of the Freedmen's Bureau to expect "forty acres and a mule" from the property of his late owner.

Those agents were everywhere candidates for office, dependent upon the negroes for election, organizing them into secret "loyal leagues," swearing them to vote the Republican ticket, and filling their minds with vague, vast hopes of some great good to be at once realized. The negro has seen himself abandoned by the men who used him as soon as they lost office. Even in the hey-day of reconstruction the great mass of the negro voters found that they had for their share only "the heat and burden of the day," their leaders taking the substantial spoils of the victory, a disappointment well put by the story told by one of them during the Virginia campaign of last year, and which has gone the rounds of the press:

Feller freemen, you all know me. I am Abram Jasper, a Republican from away back. When dere have been any work to do I has voted early and often. When dere has been any fightin' to do, I has been in de thickest of it. I are above proof, old line, and tax-paid. And I has seed many changes, too. I has seed de Republican up. I has seed de Democrat up. But I is yet to see de nigger up. 'Tudder night I had a dream. I dreamt dat I died and went to hebben. When I got to de pearly gates, old Salt Peter, he says:

"Who's dah?" says he.

"Abram Jasper," says I.

"Is you mounted or is you afoot?" says he.

"I's afoot," says I.

"Well, you can't come in here," says he. "Nobody's 'lowed in here 'cept dem as come mounted," says he.

"Dat's hard on me," says I, "arter comin' all dis distance." But he nebber says nothin' mo', and so I starts back, and about half down de hill who does I meet but Gen'l William Mahone. "Whar is you gwine, Gen'l?" says I.

"I is gwine to heaven," says he.

"Why, Gen'l," says I, "'taint no use. I'se just been up dar, and nobody's 'lowed to get in 'cept dey comes mounted, and you's afoot."

"Is dat so?" says he.

"Yes, it is," says I.

Well, de Gen'l sorter scratched his head, an' arter a while he says, says he: "Abram, I tell you what let's do. Suppose you get down on all fours, an' I'll mount an' ride you in, an' dat way we kin both get in."

"Gen'l," says I, "do you think you could work it?"

"I know I kin," says he.

So down I gits on all fours, and de Gen'l gets a-straddle, an' we ambles up de hill agin an' prances up to de gate, an' ole Salt Peter, he says:

"Who's dar?"

"Gen'l William Mahone, of Virginny," says he.

"Is you mounted or is you afoot?" says Peter.

"I is mounted," says de Gen'l.

"All right," says Peter, "all right," says he; "jess hitch yo' hoss outside, Gen'l, and come right in."

To sum up, the negro has found there is no royal road to riches or to learning, but that he must work out his own future slowly, patiently, and laboriously, along with those whose lot is cast with him. Uneducated to appreciate the true use and value of the right of suffrage he has lost interest in it, as a child tires of a toy.

2. The negro has been confused and demoralized as a voter by dissensions among those to whom he has looked as party leaders. He has seen such leaders working in apparent harmony in one election and in the next divided and accusing each other of the most heinous crimes.

If gentlemen will go now to the Post-Office Department, or to the Treasury, or to the Attorney-General's Office, and examine the papers filed in connection with the appointments of postmasters, district attorneys, and marshals in the South under the present Administration they will find the bulk of the documents to be charges against the party fidelity and moral character of the applicants, preferred by the others. No sooner does one become prominent than the others of the pack combine to rend him, and so conclusively are the charges proven in the great majority of the cases that the task of the appointing power is the selection, not of the most worthy, but of him having the least unsavory record. And yet these are the leaders of the Republican party South.

In my own district F. G. Browberg was the candidate of the Democratic party for the Forty-third Congress, while Benjamin Turner and Philip Joseph were in the field as Republican candidates, each denouncing the other as a traitor, both continuing to the end and dividing the Republican vote. Gillette and Threet played the same rôle in the canvass for the Forty-seventh Congress, the former indorsed as the regular candidate by the State and Congressional executive committees, the latter claiming to be the nominee of the regular convention, each more bitter against the other than against the Democratic candidate. They divided the Republican vote, and then Threet issued the following manifesto:

There are possibly in this district ten or a dozen white men who are willing to be called Republicans while there is a paying office in sight. They only come out of their holes to seek office, and at all other times are so thick with Democrats that it is impossible to separate them. There are in the district 10,000 to 12,000 stanch and true colored Republicans, upon whom falls the burden of preserving the organization of the party. These are always faithful, never wavering, and but for them there would be no Republican party here. Although the masses of the Republicans vastly prefer to be represented by one of their own race, the baker's dozen of self-styled white leaders have adopted a policy of "rule or ruin," and they so poison the minds of our people with lies that they accomplish their base purposes of confusion and disruption of the Republican party.

Throughout the campaign I had not only to encounter the inherent prejudice of the Democrats against the civil rights of my race, but also the little better concealed hostility of a large number of white Republicans.

The men he denounced were then, and those of them still living are now, the favored holders of office under Republican Administrations. Threet was the candidate against me, and was believed by hundreds of negro voters to have been a traitor to his party in the past. Because of that many of them voted for me and many refused to vote at all. At the present time there exist in Alabama two Republican factions, the Moseley and the Parsons, between whom the Federal offices are pretty equally divided. Parsons has been confirmed as United States district attorney for the middle and northern districts of Alabama. In December last, while his nomination was still pending before the Senate, the following paper was filed with the Judiciary Committee of the Senate:

At a mass convention of the colored Republicans of the city of Birmingham the following proceedings were had:

G. W. Johnson was elected chairman and Berry Crawford secretary.

On motion the following preamble and resolutions were unanimously adopted, to wit:

Memorial to the Senate of the United States regarding Louis E. Parsons, jr., who has been nominated to be district attorney for the United States for the northern and middle districts of Alabama.

Whereas said Louis E. Parsons, together with certain other parties, met at Birmingham, Ala., in secret conclave March 13, 1889, and issued certain white Republicans an invitation to attend a conference at Birmingham April 10, 1889, all of which invitations were marked "personal" and countersigned "Louis E. Parsons;" and

Whereas the avowed purpose of said conference was to organize a white league in the State of Alabama and to exclude all colored men from participating in Republican meetings and conventions and from any participation in public affairs, and as far as possible to disfranchise colored men generally; and

Whereas said conference did meet in Birmingham on April 10, 1889, and did sit with closed doors, guarded by a policeman, who demanded of each person who proposed to enter the house wherein the conference sat the exhibition of an invitation by said Parsons as a pass, and also a pledge, in substance, as follows: "I am in favor of the formation of a white Republican league and agree to abide by the action of this convention," without which invitation or pass and pledge no one was permitted to enter; and

Whereas no colored man was either invited or permitted to enter said conference; and

Whereas said white league conference went through the forms of constructing a State organization, with branches in each county, for the express purpose of driving the colored men out of the Republican party and of disfranchising them as aforesaid, and this in direct opposition to the regular Republican organization of Alabama; and

Whereas said Parsons was the instigator and prime mover of said white league movement and is the corner-stone and backbone thereof; and

Whereas said Parsons at the last Republican State convention, at Montgomery, Ala., in May, 1888, in a speech in open convention, used language in substance as follows: "I will never attend another Republican convention in which the negro is allowed to participate, so help me God," the white league movement and the oath aforesaid being in full accord with his past record: Now, therefore,

Be it resolved by the colored citizens of Birmingham, Ala., in mass convention assembled, as follows:

First. That it is the sense of this meeting that the appointment of said Parsons was a mistake, and that his confirmation by the Senate would be an insult to the colored voters of the United States, and would produce a serious loss of voters to the Republican party in all the States.

Second. That said Parsons's white league movement is a direct stab at the rights, privileges, and citizenship of the colored people, and an attempt to reverse the results of the late war, and to nullify the Constitution and laws of the United States, under which we hold our civil and political rights.

Third. That we, in the name of more than a million of loyal colored Republican voters, who have always been true to the party, do respectfully but earnestly protest against the confirmation of said Parsons, and pray that his nomination be rejected.

Fourth. That a copy of this preamble and resolutions be forwarded to Hon. GEORGE F. EDMUNDS, as chairman of the Judiciary Committee, with the request that he lay the same before the Senate.

G. W. JOHNSON, *Chairman*,
BERRY CRAWFORD, *Secretary*.

Walker had been appointed marshal for the middle and southern districts of Alabama. The same convention adopted still stronger resolutions against him, and filed them also with the Senate Judiciary Committee.

The Republican State convention, held in Montgomery within a few weeks past, nominated as candidates for governor and secretary of state men who are ineligible because they had not resided in the State for the period prescribed by the constitution. They were therefore withdrawn and other candidates nominated by the State executive committee. The convention nominee for attorney-general declined in the following letter:

I wish to make it public that I can not accept the nomination for attorney-general tendered me by the recent so-called Republican convention. I am a Republican, and I would feel it an honor to accept a nomination made by a convention of the Republican party. As an eye-witness I know that the recent meeting at Montgomery was not such a convention. Excepting a few gentlemen (who were there by mistake) it was a meeting of negro politicians and deputy revenue collectors. An instantaneous photograph of the meeting would be a political education to those in power who made such a meeting possible. If a time comes when such assemblages are not recognized as representing the party, a convention could and would assemble in Alabama that would at least command the respect of the country.

3. The former white local leaders and organizers of the Republican party in the South deserted the negro as soon as they found they could not hold office; "carpet-baggers" and "scalawags," having stolen every thing else, "stole away." In the county of largest negro population in my district, their vote being about 5,000, there are not, so far as I know, two white Republicans, certainly not a single active one.

4. The Republican negro is constantly pressed by his white employer to stay away from the polls. The Republican candidate is generally one of the few white men among us left over from the reconstruction period, an office-holder under that dynasty, or a negro professional politician, one of the class familiar to you as delegates to the national conventions. Invariably his political stock in trade is the fomentation of the negro's passions and race prejudices. The white man views his candidacy as a menace of the revival of the wrongs of 1868-1874. He regards the negro's support of such a candidate as inimical to law, order, and prosperity, and he presses that upon the negro with a persistency and moral force born of sad experience.

Some of the negroes have come to understand that the friendship of their white neighbors is all-important to them. On that they must rely for the education of their children; for the proper administration of justice in the courts, which exercise power over their lives, their liberty, and their property; for employment; for meat, drink, and clothing. What can they do but yield, even though reluctantly? Is it to be wondered that under all these influences, the negro, disappointed, bewildered, a child in judgment and will, follows the lead of the employé class of Massachusetts and Rhode Island, and stays at home on election days?

INCREASED VOTE OF 1888.

The gentleman from Massachusetts [Mr. LODGE] criticises the increase of Alabama's Congressional vote for 1888 over that for 1886. It is easily explained. In 1886 there was nothing in it for the Federal office holders and seekers of Alabama, and they took absolutely no interest in getting out the vote. In 1888 they "whooped up" the negroes, not with any expectation of success, but as the basis for Federal recognition of party service.

COMPARATIVE VALUES OF VOTERS.

To prejudice the Northern mind gentlemen on the other side deduce from their tables the conclusion that the average Southern voter is wielding much more influence in national councils than the average Northern voter. The gentleman from Ohio [Mr. KENNEDY] laboriously figures it out as 2.4 to 1. As representation is based upon population, and not upon the number actually voting, the test is unfair. But apply it to some Republican States, taking the tables of the gentleman from Massachusetts [Mr. LODGE] as to the Congressional vote of 1888. The average number of voters electing a Representative in each of the following States, was:

Nevada	12,603
Rhode Island	17,684
Massachusetts	28,419
Minnesota	52,462
California	61,889
Nebraska	67,673
Colorado	92,009

That is, 1 voter in Nevada had the power of more than 4 in Minnesota, nearly 5 in California, more than 5½ in Nebraska, and more than 7 in Colorado.

In Rhode Island 1 equaled nearly 3 in Minnesota, more than 3½ in California, nearly 4 in Nebraska, and more than 5 in Colorado.

Each single voter of Massachusetts balanced 1½ in Minnesota, more than 2 in California and Nebraska, and more than 3 in Colorado.

The gentleman from Massachusetts [Mr. LODGE] compares the Southern vote with that cast for each of the following-named gentlemen for this Congress:

Colorado (Mr. TOWNSEND)	92,009
Seventh Kansas (Mr. PETERS)	82,000
Fourth Minnesota (Mr. SNIDER)	82,000
Third Nebraska (Mr. DORSEY)	77,000

Let me add, for comparison, several others:

Sixth Massachusetts (Mr. LODGE)	34,791
Eighth Massachusetts (Mr. GREENHALGE)	26,221
Tenth Massachusetts (Mr. Walker)	26,849
Seventh Iowa (Mr. CONGER)	23,011

These are not selected as the smallest votes received by Republican Representatives. In fact, the Sixth Massachusetts district cast a larger vote than any other in the State. The Republicans of Colorado who demand free silver will note that the three gentlemen from Massachusetts had behind them only 87,861 to 92,000 for the Representative from Colorado; yet they cast 3 votes against silver to his 1 for it. The four gentlemen whose immense vote at home and small vote here the gentleman from Massachusetts brings forward with so much complacency represent constituencies who are ground down by the restrictions upon the coinage of silver. They had behind them 333,000 votes, and were overwhelmed by the twelve Representatives of Massachusetts, representing only 341,028 votes and bent upon placing every possible burden upon silver. The House conferees upon the silver bill [Messrs. CONGER and WALKER] represent only 59,860 votes, not two-thirds of the vote of the Representative from Colorado; about three-fourths of the vote of the gentleman from Nebraska; yet of incomparably more weight in the settlement of that great question! How shall this disparity be equalized? Is there a remedy for it in this bill?

WHITE DOMINATION NECESSARY FOR THE PRESERVATION OF CIVILIZATION.

Mr. Speaker, if it be granted that there is a general suppression of the negro vote either by fraud or by violence, it is well worth the while of statesmen who should legislate for a country rather than a party, and for the future as well as the present, to inquire into the causes which have brought about such a condition, to forecast the consequences of such extreme legislation as is contemplated by this bill, and to consider whether so desperate a remedy may not be worse than the disease. It is not every ailment that the skillful physician treats heroically; more frequently he leaves the cure to be worked out by the healing influences of time and natural causes, watching and guiding rather than cutting.

The whites of the Southern States number among themselves many God-fearing and patriotic men. While they have their share of lawless and desperate men, enemies of the peace and security of society, they, upon the whole, are a fair average of American intelligence, worth, and patriotism, such as any country would be glad to take into its population.

More than ten millions of such people can not lightly have resorted to such courses as are charged upon them, can not have persevered in them unless under some powerful conviction of overmastering necessity.

It is known of all men that they believe that in three of their States and in many counties in each of the others they are threatened with negro domination, and they further believe that to be the most fearful calamity which can befall a civilized people. You profess to doubt the sincerity of that apprehension and hold it absurd if genuine. You treat it as a bugaboo conjured up to mislead the world and to justify the indulgence of evil passions, as "a stalking-horse," behind which we defraud the whites, as well as blacks, of their rights.

Is this fear of negro rule a pretense? or, if not, is it a cowardly dread, not justified by the situation? It rests upon two propositions:

1. That the negro will, as a race, seize the governmental control of States, municipalities, and counties, where he has the numerical majority, as soon as he finds he can do so without any other trammel than his own inclinations.

2. That at present negro control in the South means corrupt and oppressive government, under which no considerable body of white men

can live, and which will therefore inevitably bring about either white abandonment of the sections where the negro is in the majority or else armed revolution.

Let us consider these two propositions in the light of the history of other portions of the world where anything like analogous conditions have existed, and of the reconstruction experience of the Southern States.

You have but to turn your eyes to the black Republic of Hayti, where the negro has had sway for a hundred years and where no white man is allowed to own land.

But we need not go to other lands or times for instruction. The very States in which you propose that this bill shall find its chief field of operation know by bitter experience that the negro will not hesitate to grasp power when safe opportunity offers. He is a human being, and therefore loves authority.

RECONSTRUCTION OF SOUTH CAROLINA.

I can not take up the history of reconstruction in each of the Southern States. Indeed, I can only touch upon it in one, but in that one, the State of South Carolina, we have the most thorough test that could have been given to negro rule. It was, of all the States, longest and most completely given over to them; they were there drunken with power, more extravagant in their excesses than elsewhere; and the story of their misrule is told by one who was upon the ground from first to last, and during a part of the drama was one of its principal actors, with unrivaled opportunity for observation, keen discrimination in judging, and rare powers of description. I refer to the last reconstruction governor of South Carolina, Governor Chamberlain, and the history upon which I mainly rely and from which I shall chiefly quote is Allen's Governor Chamberlain's Administration in South Carolina.

The convention which convened in January, 1868, under the reconstruction acts to frame a State constitution was made up of 34 whites and 63 blacks. The first Legislature, which assembled July 9, 1868, was composed of 157 members, of whom 72 were white and 85 were colored; 21 were Democrats and 136 were Republicans. Of the Republicans there were, therefore, 85 negroes and 51 whites, clearly a good working majority of colored men. No need to turn any one out.

I have no detailed statement as to the Legislatures of the second term of Scott and the term of Moses, but they were overwhemingly Republican and dominated by negroes. In 1874 a Legislature was elected along with Governor Chamberlain; of its 157 members 104 were Republicans and 53 were Democrats. Of the 104 Republicans 76 were negroes, so that with an overwhelming majority in the party caucus they controlled absolutely all legislation. The speaker of the House was a negro, so it may fairly be presumed that he was, or at least claimed to be, "the State."

It will thus be seen that the negro was disposed to seize and use power. How did he use it?

OPPRESSION AND CORRUPTION.

The first reconstruction administration, with Scott at the head as governor, took office July 9, 1868. I quote from Allen:

At this date the entire funded debt of South Carolina amounted to $5,407,306.27. At the close of the four years (two terms) of Governor R. K. Scott's administration, December, 1872, the funded debt of the State amounted to $18,515,033.91, including past-due and unpaid interest for three years. During the period of this administration no public works of any appreciable importance had been begun or completed. The entire increase of about $13,000,000 may be said to represent only increased, extravagant, and profligate current expenditures.

Some light is thrown upon this vast increase of debt by the following extracts from Governor Chamberlain's inaugural address. It must be borne in mind that he commenced the seventh year of reconstruction government, Scott having had four years and Moses two:

ARBITRARY AND EXCESSIVE VALUATION FOR TAXATION.

Grave dissatisfaction with our tax laws has existed during the past six years. The most general and urgent complaint has been that the valuations placed upon the property of the State have been, to a large degree, capricious and excessive. It has also been believed that excessive valuations have been made in order to conceal the real extent of the burden of taxation. Without attempting to discuss the motives which prompted those who enforce the law, I express the opinion that the valuations made previous to the present year have been, to a great extent, unjust and oppressive. Whatever the causes, the result has been that property has borne a valuation almost wholly arbitrary when different localities or separate pieces of similar property are compared, and excessive in amount when tested by any reasonable standard of value.

CORRUPT EXPENDITURES.

During the past six years there has been appropriated and paid for contingent funds the astounding sum of $376,882.74. I venture the opinion that the State would have received equal benefit from one-fifth of that sum, if expended with economy upon proper objects. In practice, a contingent fund is a sum of money which a public officer is allowed to draw and expend without the usual accountability. Some governments deem it necessary to intrust certain officers with a fund commonly called the "secret-service" fund, which may be expended for objects which might be defeated by publicity. I confess I am wholly unable to imagine any such objects in South Carolina.

LEGISLATIVE EXPENSES.

Since 1868 six regular and two special sessions of the General Assembly have been held. The total cost of those sessions has been $2,147,430.97. The average cost of each regular session has been $320,405.16. The lowest cost of any regular session was that of the regular session of 1868-'69, amounting to $160,-005.79, and the highest cost was that of the regular session of 1871-'72, amounting to about $617,234.10. Besides these amounts now specified, there are outstanding of bills payable, issued on account of legislative expenses during the same period, $192,275.17. These figures render comment superfluous.

* * * * * *

The third and most important means of reducing legislative expenses will be found in cutting off the gross abuses which have heretofore existed under the name of contingent or incidental legislative expenses. I am unable to obtain a statement of the precise amount expended during the last six years under this head. I find, however, that the average expenditure at each regular session since 1868 for attachés and contingent or incidental expenses has been $258,424.65. Of this amount I estimate that not less than $100,000 have been expended for contingent legislative expenses at each regular session. If these figures do not teach their own lesson, then argument would be idle. Let it be borne in mind also that the amounts now stated represent only the actual payments made. There remains still a vast amount of unpaid claims in the form of legislative-pay certificates, estimated at not less than $500,000.

How a portion of these vast sums was expended is set forth in "Reconstruction in South Carolina," in Noted Men on the Solid South, the author of the article being our colleague from South Carolina, Mr. HEMPHILL:

When the Republicans first met in Legislative Assembly in 1868 they used the same building which the whites had occupied before them and furnished the halls in an inexpensive manner and one best suited to the impoverished condition of the State. As soon, however, as they were more firmly fixed in power and became more accustomed to making appropriations from public funds they exhibited most luxurious taste. They undertook to furnish anew the halls of legislation in the state-house. For clocks that cost $5 two years previous they substituted in 1871 and 1872 clocks at $600; for forty-cent spittoons, eight-dollar cuspidors; for four-dollar benches, two-hundred-dollar crimson sofas; for one-dollar chairs, sixty-dollar crimson plush gothic chairs; for ten-dollar desks, one-hundred-and-seventy-five-dollar desks; for four-dollar looking-glasses, six-hundred-dollar mirrors, etc.

The entire bill for furnishing the hall of the house of representatives was over $50,000, and the Legislature, thinking that entirely too small, appropriated $95,000 to pay for it. Within the past year this hall has been nicely furnished anew at an expense of $3,061.

The total amount paid out for furniture alone in four years was over $200,000, and in 1877, when this question was investigated, there remained in the state-house only $17,715 worth as appraised at the prices originally charged for it. At least forty bed-rooms were furnished at the expense of the State, and some of these as often as three times.

Another item of expense was designated "supplies, sundries, and incidentals," and this amounted in one session of the Legislature to $350,000. Of this sum $125,000 was spent in maintaining a restaurant in one of the committee rooms of the capitol, including liquors and cigars, to which all officials and their friends helped themselves without cost except to the tax-payers. This restaurant or bar-room was kept open every day for six years, from 8 o'clock in the morning till 3 o'clock the following morning.

During the six years, from 1868 to 1874, that Scott was the governor of the State, F. J. Moses, jr., was the speaker of the house of representatives.

His chief mode of illegally procuring public funds was by the issue of pay certificates, which under the law the presiding officers of the two houses of the General Assembly were authorized to issue for the payment of the salaries of the members and senators and attachés of the two Houses. Out of this power and the constant exercise of it grew up what was familiarly known as the "legislative ring."

This "ring" was composed of the presiding officers and clerks of the house and senate, together with the State treasurer and some minor officials. These certificates could be issued legally only for the payment of members and attachés of the General Assembly; but soon it became the regular means by which the members of this ring kept even with their associates of the other rings in the general plundering of the State. Eight porters were employed in the state-house and certificates issued to 238; 10 messengers employed and certificates issued to 140 at one session and 212 at another; 8 laborers and 5 to 10 pages were actually in service, while certificates were issued to 159 laborers and 124 pages. Of one lot of 150 certificates nominally given to clerks not one was legal. During one session pay certificates were issued amounting to $1,168,255, all of which, except $200,000, was pure and unfurnished robbery.

Moses admitted under oath that at the request of John. J. Patterson he had issued at one time to the latter, who was not a member of the General Assembly, $30,000 in certificates upon his paying to him $10,000 in money therefor.

I quote further from Governor Chamberlain's inaugural address:

PUBLIC PRINTING.

The cost of the permanent and current printing from 1868 to the present time was $843,073.59. The cost of advertising the statutes, that is, of printing them in the newspapers, for the same period was $261,496.32; making a total cost of $1,104,569.91. During the past three years the cost to the State of permanent and current printing was $743,993.20 and the cost of printing the laws in newspapers for the same period was $174,696.66, making a total cost to the State of $918,-629.86. Deducting from this last amount such items of printing as may be called extraordinary, including the republication of certain volumes of the statutes at large, the printing of the ku klux trials, immigration reports, tax duplicates, and supreme court decisions, amounting to $375,000, there remains as the cost of printing for three years the sum of $543,629.86, or an average annual cost of $181,209.95.

I offer no comment on these statistics. The only appropriate inquiry is, how shall such results be prevented hereafter? I answer, by exterminating the present system, root and branch, and substituting a safe and economical system.

Mr. HEMPHILL's article treats of the same subject:

The total cost of printing in South Carolina for the eight years of Republican domination, 1868 to 1876, was $1,326,589. Total for printing for seventy-eight years previous, 1790 to 1868, was $609,000; showing an excess for cost of printing in eight years over seventy-eight years previous of $717,589.

The average cost of the public printing under the Republican administration per year was $165,823; average cost per annum under former administrations, $7,807; cost for one year under Hampton's administration, $6,178.

Amount appropriated in one year, 1872-'73, by Republicans for printing, $450,-000; amount appropriated in twenty-five years ending 1866, $278,251; excess of one year's appropriation over twenty-five years, $171,749.

* * * * * * *

The cost of printing in South Carolina in one year exceeded by $122,932.13 the cost of like work in Massachusetts, New York, Pennsylvania, Ohio, and Maryland together.

* * * * * * *

Of course all these immense sums did not reach the pockets of the "ring." A large part of them had to be paid to senators and members to smooth the way for their bills through the Legislature. For the passage of one printing bill for $250,000 they paid to members and senators and others various sums aggregating $112,550.

CIVIL OPPRESSION.

It was not by thievery alone that the people of South Carolina were oppressed. The constitution provided for the election of justices of the

peace by the people. Scott and Moses ignored that and appointed them. Of them Governor Chamberlain said:

When I came into office there were at least two hundred trial justices in the State who could not read or write. The duties of a trial justice here are precisely the same as the duties of justice of the peace in other States. Yet previous governors had appointed and commissioned over two hundred men to the important duties of this office who could not write or read a word of the English language. It was a farce and a fraud; for how can men thus ignorant intelligently try causes, civil and criminal, brought before them? The idea seems to hold that men must be rewarded for political service by giving them office, whether they are fit for the office or not. For instance, all the members, senators and representatives, from Edgefield County united in an application to me to appoint a certain man there notary public. It requires a man who can at least write his name to fill that office, and I did not think but what the applicant was qualified, he was recommended so highly. I appointed him, and a few weeks after accidentally saw an official document from him, going to a distant State, to which he had made his mark, not being able to write his name. I revoked his commission.

MILITARY RULE.

Governor Scott gave to the people of South Carolina a foretaste of the deputy marshals contemplated by this bill. I again go to Mr. HEMPHILL's article:

Ninety-six thousand colored men were enrolled in military companies throughout the State, the simple enrollment costing the State over $200,000. * * * There were only two or three white companies in the State, and they were ordered by Governor Scott to surrender their arms and disband; and fourteen full regiments of negroes were organized before the election. These were fully armed and equipped and ammunition issued to them, as upon the eve of battle.

Before a committee of the Legislature Ex-Governor Moses testified as follows, with reference to organizing the militia:

The militia was organized and armed for political purposes by the advice and consent of Governor Scott, and I was commissioned by Governor Scott to proceed to Washington and procure all the arms and accouterments possible from the United States Government, and at the same time purchase ammunition and make the contract referred to. The object was to arm and organize the militia for the campaign in 1870.

John B. Hubbard, the chief constable, testified before a legislative committee, in 1877: "It was understood that by arming the colored militia and keeping some of the most influential officers under pay, that a full vote would be brought out for the Republicans, and the Democracy, or many of the weak-kneed Democrats, intimidated. At the time the militia was organized there was but, comparatively speaking, little lawlessness. The militia, being organized and armed, caused an increase of crime and bloodshed in most of the counties in proportion to their numbers and the number of arms and amount of ammunition furnished them."

Again, the chief constable says: "Ostensibly the object of the constabulary force was for the preservation of the peace, but in reality it was organized and used for political purposes and ends. Governor Scott would order me to send men to any county where the Republican party most needed encouragement and reorganization. The deputies were authorized and instructed to attend all political meetings and report the political condition of the county to me, and I would report the same to the governor."

With reference to this "constabulary" (deputy marshal) force, I quote again from Allen, the time mentioned by him being January, 1875:

Just at this time occurred an outbreak of race antagonism in Edgefield County of the kind that had been frequent hitherto. Commonly they had been suppressed by assuming that the colored people were being wickedly persecuted without cause and calling upon the National Executive for troops to put down "domestic insurrection." The State militia, an irresponsible and undisciplined force, organized by Governor Scott more as a partisan weapon than a means of preserving the peace of the State, was under arms in the county, and already one or two lives had been lost in collisions between the militia and the white citizens, who, on their part, were organizing rifle clubs. The situation was serious. Governor Chamberlain resolved to deal with this trouble regardless of parties or races, and by establishing justice to restore peace and security, if possible, without an appeal to the President. To that end he took immediate steps to ascertain the real occasion of the trouble. He sent Judge Thomas J. Mackay, an able white Republican and a native of the State, to Edgefield County to make an investigation. Judge Mackay reported that the county authorities had been guilty of gross abuses and exactions which the people resisted, and, further, that the difficulties were aggravated by the lawless behavior of the colored militia, the officers being in the habit of calling out their men under arms to enforce arbitrary proceedings of petty officials and even to settle personal difficulties. He recommended that the militia be disarmed. Whereupon the governor issued the following proclamation.

That was an order disbanding the State militia in that county.

The Hamburg "massacre" grew out of a collision between a drilling company of the same colored militia and whites, and the wonder is that it was so long delayed.

Governor Chamberlain's administration was an honest and intelligent effort to restore good government to the State. He was the bravest, ablest, and honestest Republican whom the North ever sent down to the South, and, in my judgment, an honor to American manhood. In his efforts to stop their plundering he encountered the opposition of the great majority of his party. He whipped some into standing by him, and with the manful and hearty support of the Democratic—then called Conservative—members of the Legislature, press, and people, was able to work some salutary reforms. In August 1875, he said, in acknowledgment of their aid:

I have never failed to give full credit to the conservative press of the State for their hearty support of my course. They have shown the best of spirit and have rendered effective and absolutely indispensable aid. * * * In my visit to the North recently I heard but one voice, that of approval of my efforts and approval of the wise, prudent, and statesmanlike attitude of the South Carolina conservatives.

But in December, 1875, there fell upon his administration the "horrible disaster," as he termed it, of the election of "two infamous men as judges, Moses and Whipper."

It occurred on a day when he was absent. The negro speaker of the house had led him to believe the election would not be had until his return. How the assurance was kept, let Allen tell:

When Whipper was chosen, R. B. Elliott, speaker of the house of representatives, a colored carpet-bagger from Massachusetts, an ex-member of Congress, a person of considerable education, superior oratorical power, and unsurpassed influence as a politician among his people, seconded the nomination and declared that he should regard the vote on it as a test of fidelity to the Republican party.

Whipper was a negro, and was elected judge of the Charleston circuit. Of the two men, Governor Chamberlain thus spoke in a letter to Senator Morton in January, 1876:

Moses was my predecessor as governor. Unless the universal belief among all classes of people in this State is mistaken, he is as infamous a character as ever in any age disgraced and prostituted public position. If there is anybody in Washington who shall happen to deny this, I will prove it to your abundant satisfaction. Of Whipper it can be said that he seems to have lacked only opportunity to prove himself the equal of Moses in infamy. Ignorant of law, ignorant of morals, a gambler by open practice, an embezzler of public funds, he is as unfit for judicial position as any man whom by any possibility you could name.

By the effect of this election upon Governor Chamberlain himself an estimate can be formed of the "thrill of horror" sent through the State.

Six days later he sent this telegram to the New England Society, then in session in Charleston:

COLUMBIA, S. C., *December* 22, 1875.

To the New England Society, care of William S. Hastie, jr., Charleston, S. C.:

I can not attend your annual supper to-night; but if there ever was an hour when the spirit of the Puritans, the spirit of undying, unconquerable enmity and defiance to wrong ought to animate their sons, it is this hour, here, in South Carolina.

The civilization of the Puritan and the Cavalier, of the Roundhead and the Huguenot, is in peril. Courage, determination, union, victory, must be our watchwords. The grim Puritans never quailed under threat or blow. Let their sons now imitate their example.

God bless the New England Society!

D. H. CHAMBERLAIN.

Writing in February, 1876, to Mr. Blackwell, the editor of the Woman's Journal, he said:

The great and constant pressure of duties less remote than this one in their immediate nature kept me from replying at length before the assembling of the Legislature.

You know the rest. Disasters greater than you can conceive of in good old New England—wrongs which literally "stir a fever in the blood of age" and which, in Massachusetts, would, I firmly believe, excite violence and mob law—have fallen upon us. I have not an hour's time to look away from this fearful fight for civilization.

It is evident he then thought armed resistance to such an outrage justifiable, if necessary.

There started the overthrow of the Republican party in South Carolina. It demonstrated to the world that its leader could not impart to it honesty or decency.

In the face of the storm of indignation which such action aroused it could not do else than renominate Mr. Chamberlain, but it placed upon the ticket with him Speaker Elliott, and was backed up by Whipper and Moses and all their followers. The weight was too much, and Governor Chamberlain necessarily went down with the others.

RECONSTRUCTION IN OTHER STATES.

Such was its history in South Carolina. In other States it was as bad.

The State debts were increased by it; Alabama, from $8,000,000 to $25,000,000; North Carolina, from $16,000,000 to $42,000,000; Georgia, from $5,800,000 to $18,000,000; Louisiana, from $7,000,000 to $42,000,000. Every other State suffered more or less. In no one of them was a single public work of importance begun.

But there is no need to recite the infamies of the reconstruction governments. You gentlemen recognize them as the disgrace of the age. You answer every reference to them by saying it is impossible that such conditions shall again prevail. That is true. But why? Because between christianity, civilization, order, and progress on the one side and such misrule on the other, stand in a solid body the white men of the South ready to do all, suffer all, and sacrifice all rather than pass again under that yoke. In the words of Governor Chamberlain, we face that issue in "the spirit of undying, unconquerable enmity and defiance to wrong. The grim Puritans never quailed under threat or blow." We shall "imitate their example."

UNCONTROLLED NEGRO MAJORITIES WILL AGAIN ESTABLISH SCOTT AND MOSES GOVERNMENTS.

Why not? The spoils of the South are far richer now than in 1868. Are there no political adventurers left in the North to seize their carpet-bags and swoop down upon us as soon as they shall see the opportunity to use ignorance to secure power? Are all the "scalawags" dead? I see around this Capitol some familiar faces that wear a very hungry aspect.

The vast majorities of the negroes of the South are as uneducated now as in 1868. They are now, as then, the easiest dupes a demagogue ever had. You claim 95 per cent. of them are Republicans. If so, they will follow their leaders, and such as they have are the very same men they had in 1874, or their worthy successors. Will they not lead them into the same courses? When their own nominee for attorney-general in Alabama denounces in such terms the State convention of his party,

what could the people of the State look for from such a party again in power?

No, gentlemen, the fear of negro rule is neither pretended nor ridiculous.

JUSTICE TO THE NEGRO.

You call on us to do justice to the negro, to give him a trial. That must mean, though you say it does not, to give him, where he is led to band together, governmental control of States and counties, as well as of Congressional districts, where he has the numerical majority. Was his absolute sway in South Carolina for eight years no trial? Would he be an untried experiment in Georgia, Alabama, Mississippi, and Louisiana? Many of you on that side admit privately the absolute necessity of white control of State affairs.

The gentleman from Massachusetts [Mr. LODGE] suggests an educational qualification of the right of suffrage. Will he tell us how South Carolina and Mississippi can do that, giving to every negro "a free ballot and a fair count" upon the proposition? He intimates that we can do so with the power that we now exercise. He insists that the negro is deprived of his rights by the minority at each election, which is a fearful outrage, and then invites the minority to take away all those rights at one fell swoop!

NATIONAL CONTROL BY THE WHITES.

The Speaker, in his efforts to force the country up to this bill, to which I have referred, says it is all very well to urge the danger of negro control in State affairs, but that no such fear can be used to excuse the suppression of the negro vote in Congressional elections; that at the outside the negro districts can not elect forty members of this House. The gentleman from Massachusetts [Mr. LODGE] echoes this reasoning. They both tacitly admit that the negro can not be trusted in his present condition to elect a member of a Legislature or a governor of a State, but insist that he shall choose Presidents and Congressmen. Not fit to govern a State, let him rule, by the use of the balance of power, the whole country!

The country can easily comprehend how useful to ambition, to the lust of power would be twenty negro Representatives in this House. Even Speaker Elliott, of South Carolina, knew how to use them.

Is not the Republican party in a bad way if it can not rule this country through and with its white men, if it must call to the aid of its white minority the negro vote to rule the white majority? Can it hold power upon that basis?

REPUBLICAN SACRIFICE OF THE NEGRO.

The Speaker, the gentleman from Massachusetts [Mr. LODGE] and others on that side throw out very cunningly a suggestion to us by way of compromise, that all you want is the count of the negro for the Republican candidates in Congressional elections. Give you his vote then and you will leave us to work our will upon him in our State and county elections; leave us to make and enforce the laws that deal with his life; that thrust him into the penitentiary door; that tax his property; that may make him happy or miserable. Is not that rather a cowardly course for the Grand Old Party?

Yet it is not the first time it has sacrificed the negro to retain power. In 1876 it traded him off to the Southern whites for the Presidency. Then disorder prevailed in South Carolina; a hundred homicides were then common where one is now rare; the whites stood with their rifles in their hands, driven to the wall and desperate; Federal troops surrounded the capitol. If there ever was a time when Federal intervention seemed justifiable it was then. Yet you withdrew your troops and abandoned the negro, simply stipulating for the quiet installment of Hayes.

Mr. Speaker, when we shall have educated the negro sufficiently to enable him to discern great political truths, what will he think of your proposition? Will he be grateful that you use him, bring down upon him the resentment and fire of your political enemies, and then, so soon as you have secured the camp plunder, desert him?

NEGRO DOMINATION OF NATIONAL AFFAIRS AND WHITE CONTROL OF STATE GOVERNMENTS INCONSISTENT AND IMPOSSIBLE.

Mr. Speaker, the State and Congressional elections of many of the States occur at the same time and the ballots are polled in the same boxes. By what process will you count, certify, and return a Congressional district for the negro for Congress and the white Democrat for governor? Do not say that I am asking you how cheating can be made easy. It is your own proposition that 95 per cent. of the negroes are Republicans and must select Representatives in black districts, and that the whites shall control the local governments. How are you going to work that out?

In Alabama the State elections are held in August, the Congressional in November. You suggest that we surround the August poll-boxes with our white deputy sheriffs, install our white inspectors, put in force all our own machinery, and suppress the negro vote so far as may be necessary to retain control and to secure the continuance of good government.

On the other hand, you purpose to place in November your negro supervisors over our white inspectors, your negro deputy marshals over our white deputy sheriffs, and to count as you wish.

I say negro election officials, Mr. Speaker, because you can not find in any district in Alabama where the negroes are in the majority enough white Republicans to take charge of one-fiftieth part of the polls.

DISORDERS AND BLOODSHED THE RESULTS OF THE ENFORCEMENT OF THE BILL.

Such is the deliberate judgment of the thoughtful men of the South. There are in both races indiscreet men. A negro constabulary of deputy marshals, negro supervisors of election, "dressed in a little brief authority" can not fail in some instances to exercise it offensively. On the other hand, the excitable among the whites will be ready to take offense.

You can not put tow and fire so together and have no flame. I am aware that this is an argument which will have no great weight with the leaders pressing this bill, because the danger does not touch them or their interests. They are politicians, not business men. They, with all dear to them, are far from the field of any such conflict. Gentlemen from Maine and Massachusetts may with perfect safety to themselves and theirs, and doubtless with unconcern, kindle a flame in the Southern States which will burn through a generation, and bring all the horrors of a race war upon the women and children of the South. What matters that if the fire lights up the road to the Presidency for one and the Senate for the other!

DESTRUCTION OF NORTHERN CAPITAL AND THE HOME MARKET.

But it behooves others of you who have no such political goals in sight to consider that race conflicts mean the absolute destruction of Northern capital invested in the South and of that magnificent "home market" for Eastern manufactures and Western mules, bacon, wheat, and corn.

Shutting the producer out from foreign consumers, you proceed to destroy the "home market," of which we have lately heard so much.

REPRESENTATION UPON NEGRO POPULATION.

We are charged with the exercise of power based upon the negro population, as if we had schemed to secure it.

No people could have foreseen more clearly or resisted more strenuously universal negro suffrage conferred upon a great mass unprepared for it than did the Southern whites. It was forced upon them. But the Speaker says we do not offer to give it up. How can we? Is it practicable? The Southern whites are not bent upon control, and would not hesitate for one moment to give up such representation, if thereby this portentous question could be settled.

SETTLEMENT OF THE RACE PROBLEM.

It is natural and just that, objecting to outside interference, we should be asked what remedies we propose for existing evils. The immense difficulty is recognized by all, and the question is one that every thoughtful man of the South has with him in all his waking hours and which frequently lengthens those hours. Think what that problem is where the negro is the more numerous, in some places fearfully so. We are called upon to recognize his full political equality, to give him "a free ballot and a fair count." That ballot naturally tends towards the establishment of misrule; yet, we must, in his interest as well as ours, prevent such misrule. We are called upon to do in a lifetime a work which has elsewhere taken centuries: prepare slaves to govern. If the teachings of a Senatorial orator be accepted, the task is impossible.

Mr. INGALLS said in his speech of the 23d of January last:

> Mr. President, the race to which we belong is the most arrogant and rapacious, the most exclusive and indomitable in history. It is the conquering and the unconquerable race, through which alone man has taken possession of the physical and moral world. All other races have been its enemies or its victims.
>
> History contains no record of two separate races peacefully existing upon terms of absolute social and political equality under the same system of government. Antagonism is inevitable. They become rivals and competitors, and in the struggle for supremacy the weaker has gone down.

Speaking of the negro race, he said:

> The problem is still further complicated by the fact that they are gregarious. They instinctively separate themselves into their own communities, with their own habits, their own customs, their own methods of life. They worship separately and they are taught separately. The line of cleavage between the whites and blacks is becoming constantly more distinct and perceptible. There is neither amalgamation, nor absorption, nor assimilation.

One might well ask how, in view of these conditions, political equality can be established and sustained in the South. However, we of that section are more hopeful. If there is a remedy, as we trust, it lies in

EDUCATION.

Nothing has surprised me more than to hear the gentleman from Iowa [Mr. HENDERSON] say:

> I was sorry, when for the first time in twenty-five years I revisited the South two years ago, not to find more evidences of the extension of school-houses than on the occasion when I was there before.

This is so utterly in contradiction of facts known, or which should be known, to the world, that it illustrates the ignorance of Southern conditions or the unfairness born of sectional spite with which this question has been treated by the other side in this debate. I shall content myself with putting against the gentleman the speech of the Senator from Wisconsin [Mr. SPOONER], made in the Senate on the 3d of March last. In it appear tables of the advance from 1876 to 1886. They show for the State of Alabama, for those ten years, an increase of 83.7 per cent. in the enrollment of the public schools, and of 52.9 per cent. of expenditure, greatly increased in the last year; for Mis-

sissippi an increase of 68.7 in enrollment and of 101.3 in expenditure. Commenting upon these tables, the Blair educational bill being under discussion, Senator BLAIR said:

It will not do to say that the objection to this bill among Southern Senators and among the Southern people is due to a desire to keep the colored child in ignorance in face of the fact that 985,000 of them are attending the public schools in the South, and that the burden of the expense is mainly defrayed by the white people of the South. This is marvelous progress.

Straining every nerve to educate him, to prepare him to forcefully assert and intelligently exercise the highest privilege of American citizenship, we are meantime giving him just and equal laws fairly administered. What more can fairly be asked of and for the two races?

THE FREEDMEN'S BUREAU.

I wish to say here, Mr. Speaker, that I do not hold the great body of the colored men of the South morally responsible for the evils we have endured or for those which would come upon us were they freed from the restraint of the white man's domination. Their distrust of their late owners when emancipation came to them was natural. They turned naturally to the agents of the Freedmen's Bureau, in whose charge they were placed and who, as a rule, fostered in their minds suspicion of the whites, commencing at once to use them for their own advancement and profit. How successfully they did so is evidenced by the fact that the agents of that bureau filled most of the important and lucrative offices upon the installation of the reconstruction governments. One of them, Scott, was the first reconstruction governor of South Carolina.

Another was the first Representattive in Congress from the district in which I then lived. If the charge against that bureau rested with me alone, it might have very little weight with gentlemen of the other side, but as early as December, 1865, making a report of a tour through the South, General Grant said of the Freedmen's Bureau:

The belief, widely spread among the freedmen of the Southern States, that the lands of their former owners will, at least in part, be divided among them, has come from the agents of this bureau.

NEGRO ALIENATION NOT THE FAULT OF THE WHITES.

It has been frequently and confidently asserted in this debate that the negro support of the "carpet-baggers" and "scalawags" was due to the neglect of the whites to attempt to influence them. Such a belief rests upon a want of acquaintance with events.

General Grant has recorded the initiatory work of the agents of the bureau. It was kept up to perpetuate the opportunity to plunder. Honestly, but in vain, did the whites of the South struggle to break down the barrier. I instance again the people of South Carolina.

In 1868 General R. K. Scott, of Ohio, an officer of the Freedmen's Bureau in South Carolina, was the Republican nominee for governor, the Democrats having a candidate of their own party.

In 1870 Scott was renominated by the Republicans; the Democrats supported R. B. Carpenter, a Republican, nominated by the "Reform party."

In 1870 Moses was nominated by the Republicans; Reuben Tomlinson, a Republican and the nominee of bolting Republicans, was supported by the Democrats.

In 1874 the Republicans nominated Governor Chamberlain; the bolting Republicans nominated John T. Green, a Republican, and the Democrats supported him.

In each instance the negroes gave an overwhelming vote to the Republican nominee and he was elected. In every election the whites nominated and supported for legislative and county offices mixed tickets of whites and blacks.

Every effort was in vain; they were trampled down while they simply protested; the hordes of plunderers vanished in a night when an outraged and desperate people faced them in 1876.

Mr. Speaker, the people of the South have learned fortitude; they have never been without courage. They will meet this bill when your supervisors and marshals come among them as becomes American freemen, desirous of peace, valuing liberty. It will bring about collisions; it will never crush them down.

Federal Election Law.

SPEECH

OF

HON. HERMAN STUMP.

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 1, 1890.

The House having under consideration the bill (H. R. 11045) to amend and supplement the election laws of the United States, etc.—

Mr. STUMP said:

Mr. SPEAKER: In the limited time allowed me it would be impossible to express all that I desire to say upon this infamous bill to overthrow the constitutional rights of a free people now being considered by this House. I will, therefore, reserve for publication in the RECORD my general remarks on that subject. I rise more particularly to express the indignation of my people at the wanton attack made upon my State by one of its citizens. I allude to the remarks made by the honorable gentleman representing the Sixth district of Maryland [Mr. MCCOMAS]. I am sorry he is not here now. His remarks were uttered during my absence and also that of my colleagues on this side of the House.

The gentleman from the Sixth district has been an active partisan during this Congress and has had two pet political measures before us. One was the unseating of the gentleman who heretofore has so ably represented the Fifth district, Mr. Compton, and the other was his "anti-gerrymandering bill."

Mr. Speaker, you have heard to-night the remarks of the gentleman from Maryland [Mr. MUDD] who now occupies the seat until recently held by Mr. Compton as the Representative of that district. We recollect very well the grounds upon which his competitor was unseated—the intimidation of negro voters in that district. We also know that the ground upon which gentlemen on the other side support this bill is the intimidation of negro voters.

Mr. MUDD. Will the gentleman allow an interruption for one moment?

Mr. STUMP. Hardly; I have not the time.

Mr. MUDD. I did not think you would. I can see that you can not afford to.

Mr. STUMP. Now, all the work of Mr. MCCOMAS has failed, for, although the ground on which the gentleman now representing the Fifth district obtained his seat was intimidation of negro voters at the polls, bold and successful, largely reducing his majority, as stated by the gentleman from Maryland [Mr. MCCOMAS], the other gentleman from Maryland [Mr. MUDD] has repudiated it by saying that he did not need this Federal election law in his district.

Mr. MUDD. I hope the gentleman will allow me just one word.

Mr. STUMP. Your speech will show what you said.

The SPEAKER. The gentleman occupying the floor declines to be interrupted.

Mr. STUMP. So that all the energies of the member from the Sixth district to show that the negro vote in his State is intimidated have been wasted; and I can now begin to imagine how, when his "anti-gerrymandering bill" was "turned down" in caucus, the incident irritated his feelings and prompted him to rise in his seat and abuse the State that gave him birth, and declare that the people of that State were deprived of local self-government and home rule.

In 1863 armed soldiers were sent to the polls in the State of Maryland, and the gentleman from Maryland [Mr. MCCOMAS] could readily have explained how easy it was to overturn the laws and revolutionize a State without the passage of this bill. Armed soldiers were sent into the State and into the counties, to our polling places, and they drove myself and other citizens from the polls and prevented us from voting. The year afterward, in 1864, they made a constitution which turned every office-holder out in the State, and put their own partisans in their places, and thus the revolution was completed.

Mr. KERR, of Iowa. Does the gentleman refer to the soldiers sent by General McClellan?

Mr. STUMP. In 1867 the people rose in indignation because of the outrages perpetrated upon the citizens of the State and adopted a new constitution. That constitution of 1867 is still in existence. It is under these laws that the State is now governed; and in 1887, by act of the Legislature, the question whether that constitution should be changed or not was submitted to a vote of the people; and I say that my colleagues [Mr. MCCOMAS and Mr. MUDD] and every Republican in the State voted to sustain the present constitution of the State of Maryland.

Now, Mr. Speaker, here is Mr. MCCOMAS, in this year 1890, rising in his place in this House and complaining about the fundamental laws of his own State. He talks of the school commissioners. He said that the people were not allowed local self-government, and instanced the school commissioners as an illustration. How are they appointed? They are appointed by judges elected by the people and who do not hold office for life. These judges appoint three school commissioners, one of whom is of the opposite political party. These three school commissioners appoint the trustees, and the trustees of the different schools select the teachers. Most of the teachers are selected from the State Normal School, over which presides one of the most influential Republicans in the State of Maryland. I say that the State of Maryland can point with pride to her whole school system.

Mr. Speaker, the gentleman spoke of the late election law. That election law was prepared and urged by what was called the Reform party in Maryland; and when it was submitted to the Legislature nine counties withdrew from the operation of the law, and the Republican counties could have withdrawn also if they had so desired. But instead of doing so the Republicans in the State Legislature, with but few exceptions, voted for the law, which my colleague from Maryland now says is oppressive and subversive of the right of self-government in that State. [Applause on the Democratic side.]

Mr. Speaker, the honorable gentleman from Massachusetts, the accredited author of this bill, was pleased to say, in opening this debate in support of the measure—

No graver or more important subject could come before this House than the one presented by this bill.

He at least seems to be painfully alive to this serious departure of his party from the well beaten track of prudent constitutional legislation. Never has such a momentous question, involving as it does the preservation of the rights of a free sovereign people, guarantied by the fundamental law of the land, been submitted for the consideration of a legislative body since the formation of the Constitution. There may have been some excuse for questionable legislation, growing out of the war, engendered by passion and prejudice; but look through the statutes and you will nowhere find any act or proposed legislation during all that existing period which excels this iniquitous measure in all its pernicious assaults upon the rights of a free people.

The animosities of the war have passed away. Time has soothed the wounds of dire conflict. Peace, prosperity, and happiness reign supreme throughout the length and breadth of the land. The victor is extending the hand of brotherly love and lasting friendship to the vanquished and helping to retrieve his fallen fortunes, while the South in silence toils on, waiting for the time to come when she can prove by deeds of valor, greater, if possible, than were exhibited in the past, her undying love for the Union, Constitution, and laws of our beloved common country.

Each State has observed the law and has sent its legally elected and qualified Representatives to these Halls, accredited in the same manner as their Representatives were elected, qualified, and accredited to the fifty Congresses that have heretofore assembled under the Constitution of the United States. What emergency has arisen which renders it necessary for the small Republican majority when the Fifty-first Congress began, assembled here, as they say, "in a progressive way to do business, and not to deliberate," to fulminate this scheme to deprive the people of local self-government? will be the burning question which astute politicians have failed to explain to this House and will also fail to make plain to an enlightened constituency this fall.

No wonder you hesitated and considered the cost. The bill is revolutionary and sectional in its character. It is a dangerous experiment. Success must attend it or the conspirators must be looked upon as traitors who have violated the sacred trust reposed in them. But, be the result what it may, the very introduction of this bill into this House and its favorable report from the majority of the committee having it in charge have made an indelible impression upon the body politic, and you will have to give a strict account to a scrutinizing and exacting public. The Republican party, having full control of the legislative, judicial, and executive branches of the Government, which means, besides, the Treasury, Army, Navy, and a host of office-holders, backed by the capitalists, manufacturers, and mine-owners, together with the Grand Army veterans, whom it hopes to influence, and negroes, whom it deems are its political slaves, feels so strongly intrenched that it can now reach out and grasp unlimited and paramount power by obliterating the inherent rights of the States and creating a centralized National Government.

The introduction of this bill was not the entering wedge. The entering wedge was in the organization of this House, when you, Mr. Speaker, arbitrarily, wrongfully, and in open defiance of all former precedents of opinion of illustrious statesmen and yourself among them, deprived the minority of all its rights, cut off general debate, and by your new rules, formulated by yourself, promulgated through the Committee on Rules, of which you are the chairman, have made yourself the supreme dictator of the House, not only over the minority, who courageously resist to the utmost extent of their ability, but over the meek and timid members of the majority. That was the entering wedge. This measure is a long stride towards the perfecting of your unholy purpose as announced in your Pittsburgh speech, when you said:

It seems to me that the only wise course is to take into Federal hands the Federal elections. Let us cut loose from the State elections; do our own registration, our own counting, and our own certification.

The Republican party now regards itself as the National Government. With the whole election machinery in its hands, what delightful dreams of political bliss please the fancy of would-be statesmen. Visions of perpetual "dwelling in high places" loom up before the Lilliputian politicians who stand with open mouth and outspread ears to listen for the political millennium that is predicted, when the voice of the people is as effectually silenced in the land as it is in this House, when the free expression of their will at the ballot-box is to pass through the hands of thousands of minions of a polluted political party which has determined to register voters and count and certify the votes cast at Federal elections.

If you and your party are successful, Mr. Speaker, all that our forefathers fought for was in vain, for England has to-day a Government where personal liberty is more secure than it would be under the system you propose to inaugurate. The Constitution, framed by the willing surrender of certain specified rights by sovereign States for the mutual good and protection of the whole, created the Federal Government, not with supreme, but with certain limited, well defined powers. Now, shall the Federal Government at the behest of designing men subvert the Constitution and enslave the people?

Would to Heaven, Mr. Speaker, I could attribute this measure to disinterested, patriotic motives, actuated and inspired solely under a well justified belief that an urgent necessity actually existed for its enactment; I could then treat it differently; but with the knowledge you must have that, although Mr. Harrison was elected in 1888, Mr. Cleveland received a large majority of the popular vote, and a few thousand more in the State of New York would have sealed the fate of your party, I can not do so. Since then another election has been held, when the will of the people expressed at the ballot-box was not very soothing to Republican ears, and particularly fatal to governors of your political persuasion in the North and West. Since then gubernatorial certificates of election are not as popular as formerly to Republican members of Congress. And but for the debauching of Montana and your mode of registering and counting and certifying, she would have entered the sisterhood of States Democratic. Besides this, you know that the agriculturist and the laboring element have at last opened their eyes to the iniquities of the McKinley bill and kindred legislation. They have become alive to the fact that the war tariff, over twenty-five years after the close of the war, should cease instead of being increased in another name; that protection means wealth to the few and poverty to the many; that fair and equal rights to all men and special privileges to none is the true doctrine of a nation of freemen.

The signs of the times unmistakably point to the overthow of Republicanism in November next. The probable losses of Congressmen in the North and West must be made up by gains in the South. Now, protest as you and your party may, Mr. Speaker, 99 per cent. of all the voters of this country will come to no other conclusion than that you and your associates, disregarding the Constitution and laws of our common country, trampling upon the sacred rights of the several States, are engaged in erecting over its ruins a strong, centralized Government, with your party in supreme control. How many of them will say that the end justifies the means, and that all is fair in politics, I do not know; but, mark my word, over 75 per cent. will hold you and your associates up to the scorn and contempt of the world.

All men have ambition and would figure in history, but how few become truly great from high, noble impulses, which fire their energies solely for the good and advancement of their fellow-men. Designing men, thirsting after power and place, attain notoriety. They always have plausible pretexts at their fingers' ends, and duplicity is their principal stock in trade; but the unerring scrutiny of public opinion will penetrate the true inwardness of their intentions and lay bare to the gaze of an outraged people the corrupt motives of a "do-business majority" who seek to take away the right of the people to govern themselves. Oh, yes; they will attain notoriety. Their names will be written in history like those engaged in the fraud of stealing the Presidency from Tilden and seating Hayes. Hayes's name is there, alas! and some others will shortly be added to the list. But the child as yet unborn, in generations yet to come, will be taught to regard them with loathing and contempt.

Mr. Speaker, I have thus far spoken of the motives which have prompted your party to suggest this infamous legislation and the deliberation with which it has advanced toward its consummation. Now, while denouncing the pending bill as unconstitutional, let us look at the only provision in the Federal Constitution, Article I, section 4, which touches on this question:

The times, places, and manner of holding elections for Senators and Representatives shall be prescribed in each State by the Legislature thereof; but Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators.

You will see the word "shall" imposes an imperative duty on each State, by the Legislature thereof, to prescribe the times, places, and manner of holding elections. And the word "may" is used to designate the *discretionary power* conferred on Congress to make or alter such regulations. It stands to reason that where the power to act has been exercised by the tribunal charged with its performance the discretionary power lodged in another tribunal should not act unless under the most imperative and urgent necessity, or when the public exigency demands prompt and immediate action to restrain or alter an improper exercise of the power.

No one has contended for more than this judicious and wise interpretation of this section of the Constitution, and I take it that it was this interpretation placed upon it by its defenders that induced the States of New York, Massachusetts, South Carolina, New Hampshire, and Rhode Island, which had theretofore refused to ratify the Constitution on account of this provision, to withdraw their objection. See The Federalist and Elliot's Debates, so often cited by other members that I will refrain from quoting them again. But, if further authorities are needed, turn to the Commentaries on the Constitution, written by the learned Justice Joseph Story, who was born in the State of Massachusetts.

It was highly gratifying to me, after reading in the RECORD the assault of the gentleman from Maryland [Mr. MCCOMAS] upon his native State, to read the eloquent encomiums of the gentleman from Massachusetts [Mr. GREENHALGE] of his adopted State, of its statesmen, scholars, and jurists, although that State early gave utterances of approval of the doctrine of secession and denunciations of the Constitution; and when he eulogized Justice Story I felt that he should be mindful of

the language of that great commentator, who, when speaking of the above recited provision of the Constitution, says:

SEC. 823. The truth is, Congress could never resort to a measure of this sort for purposes of oppression or party triumph until that body had ceased to represent the will of the States, and the people; and if, under such circumstances, the members could still hold office, it would be because a general and irremediable corruption or indifference pervaded the whole community.

Truly, the gentleman's quotation from Iago is applicable:

There is a daily beauty in his life—

Judge Story's—

which makes mine ugly.

This House is now using this discretionary power, in the prophetic language of Justice Story, for purposes of oppression, for party triumph, and for the perpetuation of its own satellites in power, regardless of consequences.

Again, Justice Story says:

SEC. 826. A period of forty years—

(Now over one hundred)—

has since passed by without any attempt by Congress to make any regulations or interfere in the slightest degree with the election of members of Congress. If, therefore, experience can demonstrate anything, it is the entire safety of the powers in Congress, which it is scarcely possible, reasoning from the past, should be exerted, unless upon very urgent occasions.

That Congress could exercise this power constitutionally upon urgent occasions, it is not necessary now to deny; but what were the urgent occasions contemplated at the time of the ratification of that instrument? Two: one when from invasion or insurrection the State was unable to exercise the power; the other when a State refused to put the machinery in motion to send Representatives to Congress. Does either exist now? The only emergency existing now is a purely political one. The negro vote amounts in the United States to about one and a half millions. The balance of power in at least twelve of the Northern and Western States is held by the negroes. The white vote of the North is held in subjection by the negro, and unless the white vote in the South is also controlled by the negro vote the existence of the Republican party is imperiled. So the fiat has gone forth. The negro vote in the South must be registered, polled, and counted for that party. And we must take into Federal hands—our hands, for the Federal Government is in our hands now—the Federal elections.

What more iniquitous scheme could have been devised for this purpose than the bill now under consideration? It provides for its own registration of votes, counting the returns, and certifying results by officers appointed by its own partisans, and responsible only to them. It provides for juries composed entirely of Republicans to try Democrats for alleged offenses against this act, and gives authority to supervisors to invoke the aid of the military forces of the country whenever they may deem it necessary.

The deputy supervisors have inquisitorial authority; are directed before an election to make a house-to-house canvass. They are to "guard, scrutinize, and supervise" the registration, and, in fact, carry on the election campaign for the Republican party at the expense of the Federal Government at a cost of $10,000,000.

Article I, section 2, of the Constitution of the United States provides:

The House of Representatives shall be composed of members chosen every second year by the people of the several States, and the electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State Legislature.

So you will see, Mr. Speaker, that the United States or Federal Government, as you are pleased to call it, has no power to confer the right of suffrage upon any one and has no votes to register, no ballots to count, and no returns to certify; and it was never contemplated that it should have. The States fix the qualifications and in order to vote you must be a resident of a State. Being a citizen of the United States is not sufficient. The electors of the several States have the control of elections of the members of this House. Knowing this and in defiance of this you in your Pittsburgh speech further say:

Let us cut loose from the State elections.

In this bill you have cut loose from State elections, you have violated your solemn obligations to support the Constitution of your country and have invaded the rights of the States, and by force are sapping the foundations of the best Government in the world.

The wrath of the people, North and South, East and West, is upon you. Never will a free people tolerate for one instant the ruthless hands laid upon the palladium of their liberties. Irrespective of party they will condemn you. You have mistaken your time. No longer can you engender hatred and ill-will between the sections. The Southern-outrages mill has ground its last grist. The Northern heart can no longer be fired by imaginary wrongs. The race problem will not serve you now. The people of the North are leaving to each State its right under its own State government to settle that question.

This is a time of profound peace. Northern capital, always timid, is seeking a sure and remunerative investment in a new and reconstructed South, to the mutual advantage of both borrower and lender. The old bonds of brotherly love and friendship have been rewelded and reunited so strongly that it is beyond the power of dastardly politicians to rend them asunder. Prosperity reigns everywhere throughout this great and glorious Republic. The American's heart is filled with gladness, and he turns his eyes brimful of gratitude and thankfulness to the Great Giver of all gifts, Who gave this country to us, sanctified by the sacrifices of our forefathers, to be governed by the people and for the people. And accursed be he who would raise his sacrilegious hand to mar its beauty or would seek to place his State under the operation of this odious measure and deprive it of local self-government and home rule. [Applause.]

Federal Election Law.

REMARKS
OF
HON. WILLIAM T. ELLIS,
OF KENTUCKY,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 1, 1890,

On the bill (H. R. 11045) to amend and supplement the election laws of the United States, etc.

Mr. ELLIS said:

Mr. SPEAKER: This measure strikes at the very foundation of the Government, and if it becomes a law revolutionizes the system of holding elections for Representatives in Congress. It proposes to deprive the States of all substantial control in the matter of choosing their Representatives, and to commit the management of the subject to a corps of Federal officers whose returns are not only to outrank that of the local officers of the State, but to supersede the commissions issued by the governors of the States. And from the decision of these Federal officers there is no appeal.

The bill on its face bears evidence that it is not intended to be general in its operation; it may or may not be enforced in a given locality.

The real purpose and object of the measure is to control Congressional elections in the South. There and there only is this most extraordinary measure intended to be put into practical operation. Unlike the ordinary act it does not go into effect from the date of its passage; its complex, intricate, and partisan machinery is left to be set in motion by the political charlatan, whose highest idea of patriotism is to clothe himself with political authority and to recruit his exchequer out of the public Treasury. No good result can be expected from the passage of the proposed law.

No matter in what section of the country the attempt may be made to enforce it, it would serve only to intensify party prejudices, engender strife, and stir up discord.

The people would resent it as an unwarranted interference with their free exercise of the right of suffrage and as a contrivance designed to deprive them of their liberty.

The authors of the bill insist that there is authority in the Constitution to authorize the proposed legislation and that the exigencies of the occasion demand the exercise of this authority.

I shall not enter into a discussion of the necessity for such legislation, observing simply that the only necessity which seems to require it is the necessity which political exigencies seem to suggest to those whose chief aim is to perpetuate their party in power. But apart from the question of necessity for this legislation, has Congress the power to enact a law like this? If it has the power to do so, the question as to the necessity for the exercise of that power would become a question for debate.

The majority of the committee which reported this bill seems to have had no difficulty in concluding that ample authority is conferred on Congress by the Constitution to enact this law.

Not only do they seem to have found such power in the Constitution, but they assert with equal confidence that the question has been at least twice decided by the Supreme Court, and these cases, which in fact do not touch the question involved here, are cited as settling conclusively the whole subject.

The provision of the Constitution relied upon as authorizing this legislation is as follows:

The times, places, and manner of holding elections for Senators and Representatives shall be prescribed in each State by the Legislature thereof; but Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators.

This provision, in the opinion of the majority of the committee, is so plain and simple as to render discussion "superfluous," and the conclusion is easily reached that "the power of Congress over the conduct of elections of members of this body is absolute and complete."

What construction the committee place on that part of the section of the Constitution relied on, which declares that "the times, places, and manner of holding elections for Senators and Representatives shall be prescribed in each State by the Legislature thereof," we are not definitely advised.

This is strong language, and certainly means something when taken

in connection with the balance of the section, which provides that "the Congress may at any time make or alter such regulations, except as to the places of choosing Senators."

But for this latter clause of the section, which modifies the first clause, no one would pretend that Congress had any control whatever over the subject of electing Representatives in Congress. All the power Congress has to deal with the matter is derived from that clause of the section which provides that "Congress may at any time make or alter such regulations," etc.

This clause must be construed with the first clause of the section, and is of necessity modified by it.

What does the whole section mean when taken together? It clearly does not mean what the majority of the committee contend, namely, that the "power of Congress over the elections of Representatives is absolute and complete."

Such a construction renders nugatory that part of the section which declares that the times, places, and manner of holding, etc., shall be prescribed in each State by the Legislatures thereof.

This language can not be disposed of, as the majority of the committee seem to have disposed of it, by mere declamation. It stands in the section where the authority for the proposed legislation is said to be found, and it must be construed with it

When it is remembered that all the power of Congress has over the subject was derived from the States and whatever power was not either expressly or by fair implication granted to Congress was reserved by the States, it is evident that the conclusion reached by the minority as to the true meaning of this section is correct. They say:

> If the States shall have performed their duty and exercised the general power of regulating the question, the contingency upon which Congressional action depends will not have occurred. In case a State shall have neglected to enact laws for the election of Congressmen by its people or shall have enacted laws in hostility to the General Government, either to deprive its people of representation in Congress, or to prevent that right from being exercised in a reasonable manner and at proper times, then Congress is permitted to intervene, and to establish regulations which will secure representation to the people of such State.
>
> What was given to Congress as the law-making power of the Government in this case was a defensive power against State hostility, or negligence by which popular representation would fail and the necessary power of the Federal Government would be impaired or paralyzed for a want of representation in the House.

This view can not be successfully overturned. It is the only reasonable construction of which the section is susceptible, the only one which can be given that will allow all the language employed its fair and ordinary meaning.

This construction is sustained by authority. Mr. Story, in his Commentaries on the Constitution, says:

> A discretionary power over elections must be vested somewhere. * * * It might be lodged wholly in the National Legislature or wholly in the State Legislatures, or primarily in the latter and ultimately in the former. The last was the mode adopted by the convention.

This ultimate power over Congressional elections was conferred upon Congress, as the minority of the committee correctly says, to protect the General Government against the non-action or hostile action of States, and which would "hazard the safety and permanence of the Union."

It therefore seems perfectly clear that, so long as the States act in the matter and provide reasonable times, places, and manner of holding elections for Representatives, Congress is wholly without power in the premises; the occasion alone upon which it has power to act has not arisen, and any attempt on the part of Congress to assume control over the elections of Representatives is a clear usurpation and an invasion of the rights of the States.

It is not claimed by any one that any State has failed or refused to prescribe the times, places, and manner of holding elections for Representatives, or that the safety or perpetuity of the General Government demands the enactment of the proposed law. Congress, therefore, has no right to interfere in the slightest degree with the elections of its members, because the contingency which would authorize Congress to act has not happened.

The control of the subject should be left with the States, none of which have neglected to provide the times, places, and manner of holding elections for Representatives. The cases of *Ex parte* Siebold, reported in 100 United States, and *Ex parte* Yarborough, 110 United States, are relied on in the majority report as authorizing this legislation, but they do not, in fact, touch the question involved here.

The single and only question involved in these cases, and all that was necessary to their determination was, had Congress the power to enact a statute imposing penalties against the intimidation of voters in the exercise of their right to vote for a member of Congress and to impose penalties against those who obstruct or hinder Federal supervisors from performing their duties?

The cases decide only that an act may constitute an offense both against the laws of a State and of the United States; that either jurisdiction may punish the offender; that the laws of a State and those of the United States denouncing penalties for the same offense are not in conflict. Since an act may be an offense against both jurisdictions; each has full power to provide for its punishment.

Whatever was said in these decisions that may seem to sustain the proposed legislation was not necessary to the determination of the questions there presented, and is therefore not authority.

This bill presents a different question; it proposes to annul the election laws of the States wherever they are in conflict with the provisions of this act.

It proposes, in the language of the Speaker of this House, to "cut loose from the State elections, do our own registrations, our own counting, and our own certification."

The question is at once raised, Has Congress the right to annul the laws which the several States have enacted providing the times, places, and manner of holding elections for Representatives and to take exclusive control of the same? This is what this bill proposes to do, and if it becomes a law all substantial control over the elections of Representatives is taken from the States and transferred to Federal supervisors, Federal returning boards, and to the Federal courts. The people are no longer to be trusted. They are supposed to have become so corrupt, dishonest, and lawless that the purity of the ballot is no longer secure in their hands.

This seems to be the theory upon which this legislation proceeds; but this is an unjust imputation which the patriotic people of this country will be swift to resent. If the majority in this House thrust it is odious bill upon them, they will rise in their power at the approaching elections and repudiate those who by the passage of this bill seek to establish a system by which the will of the people is to be set aside and their voice effectually silenced in choosing their own Representatives.

Federal Election Bill.

SPEECH
OF
HON. THOMAS G. SKINNER.
OF NORTH CAROLINA.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 1, 1890,

On the bill (H. H. 11045) to amend and supplement the election laws of the United States, etc.

Mr. SKINNER said:

Mr. SPEAKER: The gentleman from Massachusetts whose name gives the title to this bill, in his speech opening the debate, said:

> I do not think that any graver or more important subject could come before this House than the one presented by the pending bill. The subject is one which demands the most serious and deliberate treatment on the part of the House.

Having commended his foundling in these words to the tender mercies of the members of this House and asked them to act deliberately in their treatment of it, I expected to hear from him some excuse for the precipitancy with which it was thrust in here or some protest against the haste with which it is sought to be enacted into law. But I have listened in vain. No such protest has fallen from his lips or from the lips of any member of the majority during this debate.

No measure of the importance of the one under consideration was ever considered in either branch of Congress in so short a time as is allowed for the consideration of this. Look, read, ponder. How large the bill, how stupendous its contents, and how short a time allowed for its consideration. It contains fifty-seven sections, seventy-three pages, over seventeen thousand words. It changes the policy of the Government in regard to Federal elections. It provides for the appointment of over 180,000 supervisors, 60,000 clerks, an army of deputy marshals, whose number no man can estimate, and a permanent biennial appropriation of from ten to twenty-five millions of dollars to pay this horde of officials. And only four days are allowed for general discussion and two days for amendment, six days in all, and a part of that time taken up in the consideration of other bills. It is impossible that this House can digest this bill in such limited time.

The leaders of the majority had this bill in their minds when they broke down the bulwarks that protected the minority by changing the rules of this House at the beginning of this session, thus placing the rights of the minority (and the majority, too, as for that matter) in the hands of the Speaker and two men to be appointed by him. That immortal trio, the Republican members of the Committee on Rules, have limited the consideration of this bill because they are afraid of its full, fair, and free discussion, and they intend to put it through under the whip and spur of the party caucus before the American people have time to understand its provisions and protest against them.

No man has yet, on either side, discussed all the provisions of this bill, and in my opinion no man will. There are too many of them and they are too complicated for one mind to grasp with sufficient energy to attempt their full discussion in the limited time allowed any one man to speak to any one bill under the rules.

When I arose from my first perusal of it I felt as if I had been cast away in a fog, and I could not tell whether what I had just read was

intended for a new bill of rights, a revision of our judicial system, or a penal code.

I have read it several times since and listened to the explanation of it by its author and others friendly to its passage, and yet the fog has not lifted, and I need a pilot almost as badly as I did at first. I doubt whether anybody fully understands it, except, perhaps, its illustrious father; who, besides being the impersonation of all the learning that can be classed under the name of Boston culture, being able to see clearer than we who have never enjoyed the upper air at the Hub, ought to be better acquainted with this child of his own brain than those to whom he has given such little time to form its acquaintance.

Even he will not claim, I imagine, that this paper is conspicuous for its perspicuity, nor will he class it among his literary gems and publish it as such.

No, we have not yet threaded all the intricacies of this bill. We do not understand it. If the American people ever understand it, which I pray they never may (as they would have to learn it in the kindergarten school of experience after its enactment into law), they will rue the day that the *literati* of Boston sent a professor of its literature here to frame laws for the nation.

I shall not take up your time in discussing the constitutionality of the bill or any of its provisions. That has already been sufficiently discussed, and with more ability than I possess.

Besides, whether Congress has the constitutional power to enact it into law will make no difference in the vote of any member on this floor. You all look at the Constitution through the spectacles of your individual wishes. It is as true in politics as in theology that "orthodoxy is my doxy and heterodoxy is your doxy." Strict constructionist and liberal constructionist, when their interests are identical, construe the Constitution in the same way, and when their interests conflict their constructions clash.

The author of the bill says that it is not an election bill, but only a supervisory bill. If he was correct in this there would not be so much objection to its passage. There would be no necessity, however, for so many officials as are provided for. Instead of three supervisors and a clerk and an indefinite number of deputy marshals at each polling place, one supervisor, or clerk, or deputy marshal would be ample.

If light is all these gentlemen want, as they say, so that the world can see how elections are carried on in Massachusetts and South Carolina, in Maine or Mississippi, I submit that one person, and you might give him any high-sounding title that you please, from simple watchman to deputy high lord supervisor, could turn on the light as well as a dozen.

That the ballot-boxes may be properly and distinctly marked and placed so that the electors may publicly and without hinderance deposit their ballots therein, and afterwards have them counted in the presence of all the people is not all that the advocates of this measure want. They want to count the votes by tens as they provide in the bill (why not in blocks of five?); they want to canvass the districts before the election to pass upon the eligibility of the voters, and to make the only authoritative return upon which a member of this body is entitled to a seat on this floor.

The returning-board feature of the bill, to which all the other provisions of it are subsidiary, is its main provision and shows the purpose of the Republican leaders to perpetuate their power and to maintain a Republican majority in this House indefinitely.

They feel that they have so forfeited all the pledges that they made to the people in their last national platform that they do not deserve to be retained in power.

They know that the shameless way that they leveled up the tariff which they had promised to reform, their utter disregard of their promises in regard to the abolition of the internal revenue, their desertion of the people upon the silver question, and the deaf ear that they have turned to the demands of the farmers will meet with the condemnation of the people at the polls in November.

They see the handwriting on the wall, and they have set to work to insure against such a party disaster by providing a partisan returning board in each State, which, wielded by one man, the chairman of the national Republican executive committee, can always, no matter how the people vote, certify to the Clerk of this House a sufficient number of their own party to organize, and the members of the present Congress know how well the Republican party can maintain that organization.

The gentleman from Ohio [Mr. WILLIAMS] says that this bill is not strong enough, but that he will vote for it because it is a step in the right direction. How much stronger it could have been drawn I can not imagine, nor how many more steps could be taken in that direction.

This step, it appears to me, is made by a man with the seven-league boots on and in the direction of monarchy. It reaches from a sisterhood of States, protected by the checks and balances of a constitutional Government, to a partisan oligarchy, guarded by the bayonet. Enact this bill into law, and the gentlemen who desire a strong law will find this strong enough for all practical purposes, strong enough for them to write the nation with a big N and to do away with the necessity of keeping State lines well marked.

If not in all the Congressional districts in the United States, certainly in all the close districts the law will be put in operation. Can there be any doubt about the manner of its enforcement?

With two Republican supervisors and one of some other party, nominally, all holding their positions at the will of the chief supervisor, armed with authority to superintend the registration of voters, to make a house-to-house canvass, electioneering for the Republican ticket, to judge of the eligibility of voters and superintend the election and count the votes, and, no matter how much their count differs from the count made by the State authorities, to have their count allowed, there will be certified to the Clerk of the House not only a majority of Republicans, but such Republicans as will do the will of the Republican bosses. This is what the bosses want and what the bill was framed for.

All this parade about the negro and his rights and wrongs is made for the purpose of drawing attention from the real purpose of the originators of the bill.

There is no necessity for this law in my State to protect the negro in his right to vote and have his vote counted—certainly not in the district which I represent on this floor.

There all the rights of citizenship are accorded to the negro. He registers and votes as freely as the white man, and with much more freedom than wage-workers do in other sections of this country claiming more enlightenment. On election day the negro laborer and his white employer frequently ride to the polls in the same vehicle, and each casts the vote of his own choice, without any attempt on the part of the Democratic employer to bulldoze, buy, or otherwise influence his Republican employé, and these votes are counted, not in a private room, but publicly, in the presence of the voters, and absolutely fairly.

The only attempts at bulldozing I have ever seen were made by negroes themselves attempting to prevent men of their own color from voting the Democratic ticket. But even this is growing less frequent and the negro is growing more independent. Now, is it not strange that just as the negro voter is beginning to throw off the shackles of prejudice which have heretofore bound him to the Republican party, and is beginning to find out that it is not unlawful for him to vote the Democratic ticket, and that he can do so without injury to himself or his race; when he is awakening to the knowledge that the Republican party have no use for him except during an election, and then only want his vote for some white Republican; and that even at the North, where so many hypocritical tears are shed over the wrongs of the poor, downtrodden negro, he is not treated as well as he is by the Democrats of the South—not only not given any more offices, but not even allowed to work at a lucrative trade in many places—that just at this juncture the Republican party should suddenly awaken to their duty to their colored brethren of the South, and ostensibly in their interest attempt to pass an election law which, if ever, ought to have have been passed over twenty years ago? If this is your real purpose you have waited too long.

You gave the negro the right of suffrage and left him to shift for himself. He helped the carpet-bagger to office in the South until all our States in the Black Belt were bankrupt. Then the native whites took charge of these States, brought order out of chaos and re-established the credit of their States. In so doing they did not neglect the negro. When they provided a benefit for the white man they provided a like benefit for the colored man.

Asylums for the deaf, dumb, blind, and insane of both races were provided at the public expense. When a school-house for white children was erected a school-house for the negro children was erected in the same neighborhood. For every dollar expended for the free education of the white man's child another dollar is expended for the child of the black man, and nearly all the taxes that go to pay for these asylums and school-houses and educators of the negro are paid by the white man.

Now, when you see that he is beginning to appreciate the kindnesses of those who clothed him when he was naked, fed him when he was a hungered, educated him when he thirsted for knowledge, you make hot haste to pass an election law and send the myrmidons of your party to the South to stir up strife again between the races and to count the negro vote for the Republican candidates, whether it is cast that way or not, on the ground that the negro vote belongs to that party, and thus save the Republican party from merited defeat at the next election.

You were content to leave the negro to his fate as long as you could hold power without him and the solid South could help you toward a solid North. And now, when you see that you have forfeited your claims upon the great West by the way you reformed the tariff and your refusal to remonetize silver, and that the Farmers' Alliance are about to tear down the bloody shirt under which you have marched to so many victories in the Northwest, and that the chances are that in the near future some of the great States in that quarter of the Union will wheel into the Democratic column, you discover that your colored ally in the South has been cheated and defrauded out of his vote, and you give that as an excuse for passing what you call a general election law, so constructed that you can enforce it in such districts as you desire only.

You have voted down an amendment to make it apply to all the lis-

tricts in the United States without petition. You know that no Democrat will ask for its enforcement, because he can gain nothing by creating a Republican board to count and return the votes in his district, for, if Republican, it would then remain so, and, if Democratic, that would indeed be committing the lamb to the wolf.

The passage of this law is expected to perpetuate the power of the Republican party, to enable the Fifty-first Congress to elect the Fifty-second.

If it should have that effect it will not only perpetuate the power of the Republican party, but also the Reed dynasty, and through that the money power that has directed the legislation of this country for the last quarter of a century and coined the sweat of the million to enrich the millionaire.

You Republicans who dared during this session to bolt your caucus and vote for measures that your people wanted, and whose efforts have been unavailing because the gold bug was dominant in your party, and who still hope at some future session to pass some laws that will benefit your constituents, will find yourselves under the workings of this law either left at home or see enough pliant tools of the Reed dynasty returned as elected to cancel your votes.

New England Republicans will wield the scepter in your party, and Western ideas will find no lodgment in your caucus. You and your constituents will live to curse the day when, yielding to sectional prejudice and sickly sentimentality, you aided that oligarchy to perpetuate its power and continue its oppression of the people.

Mr. Speaker, the enactment of this law would revolutionize our system of government, destroy the autonomy of the States, and strike a deadly blow at the liberties of the people. Nobody demands it except the Republican leaders, and they show no necessity for it except the doubtful chance that it offers toward helping them to retain power.

In the name of the founders of the Republic, in the name of the rights of the States, in the name of the people and their liberties, I protest against its passage.

Federal Election Law.

SPEECH

OF

HON. LEWIS P. FEATHERSTON,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 1, 1890.

The House having under consideration the bill (H. R. 11045) to amend and supplement the election laws of the United States, etc.—

Mr. FEATHERSTON said:

Mr. SPEAKER: My colleague from Arkansas [Mr. MCRAE] has taken the liberty to introduce into the RECORD certain expressions which were not used upon this floor, and has so arranged the questions and answers in the discussion between him and myself that I very much regret his absence upon the present occasion.

To these matters in particular I shall not especially allude at this time.

Mr. MCRAE here appeared.

Mr. FEATHERSTON. I am glad to see that my colleague is present, and I shall now proceed to say what I had not intended to say in his absence.

The remarks to which I have just alluded as appearing in the RECORD of to-day, and which I did not hear uttered upon the floor last night, were to the effect that my friends were responsible for the trouble in my own county; that we were the aggressors, and there was appended a remark of his own condoning the offenses of the violators of the law in my State, justifying their actions and intimating that the retribution which the free ballot and fair count Democrats had received was nothing more than they deserved.

Mr. Speaker, this is the first time I have heard that any man attached to that party which was making an effort to secure a free ballot and fair count in that county had done anything in violation of law.

It is the first time that any member of that organization has ever been charged with an effort to intimidate, much less to commit murder, as the gentleman has asserted was done by the members of the free-ballot and fair-count element of the Democratic party in St. Francis County.

Our bitterest enemies have at all times conceded the fact that we have kept within the law and advocated only lawful methods. I am not surprised, however, at his readily coming to the defense of the men who have been the violators of the laws of the State. I am not surprised at it when I consider the fact that he is a Representative of the politicians of my State more than of the people of the State.

I want to say with regard to the people of the State of Arkansas that a very large majority of them are to-day in favor of honest elections, and are sick and tired of the control which proposes to fasten upon them a political oligarchy which does not in any way represent their wishes or their sentiments. The proof of the truth of my statements is of record. I do not care to discuss methods of Arkansas politicians further.

Mr. Speaker, after a calm and careful consideration of this bill, and after listening to the argument that I have heard upon this floor, I desire to say that as an Independent Representative, responsible to no "caucus" of either party, the representative of the "free-ballot and fair-count" Democrats, Republicans, and Union Labor people of my district, and in the interest of honest and fair elections, I believe it is my duty to vote for and support this bill. [Applause on the Republican side.] The time has come when the people of the South are tired of being apologized for by men who profess to represent them upon this floor. The arguments we have heard from gentlemen opposing this bill, both North and South, are a defense of a condition of things which we do not wish to have continued, nor do the people of the South intend that they shall be continued. [Applause on the Republican side.]

In glowing terms, you tell us of our prosperity and in the same breath you tell us if our elections are supervised devastation and ruin will follow.

Do you mean to say that supervision will bring honest elections, and honest elections will bring ruin? You say "Let us alone, while we work out our own salvation." Where is the salvation of the people while you are working out your salvation? Such a plea, from such sources, in the Hall of Representatives of the first Republic on the face of the earth, I had not expected to hear.

Are unfair elections a blessing and fair elections a curse? This is the only legitimate conclusion to be drawn from your arguments. I deny the truth of that conclusion. Unfair elections are an unmitigated curse. Whatever of prosperity we may have has been despite these methods.

As I view this measure, it is nothing more nor less than an effort upon the part of the Representatives of the Government to secure the protection of the ballot of the citizens of this Government.

It is the candid and honest opinion of seven-eighths of the people of this nation that the accumulations in certain sections and by certain classes of this country are more rapid than they ought to be.

They believe that this is largely due to favoritism in legislation. They believe that the only means that is left them with which to defend themselves against these aggressions is the ballot.

They believe the encouragement or further toleration of a system the powers of which have never been defined—I mean the ballot-box-stuffing system [laughter]—whose authority can not be measured, and from the results of which there is no appeal, will soon destroy their only means of protection, their right of suffrage.

I say to you, gentlemen, as a Southerner, that system must be brought to an end.

I say this as a representative of men who resisted this Government, and I am not here to apologize for them for that act.

They propose to accept and they have accepted the situation in good faith, and under the Constitution of the United States they propose to work out their own salvation; but they do not demand that they be let alone quietly and privately with the ballot-box while they are doing it. [Laughter.] They propose to do it under that divine injunction which commands us "to do unto others as we would that others should do unto us," the true foundation doctrine of republican institutions. Upon that basis and that line this Southern question will be solved.

When that result is reached it may be fatal politically to many Representatives now upon this floor, but it will be the birth of a peaceful and brilliant new South. The South will not then be represented upon this floor by men who apologize for the present condition of affairs; it will be represented here by men who will be elected by the honest votes of the people, and we shall have no excuses for further violations of the laws of the land. The same spirit of candid, honest, intelligent bravery which made them bare their breasts to the storm of battle for four years now inspires them to address themselves to the condition confronting them, and to meet it fairly and squarely, and they will do it.

The men who succeed the apologists here may not be Republicans; the men who succeed them may not be Democrats; but they will voice the sentiments of the people who send them here, and the people who will send them here love their country and her institutions. I say to you that we have no fears of supervision of our elections. We intend they shall be honest, and we want the world to know they are so whenever or wherever there is any doubt about it. We do not ask for more than we are willing to give.

Where a man against whom there is the imputation of crime refuses to be supervised, to be watched in his manipulation, we believe it is evidence of his intention to further prosecute practices which are detrimental to our best interest.

We believe, in plain English, that the desire for non-interference is because he wants to stuff the ballot-box; and we are afraid of that condition, let it prevail wherever it may, in New York, Chicago, or Little Rock. [Applause.]

It is charged that this bill is sectional and you claim it is for the South. I deny the imputation and ask if it is not applicable wherever fifty citizens of a county believe it necessary. Even in the past few days in the State of New Jersey unscrupulous scoundrels have been tried and convicted for stuffing ballot-boxes, and I herewith submit the following extract from the charge to the jury, delivered by Judge Lippincott in that case:

The government of the ballot-box-stuffer and repeater is no government at all. Such crimes are the most dangerous that can occur. Honest ambition and honest aspiration are crushed. Intelligence is scorned. The patriotism with which you would imbue your children becomes to them a useless acquisition. To instill in their minds a love of country so governed would be only to invite them to a sickening fraud feast. The history which would be placed in their hands would only be the cruel story of bribery and corruption of the ballot-box. Under such rule property becomes the prey of confiscation. Under the name of taxation communistic parasites and sinecurists would eat up the heart of mankind.

No less direct was a recent sermon of Dr. Parkhurst, of New York, as follows:

Dr. Parkhurst says with regard to the men who dominate New York municipal life that "their only title to candidacy was their devility, and their only apology for being elected the apathy of the saints and the subserviency of respectable men to political bossism." He adds:

"We maintain in this city schools of the prophets, we ship missionaries to all countries, and we annually export tons of Bibles and evangelical literature, and yet there is not concrete holiness enough on Manhattan Island to insure us against a system of political brigandage that excels even the organized outlawry of Italian banditti in the monstrousness of its demands and the frank cheerfulness of its methods."

The time is near at hand when members representing Southern districts will not thus claim by implication a monopoly in this or any other crime.

The bill which this is intended to amplify and perfect has been applied in most of the large cities North and South, and with direful results to none save and except the conscienceless voter and ballot-box-stuffer or the beneficiary of his corrupt practices.

The repeal of neither the fourteenth nor fifteenth amendment to the Constitution is being now considered, though from some of the speeches it would seem so, nor is that question in any way connected with this bill. This is a bill looking to honest elections.

It is not a race question, for the man who commences by stealing a negro's ballot, soon degenerates into the unscrupulous thief who will steal the ballot of any man who differs from him.

This is not a question of the supremacy of the Democratic or of the Republican party; it is greater; it is above and beyond either of these parties. It is a question of supremacy of the whole people, which is a matter of more importance than the success of any political party.

So long as this is a republic, the humblest citizen will be anxious to know that he can cast his sovereign vote as he pleases and have it counted as he casts it.

Further, he will want to know that no other citizen in the Republic, though he be ten times a millionaire, is allowed to do any more.

As he loves a republic better than oligarchy, as he loves certainty better than uncertainty, as he loves law better than anarchy, he will be anxious to know that every other citizen has the same right.

This is not a Federal election law in the sense of taking control of Federal elections. It in no way interferes with the right of the State to hold the election. It only asks in behalf of the nation to be allowed to supervise the elections in which members of Congress are being voted for, so that each and every State may know that each and every other State is securing exactly that representation to which it is entitled; no more, no less.

It is simply perfecting a system which has been in operation since 1871, a system which has proven beneficial in the suppression of frauds in every section of this Union where fraud has prevailed, from New York to California.

None save the vicious and strong or the rich and corrupt can possibly be the beneficiaries of a system of frauds.

As I do not care to represent either of these classes, but do represent the honest and laboring people of my district, I have no hesitancy in placing myself on record for the preservation in all of its sacredness of the ballot, by the supervision of the ballot-box, whenever that supervision is demanded.

It is the palladium of American liberty, "the distinctive feature of our Government," that which has made it the pride of every patriot and the glory of the nineteenth century.

Mr. Speaker, the actions of the Democratic members on this floor in the contested-election cases have been to me completely astounding. They have never as yet failed to indorse by their votes each and every method of fraud committed by their partisans against the right of suffrage.

They seemingly hailed with delight the invention of the double-slotted ballot-box, and fought with desperation for the retention of its product. They rushed madly to the defense of their election officers in the Alabama case, who returned their candidate as elected by a majority of 13,000, when it was subsequently proven that he was defeated by a majority of more than 4,000.

With these and other facts before me, I confess that their artful and labored arguments in opposition to a bill favoring the supervision of elections go far to satisfy me of the necessity for the protection of the people as against an organized band of office-seekers.

The skillful and artistic engraver, misapplying his God-given genius, duplicates the plates of the national Treasury note, and while working out his term in prison complains bitterly of the rigid and severe laws against counterfeiting. Does the good citizen object to these laws for the suppression of counterfeiting?

The heartless exactions of certain railroad corporations have furnished the necessity for the Interstate Commerce Commission, and, depend upon it, these corporations will be controlled by this or some other method. This, it is complained by corporation managers, is an outrage upon vested rights which the Government has no right to disturb.

The people say "Go on."

The vicious operations of the Standard oil trust, the sugar trust, the bagging trust, and other trusts, their total disregard of the rights of the people, have given to this nation an anti-trust law. The trust operators complain of its unconstitutionality and say it restricts trade. The people indorse the law, and if need be will have it more rigid.

The proof in seventeen contested-election cases brought before this House (aside from others which have been coming here for the past ten years), containing seventeen thousand pages of sworn testimony, of twenty-one thousand sworn witnesses, satisfies the people of this nation that the heart of their system is becoming corrupted; that an enemy powerful and unscrupulous is pursuing a deep-laid scheme to overthrow popular government.

The nation is alarmed, and the people demand that wherever or whenever there is danger the nation's truest and best citizens, selected from different political organizations in their respective districts, be placed upon guard to watch that sacred source of American liberty, the ballot-box.

Would any man who loves his country say nay? I think not. Yet the beneficiaries of this system of corruption rise up in their wrath and say it is unconstitutional. This is the well worn plea of intrenched corruption. I take it that our Constitution was framed for the protection of law-abiding citizens, rather than the shielding of criminals.

I have stood in the track of the ballot-box-stuffers' cyclone; I have stood by the dead bodies of its victims; I have seen the broken-hearted widow and orphans weeping over their slain, the honored sheriff of his county; I have seen the aged father bowed down over his brave son, who was not only the stay of his declining years, but the pride of his county; while the night was made hideous by the devotees of the system who mistook the desperation of their drunkenness for a courage the possession of which would have rendered them incapable of such deeds of atrocity. Their operations were conducted with an audacity indicative of the foreknowledge of the immunity subsequently enjoyed. These victims were not negroes. They were not Republicans. They were Democrats, whose only sin was an effort to secure a free ballot and a fair count. Such scenes are the inevitable consequences of such a system. Then why should there be opposition to a supervision of elections, thereby suppressing election frauds, the source of all these miseries?

As for myself I would invoke not only the power of both State and National Governments, but as I love my country and respect her whole people I would pray Heaven for their relief from such control.

Federal Election Law.

SPEECH

OF

HON. JOHN C. TARSNEY,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 1, 1890.

The House having under consideration the bill (H. R. 11045) to amend and supplement the election laws of the United States, etc.—

Mr. TARSNEY said:

Mr. SPEAKER: Were I asked to point to the brightest and best pages of my country's history I would point to those pages whereon it is recorded that, within fifteen years after the close of the most gigantic civil war that ever threatened the life of any nation, from Chesapeake Bay to the Rio Grande and from the Ohio to the Gulf, not one fort, one arsenal, one battalion was maintained to bind a single citizen in unwilling allegiance to the Constitution and laws of his country.

Were I asked to point to the darkest and worst pages of my country's history I would point to those pages whereon are written the acts and declarations of those of her public men who, during the four years of her supreme struggle in the field of arms for national unity, could find no field for personal patriotic effort, but who since, after the sacrifice of the blood of hundreds of thousands of their fellow-citizens has preserved the integrity and unity of the nation, have sought with unfaltering zeal, by keeping alive the sectional hatreds and animosities

engendered in civil strife, to prevent that perfect restoration and unification for which so much treasure was expended and so many brave lives were sacrificed.

Mr. Speaker, in every stage of the formative period of our Government two conflicting principles have contended, and each has found many advocates and supporters. Upon the one hand is the principle of centralization, which, being based upon the assumption of the incapacity of the people as a repository of political power, seeks to concentrate and centralize in the governing class not only the administration of granted and defined political authority, but assumes the existence of a right in those who govern to limit and restrict the exercise by the people of that residuum of political power reserved to the people. On the other hand is the principle which, recognizing the capacity of the people for self-government, maintains that the people are the source of all political power and authority; that the authority of those who govern is not inherent, nor yet derived from any divine source, but is based upon the consent of the governed and is subject to the limitations placed thereon by the people.

The conflict between these antagonistic principles has generally been manifested in controversies concerning the distribution of political powers between the General Government and the governments of the respective States; but to-day, and by the measure under consideration, the conflict between these principles becomes a conflict between the Government and the people; between those who govern and those who are governed; between arbitrary power upon the one hand, seeking its own enlargement in order to its own perpetuity, and the right of the people upon the other hand to keep within their own control the manner of choosing those to whom they intrust the enactment of their laws, thereby maintaining the only check that can be maintained against irresponsible arbitrary power. The Republican and Democratic parties stand respectively as the exponents of these conflicting principles.

The Republican party is the party of centralization, the party of arbitrary, unrestricted power. The Democratic party is the party of the people, the party of liberty regulated by law.

Every page, every line of the history of the Republican party marks its onward steps in the pathway of centralization; but the step it proposes to take by this measure is so radical in the direction of unrestricted authority in those who govern, so usurpatory of the political power reserved to the people and heretofore exercised by the people, that the past history of that party in this regard would appear insignificant if not harmless.

For the first time in the history of the Republic it is proposed to take from the people the greatest right reserved to them by the Constitution, that right upon which all their rights and liberties depend, that right which marks the distinction between a free government and a despotism, a right which they have exercised for more than one hundred years without restriction, the right of themselves choosing their own representatives in the legislative branch of the Government.

What is the basis of this measure? Why is the right of choosing the representatives of the people to be taken from the people and vested in appointive agents of those who govern? Sir, the answer is obvious. It is found in every page of the history of government. Authority is always seeking its own aggrandizement, its own enlargement, its own perpetuity. Authority never relinquishes, it always grasps; therefore the party that proposes this me sure, being in authority, not daring to rely upon the people for a continuance thereof, but unwilling to relinquish power, seeks the perpetuation thereof by taking from the people the last remnant of self-government and the only bulwark between a free government and unrestrained power.

Mr. Speaker, after the crucial tests which our system of government has undergone, after one hundred years of experience has demonstrated that man is capable of self-government, that a free government, a government of the people and by the people, may be made great and strong among the nations of the earth and at the same time preserve the greatest degree of liberty to its citizens, it were bad enough were we compelled to admit the necessity for a change in that system because of the ignorance or incapacity of the people; but how can we properly characterize a measure which embodies the changes in that system which are embodied in the pending measure, when the rightfulness or necessity for such changes finds no warrant or authority except in reasons and arguments based upon allegations of the corruption, the criminality, and the inherent dishonesty of the people?

That the measure under consideration proposes a complete change in the methods of conducting elections of Representatives in Congress and the certification of the results of such elections no one will deny. The Constitution of the United States, section 2 of Article I, provides:

> The House of Representatives shall be composed of members chosen every second year by the people of the several States, and the electors in each State shall have the qualifications requisite for electors of the most numerous branch of the Legislature.

That Constitution further provides:

> The times, places, and manner of holding elections for Senators and Representatives shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by law make or alter such regulations, except as to the place of choosing Senators.

Under the above provisions of the Constitution all elections of members of Congress have heretofore been conducted and the results thereof ascertained and certified in accordance with regulations prescribed by the Legislatures of the several States, and the officials or agents conducting such elections receiving and counting the votes, as well as those canvassing and certifying the results, have been authorized thereto only by the laws of the States.

The right to interfere with or control the elections of members of Congress has never been assumed by the General Government, and no jurisdiction over the subject of the election of members has ever been exercised, or sought to be exercised, except that appellate judicial jurisdiction involved in the case of contests, which jurisdiction is clearly conferred by the Constitution. Although offenses against the freedom and purity of elections are not more prevalent now than at any other period of our history, there never was a time when the subject of free, fair, and honest elections attracted such universal attention as the present.

The freedom and purity of the ballot to-day merits and commands a greater degree of solicitous consideration by the people than any other problem upon which depends their welfare. The existence of free government, the perpetuity of our system, the very life of the nation, are all involved not only in the freedom of the citizen to exercise the right of franchise, but in the honest conduct of elections and certification of their results. Hence we see that everywhere Legislatures as well as the people are thoroughly aroused to the importance of the subject, and State after State is hastening to adopt those systems which promise to insure the greatest degree of freedom, fairness, and purity of elections.

Mr. Speaker, now, when the attention of the nation has been aroused to the full importance of this question, when everywhere the sentiment of the people in favor of ballot reform is manifesting itself; when Legislatures are seeking after the greatest safeguards to the freedom and purity of the elective franchise, is it wise or just for Congress to assume or declare that the people do not want honesty in the conduct of their elections, and that the States, because of the dishonesty of the people, can no longer be intrusted with the power to regulate and control their own elections?

Sir, these are the plain, undisguised propositions of this measure. Its very basis is not alone the alleged corruption and dishonesty of the officials now charged with the conduct of elections, but the criminal complicity of the States and the people with the corruption and dishonesty of such officials. Upon what foundation does this measure rest? Upon what pretense of necessity is its enactment to be based? By what argument is it supported? What wrong will it right? What evil is it to remedy?

It is asserted by the authors and advocates of this measure that elections of members of Congress as now conducted are not free nor fair; that the voice of the people, when permitted to be expressed at the polls, is not honestly nor truly recorded; that a criminal conspiracy involving a majority of the white people of the South exists to prevent the colored people of that section from exercising the rights of citizenship; that fraud, intimidation, ballot-box-stuffing, false counting, false certifying, and every crime against the freedom and purity of elections is so universally and openly committed as to silence or destroy the voice of the majority in the selection of the representatives of the people.

If this indictment be true it does not follow that the measure we are now considering is either a necessary or proper remedy for such condition. If it be false then this measure can have no purpose but to rob the people of the right of choosing their own representatives, the right of self-government, and it can only be properly characterized as revolutionary and treasonable.

I have said that if the indictment upon which this bill is founded were true it would not follow that such a law was necessary or proper to meet the condition. In the enlightened, moral, and law-respecting age in which we live such a condition would not long exist. No great community would for long wish to bear a character for injustice when such injustice was accomplished by the open and flagrant violation of laws sanctified by the approval of the civilized world. No community would for long consent to be represented in the character of officials reeking in murder, in perjury, and every crime of the decalogue against justice, right, liberty, and civilization.

No community could afford for any period of time to permit such a condition to exist. Every consideration, moral, religious, and material, particularly self-interest, would appeal against such a condition; and therefore, while communities, like the individuals of whom they are composed, moved by sentiment or passion, may for a time seemingly acquiesce in being borne upon the crest of a wave of disorder and lawlessness, and even of crime, yet a consideration for the opinions of mankind and the sentiments of right, of justice, of patriotism, and of respect for and obedience to law which characterize and ennoble the people of our country and of our race would soon assert themselves, and such community, bent for the moment before the storm of sentiment or passion like the sapling before the hurricane's blast, would soon rise proudly up and take its place in the columns of the grand legions of their countrymen marching on to a higher civilization and to more perfect liberty attainable only by respect for and obedience to law.

But, Mr. Speaker, if disorder does exist in sections, as is asserted; if violence, and fraud, and crime do prevail, even to the extent alleged, in the elections of members of this body, I yet maintain that the measure proposed, dangerous as I shall show it to be, ought not to pass; that until a proper sentiment shall assert itself in the communities where such disorder is alleged to exist, and until such sentiment shall prevail to correct such evils, the law is now adequate to afford redress and prevent any injury to the body-politic.

The Constitution has wisely conferred upon this House the authority to absolutely determine the elections and qualifications of its own members, and therefore, if by offenses against the election laws the voice of the majority is suppressed and one be certified here as a member who was not fairly or honestly elected, this House has jurisdiction and authority greater than that possessed by any judicial tribunal and may investigate every matter pertaining to such election and set aside and reverse every act of corrupt or dishonest election officials and give effect to the voice of the majority in any district by seating here the one who was elected or who would have been elected had a free and fair election been held.

This remedy is not new nor untried; it is as old as the Constitution and has been asserted and enforced in every Congress from the beginning. In the elections of members to the Fifty-first Congress from the three hundred and thirty districts embraced in the country there has been no claim or pretense of crime, fraud, or illegality except in seventeen districts. The gentleman from Illinois [Mr. ROWELL], who is in some manner alleged to be connected with the authorship of this bill, is the chairman of the Committee on Elections, and as such has had charge of the investigation of the charges involved in the contested cases coming from those seventeen districts. Twelve of those seventeen cases have been disposed of by this House, and in six of those cases, namely, those from the districts represented by Mr. PARRETT of Indiana, Mr. BUCHANAN of Virginia, Mr. CATCHINGS of Mississippi, Mr. HOOKER of Mississippi, Mr. MORGAN of Mississippi, and Mr. CLARKE of Alabama, the contests have all been decided in favor of the contestees, the committee finding that there was no satisfactory proof of fraud, of intimidation of colored voters, of suppression of votes, or of any illegality whatever in the record of any of those cases.

Six cases have been decided by a strict party vote in committee and in the House in favor of the contestants, namely: Smith *vs.* Jackson, West Virginia; Atkinson *vs.* Pendleton, West Virginia; Featherston *vs.* Cate, Arkansas; Mudd *vs.* Compton, Maryland; Waddill *vs.* Wise, Virginia, and McDuffie *vs.* Turpin, Alabama. The cases of Jackson and Pendleton were decided upon charges of error or illegality in the count of a few votes in each case. The case of Mudd *vs.* Compton involved the allegation that a few illegal votes had been cast and counted for the contestee.

In three of the twelve cases disposed of the color line did not present itself, and in the nine other cases disposed of in which there was any pretense or claim that violence, intimidation, or fraud was resorted to in order to prevent the casting or counting of votes cast or offered to be cast by colored voters, the committee and this House has found and declared that as to six of these cases there was no foundation in fact for such claim or pretense, and that as to those six districts the elections therein were fairly and honestly conducted. Hence, we see that in but three districts have the charges that the laws were violated or that fraud, intimidation, violence, and crime were resorted to in order to prevent colored citizens from exercising the rights of citizenship been sustained by this House, and, hence, to the official action of gentlemen I appeal against their malignant partisan utterances on this floor.

Mr. Speaker, is the indictment presented by this measure against the people and the election officials of the country or any section of the country true? Does the condition in regard to our elections alleged in argument exist?

No man who loves his country would desire to see any of its laws violated or any section of his country by reason of disrespect for law brought into contempt. Much less can we afford to acquiesce in or condone offenses against the free suffrage of the people, upon which depends the existence of republican government. But, sir, perfect respect for and obedience to the laws relating to the suffrage can no more be expected than perfect observance of and obedience to any other law.

The history of the world from the beginning furnishes no warrant for expectation that any law, human or divine, will meet with absolute respect and observance. So long as the perversities of human nature require the enactment of laws for the government and restraint of man so long will there be violations of those laws.

Since the finger of God wrote upon the tablet of stone on Sinai's heights "Thou shalt not kill" there have been murders. Since the finger of God traced upon that tablet the words "Thou shalt not steal" there have been larcenies. Since an omnipotent God commanded "Thou shalt not bear false witness against thy neighbor" there have been slanders and perjuries. But, sir, because there has been murder committed, it does not follow that all men are murderers or that any community in which murder has occurred is a murderous community. Because the world's history is defaced with records of larcenies, of slanders, and perjuries, it does not follow that the communities in which these crimes were committed were guilty participants in these crimes or guilty of complicity with the perpetrators of such crimes. Nor does it follow that, because, perhaps, in many communities throughout the land there have been crimes committed against the purity of elections, therefore, every community where such crimes have been committed is unworthy to be intrusted with the administration of the laws or the conduct of the elections of their own officials.

No one will assert, sir, that all our elections everywhere or anywhere are conducted with absolute respect of and in obedience to law or that offenses are not committed against the purity of the ballot.

But, Mr. Speaker, what is the evidence concerning the extent and prevalence of crimes against the ballot? We have the statement of every honorable gentleman who has spoken from this floor in support of this measure that in his own district elections are conducted with the utmost fairness and honesty, and that for those districts this law is unnecessary and will not be enforced therein, but they allege that in other districts and in other sections there is a total disregard of law and every conceivable crime against the ballot is committed. It is significant that not one of these honorable gentlemen assumes to speak from personal observation concerning the conduct of elections in districts where they assert that crime and lawlessness prevail or that they were ever in those districts. Almost every charge and allegation upon which they urge the necessity of this measure is based upon a recital from a partisan press, wherein every crime, every act of lawlessness, every disorder, and every violation of law occurring in a particular section of the country, whether contemporaneous with an election or not, and no matter from what cause originating, are distorted into an offense against the laws of elections, having for its object the suppression of the colored vote.

Notwithstanding that thinking men view with grave alarm the indifference of electors and their reluctance to participate in political affairs and that this indifference is so prevalent that laws are being enacted to compel citizens to participate in elections and to vote thereat, gentlemen upon this floor urge as conclusive evidence of intimidation of voters and suppression of votes that the full registered vote of a district has not been cast or that the number of votes which a district should be entitled to cast as shown by census statistics has not been polled.

It would not lessen the conviction of these gentleman concerning the value of this evidence or the strength of their deductions therefrom for me to state that in my own city, at its last election, when great interest in the result was aroused and when excitement ran high, out of a registered vote of 37,000 but a little upwards of 22,000 were cast. Against the evidence, such as it is, and the assertions of gentlemen presented in support of these impeachments and slanders of communities and States, evidence of such character that no attorney who valued his reputation would think of presenting it in support of any issue in any other tribunal, to show how little of truth is found in these charges, and in defense of my country and the good name and fame of all her people in every section, I again call the attention of the House to the fact that at the election of members to this House in the three hundred and thirty districts of the country there was no claim or pretense but that all of said elections had been without taint, absolutely fair, free, and honest, except in seventeen districts; that in twelve of these districts the charges had been investigated and determined by this House, and in but three was there found any evidence of intimidation of voters or suppression of votes, or any other willful violations of the election laws.

I call the attention of the House and country to this fact that in this debate, and for years in the Republican press of the country, the State of Mississippi and her people have been charged with every crime against the ballot. The chairman of the Committee on Elections has, in this debate, poured forth the vials of his wrath against her and her people. We have heard much from him and others as we have read and heard much in the Republican press about "the Mississippi plan," about "the shotgun policy," about violence and murder and other crimes committed in that State and by her people, whereby almost the entire negro vote of the State was suppressed at every election. But, sir, for the ascertainment of the truth concerning the conduct of elections in that State we are not compelled to rely upon the heated utterances of the gentleman from Illinois, nor yet upon the malignant utterances of a partisan press.

Conclusive evidence regarding the facts is within our reach. An official record thereon is before us. That record, made in part by the gentleman from Illinois, is in every part at variance with his utterances on this floor. That record shows that there was no claim or pretense that the colored vote of that State had been suppressed or that there was any unfairness or illegality in the elections held in that State for members of the Fifty-first Congress, except in three of her Congressional districts. There were but three contested-election cases from that State. In all the other districts the elections were admitted to be fair. These contests were from the districts known as the "black districts," where the colored population predominates.

Those three cases were heard by the Committee on Elections and by the House, and all were decided in favor of the contestees. Those

three cases were heard and considered by the committee upon records which contained all the evidence, relevant or irrelevant, which tended to throw light upon the conduct of those elections or which bore in any manner upon the question of the fairness, the freedom, or the honesty of the elections in those districts. And upon that record, upon that evidence, the gentleman from Illinois and the other gentlemen who in debate talk about "the Mississippi plan," about "the shotgun policy," about violence and murder being resorted to in Mississippi to prevent free and fair elections, were compelled, under their oaths of office, to find and declare that such charges were absolutely untrue; that the elections held in the only districts of the State where pretense had been made that elections were not honestly conducted were free from any taint; that the contests were without merit, and that the gentlemen representing each of these districts by virtue of the certificates of their State were honestly elected and were entitled to retain their seats.

Mr. Speaker, let us go a step further in the investigation of the truth of the charges upon which this bill is based. I present to you the testimony of "witnesses who know whereof they speak." The gentleman from North Carolina—not from Massachusetts, not from Illinois—the gentleman from North Carolina [Mr. EWART], arising in his place here and as a Republican, declares that elections are as free and fair in his State as in any State of the Union. He declares that no Republican, white or black, is deprived of the privilege of voting for the candidates of his choice in that State, and that when they vote their ballots are fully and honestly counted.

The gentleman from Louisiana—not from Maine, not from Iowa—the gentleman from Louisiana [Mr. COLEMAN] says the elections in his State are free and fair, and that the count of ballots is correct and honest, and as a Republican he protests against this measure as a foul and false indictment of his people.

The gentleman from Indiana [Mr. CHEADLE] says that there is no more necessity for the enforcement of a law like this in any part of the South than there is in the State of Indiana; that there is as much suppression of votes in Indiana as elsewhere. The gentleman from New Jersey [Mr. LEHLBACH] says that if it should be enforced in the South it should be enforced also in New Jersey; that elections are as honest in the one place as in the other.

Mr. Speaker, the American student who investigates and studies the conduct of our elections, and compares them with the methods and practices which prevail in the election of members of that other great Anglo-Saxon Parliament, will have no reason to blush for his country and will find no developments coming forth from the crucial fires of this debate to warrant him in the belief that the time has come when it is necessary to take from a free people the control of the machinery for the selection of their law-makers.

But, Mr. Speaker, if reform in the conduct of our elections is demanded, if there be such violations of law and such prostitution of the suffrage for partisan ends as is asserted, does the measure we are considering promise relief from that condition; does this bill offer hope or promise of reform? I submit, sir, that the only results to follow the adoption of the system here proposed would be to increase in an immeasurable degree the evils complained of and to lessen the interest and responsibility of the people in affairs of government and transfer such responsibility solely to the official class, thereby creating an official autocracy in whom would be absorbed all the powers of Government vested in and reserved to the people by the Constitution.

Under existing law the ballots of the people are received and counted by men in each community chosen by the community because of their fitness and integrity to perform other high official duties, or who are selected and appointed to perform such duties by the incumbents of other high offices, chosen thereto by the free voice and suffrage of their fellow-citizens who know them and trust them and to whom they are immediately responsible for the manner in which they discharge the trusts reposed in them. For these you would substitute supervisors who may or may not be of the community or known to the community, who are not elected by or responsible to any constituency for the discharge of such important duties. You assume that the judges and clerks of election as now chosen are dishonest and that the communities they serve prefer dishonesty to honesty in the conduct of these public servants, yet how much less are the restraints against dishonesty and the guaranties for honesty in this particular under the system you propose.

By this measure you say that boards of county supervisors, county judges, county commissioners, with the clerks of the counties constituting the bodies authorized by law to canvass and tabulate the precinct returns, are corrupt, dishonest, and untrustworthy, and for all these you would substitute one man your chief supervisor in each judicial district (in many cases embracing a whole State), who is appointed to the place by a judge who may or may not know him, and who will be guided and influenced in making such appointment by men who make partisan politics a profession and whose sole aim will be partisan results, regardless of the means to be employed thereto.

In the hands of this one man you would intrust the discharge of duties you are not willing to intrust to the highest officials of all the counties of a district or of a State. To this one man thus chosen, and responsible only to the political party that secures him his appointment and whose servant he is, you would intrust not only the duty of appointing all your judges and clerks of election, but also of tabulating and making returns of the results. Gentlemen, have you duly contemplated the enormous power and the unrestricted opportunity for robbing the people of true representation which you purpose to intrust to this one man, a circuit-court commissioner generally, an alleged attorney, who has demonstrated his inability to obtain a livelihood in the legitimate walks of the profession, and who accepts the position as a means thereof?

A great Irish poet has said:

> Let me write the songs of my country and I care not who makes her laws.

I greatly fear, Mr. Speaker, that your chief supervisor will parody this sentiment by saying, "Let me tabulate the returns of your elections and I care not who casts your votes."

Mr. Speaker, every link in the chain that binds together the machinery of this measure bears evidence that it was forged not to purify, but to corrupt elections, not to insure correct returns, but to falsify returns, not to enforce the expression of the will of the people, but to subvert the will of the people, not to enfranchise, but to disfranchise.

But the crowning evidence of this purpose as well as your insolence towards and insult of the people is found in the returning-board clause of this measure. You say that the governors of States and secretaries of state elected to those high offices by constituencies many-fold greater than any you represent can not be trusted in the performance of their sworn duties; that the people elevate to those high places men who are so criminally dishonest that they can not be safely trusted with the compilation of the returns of the elections of their own people, or to certify therefrom whom the people have chosen, but that such duties may safely be intrusted to a partisan board of your creation composed of professional politicians.

Think you, gentlemen, that the intelligent people of this great country will hail with rapturous delight the passage of a measure based and founded upon an assumption that they have grown so dishonest, so criminal in their practices, that they can not longer be intrusted with the discharge of duties that for more than a hundred years have been intrusted to their fathers? Think you that you can thus with impunity slander, traduce, and insult the intelligent, brave, honest, and noble people of this country, whose servants, not masters, ye are and, by the grace of God, shall remain?

Mr. Speaker, the history of the Republican party does not justify the presumption or belief that its only purpose in seeking the enactment of this measure is to purify the ballot or to protect constituencies in the right to be represented by Representatives chosen by their own free voice. When we behold the Representatives of that party arising here in their places and denouncing offenses against the freedom of elections, protesting against the suppression of the voice of the majority, demanding a free ballot and a fair count, and hurling forth anathemas against those who would interfere with the right of the people to have their laws made and administered by officials duly and freely chosen by the people, we are vividly reminded of the portrayal of a strangely similar incident recorded in ancient and trustworthy history, to wit, that of Satan rebuking sin. Disclaiming any intention or thought of applying what I have just said to any individual as a representative of the Republican party, permit me to quote from the speech of the gentleman from Kansas [Mr. PERKINS]. Upon this measure he said:

> Mr. Speaker, it has been charged in the course of this debate that this is a Republican measure. I desire to admit it. It has been charged also that this was a partisan bill. In the sense that it is intended to give to every honest voter the opportunity of casting an honest vote, I admit that it is partisan. For more than twenty-five years it has been the doctrine of the Republican party that every qualified voter under the laws and Constitution of our country should be permitted to cast an honest ballot and to have that ballot honestly counted, and in that sense this is a partisan measure. This demand for honest elections is no new-born zeal with Republicans.
>
> For more than twenty-five years we have insisted that every man, no matter what the color of his skin, no matter what his nationality or creed, if he was qualified as an elector under the law and under the Constitution, should be permitted unchallenged and unrestricted to cast a ballot representing his convictions and his thoughts.

Mr. Speaker, if the doctrine of the Republican party for the past twenty-five years has been as stated by the gentleman from Kansas, then there has been a woful difference between its doctrine and its practices.

Before the people of this country can be made to see the Republican party as the gentleman from Kansas portrays it you must efface from men's minds and from the pages of your country's history all records of your test-oath disfranchisements. Blot out the record of the years of dark and bloody reconstruction. Let mothers teach their sons that the history of their country is a lie; that State government after State government was not overturned, and Legislature after Legislature was not organized nor dissolved by the bayonets of the Republican party. Teach them that the record of the Presidential contest of 1876 is as false as that record is black and damnable. Teach them that the Republican party did not then stifle and annul the voice of the people, trample upon the suffrage, disfranchise a majority of the citizenship of the nation, and, through a prostituted judiciary, by methods as revolutionary and treasonable as any for which revolutionist or usurper ever paid penalty with his life, set up in the high places of the nation to rule over the people

rulers not chosen by the people. Teach them that the measure we are now considering is not the most revolutionary, bold, and audacious step ever taken with the design of robbing a free people of the only safeguard to self-government.

Sir, when the present generation shall have passed away and when the children yet unborn shall have been taught that all the record of their country's history is but a lie, then, and not until then, will the world believe that the Republican party in the past has been true to the doctrine "that every qualified voter under the laws and Constitution of our country should be permitted to cast one honest ballot and to have that ballot honestly counted."

Mr. Speaker, I have treated of this measure only with regard to its general scope and purpose and of the probable results as regards the accomplishment of the reforms it is asserted by its advocates that it was designed to accomplish. I will not here discuss its provisions in detail, to show the enormous cost and expense it would unnecessarily entail upon an already overburdened people, nor yet its inquisitorial features which under the pretext of verification of the registration of voters authorize the invasion by its minions of the homes of the people for the apparent purpose of obtaining pretexts for annoying and harassing our foreign-born citizens and depriving them of their rights of citizenship.

I have shown that the conditions asserted as a foundation for this measure do not exist; that, if such condition as is alleged did in fact exist, this measure instead of being a measure of reform would only increase the evil and augment the danger. Its asserted object, therefore, is not and can not be its real object.

What, then, is the real purpose of this measure? Read in the light of the history of the past, of the conditions of the present, and the certainties of the future, there is no difficulty in reading aright the solution of this question. Sir, the purpose of this measure is that the Republican party now, when it has forfeited the confidence of the people and can no longer hope to retain power with the consent of the people, may perpetuate its power in despite of the will of the people.

Mr. Speaker, on that eventful day of Appomattox, it was supposed that civil war in this country had ended forever. The participants in that great struggle so believed, and so sincerely hoped. Those who followed the flag that still waved, and which I pray under God's providence may continue to wave over a free and united people until time shall be no more, and those who followed the flag that was then furled never to be unfurled again had on a hundred battle-fields learned that each had met a foeman worthy of his steel. The superb courage of each had won the respect of the other, and each felt a just pride in the remembrance that they were of the same race and of the same country, separated only for a time that the reunion might be more fraternal. When that war had closed they parted as friends, not as foes, and each resolved himself back into the citizenship of the land, there to aid with his grand physical courage and God-given intelligence in the moral and material growth and advancement of a restored Union, a common country.

But, sir, all the citizenship of the land did not participate in that great struggle, and unfortunately there was too large an element to whom a complete restoration would bring no feelings of gladness. To them an end to the war was to mean conquest and not restoration, and therefore bitter was their disappointment when the humanity of a Lincoln and the magnanimity of a Grant put an end to their expectations of lootings and plunderings.

Into the field of politics thousands of this element then turned for the spoils they had expected from conquest. A grand army of this class invaded the States lately in rebellion, and, taking advantage of the enfranchisement of the negro, by fomenting race prejudice and by the aid of test-oath enactments and other laws for the disfranchisement of the whites soon foisted themselves into the high places in the governments of all those States, and devastation and desolation worse and more lasting than the devastations and desolations of war followed in their footsteps. Their brethren of the same class in the North bent their energies to the task of fanning the embers of the war into flame and fomenting a wave of sectional hatred, upon the crest of which they might and did ride into place and power. Campaign after campaign was fought and won upon issues which appealed only to the vilest and basest passions of man.

But, thank God, we were living in a new era. We were living in the age of steam and electricity. The Goths and Vandals in time had been driven from many of the States of the South, and then the capital of the North began to build railways and telegraph lines into the South, and then it touched with its magic wand the rocks that hid the fountains of her illimitable wealth, and there gushed forth a living stream of prosperity for both sections. The wave of sectional hatred was turned back. The prosperity of the South had become a matter of selfish interest to the North, and the war and its memories were no longer a potent issue upon which campaigns could be won.

But the men who rode into place and power on the waves of sectional hate have not all been retired. Their voice is yet abroad in the land. They are here in this Chamber, and their voices are all-powerful here. Again we hear their bugle notes summoning their followers to a campaign of hate. The men who during the four years of actual war could not find a recruiting office now talk of "voting as they shot." The assistant paymasters now prate as glibly of war and battles as the grizzly bearded cannoneers. The judge-advocate of the home guard, standing in the silent bivouac of the heroic dead, talks bravely of the suppression of treasons and rebellions. He who in time of war confessed that "but for these vile guns he would himself have been a soldier" now declaims of "guns and drums and wounds." "God save the mark."

Sir, these men, invisible in war, invincible in peace, who thus and here, but here alone, play such heroic parts, have yet a deep design and one that bodes no good. There is a double purpose in this scheme. By rekindling again the fires of sectional hatreds you may hope to draw the minds of the people away from the great questions they are now considering, and by this means obtain for your party an extension of its lease of power. But failing in this you are providing by this measure the machinery by which you may perpetuate your power regardless of the will of the people.

But, Mr. Speaker, you will fail. The people of this country know too well the value of that great safeguard of liberty, the right of choosing their own law-makers, and never will they voluntarily surrender that right, but in the years that are to come, as in the years that are past, the people of this great country will march steadily onward in the enjoyment of the liberties bequeathed to them by the fathers, presenting to the world the sublime spectacle of the whole people of the greatest of all nations looking not to the bayonet, but to the decrees of their own courts and the verdicts of their own juries for the protection and preservation of their liberties and the enforcement of their laws.

Original-Package Bill.

SPEECH

OF

HON. WILLIAM C. COOPER,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 19, 1890,

On the bill (S. 398) to limit the effect of the regulations of commerce between the several States and with foreign countries in certain cases.

Mr. COOPER, of Ohio, said:

Mr. SPEAKER: In the brief time allowed me I will not undertake to do more than to express my earnest hope that we in this House will improve this our first opportunity to pass some measure relieving the people from the very unfortunate conditions resulting from the so-called "original-package decision" of our Supreme Court.

Sir, the unmeasured evils resulting from the free, untrammeled traffic in intoxicating liquors are known to and conceded by all, and therefore in every State in the Republic laws have been enacted affording the people at least some protection against these evils. Some of the States forbid it altogether; in others there is local option, taxation, license in various degrees. In many, if not in most of the States, provision by statutes has been made against the invasion by this traffic of religious societies, camp-meetings, agricultural fairs, educational institutions, the sale of liquor upon election days, etc.

The wisdom and the necessity of most of these laws few men will challenge; yet all these wise, salutary, and beneficent enactments are now everywhere insolently defied, set aside, and trampled down, and this traffic is publicly carried on without restraint, regulation, license, or taxation in each of the States—not by the citizens of the State where the liquor is sold, but by those who are not residents of the State, who do not obey the laws of the State, who do not pay taxes to the State, or in any way contribute to the support of its institutions.

Sir, I aver that there has never been in our nation's history so flagrant an instance of the violation of the doctrine of home rule or the right of the people to control their own local affairs and make their own police regulations as is here presented.

Sir, I believe that the first duty of the hour is that Congress shall enact some measure of relief from this wretched condition of affairs. The people are everywhere asking for it; they are earnest, importunate, and loud. The mighty voice of their petition comes to us from all over the land like—

> The roar of the ocean when navies are stranded;

And it is neither just nor wise for us to turn a deaf ear to their appeals. We should pass some measure of relief, and that quickly.

The people have no patience with doubts as to the constitutionality of legislation which the Supreme Court manifestly suggested and invited in the very decision of the original-package case itself, and they will regard advice to wait until the Supreme Court modifies the decision as mere mockery and but a cowardly pretext for refusing their just demand.

In conclusion I beg leave to say that, while I can and will cheerfully support the House substitute, I much regret that the Judiciary Committee did not deem it proper to accept the Senate bill as it came to us. The House substitute may be and perhaps is much better, but if our refusal to accept the Senate bill should result in the failure to secure any legislation upon this subject at this session of Congress, it would be in my judgment an immense mistake upon our part and a dire calamity to the country.

Original-Package Bill.

REMARKS
OF
HON. SCOTT WIKE,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 19, 1890,

On the bill (S. 396) to limit the effect of the regulations of commerce between the several States and with foreign countries in certain cases.

Mr. WIKE said:

Mr. SPEAKER: As I can not see my way clearly to the support of this bill, it is proper to state briefly the reasons that impel me to vote against it, though time for debate is too limited for general discussion.

The Constitution which I have sworn to support declares that all powers not delegated to the United States by it nor prohibited by it to the States are reserved to the States, respectively, or to the people. The power to regulate or prohibit the manufacture or sale of intoxicating liquors was never delegated to the United States nor prohibited to the States; hence Congress has no power over those subjects, but they are reserved to be exercised by the people of the several States through their State and local authorities.

Independent of this constitutional provision the Supreme Court of the United States has repeatedly held that there is an inherent power in the people to protect and preserve the life and health of the citizen and the peace, good order, and public morals of society. This inherent power is comprehended in what are termed the police powers of the State.

The Supreme Court has also decided that intoxicating liquors belong to that class of objects with which the Legislature of a State may deal, in its discretion, to promote the objects just enumerated, and has consequently repeatedly held that the States might prohibit the manufacture and sale of intoxicating liquors at pleasure.

The following quotations from decisions of the Supreme Court are given to sustain these views and are but samples of a long line of authorities:

Whatever differences of opinion may exist as to the extent and boundaries of the police powers and however difficult it may be to render a satisfactory definition of it, there seems to be no doubt that it does extend to the protection of the lives, health, and property of the citizens and to the preservation of good order and the public morals. The Legislature can not by contract divest itself of the power to provide for these objects.

They belong—

Speaking of intoxicating liquors—

emphatically to that class of objects which demand the application of the maxim of *salus populi suprema lex;* and they are to be attained and provided for by such appropriate means as the legislative discretion may devise. That discretion can no more be bargained away than the power itself. (Boyd *vs.* Alabama, 94 U. S., 645; 97 U. S., 192.)

Again, the Supreme Court says in the case of Stone *vs.* The State of Mississippi, 101 U. S., 814:

No Legislature can bargain away the public health or the public morals. The people themselves can not do it, much less their servants. The supervision of both these subjects of governmental power is continuing in its nature, and they are to be dealt with as the special exigencies of the moment may require. Government is organized with a view to their preservation and can not divest itself of the power to provide for them. For this purpose the largest legislative discretion is allowed, and the discretion can not be parted with any more than the power itself.

The Supreme Court went out of the broad, beaten road of Constitutional construction and "followed a rabbit track," as the saying is, to hold that a sale was necessary in the Iowa case to constitute the article a part of the mass of property in the State.

It would better have followed the decision in the New Orleans barge-coal tax case in 1884, where the coal had remained in the barge, or "original package," and the New Hampshire case, and the opinion of Chief-Justice Taney, who was no mean expounder of Constitutional law, cited in 5 Howard U. S. Supreme Court reports.

In the New Orleans case the court says:

It (the tax) was imposed after the coal had arrived at its place of destination, and was there put up for sale. The coal had come to its place of rest for final disposal or use and was a commodity in the market of New Orleans. It might continue in that condition for a year or two years or only for a day. It had become a part of the general mass of property in the State, and as such it was taxed for the current year, as all other property in the city of New Orleans was taxed. (Brown *vs.* Houston, 114 U. S., 632.)

And in the New Hampshire case the court, Chief-Justice Taney delivering the opinion, said:

Upon the whole, therefore, the law of New Hampshire is in my judgment a valid one. For, although the gin sold was an import from another State and Congress has clearly the power to regulate such importations under the grant of power to regulate commerce among the several States, yet, as Congress has made no regulation on the subject, the traffic in the article may be lawfully regulated by the State as soon as it is landed in territory, and a tax imposed upon it, or a license required, or the sale altogether prohibited, according to the policy which the State may suppose to be its interest or duty to pursue.

Justice Grier well puts it in his opinion in the celebrated license cases, decided by the Supreme Court in 1847 (see 5 Howard, 631):

I do not consider the question of the exclusiveness of the power of Congress to regulate commerce as necessarily connected with the decision of this point.

It has been frequently decided by this court "that the powers which relate to merely municipal regulations, or what may more properly be called internal police, are not surrendered by the States or restrained by the Constitution of the United States; and that consequently, in relation to these, the authority of a State is complete, unqualified, and conclusive." Without attempting to define what are the peculiar subjects or limits of this power, it may safely be affirmed that every law for the restraint and punishment of crime, for the preservation of the public peace, health, and morals, must come within this category.

As subjects of legislation they are from their very nature of primary importance, the foundation of social existence; they are for the protection of life and liberty, and necessarily compel all laws on subjects of secondary importance, which relate only to property, convenience, or luxury, to recede when they come in conflict or collision. "*Salus populi suprema lex.*"

If the right to control these subjects be "complete, unqualified, and exclusive" in the State Legislatures, no regulations of secondary importance can supersede or restrain their operations on any ground of prerogative or supremacy. The exigencies of the social compact require that such laws be executed before and above all others.

It is for this reason that quarantine laws which protect the public health compel mere commercial regulations to submit to their control. They restrain the liberty of the passengers, they operate on the ship which is the instrument of commerce, and its officers and crew, the agents of navigation. They seize the infected cargo and cast it overboard. The soldier and the sailor, though in the service of the Government, are arrested, imprisoned, and punished for their offenses against society. Paupers and convicts are refused admission into the country. All these things are done, not from any power which the States assume to regulate commerce or to interfere with the regulations of commerce, but because police laws for the preservation of health, prevention of crime, and protection of the public welfare must of necessity have full and free operation according to the exigency which requires their interference.

The court, in the "original-package case," so called, should have followed the authorities quoted and others sustaining the rights of the States in the exercise of their police powers, instead of revolutionizing the theory of our Government by striking them down and setting up the doctrine of the centralization of power in the General Government at the expense of popular and State sovereignty as recognized by the Constitution; and as nine-tenths of the members of both Houses of Congress condemn this latest decision as unwarranted it would be strange indeed if Congress should imitate the court in the infraction of the fundamental law.

The power, therefore, to deal with the subject of intoxicating liquors residing already with the States, and not with Congress, the latter can not confer any additional power upon them; and to assume to do so would be dangerous in the extreme, since, if such power were assumed and exercised in order to bring about certain results, say the prohibition of the sale of intoxicants, a subsequent Congress might be invoked to repeal such an exercise of power, in order to produce opposite results, in the liquor interests, to inhibit a State from preventing such sale; and, this sort of legislation being illimitable, that is, not confined to the subject of intoxicating liquors, it would be found easy under such assumption of power for the General Government to absorb the legislative powers of the States and leave them entirely at the mercy of Congress. So that it will be found that, with this class of legislation once recognized, the liquor question would cease to be a local one and would become national in its character. That would certainly not be desirable, though it is now insisted upon by radical prohibitionists. The question should be left to the States freed from even any implied power in Congress to interfere with it in any sense further than as a matter of taxation; and, so far as it might be considered independent of the police powers of a State, it might become subject to the constitutional power of Congress to regulate commerce among the States. It would be a startling stretch of power to hold that the authority to regulate commerce "among the States" gives Congress the right to regulate the manufacture and sale of intoxicating liquors within any State, whether the same were imported or not.

The Supreme Court, therefore, in view of the treatment of this subject by the people and the States, as well as by the courts themselves for the last fifty years, committed a most grievous error when it decided the recent Iowa "original-package" case, in denying or appearing to deny to the State the power to regulate the sale of imported intoxicants within its limits, and an error, too, and a wrong against the right of the people to regulate and control their domestic institutions in their own way, at which these same people, who are above the Supreme Court, as well as above Congress and the Executive, have a right to feel indignant.

It is not, however, to be apprehended that, when the question comes fairly and squarely before the court, of the right of a State to regulate or suppress saloons for the sale of intoxicating liquors, it will decide that such saloons in full blast may be imported into a State against its laws and against the will of its people, or that an "original package" descends from the imported barrel to every drink of whisky

that should be drawn out of it, or from the crate, case, or box to each bottle, vial, or capsule that may have been imported therein. So that it would appear for the present, at least, that the part of wisdom is to permit the courts and the people to settle the controversies growing out of the liquor question, without the interference of Congress, as it can not reasonably be doubted they will settle them correctly and satisfactorily.

As to what the Supreme Court may be expected to do in the premises, I submit the following extracts from a speech delivered a few days ago at the other end of the Capitol by that eminent jurist and statesman, Mr. EDMUNDS, of Vermont:

It may be that when the next case comes up on a further and wider consideration the very gentlemen who now compose the court, differing as some of them did with the majority, may come to the conclusion that they had been led into an error and that they may still hold that the States of the United States in respect of what shall be done in those States, and not among them, is a matter that the Constitution leaves to those States to regulate as they will.

So I do not feel absolutely condemned and overpersuaded and feel myself as put in a box by what the Supreme Court of the United States have so recently said. It is their mission to decide causes between parties as they think they ought to be decided; and, as they have often done, it may be their mission next year to change their opinion and say that the rule ought to be the other way. So I do not feel deeply embarrassed by the fact that the Supreme Court of the United States has taken the largest step that in the whole hundred years of the Republic has ever been taken toward the centralization of power somewhere, either in the Supreme Court or in Congress, one or the other.

I do not believe, for one, in the centralization of power. I believe in its segregation and separation in every respect that concerns the internal affairs of the body of the people in every one of the States, leaving out of the question those universal human rights that everybody agrees are intrinsic in men and citizens.—*Congressional Record*, page 5217.

And further on, in the same speech, he says:

Now, where is the line? The line is, I think, a line which the Supreme Court of the United States appears to have gone over, that when your act of transportation, your act of commerce among the States or from foreign nations has become complete, and the word "among" no longer applies, and the commodity is in the State where its transportation is ended, and it is in the hands of its owner there, whether that owner be a citizen of one State or another makes no difference, it is then just like the commodity of the same nature, all the laws being equal, in the hands of the citizen of the State who made it there himself, the subject of the State law; and that is what the Supreme Court of the United States within the next twenty years will come to.

It is not to be denied that the difficulties that have been sprung upon the country by this unfortunate decision of the Supreme Court, as well as the questions involved in this legislation, are of a serious character, and it is not surprising there should be a difference of opinion among Congressmen, as well as in the minds of the public, as to the constitutional power of Congress to relieve the embarrassment of the situation by proper legislation. As a strict constructionist of the Constitution, which, I repeat, I have sworn to support, I do not believe that Congress can constitutionally relieve the situation by delegating to the States its authority over the subject of the regulation of commerce among the States, so as to enlarge the powers of the States beyond what they now possess.

This statement, taken from the majority report of the Senate Judiciary Committee submitted to the Senate during the last Congress, forcibly puts the matter, namely:

It is equally clear that Congress can not part with or delegate to a State any power which has not been reserved to it. Congress can not return to the States a power given by the Constitution to Congress; much more can not Congress delegate or surrender a granted power to any portion of the States, for that would *pro tanto* invest the State with power not possessed by the other States.

That report further goes on to say:

The power here claimed (as is claimed in the bill before the House) is a power denied both to the States and to Congress; and the effect of the bill is to create a constitutional power by the joint action of two parties to both of whom it is prohibited. This, we think, can not be done.

And again:

It should not be overlooked that the province of State control over what concerns the police regulation of domestic health, peace, and general good order and well-being within each State is, under the Constitution, as secure against intrusion from Federal authority as the regulation of foreign commerce by the General Government is from encroachment upon that province by State authority. It is not desirable that Federal legislation should seem, by inference even, necessary to impart or maintain aid or protection to the State's exercise of its authority within the province of State domestic control.

A Representative in Congress should be especially jealous of the integrity of the legislative department of the Government and zealous in defending against encroachment upon it by the other departments, by either a curtailment of its powers or an enlargement of them, or an enlargement of its duties beyond the powers clearly defined in the Constitution; and therefore that statement in the recent decision of the Supreme Court that declares, in substance, or intimates that Congress has power to clothe the States with certain rights necessary to enable their people to enjoy the privileges and exercise the rights of self-government is totally abhorrent to my idea of the independence not only of Congress, but of the people, and the rights of the States under the Constitution.

It is, however, argued that this bill does not delegate such authority, but simply makes the States an agency of the General Government in the regulation of commerce.

And it is again insisted that the law itself is merely a regulation of commerce, while the radical prohibitionist insists there is an overpowering necessity for interference that rises higher than constitutional obligations.

As at present advised I differ from all these; but the advocates of all the different and conflicting theories are earnest and honest and in the near future may come together upon a common ground of agreement. It would be wise, in my judgment, therefore, not now to adopt doubtful legislation, but to allow the matter to remain for the present, as before suggested, for the arbitrament of the courts.

While I am not a prohibitionist in politics or principle, I am a firm believer in the right of every State to regulate the question of the manufacture and sale of intoxicating liquors within its borders in its own way, and even though that way leads to absolute prohibition; but I do not believe that Congress has any constitutional power (other than that of taxation) to interfere in any way with the subject in the States or in any way to control a State in its management of the entire question, either by giving it greater power than the Constitution leaves to it or by detracting therefrom.

I do not apprehend there will be any permanent embarrassment to the local governments growing out of the recent decision; but, should there be an irreconcilable conflict between the people of the country and its courts which is not in the power of Congress to remedy, then there is provided a speedy method by constitutional amendment to remove any supposed or real impediment in the way of the free exercise by the people of the right to regulate and control their domestic affairs in their own way. And in the mean time it is better to "bear those ills we have than fly to others that we know not of." It will be time enough to adopt doubtful legislation to correct the error in question, even should resort ever be had to such an expedient, when all legitimate efforts to that end fail.

For the reasons indicated in these remarks and deducible therefrom I shall vote against this bill; but with a view to making it less objectionable I shall vote for some of the amendments proposed, although they may not appear to be entirely free from all of the objections urged against the main proposition.

Federal Election Law.

SPEECH

OF

HON. BENJAMIN H. BUNN,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 1, 1890,

On the bill (H. R. 11045) to amend and supplement the election laws of the United States, etc.

Mr. BUNN said:

Mr. SPEAKER: I have remained a silent though thoughtful observer of the constant usurpation of power by the majority of this House since I have had the honor to be a member.

I have heard the majority declare upon this floor that they were responsible for all legislation enacted by this Congress, that the minority should not impede their onward progress, and in the very next breath appeal to the Speaker to add a few names of the minority as present and not voting to enable them to pass a bill.

I have seen the Speaker of this House override the precedents of his thirty predecessors, overrule himself and his own express declarations as a member of this House, and become the pliant tool of his party leaders. I have seen the Constitution trampled under foot by the majority for the sole purpose of fixing perpetual Republican rule upon us, and, when we have appealed to precedents and the Constitution itself, the only reply we have received was, "Rebel," "Rebel," flaunting the bloody shirt, and attempting to widen and deepen the bloody chasm.

Now, we want to ask you gentlemen not to forget that the rebels of 1861, if rebels you please to call them, had for their example the conduct of the sons of Massachusetts and New England when you refused to the General Government the militia, in 1814, and called forth the declaration from Mr. Jefferson that, "Some apprehend danger from the defection in Massachusetts. It is a disagreeable circumstance, but not a dangerous one. If they become neutral, we are sufficient for our enemies without them, and in fact we get no aid from them now."

Yea, sir, more than that. The expression, which will live as long as the history of this country shall live, "We will resist the power of this Government peaceably if we can, but forcibly if we must," originated with and fell from the lips of Mr. Josiah Quincy, the colleague of Daniel Webster. Now, I do not refer to these matters to revive the scenes which immediately preceded and succeeded the Hartford convention. I have not the desire nor the time to go into details, but I wish simply to show that it is about time to bury the past and turn our eyes to the future.

Mr. Speaker, I have watched, waited, and wondered if the end would ever come. Now, sir, I see that the purpose of the majority was not only to scatter the surplus in the Treasury to the four winds of heaven to prevent the cry which is haunting them from all sides for a reduction of taxation, but to humiliate and oppress the land I love, the home of innocence and of virtue, of honor and of manhood. I cannot longer remain silent. I should be unfaithful to my people if I did not rise in my place upon the floor of this House and defend them from the insinuation of fraud contained in this bill and from the open charges of fraud made upon this floor and hurl them back as false into the faces of the men who make them.

The majority have seen fit to stifle the voices of the representatives of a free people upon the floor of this House, and although we are to-day called upon to consider a bill to uproot a custom and a part of our system of government as old as the Government itself, dear to us by reason of its having been transmitted from our ancestors as one of the very corner-stones upon which this Republic was built, we are told that we are not to have more than three days to discuss it, and one-half of that time they will take to answer us; we are told that we shall only have two days to offer and vote on amendments, and on the sixth day we must vote on all amendments and the final passage of the bill. And in the mean time they reserve the right to call up any appropriation bill or bills that may be reported from committees, thus taking off the time of debate, as it does not postpone the time fixed for taking the final vote. They never lose an opportunity to vote away the public moneys.

There can be no question that this bill is intended for the South. This can be gathered from expressions upon this floor and elsewhere. An eminent gentleman from the other side recently in a speech delivered in this city said:

I believe that this Congress will pass a national election law. If this bill passes it will teach Southerners there is but one flag.

Now, this language is cruel and unkind and entirely without foundation or justification, and can only be excused on the ground of ignorance of our feelings; but it confirms what I have said. I thought the war was over and that we had met as national legislators. I will not, Mr. Speaker, review the power of Congress to pass this bill, but I will only say that it is, to say the least, a very questionable power. I will only refer to its expediency. Mr. Speaker, I want to tell this House that I chanced to be in New York on the 30th day of October, 1889, "when one of the most beautiful spectacles ever presented was seen at the highest point, in the city of Brooklyn, one of the most superb sites in the world, on the occasion of laying the corner-stone of the long-delayed monument to the brave men who went from the City of Churches to save this country. There, in the presence of thousands of boys in blue, the Rev. Dr. Behrends delivered the address. I shall never forget the effect of that address upon me and upon all who heard it. When referring to the cause of the late war and the reserved rights of the States under the Constitution and the different constructions placed upon it, he said:

The South is entitled to the moral relief which a frank and fearless recognition of this fact provides. They fought for what they honestly believed to be the doctrine of the founders of the Union.

This language, delivered as it was in the very heart of the North and to the Northern soldiers, emboldens me to appeal to my friends on the other side of this Chamber to call a halt; to stop in their mad career and hear the appeals of one who wore the gray, who on the bloody field of Gettysburgh, at Bristoe Station, the Wilderness, Spottsylvania, Cold Harbor, Gaines's Mill, at Malvern Hill, before Petersburgh, and elsewhere, met the boys in blue, one who honors every brave soldier of the late unfortunate war, I care not upon which side he fought.

I want to tell you in behalf of the men who wore the gray that they are as faithful to that flag which now floats over the head of the Speaker as any man upon either side of this House. And if the time shall come in our day when it shall be necessary to test that fidelity they will be found in the very front rank of soldiers fighting to sustain it.

They will put to shame some of the demagogues who ride into place and retain power by reason of the constant charges of infidelity against them.

I come not here, Mr. Speaker, to apologize for their course. I hate the man who would ask an apology and I despise the man who would give one, but I come to tell you that when they surrendered and took the oath of allegiance to the Government they took it without mental reservation, and to say that, however much they loved the cause of the South, they realized that the star of the Confederacy had set to rise no more, and they determined that no Union soldier or northern man should be more faithful to this Government than they. And I challenge any man to point to a single instance of violation of the parol taken by any Southern soldier when the army of the South surrendered.

We are tired of the charge of rebel, and we call upon you now to recognize us as your brothers. We are blood of the same blood and flesh of the same flesh. Hear our appeals. They come from the heart of the South. Our people, white and black, desire to be let alone. Nobody wants this law to pass, save and except a few politicians. I copy a letter from a Republican from my State as evidence of what that party thinks of it.

FORCE BILLS FOR THE SOUTH—HOW THE QUESTION IS VIEWED BY A SOUTHERN REPUBLICAN.

Editor Post: Congressman EWART was quite right in denouncing the Lodge election bill as a force bill and equally right in opposing it as a caucus measure, and should he have the backbone to oppose it as a party measure he will again be right and merit and receive reward. I say this as a Republican who lives in the so-called Black Belt. My county has 3,000 white voters to 700 black, and in politics it is about evenly divided. Elections, and I have had much experience, are fair, but where courage is they are bound to be so, and both parties have it here. Every reconstruction measure has been a failure, more or less, in so far as it attempts artificially to boost the negro above the Caucasian. The following up of these measures upon measures but serves to make an Ireland of the fairest part of this nation. It does not desire to be an Ireland; it wants rest, to be let alone.

Pass your silver bills, gold bills, tariff bills, pension bills—the South is unconcerned, the masses caring nothing. But let her alone without exasperating and useless and what will prove bitterly fruitless measures like this or any other force bill. Give her a chance to develop her resources, and she will be loyal to the nation. You can not force loyalty, but she is loyal now. The greater hearts of the North, of whatever party or condition, know this, and as a Republican who never faltered and a born Southerner I affirm it.

The negro can take care of himself, and he is doing it. He loves the South, he loves his people, he loves the whites here, even Democrats, far more intensely than he does any Northern man, and (I speak advisedly) far more intensely than any Northern man loves him. He knows that our administrations administer few of the crumbs of office to negroes; he is also fully aware that that bold statesman Mr. Cleveland (who, by-the-by, promptly turned me out of office) gave more such to real negroes than had been done before or since. Force bills retard everything South, and the prosperity of the negro race more than anything else. Sentimentality, whether it refers to the so-called negro question, civil-service hypocrisy, or gushing ante-Presidential nomination pledges, deserves, and will receive the condemnation of honest men and predestined damnation.

A. V. DOCKERY,
Late Editor Southern Protectionist.

CARTHAGE, N. C., *June* 19.

The South is making rapid strides towards improvement, and, with the relief which our agriculturists hope to secure at the hands of this Congress, our whole section will blossom as a rose. We beg of you not to check our onward progress. We have inviting fields for Northern capital, and it is pouring into our midst by millions. We stand with open arms to welcome you. Not a single man from the North who has visited our section and invested with us—I care not what his politics may be—will for one moment entertain the belief that this law is necessary. Indeed, I should want no more certain way to defeat its passage than to postpone action upon it and invite its advocates to go home with us and see and feel and know what we see and feel and know. Justice is all we ask, but the majority are and will remain in total ignorance of our beautiful Southland.

The late lamented Hon. W. D. Kelley, of Pennsylvania, after returning from a recent trip through the South, said:

I saw during my trip a country upon which the Almighty has with most lavish hand bestowed his richest material gifts. It is gorged with every mineral. I have scarcely been in a State that does not abound in coal, iron, copper, and lead, and have traveled over a region of country richly underlaid with gold-bearing quartz. Let me speak especially of North Carolina. My friends, North Carolina is the most beautiful and richest part of God's earth upon which my vision or feet have ever rested.

You know that she produces cotton, rice, indigo, tar, pitch, turpentine, and superior timber. You know that her soil and climate are adapted to the cereals, wheat, corn, rye, buckwheat, and oats, but you probably do not know that that State, long known as the Rip Van Winkle of the Union, from which more than fifty thousand free white men have fled to the two States of Indiana and Illinois, is the land of wine and honey, the apple and the peach, the fig, the pomegranate, all of which I saw prospering in open field and under the most artless culture Its native vines made the fortune of Longworth, who carried cuttings there. The wine-producing vineyards of Western Pennsylvania and around the border and on the islands of Lake Erie, and those scattered through Missouri, are from cuttings taken from the native vines of North Carolina—the Catawba, the Lincoln, the Isabella, and, richest of all, the Scuppernong, of which, as it has not yet been successfully transplanted, Eastern North Carolina has the monopoly. There it grows spontaneous as a weed.

The woods and hillsides teem with the richest honey-bearing flowers, and the bees invite you to put up a rude box, that they may reward your kindness with the sweetest treasure. There is not a vegetable we produce that will not thrive in North Carolina. Wealth and honor are the pathway of the New South. Her impulses are those which are impelling the advance of civilization and the progress of wealth and refinement. May the Almighty speed and guide her onward progress.

Those are words of wisdom and invite the careful attention of those whose duty it is to legislate in the interest of a united country.

Now, sir, I will add that the warmest possible feeling exists between the whites and blacks in my State, and they are working together to build up the waste places and unearth the hidden treasures which lie buried beneath her surface.

The Democratic party took charge of the State government of North Carolina in 1872. The Republicans had had unlimited control from 1868. When the Republican party took charge of the State government in 1868 the indebtedness of the State, upon every account, including interest, was $13,000,000. This was the aggregate indebtedness of a hundred years.

During the four years of their reign the Republican party in North Carolina incurred an indebtedness of $23,700,000, leaving us as a legacy, a debt, including the interest on the $13,000,000, of $40,000,000. Our grand old State never realized one cent of benefit for this additional indebtedness. They squandered the school fund which had been given to the State by the National Government, and which was preserved

and held sacred during the entire war. They sold almost every share of stock which the old North State had in her railroads. They never spent a dollar to enhance the material interest of the black man; never built a single school-house; never sent anybody to school or provided the means to run a school a single day; never provided in any way to care for the colored insane, deaf, dumb, or blind.

Now, sir, upon this record can my friends on the other side wonder that we have been forced to take charge of our own affairs and run the government of the State?

That the Democratic party in North Carolina has done absolute justice to the negroes no one can deny who is acquainted with her history. They have built asylums for their deaf, dumb, blind, and insane, in which they are cared for exactly as the whites are cared for in their own asylums. They are conducting normal schools for the education of negro teachers. They have built negro school-houses all over the State. They provide exactly the same means and methods for conducting negro free schools as they do for white schools. They provide exactly the same amount of money per capita for the education of the negro children as they do for white children, and in all respects guard and protect the interest of the negro in his rights of citizenship. They restored the school fund squandered by the Republicans. They restored the State's credit, compromised and funded her debt, and placed her bonds above par upon the markets.

There is one remarkable fact about the negro which fully demonstrates his confidence in the white Southern man, and that is if they have a case to be tried in a court of justice they always prefer to have white men on the jury, and this is especially the case if a colored man is on the other side of the case.

You never hear a word of discontent coming from the blacks till some political disturber comes among them. They are a kindly race, strongly attached to the Southern whites, and the whites have a very strong attachment for them.

They are improving rapidly, and gathering around them considerable estate. I have received a letter from one of their race in my district. Writing upon this subject, he says:

I have worked up this (Wake) county with the following result as to three items:

Property.	Number.	Value.
Land.....acres...	12,360	$98,704
Town lots	419	175,000
Horses and mules	555	27,698
Total value		301,402

These figures indicate that the actual value of property owned by negroes in this county is about $500,000, and in the State not less than $7,000,000.

The author of this letter is Charles N. Hunter, editor Progressive Educator, Raleigh, N. C.

It will be a matter of interest to study the negro question a little more fully, and I print some facts showing how they are gaining throughout this entire country, and their relative political power.

APPORTIONMENT ACT, FEBRUARY 25, 1882.

The House of Representatives to be composed of three hundred and twenty-five members, to be apportioned among the several States as follows:

Alabama	8	Missouri	14
Arkansas	5	Nebraska	3
California	6	Nevada	1
Colorado	1	New Hampshire	2
Connecticut	4	New Jersey	7
Delaware	1	New York	34
Florida	2	North Carolina	9
Georgia	10	Ohio	21
Illinois	20	Oregon	1
Indiana	13	Pennsylvania	28
Iowa	11	Rhode Island	2
Kansas	7	South Carolina	7
Kentucky	11	Tennessee	10
Louisiana	6	Texas	1
Maine	4	Vermont	2
Maryland	6	Virginia	10
Massachusetts	12	West Virginia	4
Michigan	11	Wisconsin	9
Minnesota	5		
Mississippi	7		325

Representatives that may be assigned to new States, when admitted, shall be in addition to the above. Congressional districts are to consist of contiguous territory, and are to contain, as nearly as practicable, an equal number of inhabitants. There is no requirement that the territory shall be compact in form, and a district might extend from one end of Texas or California to the other and be consistent with the law, although not consistent with reason and good conscience.

The population of the United States, exclusive of that of the Territories, was, in 1880, 49,371,340; and this number divided by 325, the number of Representatives from all the States, will give the apportionment of population to each district, namely, 151,911.8.

The Presidential election in 1884 was the first one held under the apportionment which was based on the census of 1880. The aggregate vote for Cleveland, Blaine, Butler, and St. John in 1884 was 10,044,062. And it appears, therefore, that this voting population in 1884 was more than a fifth of the total population in 1880; that is to say, it amounted to 4.915 of that population. But the aggregate population had increased considerably during the four years; and it is therefore safe to say that the voters were in the proportion of one-fourth of the whole people.

Let it be assumed, therefore, that as a rule, but not applicable to the colored vote of the Northern States, the voting population is now one-fourth of the total population.

There were in 1880, in the Northern States, or those which had no slaves when the war came on, 479,618 people of color. This class had increased in those States in the ten years from 1860 to 1870 at the rate of 50 per cent.; and from 1870 to 1880 it increased 41 per cent. It is probable that this rate of increase has gone on to the present time, though not equally in the different States; so that something like 40 per cent. must be added to the colored population of 1880 in the Northern States, which would give a total for 1890 of 671,465.

Now, the great increase of the colored population in the Northern States since 1860 is known to be due to emigration from the South; and it is equally well known that nine-tenths of that emigration has consisted of young men or men in the prime of life.

Prior to the war the increase of the colored people in the free States was at a less rate than that of the free colored people of the South, and it was far behind the increase of the slaves, and was not above 10 per cent. in ten years. But from 1860 to 1870 the leap of Northern colored increase transcended all records; and the fact was simply due to immigration. Pennsylvania, in 1880, for instance, contained 85,535 colored inhabitants, and now, supposing it to have gone on at the rate of the preceding decade, 31 per cent., it must have 112,040.

Now, Pennsylvania, at the last Presidential election, gave Mr. Harrison a majority over Mr. Cleveland of 79,561 votes; and a majority over his three opponents, Cleveland, Democrat; Fisk, Prohibitionist; and Streeter, Labor candidate, of 54,719. But of Mr. Harrison's majority not less than 30,000 were colored voters.

New York, in 1870, had 52,081 colored inhabitants, and in 1880 it had 65,104. The increase was at the rate of 25.23 per cent. At the same rate that class of the population in 1890 must be 81,530, of whom 20,000 are voters and vote the Republican ticket. Mr. Harrison's plurality in the State over Mr. Cleveland was 14,373, while he fell short of a majority over the three candidates of above 16,000 votes.

New Jersey contained 30,658 colored people in 1870, and in 1880 that class of the people had risen to 38,853. The increase, therefore, was at the rate of 26.73 per cent. At the same rate of increase the colored population of New Jersey in 1890 would be 49,236; and the voters among them must be 12,000 and more.

The colored population of Massachusetts in 1870 was 13,947, and in 1880 it amounted to 18,697. The increase was at the rate of 34 per cent., and at the same rate it must now be 25,000; of which number above 6,000 are Republican voters, and their votes added very materially to the majority of Mr. Harrison over Mr. Cleveland and Mr. Fisk. At another election the votes of these colored men may be found very necessary to the success of the Republican ticket in that ancient Commonwealth.

Ohio had 63,213 colored inhabitants in 1870, and in 1880 the number was 79,900. The gain in ten years, therefore, was 16,687. This was at the rate of 26.39 per cent., and at the same rate the present colored population of Ohio must be 100,985, of whom 25,000 are Republican voters.

Illinois had 28,762 colored citizens in 1870 and 46,368 in 1880. The gain was, therefore, 17,606, and the rate of increase was 61 per cent. At the same rate of increase the colored population of Illinois must now be 74,652, a third of whom are men and Republican voters.

Indiana contained 24,560 colored people in 1870, and 39,228 in 1880. The gain was therefore 14,668, and the rate of increase was 59.72 per cent. At this rate the present number of colored people in Indiana must be 62,655, one-third of whom are Republican voters. Mr. Harrison's plurality over Mr. Cleveland was 2,348; but he was in a minority of about 10,000 on the whole vote.

Michigan had 11,849 colored citizens in 1870, and 15,100 in 1880. The gain was 3,251, which was at the rate of 27.43 per cent. At that rate the colored population of Michigan in 1890 must be 19,250, of whom one-third are Republican voters.

The colored population of Kansas in 1870 was 17,108, and in 1880 it was 43,107. The increase therefore was 26,000, and the rate of increase was 152.94 per cent. It is not to be supposed that the increase has gone on at that rate, however. But if it has been only one-third of that rate, or only 50 per cent., the colored population of Kansas will be shown by the census to be taken in 1890, to be 64,660, of whom nearly half are voters.

The greatest rate of increase of the colored population in the Northern States since the war has been in the West. That race, like the whites, have taken the advice of Mr. Greeley to go West.

The following statement shows the number of Representatives and the number of electoral votes to which each State is entitled under the apportionment act of 1882, and the number to which they would

be entitled if the colored population were excluded from the right of suffrage.

In the first place, as has been stated, the division of the total population of the States by the number of Representatives, 325, shows that the population for each Congressional district, if the country could be divided equally, would be 151,911.8. But if the white population of the States, which amounts to 42,714,479, be divided by 325, the apportionment to the several districts will be 131,429. And dividing the white population of the several States by that number will show the number of Representatives to which they would be entitled on that basis, as follows:

States.	Total population.	Representatives.	White population.	Electors at present.	Electors on white basis.
Alabama	1,262,505	8	662,185	10	7—
Arkansas	802,525	5	591,531	7	6+
Delaware	146,608	1	120,160	4	3
Florida	269,493	2	142,605	3	3—
Georgia	1,542,180	10	816,905	12	8—
Kentucky	1,648,690	11	1,377,179	13	12—
Louisiana	939,946	6	454,954	8	5—
Maryland	934,943	6	724,693	8	8+
Mississippi	1,131,597	6	479,398	8	6+
Missouri	2,168,380	14	2,022,826	16	17—
North Carolina	1,399,750	9	867,242	11	9+
South Carolina	995,577	7	391,105	9	5+
Tennessee	1,542,359	10	1,138,831	12	11+
Texas	1,591,749	11	1,197,237	13	12—
Virginia	1,512,565	10	880,858	12	9+
West Virginia	618,457	4	592,537	6	6+
Total	18,507,324	120			
California	864,694	6	767,181	8	8
Colorado	194,327	1	191,126	3	4
Connecticut	622,700	4	610,769	6	6
Illinois	3,077,871	20	3,031,151	22	25
Indiana	1,978,301	13	1,938,798	15	17
Iowa	1,624,615	11	1,614,600	13	14
Kansas	996,096	7	952,155	9	9
Maine	648,936	4	646,852	6	7
Massachusetts	1,783,085	12	1,763,782	14	15
Michigan	1,636,937	11	1,614,560	13	14
Minnesota	780,773	5	776,884	7	8
Nebraska	452,402	3	449,764	5	5
Nevada	62,266	1	53,556	3	3
New Hampshire	346,991	2	346,229	4	5
New Jersey	1,131,116	7	1,092,017	9	10
New York	5,082,871	34	5,016,022	36	40
Ohio	3,198,062	21	3,117,920	23	26
Oregon	174,768	1	163,075	3	3
Pennsylvania	4,282,891	28	4,197,016	30	34
Rhode Island	276,531	2	269,939	4	4
Vermont	332,286	2	331,218	4	5
Wisconsin	1,315,497	9	1,309,618	11	12
Total	30,864,016	204	30,254,232	248	264

President Harrison carried twenty States	5,439,877
President Cleveland carried eighteen States	5,538,421
Cleveland's majority over Harrison	98,544
Harrison's electoral vote	233
Cleveland's electoral vote	168

Cleveland States.	Electoral vote.	On white vote.
Alabama	10	7
Arkansas	7	6
Connecticut	6	6
Delaware	3	3
Florida	4	3
Georgia	12	8
Kentucky	13	12
Louisiana	8	5
Maryland	8	8
Mississippi	8	6
Missouri	16	17
New Jersey	9	10
North Carolina	11	9
South Carolina	9	5
Tennessee	12	11
Texas	13	12
Virginia	12	9—
West Virginia	6	6
Total	168	143

Harrison States.	Electoral vote.	On white vote.
California	8	8
Colorado	3	4
Illinois	22	25
Indiana	15	17
Iowa	13	14
Kansas	9	9
Maine	6	7
Massachusetts	14	15
Michigan	13	14
Minnesota	7	8
Nebraska	5	5
Nevada	3	3
New Hampshire	4	5
New York	36	40
Ohio	23	26
Oregon	3	3
Pennsylvania	30	34
Rhode Island	4	4
Vermont	4	5
Wisconsin	11	12
Total	233	258

It will be seen from this calculation that if the electoral vote were divided according to the white vote—

The Cleveland States would have had in the electoral college	143
The Harrison States	258
Total	401

But if you were to exclude the negro vote it would change the State of—

Indiana	15
New York	40
Ohio	26
Total	81
Add the	143
	224

With a good chance of carrying also the State of Illinois. This alone would have elected Cleveland by a very decided majority. A careful study of these figures will possibly explain why our friends on the other side are so constant in their efforts to consolidate the negro vote.

The election laws in my State protect the rights of everybody. The registrar is required to take the registration books and keep them open for thirty days before each election. He is required to revise the same so that on the evening of the second Saturday before the election it will contain the name of every person entitled to vote in the township, and none other. On that day he must be at the polling-place with his books, and keep them open all day for public inspection, and hear all evidence touching the competency of any man to vote whose name is on the books, and erase any name or enter it upon the books, as the facts appear to be.

The elections are held by this registrar and four poll-holders, two of whom must be of different politics from the registrar. When the voter presents his vote the registrar checks his name, one of the poll-holders, who keeps the poll-book, writes his name on the poll-book, he hands his votes to the poll-holder, who either puts the votes in such boxes as the voter directs or takes them all, if the voter directs, and distributes them in the proper boxes. The election books are closed at sunset and the votes counted in the presence of such of the voters as desire to remain, and the result certified to the proper officers in each county. Every citizen can inspect the election and the count and everything is open.

And now, in behalf of the State I have the honor to represent, I protest against the passage of this infamous bill.

Suppose you grant, for the sake of argument, that there are frauds in some of the States of this Union. Are not your election laws so guarded as to bring any offender to justice? If they be not rigid enough, make them so, but do not strike at the very fountain-head of our republican system and drag that into disrepute and declare it to be a failure.

Upon the very same principle you might attack the jury system because some juror had been bribed or some jury rendered an improper verdict.

I beg of you, my countrymen, let us unite now and join hands forever and save this Government the fatal stab you are about to inflict.

Stay the hand of despotism and let us preserve intact the Union and Constitution and transmit them to posterity as pure as our Revolutionary ancestors gave them to us.

Let us declare that the Constitution is above party and we will preserve it and guard it from attack.

But if the fatal blow must be struck; if this Congress shall turn over our elections to a partisan judiciary; if the grand old ship of state shall waver and totter upon her foundation from attacks made upon it by this Congress for partisan purposes; if the entering wedge of centralization shall be driven to the very core of this Union, let it be done with a united Democracy, North, South, East, West, crying aloud against it.

And now, Mr. Speaker, if we inquire what justification the majority can find for the passage of such a law, we are not driven very far to find it.

It will be found in the language of the senior Senator from the State of Ohio, uttered at the special session of 1881, when the famous Virginia steal was inaugurated, and which if acted upon will bring shame upon this boasted land of freedom and cause the sons of America yet unborn to blush with shame that this generation was capable of producing or tolerating such a sentiment—I pause, ere I repeat it, and repeating it I close—

Anything that will beat down that party and build up ours is justifiable in morals and in law.

Democratic Obstruction—Silver.

Everything has increased in value in this country except the Democratic party. An event which took place in April, 1865, sent up the value of American property, American character, and American patriotism to a very high point, and wherever the Republican party has stood from that day to this that character has never gone down in the scale, and while the Republican party remains in power it never will.

SPEECH

OF

HON. CHARLES H. GROSVENOR,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 12, 1890.

The House having under consideration the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 5381) directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes—

Mr. GROSVENOR, said:

Mr. SPEAKER: It is greatly to be regretted that at this late day in the session of Congress my genial and talented friend from Mississippi [Mr. ALLEN] should abandon, even for the time being, the character for which he is prominently fitted and should attempt to appear in a rôle which involves the serious consideration of a matter of politics. [Laughter.] He has made an original point, that is, he has made the point that was original thirty years ago and has been originated a thousand times since in regard to the bonded indebtedness of the Government of the United States. He charges that the bonds of the Government have increased in value under Republican administration and control. If I wanted to be unkind—which I never do—I might say to a great many gentlemen on the other side that they ought to have been here and in Congress representing their people at the time those bonds were authorized to be issued, so that if they were dissatisfied with the terms of the bonds they might at least have protested in the name of their constituents against the enactments with which they were not satisfied. They might have at least exercised the great American right of protesting against the qualities and provisions that were put into those bonds.

Mr. ALLEN, of Mississippi. I was not complaining of the bonds, but of the increased value given to them after they had served their purpose to the Government.

Mr. GROSVENOR. Everything has increased in value in this country except the Democratic party. [Laughter.] An event which took place in April, 1865, sent up the value of American property, American character, and American patriotism to a very high point, and wherever the Republican party has stood from that day to this that character has never gone down in the scale, and while the Republican party remains in power it never will.

Mr. PEEL. I would remind the gentleman that according to recent elections in his own State the Democratic party has advanced there. [Laughter.]

Mr. GROSVENOR. As I understand it, and from such information as I have, the reports of the revaluation of the taxable real estate in my State show that during the last ten years it has fallen off materially. The gentleman must study the figures before he makes a venture such as he has made. The Democratic administration out there may be a very good one—I will not discuss that here and now—but it must raise its money upon a very largely decreased valuation of the real estate, and that leads me up to the very question I want to speak about.

Mr. BLAND. I have no doubt you would be glad to see Foraker elected governor again in order that property might be appreciated.

Mr. GROSVENOR. I would very much rather see Governor Foraker re-elected governor than any gentleman holding the political opinion of my friend from Missouri.

Mr. BLAND. I have no doubt that is your taste.

Mr. GROSVENOR. It is my taste, and I stand by my taste, and I am sorry for anybody whose political tastes differ from mine on this point. [Laughter.]

Let me now proceed. What was it that depreciated the values in the country? Why, sir, we have been sitting here for nearly eight months—we are entering upon the eighth month of our session—and we have had a constant, unceasing, nauseating series of declamations from the other side of this House that the great depreciation in the values of the country has come about from a lack of a sufficient volume of currency, and they have charged, and it has been a constant repetition, that the status of the silver currency of the country has had much to do with this depreciation.

The gentleman from Missouri [Mr. BLAND] has filled hundreds of pages of the CONGRESSIONAL RECORD with constant eternal repetition, iteration, and reiteration of the statement that it is because we have not money enough, and have not silver coinage enough, that the agricultural products of the country have gone down to the low ebb that we witness to-day. It may be so, Mr. Speaker; the Republican party is alert to this question, it is wide awake to do its duty in this behalf, but when we come here to deal with a measure which, no matter how it may be criticised in certain directions, stands admitted by friend and foe to be a measure which will increase the circulation of the country something like $60,000,000 per annum of money just as good as gold, you on the Democratic side of this House vote solidly against the adoption of this measure and thereby indicate your preference to stand by a system which you yourself say has depreciated the agricultural production of the country and all the values of the country to the extent which you have so often described.

The Republican party, true to its faithful guardianship of the people's interest, has determined to give to the people of the country a great increase in the circulation and you resist, you refuse to have it, you filibuster, you kill time, you weary the patience of men. No matter what else may be decided by the American people they will say that the Democratic party has been unwilling to merge partisanship in patriotism in this behalf, and the indictment and arraignment of the Democratic party on this point will be unanswerable. You have done nothing to join hands with the Republicans in Congress to pass any measure of relief to the suffering agriculturists of the country. No man in this country will deceive the people by any pretense that the Democratic party is now or ever has been willing to give us free coinage of silver. A free-coinage bill would have been passed in this House if you could have brought the Democratic party to the support of it. But 22 Democrats voted against free coinage and defeated it.

But I want to point out something back of that—something that is becoming ancient history, but not so ancient as the history that my friend from Mississippi has been giving us. I go back only four years to the only Democratic Administration we have had since the war, and the only one I fondly hope and devoutly pray we may have until after the next war, which I trust may be postponed one hundred years. [Laughter.] Your President-elect, Mr. Cleveland, between his election in November and his inauguration in March, made known the status of his Administration upon this silver question. He could not wait until he had assumed the functions of his office, but he issued a pronunciamento from the governor's office in New York State, warning the friends of free silver in this country that they must desist from all agitation on that subject and all promotion of increased silver coinage or they would put themselves in antagonism to his Administration. It was a sort of early premonition that there would be an "Allentown for every Sowden."

He wrote a letter to my friend, General Warner, my predecessor in this House, a man of fearless devotion to the interests of free silver coinage, a man of high character and great learning upon this question, notifying him and his associates by fair inference that the whole power of the Democratic Administration would be brought to bear to crush out any attempt to further promote or enlarge the scope and power of silver in the coinage of the country.

The following is the letter:

ALBANY, *February* 24, 1885.

GENTLEMEN: The letter which I have had the honor to receive from you invites, and indeed obliges, me to give expression to some grave and public necessities, although in advance of the moment when they would become the object of my official care and partial responsibility. Your solicitude that my judgment shall have been carefully and deliberately formed is entirely just, and I accept the suggestion in the same friendly spirit in which it has been made. It is also fully justified by the nature of the financial crisis which, under the operation of the act of Congress of February 28, 1878, is now close at hand. By a compliance with the requirements of that law all the vaults of the Federal Treasury have been and are heaped full of silver coins which are now worth less than 85 per cent. of the gold dollar prescribed as "the unit of value" in section 14 of the act of February 12, 1873, and which, with the silver certificates representing such coin, are receivable for all public dues. Being thus receivable, while also constantly increasing in quantity at the rate of $28,000,000 a year, it has followed of necessity that the flow of gold into the Treasury has been steadily diminished. Silver and silver certificates have displaced and are now displacing gold, and the sum of gold in the Federal Treasury now available for the payment of gold obligations of the United States and for the redemption of the United States notes, called greenbacks, if not already encroached upon, is perilously near such encroachment.

These are facts which, as they do not admit of difference of opinion, call for no argument. They have been forewarned to us in the official reports of every Secretary of the Treasury from 1878 till now. They are plainly affirmed in the last December report of the present Secretary of the Treasury to the Speaker of the present House of Representatives. They appear in the official documents of this Congress and in the records of the New York clearing-house, of which the Treasury is a member, and through which the bulk of the receipts and payments of the Federal Government and of the country pass.

These being the facts of our present condition, our danger and our duty to avert that danger would seem to be plain. I hope that you concur with me and with the great majority of our fellow-citizens in deeming it most desirable at the present juncture to maintain and continue in use the mass of our gold coin as well as the mass of silver already coined. This is possible by a present suspension of the purchase and coinage of silver. I am not aware that by any other method it is possible. It is of momentous importance to prevent the two metals from parting company; to prevent the increasing displacement of gold by the increasing coinage of silver; to prevent the disuse of gold in the custom-houses of the United States in the daily business of the people; to prevent the ultimate expulsion of gold by silver. Such a financial crisis as these events would certainly precipitate, were it now to follow upon so long a period of commercial depression, would involve the people of every city and every State in the Union in a prolonged and disastrous trouble. The revival of business enterprises and prosperity so ardently desired and apparently so near would be hopelessly postponed. Gold would be withdrawn to its hoarding places, and an unprecedented contraction in the actual volume of our currency would speedily take place. Saddest of all, in every workshop, mill, factory, store, and on every railroad and farm, the wages of labor, already depressed, would suffer still further depression by a scaling down of the purchasing power of every so-called dollar paid into the hand of toil. From these impending calamities it is surely a most patriotic and grateful duty of the representatives of the people to deliver them.

I am, gentlemen, with sincere respect, your fellow-citizen,

GROVER CLEVELAND.

Hon. A. J. WARNER and others,
Members of the Forty-eighth Congress.

With his eyes wide open, with a full knowledge of the man whom he was appointing, your President, Mr. Cleveland, appointed a Secretary of the Treasury who demanded of Congress at the start and demanded of Congress all along through his Administration that it should repeal the act about which you have boasted, the Bland act, under which the coinage of silver was going on in this country. Not only did he insist upon limiting the silver coinage to $2,000,000 per month, but he sought by every influence he could bring to bear on Congress to repeal the act and thoroughly destroy silver, for that would have been an absolute demonetization of silver. It would have been much more clearly an act of demonetization than was the act about which our Democratic friends are so continually preaching.

The great crime of 1873, about which so much is being said, was in no proper or fair sense an act to demonetize silver. We had no silver coinage, we had no silver dollars in 1873. The coinage had ceased, had passed out under the greenback provision of the Treasury.

But I want to go still further. After Grover Cleveland had thus defined his position, and after his Administration had thus launched itself and stood firmly to the end of the four years in that position, he was renominated by acclamation; and the gentleman from Illinois [Mr. WILLIAMS] and other gentlemen of the Democratic faith throughout the country, who are now pharisaically prophesying the benefits of free coinage to the country, not only stultified themselves by submitting to his nomination, but voted for him without qualification; and they stand ready to do it now, and will be compelled to do it in the long run. In 1888, after having been in power for four years, you went to St. Louis to tell the people of the country what you were going to do if you were put in power for four years more, and the platform was conspicuously silent on this subject. Not only you did not apologize for the sins of omission that you had been guilty of, but you did not promise to do better if you were put in power thereafter. [Laughter.] And you nominated for President at that convention the very man who struck with mailed hand at the first outcropping of the friends of free silver, before, as I said, he had a constitutional right to do so. And yet gentlemen stand here to-day saying they are in favor of free silver and we on this side are the enemies of silver coinage, or are under the influence of Wall street.

The measure here presented to the country will give entire satisfaction to the thinking, intelligent business men everywhere. In this connection I adopt and make part of my speech a portion of an able editorial which recently appeared in the Standard Union, of Brooklyn, N. Y. It was written by Murat Halstead, esq., one of the ablest men wielding the editorial pen in this country to-day, and a gentleman who from the beginning of this discussion, away back in 1873, has been an intelligent, educated, clear-headed, and patriotic supporter of the just and fair coinage of silver. While he is not a crank upon the silver question, he is a man of undoubted knowledge and attainments thereon. In speaking of the leading measures with which the Republican party was charged in the beginning of this Congress, he has the following in regard to silver coinage:

> The third theme that has influential relations is that of the money standards, the financial adjustments, the gold and silver and paper questions. In this field party lines have been crossing each other, but there is no considerable doubt in any fair and informed mind that safety requires Republican supremacy. There is a faction of the Democratic party, and it centers in New York, that is sound on money, indeed rather too hard and exclusive for hard money, and there is a faction of the Republican party exceedingly unsound, committed indeed to the vagaries of the Confederate system of finance, which was that of printing all the money wanted, and reached the point that a bale of Confederate notes was worth about the same as a bale of cotton, the form of money being idealized to that extent.
>
> The dangerous raid that the inflationists have recently made upon the Treasury Department has been masked behind a silver question, but there is a happy solution at hand, and it is the Republican party, of course, that furnishes it. The Sherman silver compromise, we believe, in spite of all rumors to the contrary, will find steadfast support, and, passing both Houses, secure the signature of the President. It would be incomparably the most important legislation, not only of this year, but of many years. First, it secures, after a little while, the stoppage of the forced coinage of the old standard silver dollars. It stops the purchase of silver for conversion into standard silver dollars and thus withdraws a menace which has gradually, though almost insensibly, disturbed credit and interfered with the progressive and prosperous development of business. Second, it protects the silver industry and gives the people of the United States their rights in silver as a money metal—rights of the utmost interest and consequence, and that have been vainly and foolishly disparaged and denied—by the purchase of 4,500,000 ounces of silver per month, with a limit on the price that prevents scheming speculators from cornering the Government; and this silver product is taken at the market price, which means the gold standard—that the silver is to be measured by gold, not under any arbitrary ratio, but just according to the markets of the world. The effect is the same precisely as the addition of the gold price of 4,500,000 ounces of silver each month to the money of the country—for Treasury paper is to be issued to the amount of the market value, the gold valuation of the silver taken—and this paper is as good as gold because it has behind each dollar of it the amount of silver that a gold dollar brings. Of course, this paper is as good as gold—it is substantially gold notes.
>
> The addition of four millions at least of these gold notes to the currency gives assurance that there is not to be contraction, that the people are not to be plucked through a scanty supply of money, and this will be a stimulus that will be felt in all channels of trade and in all the vast spaces where there is production; and the Sherman law will not be unhealthy at last, for the limitation of the issue is fixed and guarded by gold. We shall not lose gold; we shall gain it. Not by mighty magic, but through the plain chemistry of equitable legislation, we shall make gold of our silver. That is exactly what taking it at the market rate does. These are the incidents that tell of the conditions of prosperity—a period of wholesome flourishing by the legitimate use of the bounteous resources of our wonderful country. He who bets on the growing wealth, the rising grandeur, the continuing glory of the United States must win. The Republican party will fairly and worthily gather the usufruct of its application of sound principles.

Mr. Speaker, the Republican party is now, as it always has been, the friend and defender of the people's rights. The statement that it has been guilty of class legislation is a statement unsupported by facts. It has legislated for the people of the whole country; it is doing so to-day. Over the barriers of obstruction placed across its pathway by the Democratic party, with column closed up and its flag aloft, it is marching to a victory for its party and a victory for the people. It will achieve a party triumph in achieving a triumph of the prosperity of the nation. [Applause.]

Proposed Federal Election Law.

SPEECH
OF
HON. ROBERT M. LA FOLLETTE,
OF WISCONSIN,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 2, 1890.

The House having under consideration the bill (H. R. 11045) to amend and supplement the election laws of the United States, etc.—

Mr. LA FOLLETTE said:

Mr. SPEAKER: I take advantage of the indulgence of the House to submit a brief summary of the purposes and provisions of this important bill. I shall not discuss the constitutional warrant and authority for the legislation. Even the most narrow construction of the plain letter of the Constitution itself places that question beyond rational doubt. The proceedings of the convention, the contemporaneous writings and publications, and, finally, the decisions of the Supreme Court, have settled this interpretation for all save a few gentlemen who discuss constitutional questions on all occasions, except when they are involved, and in every place except where they may be determined.

Sir, no lawyer seriously questions its constitutionality, and no one will vote against it because of any doubts upon that point. The bill is constitutional and we shall shortly decide whether it shall pass this House upon other and different grounds.

What is its purpose?
Where is it to be applied?
What are its provisions?
Is its enactment necessary?

Its plainly declared purpose is to preserve and enforce the Constitution, not to violate it; to sustain and give effect to the Federal election law now upon our statutes. This measure, identical with that law in principle, broadens it in application and extends and strengthens it in detail to a fair promise of efficiency. The purpose of that law, passed eighteen years ago, was to stop the gigantic frauds practiced in New York and other great cities in the elections. It was partially successful. No one has had the hardihood to seek its repeal. The purpose of this measure is to make that existing law as perfect as legislative foresight can make it.

Where is this law to be applied? It is to be applied in any Congressional district in the United States where they do not have fair and lawful elections, whenever one hundred of its citizens petition the United States circuit court for its application and enforcement. When invoked it is to be applied only to the Congressional election, and interferes in no manner with the State, county, or local election. If, sir, it is applied in cities more than in the country or in the South more than in the North, it will be only because in some of the cities and in some parts of the South they force the law-loving, law-abiding citizens to appeal to this law for protection in the exercise of their sovereign right

to vote under the Constitution. This law will be applied, then, where it is needed. Poisonous ulcers eating their way into the body-politic can not be best treated by using the knife on some healthy part. Wherever republican form of government is assailed there the assault must be met and repelled.

What are the provisions of this bill?

It makes false registration a crime.

It makes unlawful interference with registration, by violence upon, or intimidation, or bribery of, any person lawfully entitled to vote a crime.

It makes willfully keeping any false poll-list or knowingly entering false names or false statements thereon a crime.

It makes giving or accepting a bribe to induce a person to vote or refrain from voting a crime.

It requires the ballot-box to be placed in plain sight of the voters and in such a position as to enable the election officers, national and State, and the voter when voting, to see that the ballot is in fact placed in the box.

It makes the willful rejection of legal votes, knowing them to be legal, a crime.

It makes the willful acceptance of illegal votes, knowing them to be illegal, a crime.

It makes the fraudulent substitution of one ballot for another for the purpose of having the vote rejected, or for the purpose of having it counted for a person other than the voter intended, a crime.

It makes willfully placing ballots not lawfully cast in any ballot-box among ballots lawfully cast, for the purpose of changing the result, a crime.

It makes unlawfully removing ballots from a ballot-box lawfully cast, for the purpose of affecting the result of the election, a crime.

It makes a willfully false canvass of votes or the false certification and return of such vote a crime.

It makes it a crime for every officer charged with a duty under the law to willfully neglect to perform such duty or to be guilty of any corrupt or fraudulent conduct or practice in its execution.

It makes false swearing, in matters pertaining to such Congressional election, perjury.

It makes stealing the ballot-box or the ballots a felony.

And it provides just punishment, by fine or imprisonment, or both, for each of these crimes against a government by the people through manhood suffrage.

That is this bill. There is not a section, line, or syllable in it besides this more than is necessary to enforce with certainty these provisions.

Gentlemen upon the other side delight to call it a "force bill" because that implies, as they use the term, armed soldiers, force, violence, bloodshed. But this bill appeals for its enforcement, first to the honesty and loyalty of our citizens, and lastly to our courts and a jury of our countrymen. No man who wants every citizen, high or low, rich or poor, weak or strong, to have and exercise freely his constitutional rights, sacred to each of us, can afford to oppose this bill. No man who wants less than that is entirely loyal.

Yet for six days the Democratic party as represented here on this floor has assailed this measure from first to last. Not because it invades State rights, for it does not. It meddles with no internal or domestic affairs. It trenches upon no State or local election. It threatens no law-abiding community with its application. It is only for the guilty. It lays its hand upon no man unless he be caught in the commission of a crime against the Constitution and laws of the United States; and then it inflicts no punishment until after full defense, fair trial by jury, and due conviction.

Can it be possible that you oppose it really for the things it does propose to do?

It does make false registration a crime, and you are against its passage. It does make buying and selling votes, intimidation and violence upon voters, crimes; and you assert that it endangers liberty. It does make illegal voting, ballot-box stuffing, and fraudulent counting and certification of votes, crimes; and you cry out that it interferes with the exercise of sacred personal rights. It does make false swearing perjury, and stealing ballot-boxes a felony, and you denounce it as revolutionary and declare that it shall never be enforced.

Gentlemen, it will pass, it will be sustained by the people, and it will be enforced. The time has come at last when the conservative, thoughtful citizen knows that it is absolutely necessary. In the great cities, both North and South, the present imperfect Federal election law is deemed essential. It has done much to lift the elections above a mere juggling performance. There is a demand, there is urgent need that it be re-enacted, strengthened, and extended. But outside the cities, in the South where there are colored citizens, the situation is such that the people of this country will suffer no further postponement of this vital question. They know that continued violation of the cardinal principles of the Constitution underlying representative government is not only a national disgrace, but a national crime and a national danger.

Sir, I shall not stop to go into figures now. I will add to my remarks some tables of election returns more powerful and eloquent in their appeal for this great reform than anything any one will say here or elsewhere. The people have been slow to anger. The politicians upon the other side, North and South, with the cry of "The bloody shirt," "Let the South alone," "The war is over," were able for a score of years to ridicule and silence this appeal for honest elections. The North has even been indulgent to the South, and with infinite patience they have waited almost a generation since the war for acceptance of and obedience to the Constitution.

How have you met that forbearance? Not satisfied to use your infamous system within and for the control of your own States, you have employed the same methods to control the General Government and make laws for us to obey. You have become so careless and so audacious in this practice that at last the patriotic men of the land demand that the treasonable practice shall cease. You have waked the sleeping giant and the issue is not doubtful. You may fret and delay the course of substantial justice here and there, you may even make it hard for the North as well as the South, because no one section of our common country can suffer alone in any national affair; but when once the people are roused you can no more defy the Constitution and nullify the Federal law by forged registration and debauched election returns than you can by armed resistance and invasion.

We have a right to expect, to demand, that you not only obey, but yourselves enforce the Federal law. You may conduct your own elections as you please, but you must limit your peculiar practice to purely State matters. If you think you can maintain a domestic election system rooted in perjury and fraud and watered with blood and not see it finally blossom and fruit in bitterness and hate and awful retribution, that is your own business. Whatever our opinions may be respecting it we shall be silent and leave you to your own choice.

But in the election of Representatives to Congress who make laws for us all, who adjust our burden and measure our relief, who give us good government or bad, who shape the national destiny, and who should weigh in the nice balance of just laws the rights of all the people—in the election of these Representatives we demand and will enforce laws to preserve our just and equal representation in the Government.

I am acquainted with the excuses and justification you make among yourselves for the plans and schemes by which you plunder the colored man of his citizenship. I know you say you fear ignorant negro domination; that you must protect your civilization; that you must save your social system. And yet, I know and you know upon your honor that you do not fear negro domination, that you do not believe your civilization, your social fabric would be in any danger. You know perfectly well that intellectual and moral power will control in every part of this country, does control in every part of this country, where it makes the open issue with ignorance and vice. And you know if you would make intellect and character the standards in the South, instead of color, that intellect and character would dominate and guard civilization and society and that race collisions and race conflict would end at once. You know, as intelligent men, that your social circle would be with you as it is the country over, the world over, wholly controlled by mutual concurrence and mutual choice.

That this a mere sham, a mere pretext, is obvious to any one who has studied your system. You disfranchise not where the colored voters are in the majority alone, but, if possible, even more ruthlessly where they have but small minorities, and where negro domination would not be a possibility in a thousand years. Nay, more than that, in communities where their educational and social average is high, where they are specially prosperous and are making the most rapid intellectual advancement, the rigors of your system are jealously advanced rather than relaxed. No, no, gentlemen, you are still under the spell of your old idea, and that is your real, your secret excuse and justification.

Slavery as an institution was possible only with those who held the belief and conviction that the bond race were brutes of other shape; that they were a little more valuable than the horse or mule, but that was all; that color was the mark of inferiority set on them by the Omnipotent to seal them to slavery. A lower level than this was not possible; a higher one could never have made the stable foundation on which to rear and maintain the institution of slavery.

To that old idea and opinion you still cling blindly, measuring the rights of all citizens under the Constitution by its ancient and ignorant and inhuman standards.

That this is so is proven by your conduct of Federal elections and your bitter antagonism to this bill. You know you have nothing to fear from the colored man's vote in Federal elections. There is no possibility of national negro domination, even if their votes were solidly cast and fairly counted for colored candidates. So far as race representation goes the Congress of the United States would even under such circumstances still be white fifteen to one. But you are as much averse to his voting a Federal ticket as a State or a county ticket, and defraud him as quickly of one as the other. It matters not what his intelligence or character. Has he negro blood? That is the test. If he has, strike the Federal as well as the State ballot from his hand. Not be-

cause he can control in State or local affairs by it; not because it is a certificate of social equality, a card of invitation to your homes or your tables, but because it lifts him from the rank of menial to that of constitutional citizenship and political equality before the law; that political equality which is understood where every citizen stands a political unit. Not that every one, white or black, may be each the measure of the other in intellectual force and character and influence, but each acting on his own convictions, exerting for himself such influence and power as he properly may, and each, in the end, master at least of his own action.

This political, not social, equality you can not tolerate. For that reason, and because it will interfere with your controlling the National Government by continued false registration, illegal voting, and fraudulent certificates, you are violently hostile to this measure. To mislead as to the real purpose of this bill, it has been denounced rather than discussed, and the wildest statements made as to its terms, its cost, and its direful consequences when enacted into law.

We have been admonished upon the other side of the House that its attempted enforcement in the South would bring upon that section of this country disorder and bloodshed. In the same breath we are told by gentlemen who represent Southern districts showing a total vote of from 1,500 to 2,000 that throughout that section they now have serene peace and quiet and the full enjoyment of all their rights. If they have, Mr. Speaker, then the passage and enforcement of this law can bring no disorder and no bloodshed to them.

Mr. HEMPHILL. That is something new, is it not?

Mr. LA FOLLETTE. If they have not, then let it come if it must come, in order to insure to American citizens their constitutional rights under a free government. Upon this side of the House we who represent voting constituencies in the North who have exercised patience for a generation with the people of the South can halt no longer. We are under the commands of those we represent, who demand that in every part of this country every man shall freely cast his vote and have it honestly counted. [Applause.]

The Conference Silver Bill.

SPEECH

OF

HON. BENJAMIN F. SHIVELY,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 12, 1890.

The House having under consideration the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 5381) directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes—

Mr. SHIVELY said:

Mr. SPEAKER: By the terms of the act of 1878 the Secretary of the Treasury is required to purchase not less than two million nor more than four million dollars' worth of silver bullion per month and cause the same to be coined into standard silver dollars. The discretion thus lodged in the Secretary of the Treasury has been at every point exercised aggressively against silver. The purchases have been held down to the minimum limit of $2,000,000 worth per month. Despite this adverse discretion that act gave us last year a coinage of 32,000,000 standard silver dollars. Since its enactment it has added over $350,000,000 to the circulating medium of the country. Now, gentlemen, keep in mind that under the present law we are certain of at least the minimum coinage. No accident, no trick, no adverse discretion, no Treasury Department jugglery can deprive us of this.

How about your conference bill? Section 5 expressly repeals the silver purchase and coinage clause of the act of 1878. Section 6 fixes July 1, 1891, as the date on which the coinage of $2,000,000 worth per month, provided for by section 3 of the bill, shall cease. Thereafter there is to be no coinage of silver dollars except such as may be required to redeem the notes. Section 2 places it within the discretion of the Secretary of the Treasury to redeem the notes exclusively in gold. The machinery of your bill is thus complete for the total destruction of silver coinage. There can be no doubt about it. Its interpretation in the light of the attitude of the Treasury Department on silver for the past twelve years makes it folly to pretend otherwise. Silver coinage is to be strangled and you gentlemen, whose voices are always for silver and votes always against it, are invited to keep this fact in mind when you record your judgment on this measure.

Section 1 of the bill provides for the purchase of 4,500,000 ounces of silver per month on which partial legal-tender notes are to issue. Gentlemen speak triumphantly of the harvest of dollars that this provision will put in circulation. But the trail of the serpent is over this provision also, as it is qualified by the words, "or so much thereof as may be offered." It is after all a question of how much may be offered. How much may be offered depends on what the Secretary of the Treasury will pay for it. What the Secretary of the Treasury will pay for it depends on the market price. The market price depends on the buyers. Your bill makes the Secretary of the Treasury the principal buyer. Unquestionably, if he so wills, the Secretary of the Treasury can encourage sales and add much to the volume of money; or he can as easily depress the price of silver and send the discredited products of our mines to be auctioned off on foreign markets, and finally go at reduced rates into Chinese, Japanese, and European colonial coinages.

Outright demonetization would leave the country in certainty, however lamentable. Free coinage would leave but little latitude for conjecture. Limited mandatory coinage under the present law leaves some basis for calculation for the future. Mandatory issues of fixed amounts of Treasury notes based on silver would leave some foundation on which honest enterprise could build. Your bill plunges the finances of the Government into the mazes of executive discretion and Treasury Department speculation. You are about to anchor the vast financial interests of the American people to the will of a Cabinet officer whom you make at once bull, bear, and umpire of the silver market. Yet gentlemen profess to believe that this miserable spawn of a left-handed conference will give us an ample, safe, and reliable circulating medium!

It is our boast, Mr. Speaker, that this is a Government of laws, not of men. This bill flings this precious principle to the winds. It makes silver coinage depend not on the law, but on the will of the Secretary of the Treasury. It makes the purchase of silver bullion depend not on the law, but on the will of the Secretary of the Treasury. It makes the issue and amount of Treasury notes depend not on the law, but on the will of the Secretary of the Treasury. It makes the redeemability of the notes in gold or silver depend not on the law, but on the will of the Secretary of the Treasury. In nearly every section it lodges in the prime financial officer of the Government a fund of discretionary power absolutely startling in its possible consequences. It opens a wide field for the unrestrained exercise of executive discretion, wherein by the dictates of good morals and sound public policy the law alone should point the way.

The delegation of large executive discretion on essentially substantive features of political and economic policy is fatal to good government. It beckons the officer this way or that in response to selfish interest, the whispers of ambition, or the exigencies of party. He who asks for it is invariably unfit to exercise it. He who is fit to exercise it would promptly advise you to strike all grants of discretion from your bill, to prescribe clearly and explicitly the duties of the executing officer relative to the subject-matter and then require a faithful performance of them. Should such advice prevail the people would be under the protection of the law, not at the mercy of the minions of the law. They would then be subject to the law, not subject to the whim and caprice of executive officers who under the grant of discretion are released from the restrictions of law.

Sir, the history and character of this bill constitute a parable that most nappily illustrates the parliamentary history of the present House. For many weeks the will and caprice of one man were substituted for the ordinary rules of procedure. Finally a code of rules was adopted that, instead of making the Speaker the organ of the House, made the House the organ of the Speaker. Even this code of rules proved insufficient to satisfy the lust of some gentlemen for power. On certain questions the minority of the House threatened to become the majority. Thereupon the majority of the Committee on Rules held little symposiums from time to time to perfect "special orders" under which they could revel in power and sport with great public interests unharassed by rules and unembarrassed by debate or amendment. Every member on the floor knows how the tariff bill was lashed through the House with all opportunity denied for a vote on a single one of the two hundred amendments presented from both sides of this Chamber. By the same process the silver bill was lashed through, while every avenue to amendment was carefully closed. On both those occasions was witnessed the startling spectacle of gentlemen across the aisle appealing frantically to the United States Senate to represent the interests of the constituents which they on their own confessions were about to betray. Such are the auspices under which legislation is here conceived and enacted. This bill is the natural product of the system.

To give his measure character and respectability the gentleman from Iowa in charge of this conference report had the goodness to regale us with that good old classic fustian about the marvelous record of the fiscal policy of the Republican party. It was an unfortunate allusion. It recalls the fact that the initiatory lines of that fiscal policy were laid in an express statutory rejection and depreciation of our national credit. Every greenback to-day contains in the words, "except duties on imports and interest on the public debt," the sentence of rejection and repudiation pronounced against it in the very hour of its birth in pursuance of that fiscal policy. It was made a legal tender for the blood and life of our soldiers, but expressly disqualified for the payment of duties on imports to the Government which issued it. For sixteen years that policy required that it be spurned from the counters of the Government and sent crippled and dishonored to be hawked about the caverns of bullion brokers. In speaking of the bill creating it, as amended by the clause requiring its rejection by every custom-house officer in the United States, Thaddeus Stevens, the great Republican commoner of his time, said from his place on this floor, February 20, 1862:

> It now creates money, and by its very terms declares it a depreciated currency.

In imitation of that folly the bill before us makes the proposed Treasury notes a legal tender for all debts and then by an express exception invites corporations and individuals to reject and dishonor them by special contract. It creates money for general purposes and discredits it for special purposes.

But, Mr. Speaker, even in this measure the doctrine of compensation is exemplified. It contains some information thus far concealed from the public. It discloses the financial gulf to which this Congress has brought the Government. It heralds a dissipated surplus and a bankrupt Treasury. In section 6 the $56,000,000 of trust funds now held for the redemption of national-bank notes is assailed and laid under contribution to bridge over the broadening chasm between receipts and expenditures. This provision is impertinent and irrelevant to the main subject-matter of the bill. It is out of place, both in the practical and jurisdictional sense. It has never been considered by any committee of either House. It seems to be the product of reckless haste to fortify the Administration against the inevitable consequences of profligate legislation. Yet, in a parliamentary sense, it is entirely consistent with the general course of procedure in this non-deliberative body. We are making laws by labor-saving machinery. Investigation, deliberation, thought, and debate are dispensed with as useless weights on the "transaction of the public business." We are simply recording the decrees of a directory and executing orders in council. This bill is a fitting type of many others. Temptation and invitation to peculation are snugly embalmed in nearly every section. There is not a line of direct, candid, unequivocal legislation in it. It is a collection of reservations, evasions, and exceptions to swindle the people on the hustings with its theory and invite a shameless bunco partnership with the United States Treasury Department in its application and practice.

Forfeiture of Land Grants.

SPEECH

OF

HON. BINGER HERMANN,

OF OREGON,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 16, 1890.

The House being in Committee of the Whole, and having under consideration the bill (H. R. 2781) to forfeit certain lands heretofore granted for the purpose of aiding in the construction of railroads, and for other purposes—

Mr. HERMANN said:

Mr. CHAIRMAN: There are involved in the pending proceedings three distinct and independent propositions. The first is that contained in the report of the majority of the Committee on Public Lands, which proposes a forfeiture of all the lands conterminous with the land-grant railroad lines not completed. It also provides for the protection of the rights of settlers and of those who have made occupancy or improvement under contract, agreement, or license from the railroad company with a view to the obtaining of title to such lands, not exceeding 320 acres, when the corporations had earned the title from the Government by a compliance with the conditions of the grant. It also particularly provides that as to this forfeiture it shall not be in prejudice, nor shall it be a waiver of any further proceedings on the part of Congress to do whatever else may be deemed necessary toward forfeiture of other portions of unearned land grants.

Secondly, we have the substitute reported by the gentleman from Missouri [Mr. STONE], which provides for the submission of the question of the forfeiture of the lands earned out of time and conterminous with constructed land-grant roads to the courts, and it provides that the Attorney-General of the United States shall institute proceedings against any corporation, company, or association, person or persons who may claim directly or indirectly from a railroad company any interest in such lands the title to which they may have obtained since the grant——

Mr. HOLMAN. Will my friend allow me?

Mr. HERMANN. And it limits the forfeiture to lands earned out of time.

Mr. HOLMAN. If the gentleman will permit me, I will state that the amendment of the gentleman from Missouri is not a substitute for a provision of the bill.

Mr. HERMANN. I understand that. He was permitted by a vote of the Committee on Public Lands to report his bill as a substitute to be offered as an amendment.

Mr. HOLMAN. No; as an addition to the bill.

Mr. HERMANN. Then I accept the gentleman's explanation.

Thirdly, we have before us the pending amendment, offered by the gentleman from Indiana, which proposes the forfeiture by Congress of all lands conterminous with the line of the land-grant railroads completed out of time. As to lands earned out of time, one proposes a judicial and the other a legislative forfeiture. These are the three distinct and independent propositions which are at present before us. As to the first, which is the substitute to the Senate bill favorably reported by the majority of the Committee on Public Lands, permit me to say we are all agreed. There is not a voice in this House against that legislation; even the minority of the committee express no dissent as to that principle.

We all believe, then, that as to all lands conterminous with unconstructed roads they are clearly forfeitable and should be restored to the public domain.

Now, as to the amendment offered by the gentleman from Missouri, which provides for a submission of all questions of forfeiture involved in the lands earned out of time to the courts of the United States, I simply desire to say this: That provision—and I read the details closely—is productive of infinite mischief, and for my part I prefer that all legislation fail than that this should prevail in the form in which it comes to us.

The viciousness of the Stone amendment consists chiefly in the fact that all suits are to be instituted against the property-owners along these granted roads before ever the courts pass upon the question of forfeiture. If these suits should be commenced against those deriving title, direct and indirect, from the railroad company, after it should be formally decided that under the law the corporation had forfeited the grant, it might be defended in honor, but to involve all in the first instance, and to require that more than a hundred thousand separate and independent suits should be instituted in the circuit courts of the United States by the Attorney-General, and that they should all remain pending until the real question of forfeiture of the grant should be determined, is so revolting to every fair and reasonable view that I can not believe it was thoroughly understood by the honorable gentleman who introduced it. The small lot-owner in every city and town from Bismarck, in Dakota, to Tacoma, in the State of Washington—over 1,500 miles in length—will suffer the same inconvenience and vexation and cost of the defense to a suit as will the town proprietor, the wealthy mine-owner, the extensive manufacturer, or the great land-purchaser.

The language of the amendment is:

> That the Attorney-General of the United States is hereby authorized and directed, as speedily as possible after the passage of this act, to institute suit, or suits, at law or in equity, in the name of the United States, in the circuit court of the United States having jurisdiction, against any person, corporation, or association of persons claiming to own, under or through the grant of Congress, any lands heretofore granted by Congress to any State or to any corporation to aid in the construction of a railroad, or a railroad and telegraph line, where any such lands so claimed lie opposite to or conterminous with any constructed part of any such railroad which was not constructed and completed within the time specified in the granting act or acts for the construction and completion of the whole railroad, to determine whether any such granted lands so claimed by any such person, corporation, or association of persons are subject and liable under the law to be forfeited and reclaimed by the United States on account of the non-construction of such part of any such railroad in accordance with the requirements of the granting act or acts, and to obtain and recover judgments declaring forfeited to the United States all of such lands * * * and setting aside any patents which have issued for any such lands.

As if such annoyance was not sufficient, it is provided that as to any land owned by any person in excess of 320 acres, it shall not be litigated in the same court or suit, but the unlucky owner is driven to defend his interests in the local land offices. The person having 321 acres may "put in issue and have adjudicated and determined," in the proceedings instituted by the Attorney-General in the courts, his interest as to the 320 acres; and to this extent it shall be exempt from forfeiture, and the title to such extent will be confirmed to the purchaser, but as to the one acre or more in excess he is required "to make and file before the register and receiver of the proper land office proof of the good faith, consideration, date, and extent of his and her purchase." After hearings and proof the case, if found favorable to the purchaser, still does not end, but must be certified to the General Land Office. There the findings and decision of the local land officers are again passed upon, and if adversely to the purchaser, he may appeal to the Secretary of the Interior. If in all these ordeals this excess purchase is confirmed and the sum of $1.25 per acre be paid, then patent will issue.

Why, it may be asked, for the sake of economy, if not for justice, were not these purchasers permitted to adjudicate their entire title in the one court and in the same proceeding and thus save them two expensive proceedings in different tribunals? I think I may fitly designate this amendment as a "bill to encourage litigation and to confiscate the property of purchasers and innocent settlers." And yet the gentlemen who advocate this measure in strong numbers claim to be the friends of the people and the special guardians of the settler! Is it any wonder that delays have been experienced in the passage of a just forfeiture bill in this Congress when such views are entertained and such impracticable, unjust, and illegal conditions are made a part of the bill? As if to add emphasis to the general harshness of the amendment, it permits no relief whatever to a purchaser, in large or small quantities of lands, after January 1, 1888, unless he may be a settler on 160 acres. All other interests are not "exempt from the operation, force, and effect of any such judgment or decree." A sweeping forfeiture and confiscation falls upon all industries and titles based upon purchases made since January 1, 1888.

Since that date, and within the grant adjacent to completed road between Bismarck and Tacoma, thousands of purchases have been made from the railroad company, and many of these assignees have in turn conveyed to others; and costly and permanent improvements have been constructed on these lands and great enterprises have been inaugurated. In some instances towns have been built up, and many thousands of people have constructed bona fide homes and invested the earnings of a lifetime; but all of these are treated alike, and all must suffer the same penalty and fall under the same undeserved condemnation. In addition to these calamities to public as well as private interest, there may be included the same hard blow to all mortgage securities on the bonded interests to be confiscated and forfeited, as well as the consequent depreciation in the markets of all bonds and stocks of the road companies involved.

No infliction to a community is so severe and so absolutely demoralizing to all prosperity as that which imperils or disquiets titles. It amounts to a paralysis of all individual effort. This result would surely follow with all business interests along the land-grant railways should such legislation succeed as proposed in the amendment before us.

There never was a time in the history of these grants after the construction of the roads when unconditional forfeiture could be sustained, or would not create unbounded confusion, vexation, public and private loss. The Government itself is responsible for the confidence which induced the public to deal with land-grant property. Legislative as well as judicial and executive recognition gave sanction to individual transactions, and no outrage could equal that of governmental legislation adverse to these interests. It is a maxim in the law that no man shall take advantage of his own wrong, and the principle applies alike to public as well as individual bodies. We can all afford to be just, but none can afford to do a wrong.

The amendment of the gentleman from Indiana [Mr. HOLMAN] to the forfeiting section of the committee's bill is largely indefensible, because of its entire disregard of the same vested rights. Right of way,

depot grounds, switches, side-tracks, machine-shops, and turn-tables, and lands included in any village, town, or city are alone exempt from forfeiture along the constructed lines of roads. In all the speeches and all the legislation proposed by these "friends of the people" the single idea and the sole purpose and object is as to how severe a blow can be seemingly struck at the companies, and how much politics can be injected between all the lines. They seem to be utterly oblivious of any other interests, of any other persons, or any other rights or feelings except these, and they seem to be equally indifferent. Their object is apparently more to delay action that the forfeiture question may be a subject before Congress for perpetual politics, and that they may biennially declaim about past extravagance in land-grant legislation, and thus commend themselves as the friends of the people.

This mask will no longer conceal the features. It is now demonstrated that when the time for action arrives these "friends of the people" not only encumber their bills with impracticable conditions as to forfeiture, but so utterly ignore the rights of innocent purchasers as to defeat all legislation as to forfeitures. The results of this inconsistent maneuvering have done more to aid the land-grant corporations than all efforts combined of their own friends to aid them. Delays alone have enabled them to acquire millions of acres which otherwise would have been long ago restored to the people.

Numerous appeals are addressed to us from the people along these railways, and from the settlers whose homes are at stake, saying: "Stop your politics; cease wrangling and speech-making, and go to work. Let us have practical results. Terminate the long dispute. Take the best you can get, and enable the people to have titles to their homes, and the public to impose taxation on corporation lands which now remain unassessed, untaxed, and untaxable. Give us more business and less politics."

Now, gentlemen, look even at the machinery of the Stone amendment, which I have outlined to you, and say, upon the most cursory examination of it, whether you believe that such a measure as this should for one moment be favorably considered by this Congress, especially when we take into consideration the rights, the privileges, and the good faith of thousands and thousands of people from Dakota to the waters of the Pacific Ocean, and along other routes contemplated in this measure. There may be a little left to the settler after he passes through the trial court, but all will be absorbed by the time he passes through the ordeal of the Interior Department. The results of such a measure will, in effect, mean bankruptcy, confiscation, suffering, and poverty over great areas of country.

I regard this, then, Mr. Chairman, of all the measures before us and of any that ever have been before this Congress, devised or submitted for our consideration, as the most far-reaching and the most calamitous in its injurious results. It means long delay. It means, as I have already suggested, great cost to those who are least able to bear it. Its greatest injury will be inflicted upon those who are the most deserving and the most innocent. It means, in addition to individual injury, the ruinous suspension of great public works in the West. Especially would its effects be most ruinous along the line of the Northern Pacific Railroad over a region which in its extent embraces an area at least equal to all the New England States, and along a route which is over 1,500 miles in length, upon which are built numerous growing towns and cities that have sprung up as if by magic, as well as great manufacturing establishments, flourishing farms, handsome residences, and other improvements which the patriotic and enterprising and industrious citizens of the United States who have gone thither have built up within the last ten years.

All this will follow as a result of a measure submitting these questions to the courts. The gentleman from Missouri says, in outlining the so-called benefits of his amendment, "What harm will be done if there are delays?" And he says that as to the railroads being built during the delay, that is all nonsense, a false alarm sounded to influence our action. I have only to remind the gentleman that within the last three years this matter of building railroads has not been altogether a false alarm. If his attention can be directed to the western slope of the Rocky Mountains, especially to the Cascade Range in the State of Washington, he will find there a line of at least 75 miles of railroad and running through some of the most valuable lands on this continent, some of the most valuable timber lands, some of the most valuable coal lands, some of the most valuable gold and silver bearing lands. He will find them very valuable on the western slopes of the Coast Range Mountains, passing down to the waters of Puget Sound.

There was a time when it was within the power of this House to have restored to the public domain all that magnificent territory, embracing about 2,000,000 acres. There was a time, not three years ago, when that proposition was submitted to us upon this floor and when the gentleman from Missouri himself was one of us here. It was said then, as it is said now, with reference to the future action and operation of the railroad companies as to the grants unearned, if we failed to forfeit they would go on and complete their roads and earn the lands which it was then in our power to restore. But these predictions were disregarded, appeals were made to deaf ears, and they were met with a contemptuous refusal.

Inaction was the result; and then, in the period intervening between the end of the long session and the beginning of the short session two years ago, that railroad company, knowing the temper of this House and feeling that some determinate action would soon be taken, doubled and trebled and quadrupled their forces, and from a point at Ellensburgh to a point on Puget Sound they made a living line of laborers. Men and extensive machinery were placed upon the tunnels, high elevations were overcome, steep chasms were trestled, electric lights were introduced to aid the operations by night as the mighty work went under and over the mountain range; and when we assembled here again at the beginning of the succeeding short session to resume our labors the most stupendous results in railroad building had been accomplished, every mile of the great road had been completed from the waters of Lake Superior to the waters of Puget Sound, the road was accepted, and the railroad people came here and, smiling confidently in our faces, said: "What will you do about it?" And, sir, what can we now do about it? There is not a lawyer on this floor or anywhere else who can answer that question with satisfaction to himself. With the numerous decisions of the Supreme Court, as well as the pronounced opinions of distinguished men who have given this matter the most profound attention, and with the most learned discussion of the subject in the other House of Congress as well as in this body, it seems hopeless at this or at any other time or place ever to restore to the public domain any portion of that land which the railroad companies claim they have earned by construction, followed by acceptance of their roads, although completed after the prescribed time.

The gentleman speaks of the worthlessness of a large portion of the lands embraced in the grants now before us for restoration. He says to this House that at least two-thirds of the immense grant of the Northern Pacific is worthless. I have so much confidence, Mr. Chairman, in the integrity of that gentleman that I must say if he had been over any portion of that country he would not have made so broad and sweeping a declaration and one so very erroneous with reference to the entire length of that grant.

Speaking more particularly of the 214 miles of the remaining land grant of the Northern Pacific Railroad, along the valley of the Columbia, I can place myself upon the witness stand to say that as to that particular portion, involving about 3,000,000 acres, the gentleman is most wofully in error when he tells this House that two-thirds of that land is worthless.

Let me say that in no portion or the Union is there an equal extent of land, public or private, of greater value as to its fertility than the lands along the Columbia River—lands which have yielded often from 40 to 50 bushels of grain to the acre when properly cultivated and irrigated; lands which produce the finest fruit that has ever reached the markets of the Pacific; lands which, as to either esculents or cereals, are unequaled, under proper conditions, as to their productiveness. But of what avail is all this with that black cloud of railroad withdrawal hanging over that country for 214 miles? What inducement is there for any American citizen, homeless as he may be, to pitch his tent and rest his weary footsteps upon that magnificent domain, so long as this cloud hangs over it? The corporation will neither build their road nor will they voluntarily relinquish the land.

The distinguished gentleman from Indiana has repeatedly stated to the House during his very able address (for he is always able and interesting) that there is a hope that the two Houses of Congress may agree on his amendment, but when interrogated by the gentleman from Illinois he gave us no satisfactory answer as to the basis of his hope. We all know—indeed it is a matter of public notoriety—that while there is less difficulty at the present time than there was four years ago in uniting the views of the Senate and those of the House of Representatives on this question, it is not because the Senate is more yielding, but because the House is more conservative. Why, we may ask, does the Senate take so conservative a view on this subject, and why is it that body has not receded and come to the radical basis recommended by the Committee on the Public Lands of the last House? It has repeatedly expressed its position upon this question. It adheres firmly to the same position still.

We are reminded of this again in the bill which for the third time has been sent to us. We are reminded particularly of the one great grant of the original act of incorporation of the Northern Pacific Railroad, an act which invited the people of the United States to subscribe to the stock of that company, section 10 of that act providing—

> That all the people of the United States shall have the right to subscribe to the stock of the Northern Pacific Railroad until the whole capital named in the act of incorporation is taken up.

Then, again, we are invited to consider another act adopted in a subsequent Congress, which permitted the railroad company to mortgage its lands and all its property for the purpose of raising money to carry on the work of construction. They say to us it would be bad faith, it would be a wrongful act, it would be an act of treachery for this Congress now to do anything to make less valuable the bonds and mortgages which were taken by the people and paid for from their hard earnings upon the invitation and authority and the pledged faith of this Congress. This act is entitled "An act to aid the Northern Pacific Railroad Company in the construction and equipment of its road."

Those mortgages and those bonds were subscribed for to a large extent; the rich as well as the poor made this subscription.

Then, again, we are pointed to the great inducement, which was one of the controlling motives in the original grant of these lands—shall the people have a road for national and military purposes connecting the waters of the Lakes with the waters of the Pacific? In section 7 of the original act it is provided—

That said Northern Pacific Railroad, or any part thereof, shall be a post-road and a military road, subject to the use of the United States for postal, military, naval, and all other Government service, and also subject to such regulations as Congress may impose restricting the charges for such Government transportation.

The Executive Departments of the Government not only impose conditions upon these railroads, and have done so ever since the first rail was laid, as to carrying public stores, munitions of war, etc., for the Government of the United States, but especially with regard to the transportation of the United States mails. All land-grant railroads carry the mails for nearly 25 per cent. less than the charges made by roads not of that character.

The great object of the legislation was to connect the waters of the lakes with the Pacific Ocean for the purpose of transporting troops and public stores and to suppress Indian difficulties, and for other national purposes, as well as to open that immense domain for settlement. These were all questions that entered into the discussion. It was also believed that this road would be indispensable for national defense in time of hostilities with foreign powers, and an eminent gentleman occupying a seat on this floor at the time of the passage of the act said:

If this road is not built within our own territory it will be built within the British possessions. The English never neglect their own interests. If this bill will be the means of constructing a road on our own soil south of the British possessions, it is certainly a measure which every gentleman in the House ought to vote for.

And as to the development of the country one of the most distinguished gentlemen that this century has produced, now no longer amongst the living (Mr. Thaddeus Stevens), said:

What, then, have we given them which gentlemen seem so sensitive about? We gave them that which to this nation to-day is not worth a dollar. We gave them land wholly uninhabited, lying in the bleak regions of the North, and which without some such road as this never will be inhabited until the great fire shall consume those forests.

It is therefore as a means of settling that country, now without one white inhabitant, and it is for the purpose of bringing the alternate sections into value, so that homesteads may be worth something there, that we propose to give this company an opportunity to open up that vast wilderness to civilized man.

And Mr. Hendricks, then in the United States Senate, and since Vice-President of the United States, and to whose memory not long since we paid an affectionate tribute, said, in speaking of the importance of the grant when made:

Everybody can see at a glance that it is a work of national importance. It proposes to grant lands in a northern latitude, where, without the construction of a work like this, the lands are comparatively without value to the Government.

The same debates to which we are referred all demonstrate the high patriotic motives of Congress in making the grant, and showing that it was then thought to be in the interest of the Government, in the interest of national aggrandizement, of power, of unity, of development, in binding together in bonds of steel the Pacific and Atlantic portions of the continent. Then, again, we are also particularly reminded that in the original act Congress did everything in its power to encourage the building of the road thus provided for through that region. In section 9 of the act we find this language:

That if the company make any breach of the conditions hereof and allow the same to continue for upward of one year—

Bear in mind, gentlemen, that by the very language of the law itself, even in the event of an unquestioned right of forfeiture, one year was permitted to the company to make good any default which might have resulted, and it then provided—

in such case at any time thereafter the United States, by its Congress, may do all acts and things which may be necessary to secure the speedy completion of such road, etc.

And Judge Deady, judge of the United States district court of Oregon, whose learning and purity as a distinguished jurist are well known from one end of the country to the other, and who is regarded as among the ablest presiding officers on the bench in the United States, when passing on this question in the case of Hughes *vs.* The Northern Pacific Railroad Company, said sections 8 and 9 should be taken together and the act should be construed rather as intending that if the corporation failed the United States would take up the work and complete the road.

We are invited to consider still another condition in the grant, which provides that whenever 25 consecutive miles of that road were completed commissioners to be appointed by the President of the United States should examine the road, and if it should be found to have been constructed in a good and workmanlike manner should certify that fact, and then the lands conterminous with the 25 miles of completed road should be certified to the President of the United States for patent; and, further, that the title should be conveyed from the Government of the United States to these grantees of the Government. "And patents of lands as aforesaid shall be issued to said company confirming to said company the right and title to said lands."

This provision, bear in mind, applies to each consecutive 25 miles of road as they should be completed. That is the language of the act. And to show, Mr. Chairman, what was the intent and purpose of those who were here when that grant was made, our attention is called to the language made use of by Senators and Representatives, and especially by the chairman of the Public Lands Committee of the Senate when he reported that bill. I refer to Mr. Harlan. He said on the floor of the Senate:

The land is to be conveyed to the company only as the road progresses.

That is to say, according as each section of 25 miles is completed and accepted.

Mr. OUTHWAITE. Can the gentleman inform us whether the Secretary of the Interior has certified the lands adjacent to that portion of the road which the gentleman spoke of as having been built between the long session and the short session of the last Congress?

Mr. HERMANN. I am quite certain that the lands have been certified to the President, but the patents have not been issued. The last action taken in this matter was by the late Democratic President of the United States, Mr. Cleveland. He received the report of the commissioners whom he had appointed, and then he certified that each consecutive 25 miles of that road last completed was entitled to be patented.

We are reminded again, sir, that there is a question as to the legal title and as to our right to declare a forfeiture of earned lands by construction of road out of time.

We are referred in answer to this doubt to decisions of the Supreme Court, among the rest one formidable one in the case of Van Wyck *vs.* Knevals, the language of which is, in brief:

So far as that portion of the road which was completed and accepted is concerned, the contract of the company was executed; and as to the land patented the transaction on the part of the Government was closed, and the title of the company was perfected.

The decision in Schulenberg *vs.* Harriman, covering the same point, is also of close application to cases such as we are considering.

And again, sir, it can hardly be necessary for me to recall to the minds of our friends, especially those who take the radical view of this question to-day, that Congress in 1882 impliedly recognized the fact of the existence of the grant, its validity and its operation, by the act of July of that year in providing for the extinguishment of the Indian title along the line of the road through the Crow reservation some two or three hundred miles, and bought and paid for the right through their reservation and for the construction through their territory of this road. This was three years after July 4, 1879, the time fixed for completion of entire road. Then, as I before remarked, the President of the United States himself, from the very first section of 25 miles of road completed up to the last, has received these sections and certified them for patenting. The companies excuse their delay in construction in part because of the delay of the Government in extinguishing the Indian title and extending the public surveys, as promised in the granting act, in advance of the road.

We find from the reports of the Interior Department on the necessity for public surveys that for a long time the Northern Pacific Railroad Company found it impossible to continue advance work, and were delayed in the prosecution of the work because the surveys were not extended, and selections and definite locations could not be made; and therefore the work could not be hastened. It was not until 1882—some time after the time prescribed for the building of the road—that the surveys were finally extended through. These and numerous other mitigations have been presented showing a degree of equity, or, I may say, numerous equities, which it is claimed should be considered by us in these discussions in determining the extent of the forfeiture penalty. With these arguments before us, as they have been for years, we can well entertain serious doubts if the Senate ever will, or if it should, recede from the position it now occupies. Gentlemen seem to emphasize the fact that this forfeiture is particularly desired by the railroad companies, claiming that it will be a confirmation to the rest of their grants or to such portions as were earned out of time.

I think I have sufficiently answered that by referring to the saving proviso which is in this bill reported by the majority of the committee. I must say, however, that if the lands earned out of time are legally earned this proviso will not make them less so, and if not legally earned this substitute now being considered can not make them so even by implication. The opposition constantly dwell upon the great benefits formerly conferred upon railroads and now the public necessity of depriving them of all lands earned out of time, and to do this they are eager to tie up these grants, hoping that at some time in the future public sentiment may invite extreme legislation. They seem to assume that in all the granted limits there is the same wild, uninhabited expanse that existed prior to the grant. They ignore the subsequent development and progress, the investment of capital, the acquisition and conveyance of real property, the numerous titles which have passed from hand to hand, and all relating back to the land grant for validity. Let me say to gentlemen, if they will lay less stress upon the benefits accruing to the railroad companies and speak a little more of the injuries which will follow from further delays to the people and settlers of the country, and to the bona fide purchasers, not only directly but

indirectly, from the railroad company, and then look for a moment upon the great injury which would be perpetrated upon all the country adjacent to the roads and within the grants, and upon all of their thriving industries, they will come nearer to the mark than they have up to the present time.

Now, the gentleman from Indiana says that it is only the railroad companies who want this particular forfeiture; that is to say, the forfeiture of the land conterminous with the unconstructed lines. Let me say to the gentleman that he is mistaken in reference to that. I call the gentleman's attention to the voluminous petitions from people along the line of these grants, thousands of whom have addressed the Committee on Public Lands in this Congress, asking its members to come to their rescue now, after so many years of patient waiting, and at least do them this long-deferred justice. If the gentleman will look among the files of his committee-room he will find them there, one petition at least, which I had the honor to present from 3,000 people who have settled along the line of the Northern Pacific, in my own State, asking that action be taken as to the unconstructed lines independent of further forfeiture.

Substantially the same language is also used in the memorial addressed by the Legislative Assembly of the State of Oregon to this Congress, asking for some immediate action, a portion of which I will read:

That by the forfeiture of said lands it will increase the wealth, prosperity, and general welfare of the State of Oregon, and the eastern portion in particular.

And to the end that the greatest good may come to our Commonwealth, we, your aforesaid memorialists, most respectfully and earnestly ask:

First. That all the lands of said company conterminous with and adjacent to the proposed Columbia River branch of said road, namely, between Wallula, Wash., and Portland, Oregon, be declared forfeited without delay.

Second. That the forfeiture of said lands do not depend upon the condition of any other portion of the grant of said company than the one mentioned herein; and that the question of the forfeiture herein mentioned be acted upon independently of all others, that the minds of the people may be set at rest and their property rights secured.

This is substantially accomplished in the bill reported by the majority of the Committee on Public Lands.

Now, Mr. Chairman, I desire to have read also the appeal of thousands of settlers who have made homes along these 214 miles, the counties of which, along the river, embrace a population of at least 40,000 people, 3,000 of whom unite in this petition. I ask the reading of it by the Clerk. I think this will satisfy the gentleman that it is not the railroad companies who are asking for immediate and earnest action, but it is the settlers and the people who are building up that great empire in the valley of the Columbia.

The Clerk read as follows:

To the honorable Senate and House of Representatives in Congress assembled:

We, your memorialists, the farmers, stock-raisers, and other permanent settlers of Morrow County, Oregon, assembled in Lexington, Oregon, on Saturday, the 15th day of January, 1887, respectfully represent:

That our homes, farms, and stock ranches are within the 40-mile limit of the branch line of the original Northern Pacific Railroad survey, which was located along the bank of the Columbia River, from Wallula, Wash., to Portland, Oregon;

That the last limit of time in which this Northern Pacific branch line was to have been built, according to the terms of the grant, expired on July 4, 1879;

That in the year 1880 another railroad company, known as the "Oregon Railway and Navigation Company," completed a railroad line along this original Northern Pacific location, from Portland, Oregon, to Wallula, Wash., a distance of 214 miles, and has, since said completion, operated its line without intermission;

That the Northern Pacific Railroad Company, after having plainly forfeited all right to any land south of the Columbia River, threaten settlers upon odd sections in this large belt of territory with prosecution, unless said settlers bond themselves to pay said company's exorbitant prices for the homes built upon what is clearly, and in all justice, solid Government domain;

That many of us have been compelled to pay the maximum price of $2.50 per acre for pre-emptions and commuted homesteads on even sections, on account of this unlawful withholding of the odd sections for said Northern Pacific Railroad, whose title to these lands lapsed in 1879;

That the cloud over the title to these odd sections is now, and has been for nearly seven years, retarding the growth of this community and preventing the improvement of the homes of what would otherwise have been a large and prosperous commonwealth;

That a majority of us came to this region very poor in pocket, but strong in hope and muscle, and have been obliged to break up the sod of many centuries for some years before its inherent productiveness could be developed sufficiently to raise a remunerative crop; that we have been compelled to reside in shanties and live from hand to mouth, from year to year, while endeavoring to build comfortable homes upon prairies which the early settlers considered barren, arid wastes, fit only for a range for a limited number of horses and cattle;

That in our struggle upward we have been visited by dry seasons, which have put us back from year to year, so that many of the most industrious and frugal of us have been unable to raise the $400 demanded by the Government for pre-emption claims on even sections, and that, in consequence, ourselves and families are in many cases living upon expired and unpaid pre-emptions;

That we have been hoping from year to year, and from one session of Congress to another, that our lawgivers would come to our relief by declaring these lands forfeited to the Government and throwing them open to actual settlers, thus enabling us to build and improve these homes with some degree of confidence, but have been disappointed at the termination of each session until all has been doubt and despondency, where otherwise would have been a prosperous and happy community;

That we can not settle closely together and establish schools for our children within convenient reach, on account of every odd square mile within this belt being withheld from permanent settlement;

That the exemption from taxation of railroad sections, which comprise nearly one-half the land in Morrow County, adds additional load to our other burdens, as the deeded land has to bear much more than its just proportion of taxation;

That we have still sufficient faith in our national legislators to hope for justice at their hands, when we succeed in calling their attention to our grievances;

Wherefore, your memorialists earnestly pray the members of the United States Senate who are not in the pay of corporations, and the honest members of the House of Representatives, to agree upon some measure which will immediately free us from this railroad incubus which has for nearly seven years stood in the way of our prosperity.

We earnestly beg that you will see fit to forfeit all railroad lands in Eastern Oregon and throw them open to settlement by the people at the minimum price of $1.25 an acre.

Mr. HERMANN. Now, Mr. Chairman, how long shall these pleadings from the people be made in these Halls without a responsive answer? How long shall they be compelled to knock at the doors of their country's Capitol for relief and be denied the simple justice they ask? Tell me, are they to go away again, as they have for the past six or eight years, without a word of encouragement? For them, and in their name, I hope not. Along this portion of the 214 miles of grant the stranger may distinguish by the dilapidated appearance of the humble cabins on the odd sections the dividing line between the grant proper and the restored indemnity limits. Sir, you can look into the sad and despondent faces of the people upon those lands and plainly see that they have been worn out in watching and waiting from year to year, hoping the time would still come when Congress would confirm their titles at last to their well-earned homes. No argument can be urged against this.

The railroad corporation has not a vestige of claim left, for as to this portion it has never even attempted to comply with the law. The act authorizing the construction of the Northern Pacific Railroad proposed a line from some point on Lake Superior to some point on Puget Sound, and a branch road leading from some point about 300 miles eastward to Portland along the Columbia River. The point was finally located near the mouth of Snake River, at Wallula. From Wallula immediately west to the Pacific, about 262 miles, the road was continued and constructed. From Wallula to the city of Portland it is 214 miles. That branch line has never been constructed. Not a shovelful of earth has ever been taken up, not a rail has ever been laid down, and all that we ever hear as to the construction of that system of road is occasionally some uncertain intimation from railroad people that they may take action toward the building of that road to prevent the forfeiture of the grant.

This is unreliable. On the contrary, the public have neither hope nor assurance of this. The construction of a road on the south side of the Columbia River by another company will of itself discourage the building of the Northern Pacific on the north side and parallel to it. In the mean time great uncertainty prevails along the entire Columbia River grant. Settlers on the even sections are paying $2.50 per acre, which should be $1.25 per acre. Final proof must be made as the time expires on their homesteads and pre-emptions. No taxes are paid on the odd sections. Schools can not be supported and roads can not be maintained. The settlement of the whole country is retarded. In the face of all this, and with all our appeals for relief, we meet with a persistency and stubbornness on the part of those who are fighting for an impracticable object, for a theory, for a proposition not dependent upon this, and which they must know is without the remotest prospect of success.

Mr. McRAE. Will the gentleman permit a question there? The gentleman has said something about "stubbornness." I would like to call attention to his votes. He spoke a moment ago with reference to the Senate bill, which is substantially the same as this. Now, I want to call the gentleman's attention to the fact that he voted with us against that bill in the last Congress, and that he is one of the stubborn men himself.

Mr. HERMANN. I anticipate the gentleman's question, and will dwell a moment longer upon this matter.

Now, all these gentlemen who are in favor of obtaining the largest restoration of the granted lands to the public domain have been at work for years, and I did go with a great many of them here on the final votes, but I always supported substitutes and amendments limiting forfeitures to unconstructed roads, and when voted down, as a last alternative I went with the gentlemen from Indiana and Arkansas, hoping that with some bill from this House a compromise might be agreed upon between the two disagreeing bodies and some practical measure of forfeiture be obtained. To this extent I admit I united with the gentleman. I stood upon the most advanced ground upon that question that I felt it was possible to obtain. I stand on the same ground to-day. The amendments which I supported and voted for in every previous Congress went no further than the bill of the House committee to-day. I always insisted that the measure supported by the gentleman then was impracticable. When our substitutes were voted down we had either to take the gentleman's radical bill or nothing.

In my speech in this House in the Fiftieth Congress, on substantially the same issues as are now pending, I advocated the passage of a bill confined exclusively to a forfeiture of lands conterminous with unconstructed roads. I then said: "Theories may do for others and long speeches may console, but this period has gone by with these people, and they now demand such remedial and practical legislation as shall place in their possession the prize so long sought—a home for themselves and their posterity. For several sessions of Congress practical legislation has failed, and only because of the zealous, stubborn, and yet hopeless effort to secure greater results than were possible to obtain."

In view of our past experience, I confess my surprise that the gentleman should hold out so persistently as he has, and prevent results from being accomplished in this matter in this Congress. He knows that all that he hoped for and all that he pleaded for has never been realized, and he now should believe that the best thing possible to do is to recede from his former position and accept this as a compromise, because it is evident that these are the best terms that can be obtained. All former House measures that have been sent to the Senate have been defeated and now it seems to me, more than ever, it is our duty to do the best thing possible to obtain the long-needed relief for the suffering people along these grants, and we think the present bill is the sensible position to take. It has seemed to me that the position taken by the gentleman from Indiana, who is still persistently holding out when there is no hope of obtaining what he is contending for, is just the same stubbornness as that of the gentleman from Arkansas, after there has been a general consensus of opinion of both sides of the House that no more could be accomplished and no result obtained other than that which is expressed in the bill reported by the Committee on Public Lands.

Mr. McRAE. You say that in this matter you are satisfied it can not be accomplished. Why do you say that, when the question has never been submitted to the Senate?

Mr. HERMANN. For this reason: It has been submitted to the Senate four or five times and has never been favorably acted upon by them. It has been each time considered, and always rejected.

Mr. McRAE. This has never been submitted to the Senate.

Mr. HERMANN. I beg to differ with the gentleman on that question. There never was an issue about the question of the lands conterminous with uncompleted road, but there always has been and is now as to completed roads out of time, and this is your issue now. This issue was submitted to the Senate before, and now by the Holman amendment you propose to submit it again.

Mr. McRAE. But this is not the old House bill. This is not that bill, and does not involve the land which you have been talking about. The bill reported by the gentleman from Illinois we all agreed to, and all your talk is about some imaginary man or measure, and there is not a single question about the Senate agreeing to that. This is a matter on which all lawyers are agreed, that so much of the land as is conterminous with the road not constructed should be forfeited.

Mr. HERMANN. The gentleman from Missouri, as I stated at the outset—and I am sorry that the gentleman from Arkansas did not pay a little more attention, because then he would have heard me define my position more plainly than he did—the gentleman from Missouri distinctly proposes an amendment to this bill by which all the questions as to the land conterminous with the completed portions of the roads earned out of time shall go to the courts, shall go to the land offices, shall go through all the various stages of the Interior Department, until every man out there, unless he is a millionaire, will be absolutely rendered bankrupt before the last day of judgment shall arrive.

Now, I claim that such a proposition as that will not receive the assent of a majority of the body at the other end of this Capitol. Therefore I argue these questions as if they were all before us now for consideration, as they are before us. The position of the gentleman from Indiana [Mr. HOLMAN] in his amendment, the position of the gentleman from Missouri [Mr. STONE], and also the bill as it is reported here by the majority of the Committee on Public Lands, I unite them all together for the purpose of illustrating the conditions which you will attempt to ingraft on the pending bill, and then the utter impossibility of arriving at any compromise other or better than that which is presented by the majority of the committee.

Now, Mr. Chairman, what I desire to add further will be largely in the form of extracts which I shall ask the privilege of incorporating with my remarks in the RECORD.

But in conclusion I desire to say that many of the people along that entire grant of the Northern Pacific, to which I have been specially devoting my remarks, were at one time as radical as the gentleman from Arkansas can be for an entire forfeiture of this land grant as far back as Bismarck, and to the date July 4, 1879, fixed for the completion of the road. They believed before the road had progressed far that that might have been done and should have been done, for they thought it would be just; but they have come now to a a different conclusion. They believe now that the longer we delay the settlement of this question the worse it will be for the prosperity of that country and the happiness of the people individually.

And let me say to the gentleman from Arkansas [Mr. McRAE], to the gentleman from Indiana [Mr. HOLMAN], and to the gentleman from Missouri [Mr. STONE], that when they talk about the friends of the railroad corporations being here—meaning those of us who desire to realize practical results—I say to them that the railroad company's best friends here have been those who opposed all compromises and produced delays through which large grants were earned. I could point my finger to them on the floor of this House and make no mistake, and I would count among them the gentlemen who have spoken so ably here in the minority. I mean no reflection. They did not intend the consequences which followed. By their refusal to take what we could then get the railroads got what they did not want them to have.

As I before suggested, while we are caviling and disagreeing among ourselves, the railroad companies are going on building their lines and having their construction certified and their lands selected and their patents issued under Democratic Administrations as well as under Republican, and, as now nearly all agree, their titles to the lands so obtained will be confirmed by the highest courts of the land. So that, I assert again, the more you throw obstructions in the way of such a measure as that which is presented here by the Committee on Public Lands the more you are playing into the hands of the railroad corporations, aggrandizing them, and making them richer than they are and the people poorer.

Mr. McRAE. You give them what they want.

Mr. HERMANN. And let me say to the gentleman, further, that as for the settlers, the people whose cause you pretend so earnestly to espouse, you are making them poorer by the course that you are pursuing; you are throwing them into bankruptcy, into sorrow, into irretrievable suffering and ruin. That is about where the line should be drawn between the friends of the settler and the real friends of the railroad corporations here. When we look at matters in this material world we look chiefly to results; we look not to words but to living, earnest action. Those people have been patiently waiting. You have told them that you were their friends and they have been growing poorer every day in proportion to your protestations of friendship, and the time has now come for you to show your hands definitely. Give them now that which it is possible to give them. Give them that upon which there is no difference of opinion in either the Senate or the House of Representatives. Relieve the discouraged settlers of the West. Let them go on with cheerful hearts, let their titles be confirmed, and let happiness be seen again in their poor and humble cabins rather than sorrow, gloom, and despair. [Applause.]

Forfeiture of Land Grants.

It (the Democratic party) has reversed the improvident and unwise policy of the Republican party touching the public domain, and has reclaimed from corporations and syndicates, alien and domestic, and restored to the people nearly 100,000,000 of acres of valuable land to be sacredly held as homesteads for our citizens.—*National Democratic Platform*, 1888.

SPEECH

OF

HON. THOMAS C. McRAE,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES.

Thursday, July 17, 1890.

The House being in Committee of the Whole, and having under consideration the bill (S. 2781) to forfeit certain lands heretofore granted for the purpose of aiding in the construction of railroads, and for other purposes—

Mr. McRAE said:

Mr. CHAIRMAN: I have discussed this question several times on this floor, and in reports to the House from the Committee on Public Lands, during the last five years. What I say to-day will be, so far as the subject generally is concerned, largely a repetition of what I have said heretofore in some form or other.

The policy of granting lands to aid in the construction of railroads was initiated in 1850 by the passage of the act to aid the Illinois Central Railroad (3 Statutes at Large, 466), and since that time has been very liberally indulged in. Until the year 1862 it was the universal practice of Congress to make the grants only 6 miles wide on each side of the roads and to make them to the States in trust for the roads to be constructed. Since then the practice has been to greatly enlarge the limits and to grant the lands directly to railroad companies organized by Congress, and hence a great deal of our present trouble in forfeiting the unearned lands held by them.

The following table will show by what Administration made and the extent of the grants for railroads, exclusive of indemnity withdrawals to the amount of over 40,000,000 acres:

	Acres.
During President Fillmore's Administration there were grants to the States in trust for the railroads aggregating	8,198,593.73
During President Pierce's Administration there were grants to the States in trust for the railroads aggregating	19,678,179.79
During President Lincoln's Administration there were grants directly to railroad companies aggregating	74,295,891.61
During President Johnson's Administration there were grants directly to railroad companies aggregating	34,001,297.77
During President Grant's Administration there were grants directly to railroad companies aggregating	19,231,121.69
Total	155,504,994.59

At this late day I will not undertake to pass upon the wisdom of such a policy. Many of the best and ablest leaders of public thought of those times, including Hon. Stephen A. Douglas and Hon. Lewis Cass, favored the grants, but whether right or wrong at that time we

will all agree that the roads have abused the trusts and that it should now be abandoned. The time has come for us to take our bearings and see where we are drifting. Our public lands must be preserved for settlers. Our population is increasing with wonderful rapidity. The landless and homeless are to be found all around us, while our public domain is being absorbed by railroad companies and cattle and foreign syndicates.

The grand object to be accomplished by making the grants was to secure an early completion of the roads across the plains and over the mountains and the development of the great Western States and Territories, to people them and unite their commerce with that of the Eastern and Middle States. The policy did not accomplish this result. It might well be doubted if the grants materially aided in what has been done in that direction.

Eighty grants, covering directly 155,504,944 acres, and about 40,000,000 more of indemnity withdrawals have been made to companies that have altogether constructed less than 20,000 miles of road, while during the same period of time over 100,000 miles of road were constructed by other companies without the aid of land grants and subsidies, and not a few in the undeveloped West were built far in advance of and before the completion of those aided by large and valuable grants.

In many cases the construction of the land-grant roads appears to have been purposely delayed until the country through which the routes were projected had been settled to a sufficient extent to justify the building without aid. Under the law and practice of the Interior Department in permitting the lands to be withdrawn as soon as maps were filed the railroads lost nothing by such delay. They paid no taxes and the land was all the time increasing in value. The delay was a very profitable business for them. They have been allowed to build wherever and whenever they desired, either within or without the limit, and often allowed to change the route to suit their desires, and withdrawals have generally been made to suit their greedy wishes.

There are many railroads yet uncompleted to aid which land grants were made nearly thirty years ago, and when the time fixed in the granting act for completion has long since expired, and yet the lands are still withdrawn from sale and settlement and the legal title in the company, with no power in the executive department to restore them to the public domain, while up to this time the legislative department has been unable to agree as to a general forfeiture. About 50,000,000 or more acres have been forfeited, and there yet remain subject to forfeiture from 6,000,000 to 70,000,000 acres according as Congress may think proper under all the circumstances. I think the whole grant should be forfeited where the road was not completed in time, and particularly if it has never yet been completed. Of the eighty roads receiving grants, forty-seven were completed within the time, twelve have been completed out of time, seventeen only partially completed, and there are four no part of which has ever been constructed.

Congress now has the option of saving a large quantity of these lands for the homeless people or giving them to the faithless railroad companies. The question is fairly before the people and is well understood by them, and the settlement of it can not be avoided by the promise contained in section 7 of the House amendment. Shall the House now abandon its position heretofore assumed in the contest with the other branch of this department and yield to the demands of the railroads? The Democratic party is emphatically and squarely committed in its platform to the policy of declaring these forfeitures and restoring the lands to the public domain, and so long as it controlled this House it refused to make any such concessions to the corporations as is now proposed by the majority of the Committee on Public Lands.

The Democratic party stands pledged and ready to forfeit all not earned in time. That is the question to which we call the attention of our Republican friends. I call upon them now to show what they have done to recover the unearned lands so recklessly granted by their party. I charge that party with favoring the railroads as against the settlers in this fight for forfeitures, not all the members, but particularly the Senate, which is under the control of Republicans. I point with pride to the record of our party and the efforts of leading members.

Mr. HOLMAN, of Indiana, a Democrat, now the able chairman of the House Committee on the Public Lands, on the 18th day of January, A. D. 1869, when the Republican party had full control of all the departments of the Government, offered the following resolution in the House:

Resolved, That grants of the public lands to corporations ought to be discontinued, and the whole of such lands ought to be held as a sacred trust to secure homesteads to actual settlers, and for no other purpose whatever.

A Republican, Mr. H. D. Washburn, with the House about two-thirds Republican, moved to table the resolution, and the motion was agreed to by just about that proportion. The vote was 110 yeas and 55 nays, and the gentleman from Indiana [Mr. HOLMAN], who was a member of the Fortieth Congress, says he only remembers three Democrats who voted to table. With only a handful of Democrats in Congress, the leaders of that grand old party of the people that had acquired so much of our public domain undertook to stop such grants, and, if possible, to recover some of the lands that had been recklessly given to moneyless corporations for speculative purposes, and they were met by the Republicans, then in power, by a vote to table, which in effect said to the country that the lands ought not to be held for settlers, but for corporations as well, and continued to make grants.

In connection with this resolution I desire to call attention to the platforms of the Democratic party in 1884 and 1888 upon this subject:

We believe that the public land ought, as far as possible, to be kept as homesteads for actual settlers; that all unearned lands heretofore improvidently granted to railroad corporations by the action of the Republican party should be restored to the public domain, and that no more grants of land shall be made to corporations or be allowed to fall into the ownership of alien absentees.—*National Democratic Platform*, 1884.

It [the Democratic party] has reversed the improvident and unwise policy of the Republican party touching the public domain, and has reclaimed from corporations and syndicates, alien and domestic, and restored to the people nearly 100,000,000 of acres of valuable land to be sacredly held as homesteads for our citizens.—*National Democratic Platform*, 1888.

Now, Mr. Chairman, let us see what has been done to redeem these promises.

The Forty-eighth Congress passed bills to forfeit the following-named land grants to railroad corporations, all of which bills were initiated in and passed by a Democratic House in accordance with the policy of that party, namely:

	Acres.
Oregon Central	870,880
Texas Pacific	18,500,000
Iron Mountain, of Missouri	300,000
Total area by acts Forty-eighth Congress	19,670,880

The Forty-ninth Congress, which began with the Cleveland Administration, enacted laws forfeiting the following-named land grants to railroad corporations, initiated and insisted upon by the House, namely:

	Acres.
Atlantic and Pacific, estimated at	23,871,360
The Mobile and New Orleans and other Southern railroads, the grants being to States, estimated at	7,000,000
Total area restored by Forty-ninth Congress	30,871,360

The Fiftieth Congress passed a bill forfeiting the grant to the State of Michigan to aid in the construction of a road from Marquette to Ontonagon, estimated at 500,000 acres. Total legislative forfeitures, 50,982,240 acres.

The following table and statement shows the quantity of land actually restored to the public domain by the Cleveland Administration, exclusive of forfeiture bills:

	Acreage.
Lands in granted railroad limits restored	2,108,417.38
Railroad indemnity lands restored	21,323,600.00
Private land claims; withdrawn lands restored	576,000.00
Entries under pre-emption, homestead, timber-culture, desert, mineral, and timber land laws canceled in regular course of examination and proceedings in General Land Office for abandonment, illegality, and other causes	27,460,608.74
Invalid State selections restored to United States	968,747.52
Total actually restored to the public domain and opened to entry and settlement by the executive department	52,437,373.59

So we have the following results:

	Acres.
Forfeited by Congress	50,982,240.00
Restored by Executive orders	52,437,373.59
Total added to public domain	103,420,613.59

We have this as the result of the work commenced by the Democratic party ten years ago. It is a good showing, but there is still much to accomplish in this line.

It is insisted by some that we have no power to forfeit a number of these grants; that the grants were and are absolute and irrevocable appropriations and dedications of the lands to and for the purpose of completing the roads. In my judgment, there is nothing in this, and I am sure that such a theory will not be accepted either by the courts or by the country. We have heard during this debate much about the law bearing upon the question of power and of conditions-precedent and conditions-subsequent, and a little later on I will have something to say about the legal questions involved.

But the central fact stands out in bold relief that the grants were upon the condition that the roads were to be constructed on or before a fixed time, and that this condition was not performed as the Government and the people had a right to expect. If the positions were reversed the corporations would have no scruples about declaring a forfeiture. It is perfectly clear that nothing can be accomplished without a forfeiture, and we are all agreed that some bill should be passed by Congress. The important question to be settled to-day is the extent to which we shall go. There are four propositions now pending:

1. The old Senate proposition, which is now substantially concurred in by the Republican members of the House committee, to forfeit the lands where no road has been built, involving about 6,000,000 acres, as is shown by the Department estimate.

2. The substitute of the gentleman from Indiana [Mr. HOLMAN], which is the proposition several times passed and heretofore insisted upon by the House when it was Democratic, to forfeit all lands except for road constructed within the time fixed in the granting acts, involving about 50,000,000 acres.

3. The proposition which I insist upon, to forfeit the entire grant

where there has been a failure to perform the conditions of the grant, involving about 70,000,000 acres.

4. The proposition involved in the amendment of my colleague upon the committee, Mr. STONE, of Missouri, in which I have joined to agree to the first proposition, and refer the other questions to the courts for judicial determination. As for myself, I insist that as a matter of law, as a matter of equity and good conscience as well as of public right, there should be no compromise in this matter, and therefore feel it my duty to insist, as I have in the last two Congresses, upon a forfeiture of the entire grant where there was a failure to perform the conditions imposed upon and accepted by the companies and particularly where the roads have not yet been completed. If it is not done I shall wash my hands of responsibility for such failure.

I am, then, first in favor of the third proposition as stated. If it is rejected, then as the next best I want the second proposition. If neither of these is adopted, and I am sure neither will be by the House as now organized, then I want the Stone amendment and will move its adoption in his absence. These different propositions have each been fairly and ably presented by gentlemen who have preceded me in this debate, the first by the gentleman from Illinois [Mr. PAYSON], the second by the gentleman from Indiana [Mr. HOLMAN], and the third by my eloquent and forcible friend from Missouri [Mr. STONE]. I fully agree to all he has said. It will be observed that they all agree that Congress has the power under the law and the decisions to forfeit the whole of the grant where there was a failure to perform the conditions made by Congress and accepted by the roads.

LEGAL PRINCIPLES.

Now, Mr. Chairman, let us briefly consider the legal propositions involved. We have heard and read much about the power of Congress to forfeit, and of conditions precedent and subsequent. I think that the grants passed the title to the roads in fee with a condition-subsequent. At common law the object of a condition was to insure the use of the property granted to the object intended, and a forfeiture for breach of the conditions restored the property to the grantor. So these railroad companies hold the granted lands absolutely in fee-simple, subject to the right of the United States to insist upon a forfeiture for a disregard of the conditions when it shall be asserted. They can use it, sell and mortgage as their own, but only subject to the right of the Government to retake the estate for a breach of the conditions, and the forfeiture may relate back to the date of the grant if Congress so declares.

The building of the roads out of time only gave precision to the grants, but does not aid the title. The grant is the title. This has repeatedly been decided by the Supreme Court. As to the roads in question there has been a breach of the conditions of the grants. It follows, then, that there is a right of forfeiture. To what extent can Congress forfeit? I say we can and should take the whole grant, with proper protection to settlers and purchasers.

In support of this position I will refer to the following quotation from Sheppard's Touchstone, page 154:

It is generally true that he that doth enter for a condition broken doth make the estate void *ab initio*, and that he shall be in of his first estate in the same course and manner as it was when he departed with the possession and at the time of the making of the condition. And hence it is that, if there be any charge or incumbrance on the lands, as if the lessee of land upon condition grant a rent charge out of the land or enter into a statute or recognizance and the conusee has the land in execution and this charge is after the condition is made, in this case when the condition is broken and the party doth re-enter he shall by relation avoid the rent, statute, and recognizance and hold the land freed from them all.

The same doctrine is found in other authorities. Thus in Coke, Littleton, 202*a*, it is said broadly:

He who enters for breach of condition regularly shall have the land of his first estate.

Much has been said about the decision in the case of Schulenberg against Harriman (21 Wallace, 44) and it has been used upon all sides of this question. Here are the facts upon which this decision was based: There was a grant made to the State of Wisconsin to aid in the construction of a railroad to be built in ten years. The road was not built in the time. After the time had expired the plaintiff went upon the land and cut and converted to his own use certain trees growing. The defendant, as agent of the State of Wisconsin, seized the logs as the property of the State. The plaintiff brought replevin. The question was whether there was such a title in the State as would maintain replevin or trespass. The court decided that the grant was one *in præsenti;* that the legal title passed to the State by the act upon conditions-subsequent.

Now, that is the whole scope of that decision, and I challenge any gentleman on the other side to cite a single case that goes beyond it. This is the leading case and has been followed in every decision since delivered by the Supreme Court of the United States. Now, what does this case settle? I want to call attention to the exact language of the court:

The provision that all lands remaining unsold for ten years should revert to the United States if the road be not completed, is no more than a provision that the grant shall be void if a condition-subsequent be not performed. That is the settled law, that no one can take advantage of the non-performance of the condition-subsequent annexed to an estate in fee but the grantor, his heirs, or the successors of the grantor, if the grant proceeded from another person and if they do not see fit to enforce the forfeiture on that ground, the title remains unimpaired in the grantee.

In what manner the reserved right of the grantor for breach of the condition must be asserted, so as to restore the estate, depends upon the character of the grant. If it be a private grant that right must be asserted by entry or its equivalent. If the grant be a public grant [as this is] it must be asserted by judicial proceedings authorized by law, or there must be some legislative assertion of the ownership of the property for breach of the conditions, such as an act directing the appropriation of the property, or that it be offered for sale or settlement.

Mr. HERMANN. In that case there was an express reversion provided for, but in this case there is no such provision for an express reversion.

Mr. MCRAE. The principle is the same and there is substantially no difference. In the case of the Northern Pacific there was an express statement that every grant, right, and privilege was made and accepted upon the condition that the whole road should be constructed, equipped, furnished, and completed by the 4th day of July, 1876.

Mr. HERMANN. The gentleman remembers very well that in the original bill providing for the grant to the Northern Pacific Company, or, as it was at that time called, The People's Company, for a road from some point on Lake Superior to Puget Sound, it was provided that in event the road was not completed within the time stipulated the lands should revert. That bill, however, was lost, and in the bill which we are now acting upon that particular clause was not again inserted.

Mr. COBB. But it is said here that this grant is made upon the express conditions stated.

Mr. MCRAE. The condition was just as clearly expressed in the grant as it passed as could be. The grant was upon conditions to be performed, as I have shown, and the courts have held that under such circumstances Congress can declare the forfeiture. The estate so conditioned is created by declaring the condition, not by declaring the result of its breach.

Mr. HERMANN. But the gentleman will also remember section 9 of this particular bill, which provides that if the conditions are not complied with within one year after the failure of the company to comply with the conditions the Congress may take such measures as it may deem proper for the completion of the road.

Mr. MCRAE. I am going to read sections 8 and 9 together. The gentleman himself having voted heretofore with the Democrats for the forfeiture of this grant to the extent proposed by the gentleman from Indiana, now in effect says that he knew all the time that the Senate of the United States would not agree to the proposition, and that the delays were in the interest of the railroads. Now, after taking that position for many years, he plants himself squarely, so far as the Northern Pacific is concerned, upon the doctrine of dedication first announced in the report made by the gentleman from Maine [Mr. REED], as chairman of the Judiciary Committee in the Forty-seventh Congress, asserting that there was a dedication of the land granted and that the grant could not be forfeited at all. Why support the Senate proposition if this position is the correct one? Why your argument on yesterday if this grant can not be forfeited at all?

Mr. HERMANN. For the simple reason that we know what the attitude of the Senate is——

Mr. MCRAE. We are not talking now about the attitude of the Senate.

Mr. HERMANN. I am explaining the reason for my position taken yesterday.

Mr. MCRAE. But your question assumes that all the Government can do under section 9 is to take needful and necessary steps to have the road completed, yet you argued yesterday for the forfeiture of that part of the grant where no road has been constructed.

Mr. HERMANN. What I say is that this is an entirely different case from the case which the gentleman cites as having been decided in Wisconsin, a case resting upon an entirely different principle and upon a different state of facts and of law.

Mr. MCRAE. I am talking of the change in your position as to the extent of the forfeiture and the power to forfeit, and not of the difference in two grants.

Now I want to call the attention of the House to section 8 of the Northern Pacific grant, and I ask gentlemen to apply the rule of common sense, of common fairness, of common honesty, as well as the rules of law, to this question, and, as honest Representatives, say what is right for the United States and the people whom we are presumed to represent here.

Section 8 is as follows:

And be it further enacted, That each and every grant, right, and privilege herein are so made and given to and accepted by said Northern Pacific Railroad Company, upon and subject to the following conditions, namely: That the said company shall commence the work on said road within two years from the approval of this act by the President, and shall complete not less than 50 miles per year after the second year, and shall construct, equip, furnish, and complete the whole road by the 4th day of July, A. D. 1876.

Then, by two separate resolutions, afterwards the time was extended to July 4, 1879. Section 9, upon which the gentlemen who resist forfeitures rely, and under which the attorneys for the railroads who have discussed this matter before the committee have insisted that we have no right to declare a forfeiture at all, is as follows:

SEC. 9. *And be it further enacted*, That the United States make the several con-

ditioned grants herein and that the said Northern Pacific Railroad Company accept the same upon the further condition that if the company make any breach of the conditions hereof and allow the same to continue for upwards of one year, then in such case, at any time hereafter, the United States, by its Congress, may do any and all acts and things which may be needful and necessary to insure a speedy completion of said road.

That is, this further condition is that if the company fails to perform the conditions stipulated in section 8 the Government has the option of taking back the whole grant, or it may elect, under section 9, that it will take steps to have the road completed. Upon this point I desire to read the following from the report of the committee in the last Congress to which the gentleman from Oregon then assented:

Section 9 of the act, while perhaps embracing the preceding section within its provisions, and possibly to that extent cumulative, is also a provision prescribing certain other and additional conditions-subsequent.

It will be noticed at the outset that by its specific language it embraces more than one grant, the exact words being "the several conditional grants herein," and that it relates to a "further" condition. The "further" condition was that if the company should make any breach of "the conditions hereof" and the same should continue for a year, then the United States might, etc. Now, it is obvious upon the mere reading that this language does not primarily relate to section 8, for that section only appertains to one grant, needs no "further" condition, and the provision that the default should continue for a year or upwards would have no pertinence. This section evidently relates to some other condition than that mentioned in section 8.

These other conditions or requirements are found in section 5, which provides that six separate and distinct things should be done by the company, namely: First, that the road should be constructed in a substantial and workmanlike manner, equal in all respects to first-class railroad; second, that it should be made of rails of the best quality, manufactured from American iron; third, that a uniform gauge should be established throughout the entire line; fourth, that the company should construct a telegraph line of the most approved and substantial description; fifth, that it should not charge the Government higher rates than individuals; and, sixth, that it should permit other railroads to make running connections on fair and reasonable terms. These are the other and further conditions mentioned by section 9, in default of any of which, continuing for a year, Congress should have the right to "do any and all acts and things" to secure the "speedy completion of the said road," as contemplated and provided.

The intent of Congress, expressed with abundant precision in the act itself, and as every one knows as a matter of history, was to insure the construction within the time prescribed of a substantial, first-class, and thoroughly equipped railroad from Lake Superior to the Pacific, suitable and available in all emergencies for use by the United States—in peace for the transmission of its mails; in war for the carrying of troops and supplies. Congress did not donate 43,000,000 acres of the public domain to this company without expecting and requiring some equivalent. Among the things it did require was the construction of a first-class road for the purposes and in the manner indicated. It accordingly prescribed the various requirements above recited, and to insure obedience to its mandates it provided by section 9 that in default of any of the same, Congress might do anything necessary to complete the road in the manner contemplated and prescribed.

The enactment of these provisions would have been futile had no reservation been made of a right to enforce them. Without such a reservation the Government, upon default of the company, would have had nothing left except a claim against the company for breach of contract or of covenant. To prevent such a condition of affairs the right was reserved to further legislate to compel obedience to its mandates. These requirements then became additional conditions-subsequent which Congress could enforce by forfeiture or by any other remedy deemed appropriate and adequate. That was the object, scope, and intent of section 9, and it is expressed in unambiguous phrase.

It is no answer to this proposition to say that these requirements might be enforced by the general forfeiture provided by section 8.

The road might have been built within the time limited, and yet every one of these conditions been broken. The grant could not then have been forfeited at all under section 8. A road would have been completed and, though built in absolute disregard of all the requirements of section 5, the Government would have been powerless either to resume the grant or compel the company to perform the condition. That section 9 relates to other conditions than that mentioned in section 8 is also apparent from the use of the words "and allow the same to continue for upwards of one year." These words, if applied to the conditions mentioned in section 5, mean something. If applied to section 8 they are nonsensical. If Congress had intended to extend the period mentioned in section 8 one year, it would have said July 4, 1877; not July 4, 1876, and another year thereafter.

It is thus apparent that section 9 of the act has a scope and effect far beyond anything embraced by section 8; that it legislated upon further and additional subjects; has a separate and distinct function of its own, and that instead of limiting or controlling the preceding section it creates additional obligations and liability on the part of the company.

The only answer to this position advanced by the company is the suggestion that if this be true, then the two sections are utterly inconsistent with each other. It is difficult to understand how this can be seriously urged. We have already shown a different legal scope and operation for each under the construction we have adopted. They are not repugnant or inconsistent in the slightest degree. Each stands for its own particular purpose.

On the other hand, the construction contended for by the company would violate well-established rules of construction simply to disregard the plainly expressed intent of Congress. They claim that the two sections should be taken together, and that so taken all that Congress could do upon failure of the company to build the road would be to take all necessary steps to compel its completion, without power to forfeit the grant.

This position is untenable under the rules of construction because, first, it assumes an ambiguity, and then to reconcile it rejects the usual and ordinary signification of terms and phrases; twice reads as singular a word in the plural, and construes "further condition" as if the word "further" was omitted; second, with reference to a simple time condition, namely, that the road should be built by July 4, 1876, it adds the senseless expression, "provided the same shall continue unbuilt one year;" third, it excludes all of section 3 from its relations and connections with section 9, and either rejects it entirely or makes it practically inoperative; fourth, it violates the manifest general intent of the entire act and the general policy of Congress prevailing at the time in respect to these grants.

Another consideration is to be noticed. The provision of section 9 is permissive or directory only. Congress may do all necessary things, etc. It is not mandatory, as it would have been if intended as the sole remedy for the breach of the condition of section 8. So, too, it is not exclusive of other remedies for the breach. Congress may in that way enforce the forfeiture or may do it otherwise.

We have been referred to some authorities which are supposed to sustain the forced construction of the act contended for, but after the most careful examination of them we are unable to recognize any doctrine contrary to that we have adopted for our guidance. The strongest cited are undoubtedly the cases of the Episcopal Mission *vs.* Appleton *et al.* (17 Mass., 826) and Stanley *vs.* Colt (5 Wall., 119). They do not establish any new doctrine or any principle repugnant to the authority of the long line of cases we have cited.

In the former the supreme court of Massachusetts, speaking of a voluntary deed for charitable purposes, say:

"Although the words 'upon condition' in a conveyance of real estate are apt words to create a condition, any breach of which will forfeit the estate, yet they are not to be allowed that effect when the intention of the grantor, as manifested by the whole deed, is otherwise."

And in the latter the Supreme Court of the United States, speaking of a devise for certain charitable purposes, say:

"It is true the word 'proviso' is an appropriate one to constitute a common-law condition in a deed or will; but this is not the fixed and invariable meaning attached to it by the law in these instruments. On the contrary, it gives way to the intent of the parties as gathered from an examination of the whole instrument," etc.

The principle announced by these decisions is simply the universal rule of construction giving effect to the real intent of the parties to an instrument when the same can be fairly ascertained from the language used; in other words, that technical expressions and phrases ordinarily yield to a contrary plainly expressed intent. But the principle has no applicability to the case under consideration, for there is no intent, either expressed or to be reasonably implied, contrary to the technical meaning of the words "upon condition."

On the contrary, the act from beginning to end displays in every line a most deliberate, well considered, and matured intention not to bestow this princely gift without so circumscribing and limiting the company by these conditions as to secure the object, and every object, which Congress had in view. It shows the clearest intention in the mind of Congress to create a condition-subsequent forfeiting the grant for failure to build the road within the prescribed period; and also other conditions-subsequent, putting it in the power of Congress, even after the road had been built, to enforce the requirements of the act touching the manner of its construction. In the judgment of your committee there is not a word in the act indicative of an intent to limit or curtail the technical words of condition used.

And aside from the language of the act itself, it is incredible that Congress could have intended in this, probably the largest and most valuable grant of lands ever made to a railroad company or a State, to depart from the uniform and uninterrupted policy of legislation for years, and allow the company to appropriate this vast belt of the public domain without restriction, reservation, or control. Your committee can not subscribe to such a doctrine, and can find no argument, even plausible, to support it. We are clearly of opinion that Congress intended to provide for a forfeiture upon failure to build the road within the prescribed period, and that the language used was abundantly sufficient in law to accomplish that intent.

I hardly think it necessary to spend much time upon the suggestion made by the gentleman that no forfeiture can be made as to the Northern Pacific, when he himself advocates a limited forfeiture by supporting the Payson bill.

Mr. HERMANN. What I said was, and my argument has been, that there is doubt about the question.

Mr. McRAE. Oh, yes; a doubt. We have heard about these doubts for the last ten years. It is time we were providing some enactment to meet the case and settle the doubt without resolving them all in favor of the railroads.

Mr. HERMANN. We always voted for proper forfeitures.

Mr. McRAE. But you do not propose to do so now. You have avowed your purpose to support the bill you have heretofore voted against, and you say that you knew when you voted as you did that it was in the interest of the railroads. That is a matter for yourself and your own constituents; but when you charge gentlemen on this side of the House who so voted with working in the interest of the railroads because they will not surrender to the Senate, I resent it as untrue. You can confess your own sins as much as you please, but you have no right to impute your motives, if such they were, to others.

Mr. HERMANN. What I said was that the results were in favor of the railroads as you voted.

Mr. McRAE. Oh, the results have been accomplished by the obstinacy of the Senate, and made certain by the triumph of your party at the last election. Your party now has full power to legislate, and it can do as it wishes. We will see what it does do.

Mr. HERMANN. If you had voted for the substitute, which provided for forfeiture as to lands conterminous with the non-completed portions of the road, we would have had 10,000,000 more acres added to the public domain.

Mr. McRAE. Perhaps so; and if your Republican associates in the Senate had voted for the House bill as you did personally then, we would have had at least 50,000,000 acres more than we now have.

Mr. HERMANN. That is no reason for voting down the substitute. It seems to me that common sense would indicate that we should take the best we can get.

Mr. McRAE. I say take what we are entitled to, and this is all the Democrats have ever demanded. We represent the people, and we have made this fight in good faith. The best we can get! We are not beggars at the feet of the Republican party, of the Senate of the United States, or of any other organization or body of men. [Applause on the Democratic side.] We are here to take back that which belongs to the people and which we have a right to take. We are here to demand that the rights of the United States shall be respected and preserved, and in the name of the people to insist to the last upon all their rights, yielding nothing. It should not be a question of what the Senate and railroads will let us have, but what we are entitled to. We ask nothing more and will take nothing less. [Applause.]

Mr. HERMANN. It is only a question as to whether we are entitled to so much.

Mr. McRAE. And you are unwilling either to declare a forfeiture,

or to submit the question to the judgment of the Supreme Court. We will do both or either.

Mr. HERMANN. Because we are unwilling to bring bankruptcy upon a great number of innocent persons.

Mr. McRAE. The settlers are fully protected and no harm will come to them under either bill proposed by those on this side of the House.

Now, since we have failed to agree upon a bill that is satisfactory to both Houses and the country, what should we do as to the Northern Pacific? Should we yield to the wishes of the railroad company and release it from the obligation to build further and not require it to parallel the road that it has leased or bought from Wallula to Puget Sound? Shall we not require the Southern Pacific to build across the desert and over the mountains, the very places that the Government most wanted the road, and on account of which it gave the immense grant as an inducement for building it? If so, then I insist upon a forfeiture of the entire grant.

Now, Mr. Chairman, returning to my argument upon the question of power, I desire to notice the case of Denny vs. Dodson, decided by Justice Field at the November term, 1887, of the circuit court, district of Oregon (32 Federal Reporter, 899), as it has been referred to as an authority against the right of Congress to forfeit the lands. Let us see what was before the court and what was decided in that case. Mr. Denny set forth in his complaint that the property in question was part of the land granted to the Northern Pacific; that the road was located opposite to the premises in 1870 and a map filed at that time with the Secretary of the Interior, and that the land was withdrawn from disposition under the public-land laws; that the road was constructed opposite the premises in 1884, and that he, the plaintiff, purchased and received a conveyance from the railway company in 1885. He charged that the defendant was unlawfully in possession, and concluded with the usual prayer in ejectment.

To that complaint the defendant demurred upon the ground that it did not state a sufficient cause for action. In passing upon that demurrer, this much-talked-of opinion was rendered. Justice Field overruled the demurrer, thereby holding that the complaint on its face set forth a good cause in ejectment. His decision was technically right under the law. Why? Ejectment is a possessory action in which a complainant recovers on the strength of his legal title. Now, it has been decided over and over again that these Congressional grants are both a conveyance and a law. It has been decided that the granting act itself passed the naked legal title *in præsenti* to the grantee; that the moment that the act was approved the legal title to the lands became vested in the grantee.

It has been also decided over and over again that the conditions upon which these grants were made are conditions-subsequent, and that a breach of the conditions does not *ipso facto* restore the title to the United States; but that the legal title remains in the grantee until some affirmative action is taken by Congress, or by the authority of Congress, to retake the lands—such, for instance, as an act of forfeiture. Now, these lands had been granted to the Northern Pacific Company; they had been withdrawn from entry under authority of law by an order of the Interior Department; the naked legal title was vested in the railroad company, and though the conditions of the grant had been in fact broken, Congress had taken no step to declare a forfeiture.

The legal title remained in the company and still remains in it. It is to get it out that we are trying to enact this legislation. As long as the lands are withdrawn from entry, as long as the legal title remains in the company, it or its grantees are entitled to possession as against all third parties and can maintain ejectment. That is all Judge Field decided. That is all he had before him to decide. Every judge on the Supreme Bench could well agree to that. But Judge Field, by way of argument, said a great deal—went out of his way to say a great deal—about the rights of the railway company to the granted lands.

But what he said was in no wise necessary to a decision of the point before him. It is purely *obiter dictum*. According to his view it may be doubted whether we can ever forfeit the "unearned" lands. But Judge Field's position upon all questions of this sort is well understood here and throughout the country. Nothing he could say, no extreme to which he could go in this direction, would surprise anybody who is familiar with this class of decisions and of the attitude of the various Federal judges with regard to them.

I insist on believing that the Supreme Court will sustain these forfeitures if they are made. I want to hear from the new Chief-Justice, from Justice Lamar, from Justice Miller, who I believe to be the greatest of living judges, from Justice Brewer, and from the whole court. But all that is a matter for the future. Let us do our duty here and leave the Supreme Court to take care of itself.

I now desire to call attention to section 7 of the Senate bill, which excepts the railroads in Alabama from the forfeiture and allows another year to such roads in that State as have not been completed. This is in effect making a new grant, and I am opposed to it. Let us treat these Southern roads just as we do the Northern Pacific and other great lines. I now desire to refer specially to one of these roads in Alabama.

TENNESSEE AND COOSA GRANT.

I have draughted an amendment based upon the second section of the bill introduced by the gentleman from Alabama [Mr. FORNEY], who seeks to have the whole grant forfeited. I will move it at the proper time in the interest of the settlers of Marshall County. Petitions have come to him and to me, signed by about 2,000 of the settlers along the line of the road. It is charged by the settlers that a corrupt and fraudulent sale has been made of some of these lands by the defaulting company. Many of these settlers have been harassed with litigation and are being harassed now. I think this grant should be quieted with all the rest, by saying to the settlers that they shall have the lands they occupy and that the railroad company shall have nothing but the right of way. Treat this road as you treat the Northern Pacific. These honest, humble, hard-working people of Marshall County are asking protection; they are entitled to it and should have it, and have it quickly.

As to the history of this road, its management and its present condition, I submit the following statement prepared by Mr. R. B. Lewis, the representative of the settlers along the line of that proposed road, which was submitted to the Committee on Public Lands. The facts, if true, call loudly for an immediate forfeiture of this grant. I will at the proper time move an amendment which will, I think, fully protect the settlers who have been so badly treated by this faithless corporation. No more time should be allowed and the lands should at once be opened to the settlement under the homestead and pre-emption laws:

The Tennessee and Coosa Railroad Company was chartered by the Legislature of Alabama January 16, 1844, with a capital stock of $500,000, with the privilege of increasing the same one-third, and providing that it should not organize until $50,000 had been subscribed.

The act provided that the road should be built from Guntersville, on the Tennessee River, to a point on the Coosa River, and the route selected by the company was from Guntersville to Gadsden, on the Coosa, a distance of 36½ miles.

The great object sought by building this road, and that was deemed so important at the time the charter was granted, was by connecting the Coosa River and Tennessee by a railroad to get a continuous transportation by water and rail from the valley of the Tennessee and Upper Mississippi to Mobile Bay through the Coosa, which empties into the Alabama River and through it into Mobile Bay.

The line of the road passes a little west of north from Gadsden to Guntersville, through a country where timber and labor are cheap.

From Gadsden to Attalla, a point on the road, the line passes over a comparatively level country and the road-bed easy of construction. From Attalla the road runs to the foot of Sand Mountain, a distance of 6 miles, through a level country, and no difficulties of construction to be met with.

Sand Mountain rises to a height of about 500 or 600 feet above the valley. Sand Mountain is 22 miles wide, and on the top is a level plateau, and for about 22 miles presenting no difficulties or obstructions to the construction of a railroad.

From a point about 3 miles from Guntersville the road descends into the valley of the Tennessee and the only two points of any difficulty in the construction of a railroad on the whole route are the ascent and descent of Sand Mountain.

Since the charter was granted no part of the road has been completed and in operation except from Gadsden to Attalla, a distance of 5 miles, over which a dummy train runs daily.

The road-bed has been thrown up and a track laid from Attalla to the foot of Sand Mountain, a distance of 6 miles, but no trains run regularly over it.

The road has been graded and bed thrown up on the top of Sand Mountain, and also from the foot of Sand Mountain to Guntersville.

For practical purposes no part of this road is constructed, except for 5 miles from Gadsden to Attalla.

In 1854 this company received from the State of Alabama a loan of $250,000 of its 3 per cent. fund and one-half of its 2 per cent. fund; the two funds thus lent amounting in the aggregate to about $305,000, for the purpose of aiding in its construction.

It has had certified to it 67,800 acres of land under the land grant from the United States, of which about 40,000 acres have been sold to settlers under contract or license, and for this the road has received payments in full for part, and partial payments on all the 40,000 acres; the estimated amount of money received by it for lands paid for in full or in part being not less than $10,000.

The company executed a mortgage on all of its properties and franchises to secure the State of Alabama $250,000 of the money borrowed from it. (The State has passed an act releasing this mortgage on condition that the road be built in five years from date of act.)

Thereafter it executed a deed to one Hugh Carlisle, on Febuary 7, 1887, conveying to him 23,739½ acres of the land granted to it by the General Government for and in consideration of the sum of $2.50 per acre to be accounted for by Carlisle on a future settlement.

It also executed a deed of trust to secure to the Central Trust Company, of New York, an issue of its bonds amounting to $365,000, dated March 1, 1887. And has since then executed another deed of trust to secure $1,500,000 of its bonds to the Manhattan Trust Company of New York, dated April 2, 1888.

Thus showing, so far as the record goes, an indebtedness—

To the State of Alabama	$250,000
To Central Trust Company, of New York	365,000
To Manhattan Trust Company, of New York	1,500,000
Total	2,015,000

And only 5 miles of road built and in operation.

At the time of the execution of the deed for the 23,739½ acres of land to Hugh Carlisle I am informed that Hugh Carlisle was one of the directors and that his father-in-law, Louis Wyeth, was president of the company, and that Carlisle voted for the conveyance, and his vote was necessary to constitute a majority of directors present and forming a quorum for business.

The company being hopelessly insolvent a bill was filed two or three years ago in the United States court having jurisdiction of the matter, and by a decree of that court William R. Rison was appointed receiver to take charge of its affairs.

Thereafter at the October term, 1889, of the chancery court of the eighth district of Alabama a suit was brought by the receiver to set aside the conveyance to Carlisle of the 23,739½ acres of land upon the ground that the conveyance to him was fraudulent, and said suit is still pending.

S. K. Rayburn, who was secretary and treasurer of the board of directors of the company at the time of the conveyance to Carlisle, alleges that the conveyance was made for the purpose of preventing a forfeiture of so much of the lands to the United States; the parties interested fearing that a forfeiture bill might pass Congress, and hoped to protect and save so much from forfeiture by this

transfer to Carlisle (this statement made on the authority of O. D. Street and Brown, Holiday, and Street, and my other correspondents, who say they have conversed with Mr. Rayburn, and that he is prepared to testify to the fact stated. Brown, Holiday, and Street are lawyers of high standing at Guntersville, Ala.) S. K. Rayburn is now register of the chancery court for Marshall County, Alabama, and a man of integrity and high standing. The bill filed as above stated by the receiver of the company charges that the company is not indebted to Carlisle, but, on the contrary, Carlisle is indebted to the company.

Under these circumstances it will be seen that, independent of any floating debt it may have, the company is hopelessly insolvent, and that there is no possible prospect of its ever performing the duty and obligation it owes to the Government and the people by fulfilling the conditions upon which it obtained the grant of public lands.

The people of Marshall County are the principal sufferers by this condition of affairs. They are, like all settlers in a new country, generally poor, and those who have attempted to purchase lands from the railroad company have hesitated to pay the company, for fear that neither the railroad company nor any others, by reason of the pending litigations and the mortgages and trust-deeds above referred to, can give title to the lands purchased. Indeed, they have been counseled by their legal advisers not to risk payments on these lands, and they, in numerous instances, have been harassed by suits which they are compelled to incur the expense of defending. They have grown utterly tired and worn out with the promises of the company and others that the road will be built, and have no confidence in any such pretensions or promises.

There are about sixty-seven suits now pending against them in the courts of Marshall County, and hundreds more threatened, to oust them of their holdings. They are advised and believe that their only hope is in getting a forfeiture of these lands, and having them thus opened to homestead entry.

The people of that section are deeply in earnest.

On the 8th day of January, 1888, a petition signed by two thousand citizens was presented to Congress, and again, on the 20th January, 1890, another signed by one thousand of the people of that section was presented, beseeching Congress for this forfeiture.

The principal part of the 67,800 acres of land which have been certified by the land office to the railroad company lies contiguous to and conterminous with that portion of the road which has not been built and which runs through Marshall County, and the citizens of this county are placed in the situation where they have no railroad and no prospect of having one in the present condition of this company, and when they are constantly harassed by suits by the railroad company and others, so that they are always kept in a condition of turmoil and confusion and put to great expense.

The object for which this road was originally chartered by the State has long since been accomplished by the building of other railroads, as a glance at the map will show; and the policy of the General Government in making these grants to railroads, which was, as it is generally understood, to be to develop and carry a population into the country through which they run, no longer applies here; every alternate section of land here, with possibly a few exceptions, has long since been taken up and settled upon, and it is the condition of the lands granted to the railroad which alone prevents a full settlement of the country.

To recapitulate:

We have a road here chartered in 1844.

Its capital stock (less one-third increase)	$500,000
Given by the State	250,000
Borrowed by the company on deed of trust	365,000
Sales of land (money derived)	10,000
Total	1,125,000

Here is $1,125,000 which this company has expended with what result?

First. Constructed and in working order 5 miles of road.

Second. Company hopelessly insolvent, with an indebtedness ranging anywhere from $500,000 to $1,500,000.

It may be that the company have not sold all the capital stock allowed to be issued; however this may be, the act of incorporation forbade organization until $50,000 was subscribed and paid in, and above statement would only vary thus:

Capital stock received	$50,000
From State of Alabama	250,000
Bonds issued and sold	365,000
Public land sold	10,000
Total	675,000

Here, then, we have $675,000 of actual expenditure with only 5 miles of road built and in running order equipped with a dummy as the result, and the company hopelessly insolvent. Any way you may look at it, it exhibits a condition which could result from nothing but incompetency, recklessness, extravagance, and utter mismanagement.

We do not take into consideration here the deed of trust to secure the Manhattan Trust Company $1,500,000 of its bonds, as this may have been an effort to raise money to pay off its other indebtedness, and thus substitute the one for the other. But as to this we have no means of ascertaining.

Under these circumstances, if Congress intends ever to forfeit railroad land grants the reason which would actuate it applies here.

If there is any reason for granting this company a further extension of time as is done in the Senate bill, the citizens of Marshall County can not see it.

The citizens of Marshall County can not see the wisdom or justice of longer withholding these lands from forfeiture, nor can they understand why the Government should, as is proposed in the Senate bill, longer continue to foster a corporation which has so recklessly heretofore squandered the donations, State and Federal, made to it, or why it should longer trust to the promises of a bankrupt and spendthrift, to the prejudice of the people whom it was intended to benefit.

STONE AMENDMENT.

Now, Mr. Chairman, I desire to say a few words in reference to the amendment that was offered some days since by my colleague on the committee, Mr. STONE, of Missouri, and which I intend to move if my amendment and the amendment of the gentleman from Indiana should both be voted down by the committee, which I anticipate. As an independent measure it has the unanimous approval of the Committee on Public Lands. The only objection urged by the majority of the committee to its adoption as an amendment is that it may endanger the passage of the bill, not because it is not proper legislation. I submit that this, if true, is not a good reason, but I deny that it is true.

Gentlemen tell us that the Senate will not agree to it. It will be time enough to discuss this when they have disagreed to it. What right have gentlemen to say that the Senate will not agree to such a proposition when it is exactly in line with the position heretofore assumed by that body? The amendment proposes to do just what the Senate did by the enaction of the act for the forfeiture of the Oregon wagon-road grants. The last Congress passed that act and it became a law March 2, 1889 (section 25, Statutes, page 850). In the face of this law, which was supported by the gentleman from Oregon, I do not see why he should object.

Mr. HERMANN. In that case we saved the right of the purchaser, if the gentleman will remember.

Mr. MCRAE. And so we save the rights of the purchaser in this bill.

Mr. HERMANN. But not to exceed 320 acres. It confiscates their property beyond that.

Mr. MCRAE. It confiscates nothing, but saves the rights of the bona fide purchasers who are in possession to the extent of 320 acres, and I believe that is about the extent to which the rights of purchasers in the Oregon wagon-road forfeiture bill were saved. Certainly that is enough, and is all that can be acquired under the public-land laws, except in the arid region.

Mr. HERMANN. In that case it was 640 acres.

Mr. MCRAE. I knew it was limited in amount, and only to those in possession. This amendment we present here was, in a measure, and as far as could be, modeled after the wagon-road act. Again, the Senate passed another bill (S. 1708) relating to disputed land grants in the last Congress and sent it to the House, referring the question to the courts for the judicial determination of the rights of the United States in lands granted to the State of Florida for the purpose of aiding in the construction of railroads under an act approved May 17, 1856—just what the amendment I shall offer proposes shall be done.

Mr. HERMANN. But you did not trammel the settlers with the numerous conditions which you impose in this bill of Mr. STONE'S.

Mr. MCRAE. I challenge you to point to a single petition or letter from a bona fide settler upon the line of any road that is embraced in this bill who complains of its harshness towards him. The settlers are demanding the largest forfeiture possible. I have spent much time and thought to protect the honest settlers and I undertake to say that there never has been a bill submitted to the House from the Public Lands Committee providing for a forfeiture that did not absolutely protect the rights of every settler, and none of them have complained so far as I have ever heard.

Mr. HERMANN. There are no settlers who know anything about the amendment you are now discussing.

Mr. MCRAE. It has been pending since March last.

Mr. HERMANN. But the public have not discussed it. It has never been discussed outside of this House. I never heard of anybody who knew anything about it outside of this House.

Mr. MCRAE. The protection given to the settlers is secured by the bill presented by the gentleman from Illinois [Mr. PAYSON], and this amendment does not change it in the least. I only propose to add to that bill so as to cover all the questions.

Mr. HERMANN. You harass them with litigation.

Mr. MCRAE. It does not at all—does not even require them to litigate it. The Government is required to bring suit against the railroad companies to determine whether the lands earned out of time are subject and liable under the law to be forfeited.

Mr. HERMANN. It compels them to come in and intervene.

Mr. MCRAE. Not at all. If the settlers are in possession and only claim 320 acres, they are required to do nothing at all. The bill absolutely confirms their title.

Mr. HERMANN. It particularly states that they must intervene in order to protect their interests.

Mr. MCRAE. The gentleman is mistaken. Any person or corporation claiming more than 320 acres, or those who deny the right of the Government to forfeit, may intervene by sworn petition to defend his interest, but none who rely upon the forfeiture are required to intervene and they will not. So there is no reason in the world why this amendment should not be adopted as part of the House bill as so many new sections. The gentleman from Iowa [Mr. LACEY] and others admit that our proposition in itself is right. I have shown that it is in the line of the precedents already established by the Senate where there is a legal question involved as is claimed there is here. It only requires that before we yield this question we will have the highest court in the land pass upon it. It is in the interest of peace and the quieting of the titles of settlers living along the lines of the roads.

If the roads have the faith they have hitherto professed in their title they would not resist this kind of a settlement, because it would put at rest the title for all time and satisfy everybody. The substance of the bill reported by the majority of the House committee was reported early in the session, before the Senate passed their bill (S. 2781). At that time the bill we now submit as an amendment was also agreed upon as a separate measure, and both reported favorably. When the majority report was made we filed a minority report proposing to amend as we now do. Here is what Mr. STONE, Mr. QUINN, and I said in our report upon the subject at that time. I now repeat it:

The bill reported by the majority of the committee, if it should become a law, would forfeit and restore to public uses that part of all lands granted to aid in the construction of railroads which lie conterminous with so much of the lines of the several roads as shall remain unconstructed at the date of the approval of the bill. It is the bill passed by the Senate during the Fiftieth Congress and the bill which the House of Representatives of that Congress refused to agree

te. The House refused to agree to it because it insisted upon a larger forfeiture. The House adopted a substitute for the Senate bill, which provided for the forfeiture not only of the lands covered by the Senate bill, but went further and proposed also to forfeit all lands conterminous with such parts of the several roads as were constructed after the dates named in the granting acts, respectively, for the completion of the whole road.

In area the Senate bill would have forfeited and restored to the Government 5,627,436 acres, while the House substitute would have forfeited and restored 54,321,996 acres. These estimates were made on data furnished the Committee on the Public Lands by the Commissioner of the General Land Office in 1888. The Senate desired to limit the forfeitures to lands lying along such parts of the located lines as remained unconstructed at that date; the House desired to extend the forfeiture so as to embrace lands lying along the parts of the roads which were constructed after the dates fixed by law for the completion of the roads affected. This difference marked the line of disagreement between the two Houses of that Congress, as it had of former Congresses.

There were lawyers then in the Senate and out of it, as there are now, who maintained that Congress had no power to forfeit and reclaim lands lying along constructed roads without regard to the date of construction. They maintained that if Congress should pass such an act the Supreme Court would set it aside. From that standpoint they urged that it would not only be bad policy, but fatal and wicked, for them to consent to such an enactment, since it would induce thousands of people, relying upon the authority of the Government, to go upon the forfeited lands, settle, and improve them, and that afterwards the railroad corporations would come along, sue the settlers, take the cases to the Supreme Court, overthrow their titles, subject them to great loss, and involve whole communities in a state of inextricable confusion. That view was dominant in the Senate Public Lands Committee.

The House maintained a different view of the legal questions involved, and was no less positive than the Senate in asserting its position. Indeed, it was openly asserted on the floor of the House by more than one member that the Senate was not sincere in its position. The public demand for the larger forfeiture was so general and emphatic that many gentlemen on this side of the Capitol were irreverent enough to believe that the anxiety displayed at the other end for settlers who might venture to take forfeited lands was intended to obscure the real purpose, which was to serve the corporations. At all events, nothing was done.

Now come the majority of this House committee and propose the very bill which the House rejected in the last Congress. The Senate influence, for whosesoever good exerted, has taken control of the majority of the present House committee.

The minority of that committee are just as desirous of forfeiting the lands covered by the bill reported as the majority. But they desire that the forfeiture shall be extended so as to include lands lying along constructed road which was built after the time limited for completion. The minority, however, have modified the substitute to the old Senate bill above alluded to as having been adopted by the last House, in this, that instead of declaring the lands along constructed road to be forfeited by legislative act, they propose to direct the Attorney-General to institute suits in the Federal courts against the proper parties to have it judicially determined by the Supreme Court whether such lands are subject to forfeiture, and if so to enter judgments declaring them forfeited and restored to the public domain.

It has been decided by the Supreme Court that these forfeitures may be made in either of two ways: First, by an act of Congress declaring a forfeiture; or second, by suits brought under the authority and by the direction of an act of Congress to have the courts declare a forfeiture. One is a legislative forfeiture, the other a judicial forfeiture. Hitherto the House has proposed only a legislative forfeiture. To that the Senate has objected ostensibly for the reasons stated. But this time the minority of this committee, disposed to obviate these Senatorial apprehensions if they still exist, proposed the other remedy. That is, they proposed to direct the Attorney-General to take this whole question into the courts in the first instance, and have the Supreme Court say whether these lands along constructed road are forfeitable before any one shall be authorized to settle upon them. We agree to the bill reported by the majority so far as it goes; but we desire to have the other proposition added.

A bill embodying this proposition of the minority has been perfected in the committee and reported to the House as a separate bill. As reported it relates only to lands lying along constructed road. It has provisions in it protecting intervening rights of settlers and purchasers. The committee has agreed to the bill as reported. But the majority have insisted on having it reported as a separate measure, while the minority desires to have it made a part of the other bill—the old Senate bill now reported by the majority—so that the whole ground may be covered by one measure. The majority have insisted on dividing the question, putting lands along unconstructed road in one bill and declaring them forfeited; and then putting lands along constructed road in another bill and directing the Attorney-General to bring suits to have it determined whether they can be forfeited. Accordingly, the bills have been reported as directed by the majority.

But the minority propose to move that the bill directing suits to be brought be added as an amendment to the bill declaring forfeited the "unearned" lands. That will raise the question directly before the House. If this House really desires both these bills to pass and become laws, there is no reason or occasion for separating them. Both treat of parts of the same subject-matter. There is no reason why the whole subject should not be disposed of at one and the same time. It is twice as difficult and takes at least twice as long to pass two bills as it takes to pass one.

The very fact that this division of the subject is made provokes suspicion that it is done for some purpose. Now, what is the purpose? It is said it is done as a matter of legislative policy or prudence. In what respect? Why this, and only this, that the Senate will certainly agree to pass the bill forfeiting lands lying adjacent to unconstructed road, but might disagree to the other proposition, and thus result in no forfeiture at all, as was the result of the disagreement in the last Congress.

That is what the majority say. But it must be borne in mind that the proposition now made has never been submitted to the Senate, and that this proposition is intended to obviate the objections on which the Senate based its disagreement to the measure proposed by the former House. The minority are anxious to have the Senate declare whether it is willing that the Supreme Court of the United States should decide the question in dispute between the two Houses. If the House will adopt the amendment we propose, the Senate can disagree to it if it wishes so to do, and the House can then recede and pass the Senate bill if it so wishes. If the Senate shall agree to the amendment, then the entire legislation is completed in one bill. We can not tell what the Senate will do until the question is presented to that body. If you send the whole question there in one bill the Senate will be obliged to take some action on it.

But if you do not wish to have this court bill passed, if you are merely pretending, if you do not wish to put the Senate to the test, then two bills instead of one should be passed. That affords an opportunity for the Senate to pass the bill it wants to pass and to pigeon-hole the one it does not want to pass.

Everybody understands the difference between the two Houses as it has heretofore existed. Everybody understands that the general public demand for forfeiture legislation, and especially the urgent local demand in many of the States for such legislation, will compel both Houses to take cognizance of this question in some form. The minority desire to put it in such a form as will compel a consideration of the whole question, and not simply the smaller part of it. We object to any device by which the necessity of considering the entire question can be evaded.

It is very generally agreed if the Senate bill is passed and the other bill is not passed at this session, that means the end of all forfeitures. We object to any plan by which 4,000,000 or 5,000,000 acres, half of it worthless, are to be forfeited with a great flourish of trumpets while 50,000,000 acres of good land shall be lost sight of in the din and noise of congratulations and practically confirmed to the corporations. We object to passing a bill which the corporations enjoying these grants as a rule approve, without at the same time compelling legislative action on the more important bill, the bill which the corporations oppose, but which the people have many times and in many ways demanded the passage of.

Now, Mr. Chairman, I want to be entirely candid with the committee. I assure you that it is not for the purpose of delaying the consideration of this bill or a final settlement of the forfeiture question that this amendment is proposed. It is proposed only for the purpose of preventing the Senate, if it should so desire, from avoiding the issue If we adopt it, then the Senate must act upon it; but if we send them the two propositions separate, as was well said by the gentleman from Missouri [Mr. STONE] in his able speech the other day, they may pigeonhole it and that will be the last of it.

On the other hand, if we adopt it and the Senate should disagree to the amendment, we can then have a conference and insist or recede from the amendment, as the House may vote. That is all there is in it. That is all of the case, and I appeal to gentlemen upon the other side as well as upon this side who have stood for the largest forfeitures of the past, and insisted that the people should have all of the unearned lands that it was possible to secure, to make one more firm stand in behalf of the people. Let us try this new proposition. It will be only a question of a few days, and if we fail then the responsibility will not be upon the House.

Mr. HERMANN. You said that six years ago.

Mr. McRAE. Yes; and we say it now. You also said it six years ago, when the Democrats controlled the House, but now, when your party has come into power and you appear to know that it will do nothing of value to the people, you now make haste to accept the Senate proposition.

Mr. HERMANN. We always voted for what we could get.

Mr. McRAE. You voted for more than you got; and now you confess that you knew you could not get what you voted for. That is the effect of your position now considered with reference to your past record.

Mr. HERMANN. We did not know until we tried. We tried three or four times, and always failed.

Mr. McRAE. But you have never tried this proposition. As perhaps the last and only remaining chance to secure these lands for the settlers, I hope we will try it in earnest. The rights of purchasers and settlers have been carefully protected in the bill, and will not be affected by any of the amendments. The gentleman from Illinois [Mr. PAYSON] does not claim that the roads are entitled to any equitable consideration, but rather confesses that none is due them. He thinks the Senate proposition is all that we will be able to pass; and is therefore willing to yield and take almost nothing with the reservation contained in section 7, when at the same time he asserts that nothing more will ever be done. He says that the Senate will never agree to forfeit any lands opposite constructed roads.

I ask again why we should fail to do our duty because the Senate does not agree to what we think is right?

Has the House by insisting upon a larger forfeiture been trifling with the people upon this question for the last ten years? After the hard fight we have had, shall we give the country a valueless forfeiture of the odds and ends of such land as the roads do not want? And some of them would like to be relieved of the obligations attaching to land-grant roads. With a few exceptions, they do not mean to build any more road.

How comes the sudden change in our friends on the other side of the aisle? Since the Forty-seventh Congress many of them have stubbornly refused to yield to the demands of the Senate, but now, when their party comes into power, they lose hope and yield without a contest, and say "We will take what we can get." If the fight has been kept up by them, as would appear by some of their utterances, that the companies might earn more land, only to be abandoned when they get such as they desire, then they ought never to have engaged in it. We ought to make the roads complete their lines over the mountains and deserts or forfeit the whole line for the failure to do so.

Is it right to let them take their own time in building, and to only build when and where it suits them, and thus take all the lands of any value and leave the people without either land of value or road where most needed? The Government expected and stipulated for continuous lines of road over which its mails and troops could be carried at reduced rates, over which the commerce of the country could be transported across the continent. It has waited more than twenty years, and now we are told that a part of the country is too rough and poor to build over and that so much may be forfeited and the other is considered as "earned."

I deny that any is earned until the line is completed. We have no power to make them build, but can and should retake the whole estate where they have not built. Nothing less will satisfy an outraged people whose lands have been withheld from them so long by such

high-handed methods. I hope the Democrats will look this proposition squarely in the face and meet it with a determination that will not be misunderstood by the country. There is nothing in it except a naked issue between the United States on the one hand and the defaulting, grasping corporations on the other.

There are no settlers and purchasers behind whom the roads can longer take shelter and beg for mercy. Gentlemen of the majority, answer by your votes whether you are for the people's rights or the roads'. In the late Republican national platform you of the other side sought to take some credit for what has been done in the way of forfeitures. Your action here to-day will test the sincerity of that declaration. Let us have no evasion or dodging. The issue is joined, and if we can not win in this tribunal we will let the people know the reason why. If it be true that the Republican Senate and House as now organized will not pass a proper bill, let us then appeal to the country and elect a Congress that will.

I hope now that as gentlemen understand the scope and effect of the amendment we propose they will consent to vote for it. [Applause.]

Original-Package Bill.

SPEECH
OF
HON. NATHAN FRANK,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, July 19, 1890,

On the bill (S. 398) to limit the effect of the regulations of commerce between the several States and with foreign countries in certain cases.

Mr. FRANK said:

Mr. SPEAKER: I have listened to the discussion of the measure before the House with great delight and with unfeigned interest, and I must declare my opposition to the unjust and hostile criticisms that have been directed against the decision of the Supreme Court in the case so frequently referred to and out of which the supposed necessity for this legislation arises; and when I speak of the decision I mean not the rhetoric indulged in by the eminent Chief-Justice in deciding the case, but I refer to the decision on the record and on the admitted facts in that case—there were no controverted facts. There is not a lawyer within the sound of my voice who will deny that the court decided this to be the law, that the power vested in Congress to regulate commerce with foreign nations and the several States and with the Indian tribes is a power complete in itself and lodged exclusively by the Constitution in the national legislative body.

And, further, that the power to pass laws in respect to internal commerce, quarantine laws, and laws pertaining to the safety and welfare of society, originally necessarily belonging to and upon the adoption of the Constitution reserved by the States, except so far as has fallen within the scope of this power exclusively confided to Congress, belong to the class of powers pertaining to locality; but where the subject-matter requires a uniform system as between the States the power controlling it is vested exclusively in the General Government and can not be encroached upon by the States. Hence the court says:

It is explained that where State laws alleged to be regulations of commerce among the States have been sustained, they were laws which related to bridges or dams across streams, wholly within the State, or police or health laws, or to subjects of a kindred nature, not strictly of commercial regulation. But the transportation of passengers or of merchandise from one State to another is in its nature national, admitting of but one regulating power; and it was to guard against the possibility of commercial embarrassments which would result if one State could directly or indirectly tax persons or property passing through it, or prohibit particular property from entrance into the State, that the power of regulating commerce among the States was conferred upon the Federal Government.

And following this view the court remarks that this doctrine is now firmly established, and employs the following language:

The doctrine now firmly established is, as stated by Mr. Justice Field, in Bowman *vs.* Chicago, etc., Railway Company, 125 U. S., 507, "that where the subject upon which Congress can act under its commercial power is local in its nature or sphere of operation, such as harbor pilotage, the improvement of harbors, the establishment of beacons and buoys to guide vessels in and out of port, the construction of bridges over navigable rivers, the erection of wharves, piers, and docks, and the like, which can be properly regulated only by special provisions adapted to their localities, the State can act until Congress interferes and supersedes its authority; but where the subject is national in its character, and admits and requires uniformity of regulation, affecting alike all the States, such as transportation between the States, including the importation of goods from one State into another, Congress can alone act upon it and provide the needed regulations. The absence of any law of Congress on the subject is equivalent to its declaration that commerce in that matter shall be free. Thus the absence of regulations as to interstate commerce with reference to any particular subject is taken as a declaration that the importation of that article into the States shall be unrestricted. It is only after the importation is completed, and the property imported is mingled with and become a part of the general property of the State, that its regulations can act upon it, except so far as may be necessary to insure safety in the disposition of the import until thus mingled."

It will thus be seen that there was no departure in the decision of the court, and I regard that decision not only as absolutely correct upon the record and as doing credit to the great jurist who decided the case, as well as those who participated in the decision of the majority, but it is one of the greatest judicial triumphs in the history of American jurisprudence. If it goes further in the blow it strikes at State rights in extending the application of the constitutional power under discussion, as has been asserted in this debate, it strikes a greater blow to the view frequently entertained, not only by the masses, but by people of more than average intelligence, that the supreme judicial tribunal is swayed in its opinions by its political bias, or the former party affiliations of the judges composing that great tribunal.

This, then, being the state of the law as declared by the court, we are confronted by the question, how are we to relieve the States which have declared the sale and use of liquor as endangering the public health, public morals, and the public safety of her citizens? We are told on this floor that this can be done by the invitation the Supreme Court has extended to this body in the language employed by the eminent Chief-Justice in the Leisey case to permit the States to regulate the traffic. Congressional permission, according to the interpretation given to this language by gentlemen participating in this debate, must be obtained and the State Legislatures have a duly authenticated power of attorney to do what is exclusively confided to us as a legislative body. I do not believe the court intended to give any such advice or extend any such invitation. The case was not before the court for decision. Not a single case cited by the court gives any warrant for the use of this language which will permit of the language being so construed. If the Senate bill now before this House had been enacted into law, upon which the Iowa Legislature had enacted its statutes and the Leisey case had been before the court on that state of the law and on the same facts, it would have presented such a cause for determination, and I believe with a similar outcome upon argument of a similar strain, but reaching the same judicial conclusion.

I repeat that I do not believe the court intended to give any such advice. There is no constitutional warrant for it. It might just as well with equal propriety declare that, with Congressional permission, a State might declare war, establish post-offices and post-roads, etc., because it is not expressly prohibited in the Constitution. I would call the attention of the gentlemen of this House to the fact that the Constitution makes provision for cases in which the power vested in Congress might be exercised by the States with the consent of Congress, but these are specified.

Article I, section 9, of the Constitution says:

No State shall, without the consent of the Congress, lay any imposts or duties on imports or exports. * * * And all such laws shall be subject to the revision and control of the Congress.

Then, again, says the Constitution:

No State shall, without the consent of Congress, lay any duty of tonnage, keep troops, or ships of war in time of peace, enter into any agreement or compact with another State, or with a foreign power, or engage in war, unless actually invaded, or in such imminent danger as will not admit of delay.

But it is expressly declared that all the powers vested in Congress in section 8 of Article I, in which is found the commercial clause, must be carried into execution by laws which Congress must make. This body must not go headlong into this legislation, and heedlessly delegate, as is certainly the effect of the measures now before us for consideration, when the Constitution expressly provides, Article I, section 8:

That Congress shall make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof.

Now, I repeat, the Supreme Court expressly denies, in the case we have been so frequently referring to, the power in the States to legislate on the subject under the Constitution. How, then, can Congress by any legislation vest the power in the States the right to exercise which is not possessed by them? What the court must have intended as being understood to say is this: "Congress has not exercised its constitutional power over this article of commerce—liquor. You (the State of Iowa) can not on account of the silence of Congress assume the power, because you have not got the power, as you have in some cases when Congress does not act."

When the court's decision refers to the Congressional permission it means "Congressional permission" constitutionally exercised. When the court's decision refers to the absence of Congressional legislation, it means legislation by Congress under the Constitution. I know of but two ways that Congress can legislate in this apparent dilemma. A constitutional amendment may be provided for through Congressional action, by which the States might be empowered through their legislative bodies to regulate this article of commerce after it has reached the territorial limits of the States, whether in the hands of the importer or not, would be one way. Then there would be Congressional legislation or "Congressional permission." Another method is such as has been adopted in respect to the importation of liquor from foreign nations defining what should be a commercial, original package, as it has been called, and thus determine, by legislation, what should be an original package in the commerce of liquor "among the States."

The practices indulged in, according to newspaper accounts and animadverted upon by distinguished speakers on this floor in this debate of the sale of original packages in such diminished quantities in the States of Iowa and Kansas as to annul their prohibitory law, are fraud-

ulent invasions of the principle announced by the Supreme Court, and will be speedily disposed of whenever brought before the bar of any court of justice inferior, superior, or supreme. Shall we proceed to legislate upon one of the most important subjects of the century, after consideration of a bill for less than forty-eight hours in the manner proposed by the majority of the Judiciary Committee, and surrender the exercise of this power under the Constitution to the Legislatures of the several States when the very purpose of the creation of the Union was the system of commercial regulations secured by this power in the Constitution? The Senate bill is a vicious, ill-advised piece of legislation. The substitute reported to this House by the majority of the committee in some respects is worse by far. I appeal to this House to join in the adoption of a motion to recommit the whole subject to the Committee on the Judiciary.

Original-Package Bill.

SPEECH

OF

HON. MOSES D. STIVERS,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 19, 1890,

On the bill (S. 398) to limit the effect of the regulations of commerce between the several States and with foreign countries in certain cases.

Mr. STIVERS said:

Mr. SPEAKER: Since I have been a member of this body I have thus far refrained from participating in the discussion of any of the many important measures that have come before it for consideration. I desire to take a little of its time now to briefly give expression to the views I entertain relative to the question that is at present engaging the attention of this House. In stating the conclusions to which I have come and the vote that I propose to give, I have not the presumption to believe that I can throw any additional light upon the subject or add anything to the weight of the elaborate and exhaustive arguments that have been presented by those who have preceded me. I believe, however, in what I shall say that I will reflect the sentiments and in my vote that I will carry out the almost unanimous desire of the constituency that I have the honor to represent upon this floor.

I leave it to the acute, able, and eminent lawyers who make up so large a part of this body to deal with the strictly legal aspects of the question before us, and to split hairs over the power of the Federal Congress to take such measures as will counteract the admitted abuses and evils growing out of the action of a co-ordinate branch of our Government. From my standpoint I can not see how we can avoid exercising the power that I believe we possess.

The emergency that confronts us is this: The Supreme Court of the United States has recently decided that under our Constitution the citizens of a foreign country or of any State may, under the provisions of our existing interstate-commerce law, take property that is the subject of commerce into any other State of this Union and there sell it without liability to taxation, without license, and without being subject to the restrictions of any State enactment in which it is so taken and sold.

Under this decision intoxicating liquors may be taken into any State in the original packages, and those who sell it by original package are not bound to pay for a license; and any quantity, however small, may constitute an original package. The honorable gentleman from Kansas [Mr. PERKINS] has just given us an ocular demonstration of the size and kind of packages that are used, and some hint of the extent to which this traffic has speedily grown under the cover and protection of this remarkable decision of our Supreme Court.

Now, I have a profound respect, and even reverence, for this the highest tribunal in our land. It is to be presumed that the learned judges who compose this court were governed by the unavoidable construction to be put upon the strict letter of the law, and were actuated only by a sense of duty in arriving at the conclusion and in rendering the decision that has been followed by such serious consequences and which so menace the peace and welfare of the people of our country. There have been other decisions of that august tribunal in times past that have shocked the community and have met with no little opposition and, in some instances, the severe condemnation of the American people, notoriously the Dred Scott decision.

But this promulgation is the law of the land, and as such must stand and be obeyed until it shall be reversed by the same court that has made it; and its disastrous effects must be endured until some legal remedy can be devised therefor.

Happily in this instance the court itself has suggested a way whereby we may avert the evil consequences that have so speedily been the outcome of their decision. It would have been deplorable indeed were it not so. And it is for us, in our sworn capacity as legislators and servants of the people, to promptly meet the responsibility thus thrown upon us, and, so far as in us lies, to act upon the suggestions of the court and devise and apply a remedy that will speedily put a stop to the shameful practices and evils that have grown out of this most unfortunate, but, I assume, unavoidable legal decision, though its soundness is questioned by some of the best lawyers in this body. But this is neither here nor there, for it is understood that a rehearing that was applied for has been denied by the court, and so their decision must stand.

The remedy pointed out by the court, to which I have adverted, it is clearly within the power of Congress to provide. The court in its opinion uses this language:

> While by virtue of its jurisdiction over persons and property within its limits a State may provide for the security of the lives, limbs, health, and comfort of persons, and the protection of property so situated, yet a subject-matter which has been confided exclusively to Congress by the Constitution is not within the jurisdiction of the State, unless placed there by Congressional action.

In accordance with this "Congressional permission," as it is termed by the Chief-Justice, our duty is plain. The emergency calls for prompt and decisive action. Perhaps we have already delayed too long. As I have listened to the Representatives from the great States of Iowa and Kansas who have so graphically depicted the demoralization that has so suddenly been caused in their respective communities; to the recital of the drunkenness, disorder, lawlessness, and crime that have come in upon them through the door opened by the promulgation of this decision, where sobriety and peace and good order have hitherto been the rule, I could not longer hesitate, if I had ever felt any doubt before, as to my duty in the premises.

In pleading for speedy relief they have but given voice to the sentiments of their people, expressed in thunder tones.

The temperance convention at Topeka, Kans., Wednesday, is said to have been the largest body of the kind ever assembled in the State, and its spirit may be judged from the fact that it gave hearty applause to the following declarations made by the presiding officer in his opening address:

> We have petitioned, we have remonstrated, we have supplicated, but we shall not "prostrate ourselves at the foot of the throne." We shall demand in tones that can be heard from Topeka to Washington that an act of simple justice be done. Whatever Congress may do, Kansas will not abate one jot from the ground she has taken. Necessary delays will be endured with fortitude, but unless Congress acts with reasonable promptitude the politicians will be amazed at the magnitude of a new national issue. If Congress should adjourn without acting, the whole country will be thrown into a state of turmoil upon the liquor question. All regulative measures will be abrogated and we will have a reign of free whisky from ocean to ocean. Kansas can stand this as long as any State in the Union. We have encountered successfully too many difficulties to be abashed at the presence of an unbroken flask, a sealed demijohn, and a writ of habeas corpus. These may annoy us, but they can not defeat us permanently nor swerve us from our purpose. "Defeat is a school in which truth always grows strong."

Mr. Speaker, this should not be a question of party politics. It is a great national question that has unexpectedly been thrust upon us. In view of the scope of this decision and of its far-reaching consequences it seems to me that no man, whether he be ranked as a prohibitionist, a local optionist, a high license or a low license advocate, should hesitate a moment as to his duty. All, of whatever political party, should join hands in providing a remedy for the existing emergency.

Whatever their views may be upon the question of the prohibition of the manufacture and sale of intoxicating liquors as a beverage, whatever may be the facts as to the success or failure of that policy where it has been tried, I think that but few can be found who are willing to give unlimited control to this traffic, which, unrestricted, is the source of so much degradation, misery, and crime. They are not willing to have the saloons thrown open without restraint, without license, without control, upon Sundays and upon all days, for the sale of intoxicating drinks to minors, to drunkards, to any and to all who will buy them, as they may under this original-package decision.

Without Congressional action what have already been established in the hitherto peaceful and law-abiding towns and villages and hamlets in Iowa and Kansas—these so-called Supreme Court saloons—may spring up everywhere throughout our broad land, the police power of the State being powerless to prevent.

I can not believe that the intelligent people of any district in our country can desire to see this condition of things spread or continue. Judging from the numerous petitions I have received from my own district urging prompt action upon this matter, I have no doubt as to how the best men of all parties, ay, and the best women, too, for they have been the most active in awakening public attention to it, feel—intensely feel—upon this subject, and how they would have me act. They would have me support such legislation as is in the interest of good morals; legislation for the protection of the fireside and the home against the unrestrained, the unlicensed, the unrestricted rum traffic.

Other questions of public policy can be put aside for a time without great detriment to the community, but this remedial measure that is proposed and expected of us should not and can not be delayed with safety.

The Senate bill seems the more certain to meet the emergency. So believing, I shall give it my vote, and hope before another week shall have rolled away it will be the law of the land and gladden the hearts of the many who are waiting and watching with so much solicitude our action here and the beneficent results they hope therefrom.

Silver.

Its restoration to a perfect equality with gold, as to coinage, bullion, and certificates, approved by the masses of the people and demanded as a sound and enduring financial policy.

SPEECH

OF

HON. WILLIAM H. HATCH,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 7, 1890.

The House having under consideration the bill (H. R. 5381) authorizing the issue of Treasury notes on deposit of silver bullion—

Mr. HATCH said:

Mr. SPEAKER: For about eighty years after this Republic was formed we had substantially a coinage act that placed gold and silver upon a perfect equality. In 1873, by an act that had never been discussed in either House of Congress and was unknown to the people of the United States, silver was demonetized. For about five years we had no silver coinage. Until the act of 1878 no silver dollars were coined at the mints of the United States either by the Government or at the request of owners of silver bullion.

Since 1878 we have been struggling along under an act of Congress that provides in substance that the Secretary of the Treasury shall cause to be coined not less than two millions nor more than four millions of silver dollars a month. As stated by the gentleman from Illinois [Mr. PAYSON] no Secretary of the Treasury since that act took effect has ever availed himself of its provisions in the interest of the people of the United States. I reiterate and indorse every single sentiment uttered by the gentleman from Illinois upon that subject. No Secretary of the Treasury, Republican or Democrat, has ever executed that law in the interest of the people. It has been uniformly executed in the interest of Wall street and the money-changers, the representatives of that little band Christ scourged out of the Temple eighteen hundred years ago.

No single body of the people of the United States, no organization of the people, no political organization, or organization of the people outside the political bodies has had any influence upon the Congress of the United States or upon the Secretary of the Treasury in inducing or in compelling the execution of that law in the interests of the people. I have witnessed more surprises in the last few weeks (legislative surprises) than I ever expected to see during my natural life. The gentleman from Ohio [Mr. MCKINLEY] who sits before me and has won the reputation somewhere of being in some way Napoleonic is Napoleonic in strategy.

As a member of the Committee on Rules, with the Speaker of this House, they can come nearer fixing up a rule to gag the consciences and the votes of members of both sides of this House and compel the representatives of the people to vote as they please than any set of gentlemen I ever saw in power in the Congress of the United States before. And the gentleman is wonderful in strategy by always taking the floor just before the previous question is ordered to make one of those magnificent *ad captandum* speeches of his to try to pull the wool over the eyes of the people of the United States as well as to put the gag upon the votes and the consciences of members of this House. [Applause on the Democratic side.]

Now, what is this bill? It is a bill that has simply been framed in caucus, and we, the representatives of sixty-five millions of people, are told that we shall vote upon this bill with three amendments coming from that side of the House or we shall not vote at all! Why, if you believe in a representative form of government, do you not give the people, through their representatives, an opportunity of voting upon a fair and honest proposition to place silver upon a perfect equality with gold? Simply because you know it would pass this House. That is the reason.

Before the sun sets to-day upon the western side of this Capitol more representatives of the American people will violate their consciences and surrender their manhood to caucus dictation than ever before in one day in the House of Representatives. [Applause.] Gentlemen upon the other side of the House who, before their own people at home in the last campaign and upon the floor of this House, have declared themselves to be in favor of free and unlimited coinage of silver will walk with the shackles of their caucus upon them and vote as they are told to vote.

Take your shackles off and let the representatives of the people sitting here to-day vote as they please, and you will see that before the sun goes down to-day silver will be restored to a perfect equality with gold in coinage, bullion, and certificates. You robbed it of its quality as a money metal, and the people, that is, two-thirds if not four-fifths of the people of the United States, have not only demanded, but they have declared that this restoration shall be made, and they are going to have it. You may delay it for a time, but you can not beat the proposition in the end.

The gentleman from Ohio [Mr. MCKINLEY], like the gentleman from Maine, the Speaker of the House, when he took the chair, looking around for a precedent for his action, finds it necessary to go back to the most unfortunate mistake ever made by a great and noble Democrat. The gentleman from Ohio hides under the skirts of Mr. Cleveland's silver letter. Well, thank God, Mr. Cleveland's skirts are broad and big enough to hide the whole Republican party. [Applause on the Democratic side.] You can hide under it, gentlemen, but you will be crawling out as if a freight train had run over you in 1892. [Laughter and applause on the Democratic side.]

A MEMBER. He made a mistake.

Mr. HATCH. Yes, he made a mistake. I am no apologist for Mr. Cleveland's position upon the silver question. I am one of the Democrats then holding seats in this body who protested in writing against it, and a great majority of the Representatives upon this side of the House did the same thing. You are simply doing to-day, gentlemen, what has been done ever since the Bland act was passed. A little minority upon this side of the House, dwindling down, thank God, from year to year until you can almost count them now upon the fingers of your two hands—a little minority upon this side of the House and a larger one upon the other side have controlled the destinies of the people upon the silver question, and you are afraid to let your side of the House vote to-day untrammeled by caucus dictation.

But, just as certainly as this Government was formed and has stood for one hundred years, the people back of it know what they want. My distinguished friend from Pennsylvania [Mr. MUTCHLER], to whose courtesy, with that of the gentleman from New York [Mr. TRACEY], I am indebted for the floor, says that the petitions of the Knights of Labor are simply the result of the efforts of certain silver-tongued orators. Ah, my friend, you never made a greater mistake in your life. If you think that organization does not know what it wants you are making a great mistake. If you think that the farmers' organizations extending from the Canada border to the Gulf of Mexico, extending throughout the length and breadth of this land, the Alliance, the Grange, and the Wheel, do not understand this question and have not decreed that silver shall be restored to a perfect equality with gold, you are making the fatal mistake of your political life.

Gentlemen, you may pull the wool over the eyes of the farmers of Ohio on the tariff question; you can multiply tariff arguments by neighborhoods and by divers interests, and thus bamboozle a few men in every locality, but you can not pull the wool over the eyes of the great masses of the people upon this silver question. [Applause.] They know that when silver was struck down in 1873 there came at once a decline in the average value of every product of the farm. They know that with the demonetization of silver came lower prices for corn, for wheat, for tobacco, beef, cattle, for hogs, for mules, for horses, for every product of the farm. They know that that decline has been steadily going on as the gold-bugs of Wall street, with their grip on the House of Representatives, have controlled this money question in the interest of the money-shavers and the money-kings. They have determined that that yoke shall be lifted, and, my word for it, the votes cast here to-day will change more seats in the House of Representatives during this year than the votes cast upon any other measure that has been presented here in ten years. [Applause.]

Vote, if you please, gentlemen, but you will rue the day before the first Tuesday in November next. The gentleman from Ohio [Mr. BUTTERWORTH] the other day stated, in that magnificent speech of his, the counterpart of the one made to-day by the gentleman from Illinois [Mr. PAYSON]—they both talk magnificently, but they vote very badly [laughter]—the gentleman from Ohio [Mr. BUTTERWORTH] said that the election last fall was a triumph of Republican principles. He never made a greater mistake in his life. He did not make a greater mistake even when he spoke against the McKinley bill and then voted for it. [Laughter.]

It was no such thing. It was simply a triumph of Republican methods. It was a triumph of the method of "frying the fat" out of the manufacturers and paying them back at the next session of Congress, and with the aid of the Administration—the most debasing and most demoralizing spectacle ever witnessed in this country, the counting out of Tilden not excepted. It was simply a triumph of Republican methods. We are having a good many surprises and triumphs here lately. Either yesterday or the day before we had, for the first time, I believe, in our history, the grand climax, the triumph of Massachusetts culture upon the floor of this House. [Great laughter.]

We are having to-day the triumph of the Republican machine as it has never been run before, with a man at the head of it with more brains, more nerve, and, in my judgment, more recklessness than any man who ever before controlled it. [Applause on the Democratic side.] He has put the clamps upon even the majority of the gentlemen on the other side of the House, and they dare not murmur. They get up with an apology on their lips and say, "I am in favor of the free and unlimited coinage of silver; but, my christian brethren, this is not the time to enforce it." [Laughter and applause.]

Oh, no; you are like the drunkard who was in favor of prohibition

and against its enforcement. If you will allow the gentlemen on the other side, without dictation from caucus or party rule, to vote honestly and manfully their sentiments to-day, we will roll up such a majority for the demands of the people upon this silver question that even the man you have put in the White House, and who is now, as some of you declare, dictating this policy, will not dare to veto the bill. We will carry it by such a majority that we could override the veto by a two-thirds vote in this House; and let him veto it if he dare.

Here is one of the simplest propositions the people have ever presented to the American Congress: "You have struck down this great money that our fathers handed down to us as part of a policy under which we lived for eighty years. You struck it down adroitly; ay, it was a crime, a legislative crime, when you enacted it. We have gotten back a little under the Bland bill of 1878. Now, go back, Representatives," say the people, "and simply put silver upon a perfect equality with gold wherever the coinage laws refer to the two metals. You have fixed the standard; add two little words, 'and silver,' so that the provisions of law will refer uniformly to 'gold and silver.'" [Loud applause.]

[Here the hammer fell.]

I thank the gentleman from New York [Mr. TRACEY] for the courtesy of yielding me a portion of his time.

I avail myself of the general order of the House on this bill, and print as an appendix to my remarks certain brief tables for the information of those who have not recently reviewed them, and in proof of my assertion that the gradual and steady decline in the average value of farm products has followed with relentless certainty the demonetization of silver and the selfish and merciless warfare upon this time-honored metal as money, cruelly and persistently waged by the money power of the world.

APPENDIX.

FALL OF PRICES.

The following table gives the annual average gold prices of staple articles in the New York market for the years named, as given by the Bureau of Statistics:

Articles.	1851.	1873.	1878.	1885.	1889.
Wheat	$1.07	$1.47	$1.12	$0.91	$0.85
Flour	4.52	5.92	4.76	3.25	.....
Oats	.43	.43	.32	.36	.....
Corn	.61	.55	.51	.50	.375
Coal	5.22	4.26	3.54	3.82	3.50
Cotton	.10	.17	.107	.08	.....
Pig-iron	21.31	45.00	24.23	20.63	17.25
Bar-iron	36.49	78.00	.....	.....	.....
Nails	.035	.04	.028	.022	.....
Mess pork	14.00	16.00	11.47	11.61	10.25
Mess beef	8.86	11.00	11.93	13.51	.....
Hams	.08	.10	.084	.10	.....
Tobacco	.08	.12	.07	.10	.....
Wool	.42	.51	.41	.37	.35

Mr. Sauerbeck, whose tables are accepted by the Statistical Society of London as authority, taking 100 as his index number to indicate the general range of prices from 1867 to 1887, finds that in 1873 the index rose to 111, and in 1878 fell to 83; then it rose to 88; then fell again to 76 in 1884, and to 67 in 1888.

According to Mr. Sauerbeck, prices for 1888 are lower than for one hundred years and English wheat, as Mr. Frewen points out, is 47 per cent. below the average, and lower than since 1761.

The commercial value of silver in the appended table is taken from the report of the Director of the Mint, dropping fractions of cents. The price of the commodities, all save cotton, are the average wholesale prices in Chicago as given in the New Year's edition of the Chicago Tribune; the prices of cotton were prepared by the commercial editor of the New Orleans Times-Democrat.

Year.	Wheat.	Corn.	Butter.	Cheese.	Pork.	Iron.	Anthracite coal.	Cotton, good ordinary.	Cotton, good middling.	Silver.
		Cts.	*Cts.*	*Cts.*				*Cts.*	*Cts.*	
1874	$1.06⅜	65	28	14	$18.25	$42.00	$9.50	13½	13½	1.27
1875	1.02½	63⅜	28	15½	20.25	40.00	9.50	10⅞	13	1.24
1876	1.03	44½	26	13½	18.75	26.00	7.75	.....	12	1.15
1877	1.20½	44⅜	25	11½	13.62	20.50	6.62½	9⅞	11½	1.20
1878	.96½	37½	20	7¾	8.87½	21.50	6.25	8	9⅜	1.17
1879	.89	35½	28	12	9.75	30.00	6.62½	11½	12½	1.12
1880	1.05⅛	37½	28	12	13.25	35.00	8.50	10½	12½	1.14
1881	1.14½	49⅜	30	11	16.50	30.00	7.75	10⅜	11½	1.13
1882	1.13⅜	67½	33	11	19.37½	28.00	7.25	9½	10½	1.13
1883	1.01⅜	53½	30	13	15.12½	24.50	7.00	9 7/16	10 7/16	1.11
1884	.83	51½	20	9	17.50	21.00	6.75	9 3/16	10 3/16	1.06
1885	.83⅛	42⅜	16	7⅜	10.50	20.67½	5.50	8 5/16	9 5/16	1.00
1886	.75½	37	15	8½	9.90½	18.65	6.00	7⅜	9	.97
1887	.75⅜	39½	17	8½	16.70	21.00	7.00	9½	10½	.97
1888	.88⅛	46½	21	9	14.07½	20.00	6.00	8 3/16	10	.93½
1889	.85	34	18	8½	11.02½	18.00	5.15	9	9⅞	.....

It will be seen that from 1873 to 1886 the fall almost exactly corresponded with the fall of silver except in two years, after silver was partially restored to favor by legislation, and when the crops in Europe were almost a failure.

Federal Election Law.

REMARKS
OF
HON. WILLIAM E. MASON.
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 1, 1890.

The House having under consideration the bill (H. R. 11045) to amend and supplement the election laws of the United States, etc.—

Mr. MASON said:

Mr. SPEAKER: For years we have been told publicly and privately that the negro vote has been suppressed in the South, and as much as two years ago a Senator of the United States confessed the same and asked us what we were going to do about it. The bill under discussion to-day is our answer to the gentleman who asked the question.

I desire particularly to respond to the constitutional argument made by the gentleman from Virginia [Mr. TUCKER]. He said, in substance, that when a law of Congress impinges upon the right of the State to govern its own affairs, then that law of Congress must fall. The Republican party not only disagrees with him as to his statement of fact, but his statement of law as well.

A Representative in Congress is not a State officer; true, he has been elected by the people of a part of the State, but his office is a national one. His vote in Congress affects my district as well as it does his own. The law which he is able to help write on the statute-book is as binding upon my constituents, upon my family, and upon me as it is upon him. I have as much right to know that the gentleman from Virginia or South Carolina is honestly elected as I have to know that a gentleman from my own State is honestly elected; and therefore from this Republican standpoint—that Congressional office is a national one—the whole argument based upon the statement that this bill interferes with State rights must fall to the ground.

The gentleman also took, and many of the others have taken, the position that the Government could have nothing to do with the election of members of Congress unless the States fail to provide for an election. For the sake of the argument I will admit the correctness of this position, and my answer is that the State must prescribe time, place, and manner of holding elections for Senators and Representatives which will give to each elector his constitutional right to vote and to have that vote counted, and when the State does not do so it has failed to make a constitutional appointment for election, and it would then not only be the right but the duty of the Government to prescribe the time, place, and manner of holding elections. This thought was evidently in the minds of the framers of the Constitution, for by section 4 they say:

The times, places, and manner of holding elections for Senators and Representatives shall be prescribed in each State by the Legislature thereof, but the Congress may, at any time, by law, make or alter such regulations.

So, then, it is not the law of Congress that must fall, but when any law of any State Legislature impinges upon the constitutional right of any citizen, regardless of color or condition, to enjoy his constitutional right of suffrage, then the law of Congress will intervene and the law of the State must fall. While we have a constitutional right to regulate the time, place, and manner of every Congressional election in the United States, I do not believe that power should be exercised except in the cases anticipated by the fathers who framed the Constitution, namely, where certain States or districts would fail to provide for an honest and fair election.

A State which provides an election for a member of Congress in which two-thirds of the electors are disfranchised does not provide an election contemplated by the Constitution.

The learned gentleman from Virginia [Mr. TUCKER] quotes the following from the Constitution:

The House of Representatives shall be composed of members chosen every second year by the people of the several States, and the electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State Legislature;

And on that bases the statement, "The power to pass upon the qualification of a voter to vote is a power that the Constitution gives to the States and can not be wrested from them." This statement was loudly applauded on his side of the House, but a brief analysis of his statement will show its weakness. Suppose the State should place a property or educational qualification not required by or in violation of the Constitution of the United States, could Congress "wrest the power" from the State? Suppose the State of South Carolina should put into its State law that no negro could vote for a member of Congress. Could Congress pass a constitutional law which would protect a citizen of the United States in his right to vote? Or will my colleague still claim that the "power can not be wrested from the States."

This argument may be good for "home consumption" in Virginia,

but will not do here. Why, Mr. Speaker, if the gentleman is correct, then that part of the Constitution quoted by me which gives Congress the power to "make" regulations for Congressional elections is meaningless and may as well be stricken from the Constitution.

But, to proceed further with the clever but technical argument of the gentleman, he says, in order to prove that Congress has no power to regulate Congressional elections, that the three following clauses should be considered together:

First. The times, places, and manner of holding elections for Senators and Representatives shall be prescribed by the State Legislatures, etc.;

Second. But the Congress may at any time by law make or alter such regulations; and

Third. The eighteenth clause of the same article, which provides that Congress shall have power "to make laws which shall be necessary and proper for carrying into execution the foregoing powers."

Where does the gentleman get his comfort here?

First. The States must.

Second. The Congress may.

Third. The Congress is given power to make all laws necessary to execute the power. And yet the gentleman insists that the sole power rests with the States to do that thing; but the gentleman says:

> Does this mean to give the States the power in the first part of the section and take it away in the second, without rhyme or reason; does it mean to play with the States as we used to when children, "Indian gift," give with one hand and take away with the other?

To which I answer, yes, it does give the power to the State to use that power unless Congress sees fit to assume its constitutional power and make regulations as to the election of its own members.

There would be no disposition to take away from our "children," the States, that power if the "children" had common honesty enough to use that power as was anticipated and hoped for by the framers of our Constitution. He says that the power of Congress is limited, and that while Congress has the power to prescribe time, place, and manner of holding elections "that power is contingent, and conditional only when, first, the States refuse to provide the necessary machinery, etc., and, second, where they are unable to do so by reason of rebellion," etc. I deny that this is the law. The States never had the right to make a law regulating the election of a member of Congress that was not from the moment of its adoption subject to being "altered" by Congress.

The power of Congress to "alter" any State law governing elections of members of Congress is neither "permissive" nor "contingent," as is suggested by the gentleman from Virginia, but is "original" and "primary." It was adopted as a part of the same section which commands the State to do it. If the States attempt to do it Congress may "alter" what they do; if the States fail to do it Congress may "make" the laws necessary to carry on the election.

The gentleman quotes liberally from resolutions by different States while adopting the Constitution, yet not a single quotation is in conflict with our theory; but, if they had been, the instrument itself, the Constitution, contains the final and complete agreement of the States. On this platform the "minds" of the States met and united, and I care not what the arguments or suggestions of New Hampshire or South Carolina may or may not have been, it is sufficient for me to turn to the grand old instrument itself, which has stood the hammering of democracy for years, and read in simple language—

> The Congress may at any time by law make or alter the times, places, and manner of holding elections for Senators and Representatives.

The bill before the House does not propose to have supervisors of elections *unless at least one hundred citizens petition for such supervision*, and the germ of the whole bill lies in this fact, that under and by virtue of its terms *both political parties will be represented at the polls*, which has not been the case for years in many districts of the South.

In the State of Illinois, when the election methods became doubtful and dangerous, the leading Democratic clubs and the leading Republican clubs appointed committees to prepare election laws which would give both parties representation as judges and clerks at the ballot-boxes. This law was passed as a non-partisan measure, and I give it as my honest opinion that when any man refuses to the opposite party the right to be present and see the votes cast and counted he does it for the sole and only purpose of stealing the election and cheating the electors.

I have not time to quote many of the cases that have been brought to my attention within the last few years. I remember particularly the case in the Seventh district of South Carolina. Not a single Republican judge was allowed to sit; not a single Republican clerk was allowed to be present when the votes were cast and counted; and if this bill before the House to-day provided that all judges, clerks, and supervisors should be Republicans I would vote against the bill. It simply, however, provides that both parties shall be represented, as they are in Illinois to-day; and, until that becomes the law of the South and until every citizen can enjoy his constitutional right of suffrage, the boasted growth of the glorious South will be but a dream, a castle built in the air, some day to fall in ruins about your heads.

No man on the other side of the Chamber has yet risen in his place and said that this law will prevent legal electors from having their votes honestly and fearlessly cast and counted. I say I have heard no man on the other side of the Chamber announce as his opinion that under this law no man who casts his vote freely and independently will be debarred from that right if this bill becomes law. But I started to say that in many districts of the South both parties were not allowed representation at the polls. The governor of South Carolina was besought six years ago to give one Republican judge in each precinct in the Seventh district in South Carolina representation; he even refused to answer the request. Four years ago he was again asked by a committee to appoint at least one Republican commissioner of election in each county, and through them one Republican manager at each of the voting precincts for the electors and Congressmen throughout the State. This was denied by the governor of South Carolina. If this bill becomes a law the governor of South Carolina will not debar the Republicans of that State from having at least one friend in each of the precincts to see that the votes are fairly cast and honestly counted as cast.

It seems like a waste of time to put in the RECORD here the proofs of the dishonest elections in many of these Southern districts. This same governor of South Carolina stated in his inaugural address, in substance, that the negro should not be allowed to vote or to have anything to do with the management of the affairs of that State. He said in a part of his address:

> Never again shall any other than the Anglo-Saxon rule in this fair, beloved, and beautiful Southland of ours.

The Constitution of the United States says that the black man shall enjoy his right of suffrage; the governor of South Carolina says he shall not. This bill before the House says that the Constitution shall prevail and that the political dogmas of the governor of South Carolina must fall.

No better or stronger proof of the suppression of the Republican vote in the South can be offered than has already been demonstrated by several of my colleagues upon this side of the Chamber. Take, for instance, the State of South Carolina with five delegates in Congress. The total number of votes received by those five gentlemen is 51,000 in round numbers, while the Representatives from the first five districts of Illinois sit here with more than 204,000 legal electors back of them. I appeal to your sense of honesty if this is fair. Is there anything in the South Carolina statesman that should give him a right to a seat in this Congress with an average of 10,000 votes back of him, while we of Illinois must have an average of 40,000. When the census returns were made the citizens of South Carolina were there, but when the election returns were made they could not be found. We have for years said to you that you ought not to count the negro as a basis of representation unless you allowed him to vote, but you have not heeded us, and now we say to you, by this bill—inasmuch as you are determined to use those citizens as a basis of representation to increase your representation in Congress, and to this we do not object—we say to you by this bill, "You have counted them as voters; we are determined they shall vote."

Another curious fact I call your attention to is illustrated in nearly all Southern elections. While the first five districts in Illinois cast nearly an equal number of Democratic and Republican votes, in the five districts of South Carolina less than 3,000 Republican votes were cast. Why, one of your best Democratic papers in South Carolina said, editorially, in speaking of your elections:

> We have carried this sort of thing as far as it can possibly go, and the result is we are fast getting to be a set of rascals, if we are not there already.

Compare the Congressional vote of Georgia and Wisconsin, and on general average you will find, as illustrated by the gentleman from Wisconsin [Mr. HAUGEN], that one gentleman in Georgia has as much voice in determining the great questions that agitate the public mind as eleven men have in the State which he represents, and in some of the districts of Georgia one gentleman has as much political strength as twenty-two gentlemen have in some of the districts of Wisconsin. And again I appeal to you—to your sense of justice and honor—is this fair?

What, then, are the real objections to the bill? The gentleman from Virginia and some of the others have explained that the expense of carrying out the provisions of this bill are too large. If there is a shadow of doubt as to the honesty of elections in this country and the enactment of this law would remove any of that shadow, then I am for this bill if it takes ten times $7,000,000, as has been figured out by the gentleman from Virginia. His figures, however, are not fair, because they are based upon the theory that this election machinery will be put in operation in all of the Congressional districts, whereas the chances are that it will not be placed in operation in 25 per cent. of the Congressional districts in this country. But I have no patience with any gentleman who will discuss the expense attending the adoption of a measure which is intended to give to every citizen the rights guarantied him by the Constitution. The greatest and best evidence of real wealth is not the money in the vaults, but the standard of citizenship, and if it takes every dollar in the Treasury to make a man, let the money go and let us have that man.

To my mind, the weakest argument made against this bill—it has been made by every gentleman on the other side of the Chamber—

namely, that Federal officers, who are to be divided equally among the parties, will cheat and rob the people of their right to an honest ballot, and the gentleman from South Carolina, as well as many of his colleagues, in arguing this branch of the case cry out against it by intimating that it would re-establish the "carpet-bag" governments, saying that it would re-establish that system of inequality that went under the form of civil government. Examine the bill and see whether that charge is well founded or is a mere pretense. Section 4 of the bill provides that—

The supervisor must be a male citizen of the United States of good character, a resident and qualified voter in the State, county, or parish, or in the Congressional district in which he is to discharge his duties.

Does this look like sending Northern men down there to run Southern elections? Or, as the gentleman from Massachusetts puts it, when trying to make an excuse for fighting the bill,

It is not the elections that are troubling us, it is the inequalities of office-holders who are sent South to oppress the people.

Does it look like sending men South to oppress the people when the bill provides "they shall be appointed in the district in which they reside," and in the same section provides that only two out of three shall be of one political party, and that but two men shall do duty prior to the election, and that those two shall not be of the same political party? Does not this bill give to the Republicans and Democrats of the South exactly the same thing which the Republicans of South Carolina have prayed for for years in that State? and is it not a mere, shallow pretense when the gentleman from South Carolina says we are sending men South to manage Southern elections when we propose to appoint Republicans and Democrats of equal numbers to do those duties who are bona fide residents in the places in which their duties are to be performed?

Upon the question of the necessity of this or a similar bill to secure in the Southern districts a fair ballot and an honest count I desire to call attention to a few of the cases pending in this Congress. In the Second district of Mississippi, in the case of Chalmers *vs.* Morgan, a Mr. Van Buren (attorney for the Democrat), who testifies in the case, in answer as to which he thought preferable, the triumph of Republicanism or the suppression, or partial suppression, of negro suffrage, answered in part as follows (see record, page 837):

I think that anything like wholesale ballot-box stuffing or fraud in elections is almost, if not quite, as greatly to be deplored as Republican rule would be.

I quote this simply to show the moral and political sentiment which seems to prevail in the Second district of Mississippi.

A further examination of the record shows from the evidence of J. E. Drake (page 445) that twenty or thirty shots were fired into the voters when they were attempting to vote. I believe that if the election had been under the control of United States officers that firing would not have occurred. A. A. Montgomery, also residing in Oxford, says (page 593) and testifies that on the evening before the election a cannon was stationed on South street, some distance south of the court-house, and where the ballot-boxes were located, and fired repeatedly the night before the election, and early in the morning the firing was heard and at frequent intervals until late in the day. The committee also finds other irregularities in that district, as follows:

The constitution of partisan election boards having no members other than Democrats.

The appointment in many cases of parties on such boards to represent the Republicans who, by reason of ignorance and illiteracy, were not "competent and suitable men."

The unlawful removal of ballot-boxes from the polling-places and from the view of the United States supervisors.

The illegal erasure from the registration-list of duly qualified and registered voters, and the refusal to permit them to vote.

The stealing of ballot-boxes.

This, probably, would not have occurred if there had been United States officers there with the authority of the Government back of them, representing both parties, to see fair play.

At Taylor's box, in Tate County, in this same district (see record, page 191), a lamp was blown out and the box stolen and never returned. This, probably, would not have occurred if both parties had been represented at the box by United States officers. At Stewart's box, in De Soto County (see record, page 382), one of the Democratic judges testified that the box was left "sitting on the table in the room in which he slept, and that during the night he saw some one in the room, and the alarm was given and he got up and struck a light to see who it was or what it was, and found the ballot-box gone." If both parties were represented by legally authorized officers of the Government when that vote was cast and counted there would have been no excuse for this robbery and the robbery could not have taken place.

All I ask of any fair-minded man is to read the different plans adopted, and more particularly the one whereby the polls were closed in Republican precincts and votes were not taken at all. Almost every one, if not all, of the cases contested in this Congress shows that that practice has obtained. In these several districts, some ten or fifteen in number, the plan is, from the language of Dr. Lyle (record, page 187):

For the last ten years it has been the custom at the Early Grove box to open the polls when the chances indicated a Democratic majority or the majority had been counted for that party, and if the indications pointed to a majority being against the Democratic party, not to open the polls, or, if open and counted and the majority found to be anti-Democratic, not to send the box up to the court-house. This is the most convenient and is the favorite plan of refusing the majority a chance to vote in many of these Southern districts.

I have already quoted from the evidence in the case of the Seventh district of South Carolina, Smalls *vs.* Elliott, and I now call attention to a very few of the dishonest practices in that district, the case being Miller *vs.* Elliott. The shape of the district and its formation in violation of the United States law has become thoroughly well known to most of the intelligent people of this country, and notwithstanding one or two Democratic papers are honest enough to protest in the language which I quoted, yet it seems that Mr. Elliott's friends have been able to manipulate the district again in such a way as to secure a certificate.

There are of male citizens over twenty-one years of age in this district 7,695 whites and 32,893 colored, being 25,000 more colored than white, and, as stated by the Democratic paper above quoted, it was laid out by the Democratic party, intending to surrender it to the negroes of South Carolina. I ask any gentleman upon the floor of this House or elsewhere to read the many different plans adopted by the Democrats of the Seventh district of South Carolina to place the gentleman from South Carolina in the seat which he has been occupying for three years, and to which he was never elected by a majority of the people of his district.

Systematic cheating in the matter of registration was indulged in; ballots for Miller, the Republican, which were found in the wrong box were not counted for him, and the boxes were changed from time to time to confuse the illiterate voters, and when an attempt was made to show them which boxes were the Presidential boxes and which the Congressional boxes the managers of the election objected to it. (See evidence, pages 8, 13, 15, 21, 24, and others.) As a rule, only Democrats and no Republicans were allowed as managers of elections. (See evidence of L. R. Davis, page 24.)

I call attention to the evidence of Robert Wilson, Democratic manager (page 347 of the record):

Q. By whom was the position of the boxes changed?

A. In some cases by myself and in some by Mr. W. A. Cooper, one of the managers.

Q. Why was the position of the boxes changed?

A. They were changed to carry out the spirit of the law and test the intelligence of the voter. The voters were being directed by a man who had climbed up a tree so that he could see the position of the boxes over the barricade; the voters were coming in with their tickets and hands held upright, one in one hand and one in another, and whenever the boxes were changed the man up the tree would halloo out, "Mind dare!" "Change dem tickets!"

Here is a picture worthy of consideration. Here are the Democratic judges shifting the boxes to confuse the illiterate negro, who has as much right to vote under the law and Constitution as the judges themselves. When the law requires that an inclosure shall be railed off or otherwise provided, they put up a barricade, and one negro who is anxious to help his fellow-citizens to get their votes cast and counted is obliged to climb a tree and tell them when and how to change their vote from one hand to another in order to have it deposited in the right box.

Suppose we should apply this test of intelligence and ability to read to the hundred thousand majority of Tammany in New York City. They tell us the negro is not intelligent, but still insist that the man who has come to this country freely and voluntarily to better his condition, who can neither read nor write our language and who knows no rule of law except the order and edicts of Tammany, can go to the ballot-box as he does in New York and have some friend instruct him as to how to fix his ballot, in other words, to help the illiterate to cast his vote for Tammany in New York, but for the poor colored man, who came to this country through no wish of his own, he shall not have the right to have any assistance as to what box his vote shall be cast in.

I am not discussing the question as to whether or not there should be an educational qualification; I am simply stating that under the Constitution and laws of this country there is no educational qualification, and the ignorant men in South Carolina should have the same right as the ignorant men have in New York, many of whom vote at the dictates of "Boss Tammany" and know nothing of the history of the country or of the institutions of this Government.

Ballot-box-stuffing was indulged in again in this district, as will be seen by the evidence of different witnesses at pages 294, 295, and 296. But I do not care to discuss the Seventh district of South Carolina any further. This district and the conduct of the elections there have become a stench in the nostrils of the American people, and it is no wonder that a leading Democratic paper would say, "We are fast becoming a set of rascals, if we have not already got there."

I call the attention of the House and the country to one more case, the evidence of a Democratic police officer in the Seventh district of Mississippi, in the case of Kernaghan *vs.* Hooker. This witness testified as follows:

Int. State your name, age, residence, and occupation.

A. J. W. Cain; twenty-three years; Jackson, Miss.; am on the police force of the city.

Int. If you were present at a Democratic meeting held in the capitol on the night of the 5th of November, 1883, being the night before the election, state what arrangements or agreements were made there, or after said meeting, by the parties there assembled, in regard to the firing of cannon, and how the same were afterward carried out.

A. It was proposed that we were to fire the cannon early next morning,

and some of the boys proposed to carry it out through "Nigger Town" that night. They fired it out there perhaps a dozen times or more; stopped in some places and fired it in front of the houses. They stopped once in front of the colored hall, where they were holding some sort of a meeting, and the reason they did not fire it there was that it was in front of a house where a woman was about to die, and some one came out and begged us not to shoot. We went to West Jackson then and stopped in front of the lunch-stand and then came back to the capitol.

Int. Were there many or few people went with the cannon, and how did they act and what did they do and say?

A. There were about twelve or fifteen went with it. Some made the remark that it would be a good thing to carry it out there to bluff the negroes and keep them away from the polls.

Int. Were they noisy or quiet in their travels with the cannon?

A. They were very noisy.

Int. If they used any threatening language while passing through the colored neighborhood, state what it was.

A. Some said, "You damned black —— —— ——, you wouldn't come to the door to see what this cannon was being fired for if you knew the effect they were trying to have on you," and "You had better not come to the polls."

Int. If you know of any act of intimidation or violence committed in Jackson on that night, state the same fully.

A. That night, I suppose it was about 11 or 12 o'clock, after the meeting adjourned, I was in company with some gentlemen, Mr. Walt. Hendricks was one of them, Mr. Horace Perry was another, and walking on the V. and M. Railroad towards West Jackson. There is a house near the railroad belongs to Mrs. Spengler. There were some men there bursting in the door and cursing the niggers, telling them the damned —— —— had better keep away from the polls; if they didn't that every one of them would be killed, or language to that effect. They had some straps beating on the side of the house and said they wanted one of them out of that. Said they wanted Thornton Reynolds out of there. The men had handkerchiefs over their faces; they were masked. Some of them from the inside answered that the "nigger" was not in there. Then they commenced to burst in the window-lights. After that they commenced a shooting. About twenty shots were fired into the house—at least that. The crowd dispersed after that. We started on towards West Jackson, and heard several shots in different portions of the town. We then changed our minds—not to go to West Jackson—and came back up town.

Int. Of what ward are you a voter?

A. Of the South ward.

X Int. Describe the route taken by the crowd, the points at which the cannon was fired, state the exact number of times it was fired, and give the names of the parties who made use of the oaths you speak of in your answer to direct interrogatory 5.

A. From the capitol to West street, then north to Hamilton's avenue, then west to Farish street, then south to Capitol street, and then to the lunch-house at the depot, where I left them. That was the route. The cannon was fired first in front of the Clarion office, next at Sproule's shop, next at the corner of West and Capitol streets, next near Judge Campbell's, then at the corner of Hamilton's avenue, then in front of Henry Hudson's (a colored man), then in front of another colored man's house a little farther on, next at the corner of Farish street. We then moved on and halted in front of the Benevolent Hall, but didn't fire because of sickness in the neighborhood, as before stated; we fired again on the bridge on Farish street, then at Farish's stable, where we stopped under a gas light and jarred it out, and lastly at the lunch-stand. Some one of the party with the cannon used the oaths I have referred to, but I don't know who it was.

X Int. To whom were these epithets addressed, what man, and how far distant was he from the party, and did you see him at the time?

A. I saw Henry Hudson; he was the only man; he was not over 25 or 30 feet from the party.

X Int. Was Henry Hudson the only man you saw on the route?

A. No, sir; I saw other men.

X Int. Can you name any others?

A. I can not.

X Int. What did Henry Hudson do when the expletive was hurled at him?

A. He didn't do anything, but shut the door; I think his son came to the door.

X Int. Who was the captain commanding the squad in charge of the cannon?

A. I don't know that we had any captain; we had a cannoneer; I think Fuller and Louis Fite—I am not positive about Fite—were the cannoneers.

X Int. Did you make use of any of the oaths or epithets of which you speak in your examination-in-chief on that occasion?

A. I may have joined in with the crowd when they got to yelling and cursing; I expect I did.

X Int. Were any members of the party under the influence of liquor?

A. Yes, sir; Joe Rietti.

X Int. Did Joe Rietti do most of the cursing and yelling?

A. No, sir; not the most of it; he did his part.

X Int. Give us the name, dimensions, carriage, and history of the cannon used on that occasion.

A. She is named "Little Moses;" size, a little over 2 feet long; bore about 2¼ inches in diameter; rigged on the wheels of a sulky plow; don't know its history; it is generally fired about election day, to let 'em know we are going to have a fair election and to announce meetings of the Democratic club.

Int. Does he not hold some position under the Government there?

A. Not that I know of.

Int. In your progress with the cannon, "Little Moses," that night, did you go up into the North ward and fire the same before the doors of any Democrats?

A. We did not.

Int. Why didn't you do so?

A. We knew the cannon wouldn't have any effect on white men.

Int. Did you go up there and do any cursing, swearing, and hallooing before the doors of any white Democrats?

A. We did not.

Int. Why did you not?

A. We did not think it was necessary.

Int. Did you then think it was necessary to go into the colored parts of the city and fire the cannon and curse and swear and halloo before the doors of the people there?

A. I did, to keep them away from the polls.

Int. Do you know of any such plan or proposition on foot just before said election?

A. Mr. L. F. Chiles said that he and General William Henry had been talking and said it would be a good idea to take Charlie Morgan down in the swamp and tie him to a tree until after the election, as he was a leader among the negroes, and put somebody to watch him.

Int. Were any propositions made by him or any one else for you and your friends to carry out this plan?

A. Yes, sir.

Int. Who made such propositions?

A. Mr. L. F. Chiles.

Int. What office, if any, did Mr. Chiles hold at that time and now?

A. He was a deputy sheriff and alderman of the city of Jackson, and holds both of those offices.

Int. To what political party do you belong?

A. I am a Democrat. Have always been, and have never voted anything but a Democratic ticket.

And in another place he testifies as follows:

Int. You have stated in your cross-examination that you are a policeman of the city of Jackson, and that while off duty the night before the election you saw certain disorderly proceedings and did not interfere. Was not the principal reason of your non-interference at that time because of a general understanding among Democratic city and county officials in this city and county that at and just before election time Democrats are privileged to commit almost any acts they please, no matter how outrageous or disorderly, which may tend to intimidate Republican voters from the polls; was not this the real reason why you did not interfere?

A. Yes, it was.

Int. Is it not a fact that the grand juries in this county never indict anybody for outrages committed at and just before election times?

A. I never heard of them doing it.

Int. Do they ever indict any one for frauds on the ballot-box of this county?

A. I never heard of any. [The witness here expressed a desire to make a correction in his answer to interrogatory 12, last above given, and proceeding said:] I do not believe that every sort of outrage would be tolerated, but I believe that so far as intimidating niggers is concerned, that would be winked at by the officers.

The remark that the cannon was fired to let the negroes know they were to have a fair election is regarded by the average Southern Democrat as a good joke; but I appeal to any fair-minded member of this House, when he stops to consider that the poor, hard-working colored Republican of Mississippi has as much right under the law and Constitution as we have, is it common honesty to resort to such brutality as is here shown by the evidence of this witness, who has testified unwillingly against his own party?

No man dares stand up on this floor and say to the country that it is fair or that it has the first element of common honesty. The bill before the House would have a strong tendency to stop this robbing, this bulldozing, and this brutality, and yet I believe now that not a single member on the other side of the Chamber will vote for that bill. I am willing to go to the country upon that issue. The Democrats as well as the Republicans in my district have always believed and now believe in a fair election, and I am willing to submit to them whether or not it is a fair bill.

I feel that I must call attention to a few more cases of ballot-box-stealing done in the interest of some gentlemen who hold seats upon this floor. In the Second Congressional district of Florida—I will not quote from a Republican, but that there may be no question as to the interest of the party I will quote from some Democratic witnesses who were called in that case. Mr. Pond, who testifies on page 228 of the evidence, says—

That he is a Democrat and acted as inspector at the Madison precinct No 1; that, to the best of his knowledge, 615 votes were cast, and that the vote was not canvassed because the box was taken away from the inspectors.

He says further:

I was sitting with my back to the door, and the persons who took it got it before I could see whether they were armed or not. They had no authority from us to take it. I do not know what became of the box. I think the inspectors had canvassed about 70 votes. I am the editor and publisher of the Madison Recorder, and supported ROBERT BULLOCK, Democrat, for Congress.

The same witness was recalled, at page 231, at his request, and testified as follows:

The ideas as conveyed, that I did not know whether the parties were armed or not—this was an inadvertent statement, as I saw the men when they filed out of the court-house. There might have been fifteen or twenty of the armed men who took the boxes. I am certain they were armed and took it forcibly. I am still editor of the Madison Recorder. I do not remember whether in any issue of my paper I have said that the ballot-box had been forcibly taken away by armed men.

And after examining the files of his paper, he testifies on the same page:

An examination shows that I did not say anything in my paper about the taking of the ballot-boxes about which I have testified. I do not remember why I did not say anything about it.

I now call attention to the evidence of W. H. Thomas, also a Democrat, who testified in regard to stealing those same boxes. His evidence is as follows:

Q. Were you in the polls from the opening to the closing?
A. Yes, sir.
Q. Were you there when the ballots were counted from the box?
A. I was.
Q. How many ballots were there cast at that poll?
A. There were 615 votes cast.
Q. Were these votes canvassed?
A. No, sir; not all of them.
Q. How many were canvassed?
A. Between 50 and 60.
Q. Why were they not canvassed?
A. The ballot-box was taken.
Q. In what way was it taken?
A. The box was forcibly taken by armed men.
Q. How many armed men?
A. I could not tell.
Q. About how many?
A. It's a question I can't answer.
Q. At what hour was the ballot-box thus taken?
A. I judge it to have been between 9 and 10 at night, though I can't tell the exact hour.
Q. At what time did the poll close?
A. At sundown.
Q. Why was there not more than 50 or 60 votes canvassed before the ballot-box was taken away?
A. I judge because it was the time occupied in preparing the tally-sheet.
Q. Was any resistance made by the inspectors to the taking of the ballot-box?
A. There was none.

Q. Why was there none?
A. I don't reckon any one wanted to get killed.
Q. Were the men white or black men who stole that ballot-box?
A. I took them to be white men.
Q. Were they Goodrich or Bullock men?
A. I couldn't tell you that.
Q. What is your belief?
A. I can't answer that question.
Q. Don't you think they were supporters of Bullock?
A. I could not answer.
Q. What are your politics?
A. I am now and have been all my life a Democrat.

Let me call attention to the Hickstown box. Bellamy Smith testifies, at page 234:

That he is a farmer and a Democrat; that he was at the election at Hickstown; that when the inspector got there very late they said the ballot-box and the registration-list had been burned the day before. A ballot-box was produced, and still the inspectors refused to hold an election because they had no registration-list. We got a paper, and after a good deal of quarreling we commenced to vote, and voted until all on the ground had voted. The Republican party has a majority at that precinct.

I call attention to the evidence of this leading Democrat in that precinct to show that the Democratic party there by way of variety in one precinct stole the box and destroyed it before election day. If we had supervisors of elections, supported and sustained as they ought to be by the United States Government, and divided fairly and equally between the Democratic and Republican parties, there would be no prospect and not much occasion for stealing ballot-boxes and registers before election.

I now ask the attention of the House and of the country to the Hamburg precinct. You will find by reading the evidence of Charles S. Church that he was there; that it is a Republican precinct, and is so known and recognized; and that he (the witness) is a "Jeffersonian Democrat, as good as ever made;" that the "ballot-box at this precinct was destroyed by eighty or ninety armed men, who were, to the best of his knowledge and belief, Democrats." Is there any gentleman upon the floor of this House who believes that if this box had been in the possession of United States officers, equally divided in politics, any set of armed men would dare to have approached that box and taken it away by force?

The men who did take it robbed honest men of their right of suffrage, and men who will do that are not only robbers, but cowards, and, if they had understood that that attack was an attack upon the officers of the Government of the United States, the attack, in my opinion, would never have been made. I should add here that the evidence of the last witness is fully sustained and more particularly explained by the evidence of Reuben Haines, at page 246 of the record, and other witnesses. The next witness I quote from is a Democrat—J. H. Reading—who testifies that he was an inspector of election on that day at Greenville precinct, No. 5, Madison County; that it was a Republican precinct, and that Goodrich, the Republican, had a small majority; and the manner in which, between 1 and 2 o'clock at night, he was knocked down and robbed of the ballot-box is better told in his own language, and it is pretty conclusive.

I should say in passing that they were white men who robbed him of that box, because, he says, at page 251, "my opinion is that they were white men, although their faces were black, because, in the fight over the box I caught one by the hair of the head." But we will let the witness speak for himself:

Q. What became of the votes?
A. I don't know.
Q. Was not that ballot-box intrusted to you by the other inspectors?
A. It was.
Q. Why was it intrusted to you?
A. To bring it to Madison.
Q. What caused the other inspectors to intrust it to you?
A. Two of the inspectors lived far away from the polls, and it was raining and Colonel Harby, who, I think, was the clerk, being sick, the box was intrusted to me to take to Madison.
Q. What did you do with the box?
A. The box was setting on my counter. I was putting up the books of accounts of my business in the safe, as I always do every night. Some one knocked at the door. I asked "Who was that?" The reply was, "It's me, Frank." I asked him "What do you want?" He said, "I want to see you a little on some business." I stepped to the door and unlocked it. As I did so the door was shoved open in my face, bruising my forehead, and nearly knocking me down. Some one sprang on to me and grappled me. Before I recovered from the fall in an instant more two other men had a hold of me also. Another man jumps inside of the door with his pistol drawn, and said, "If you resist I'll shoot you." Still two other men came inside of the store; one grabbed the ballot-box, and the other the lamp. The man that grabbed the ballot-box ran off with it. The man who had the lamp put it out, and changed the key in my door from the inside to the outside. Then the men who had hold of me turned me loose, and all jumped out of the store and locked me up in there. They took with them my keys, both store and safe keys. I felt around in the dark and got a hold of some matches. I lit the lamp, so I could see around me; then I hallooed for Mr. Prescott, who lives about 50 or 100 yards away, to come to my assistance. Mr. Prescott came to the store with a lamp and gun. In the mean time I remembered that my back door was only closed with a bar across it on the inside. I took off the bar and went out the back door, and met Mr. Prescott as he came up with a lamp and gun. We went to the front of the store where the parties who took the ballot-box went out at, and took their tracks where they ran off and tracked them for about 300 yards, where we found horses had been hitched in a little pine sapling thicket. We could there track them no farther; they seemed to have gotten off on horses.
Q. Did these people of whom you speak take off that ballot-box?
A. Yes, sir.

Suppose, Mr. Speaker, that in the State of Maine or in the city of Chicago this man had been knocked down in the night and robbed of the box, every honest Republican and every honest Democrat would have cried out against it, and no one would have been satisfied until the thieves and robbers had been brought to justice. If there is any gentleman who is not satisfied after reading these samples of the dishonest manner of holding elections in these Southern districts and who does not recognize the necessity of having both parties represented at the ballot-box and at the polls, then all I ask is that the gentleman take the record of the contests now pending in this House and he will find ten thousand pages filled with printed evidence of the same kind of fraud and corruption in nearly all of the cases which have been decided or which are pending before this Congress.

If the pending bill had been the law of the country at the time this man was knocked down and robbed of the ballot-box, the votes in that precinct would have been counted and canvassed in the presence of the representatives of both parties, officers of the State or county, and also in the presence of the United States officers representing both parties, and the cowards who went to this man's store at night might have succeeded in stealing the box, but their work would have been too late to rob the honest citizens of their right of suffrage.

The gentleman from Kentucky charges the Republican party with neglecting the negro. We are guilty, guilty, a thousand times guilty. We gave them feet to walk with, but no ground to stand upon.

Mr. OATES. You gave them the right to vote, but you never gave them the right to hold office.

Mr. MASON. We gave them the right to vote without giving them the right and the power to have that vote cast and counted and without depriving the people of the South of the power of robbing them and cheating them of that right.

Mr. OATES. That allegation has been made too often in that general way, and it is utterly untrue.

Mr. MASON. Yes?

Mr. OATES. I concede that there may be, and I believe there are, localities at the South in which wrongs have been committed in connection with elections, but to make that broad charge against the people of that section is as unjust as any charge that was ever made upon this floor.

Mr. MASON. I ask unanimous consent for ten minutes to recite the districts where the negro vote is suppressed. Will you give it to me? [Laughter.]

Mr. OATES. You have been there and know, I suppose?

Mr. MASON. I have the record in this House of Representatives. Take, for instance, the Seventh district of South Carolina, which has a Republican majority of more than 20,000. In that district ballot-box after ballot-box was stolen and never returned. Twenty thousand natural Republican majority in the Seventh district of South Carolina, and there has not been a Republican here to represent them for years! Let me tell you the facts. Give me the time, if you say that my charges are not specific enough.

Mr. WILSON, of Missouri. Do you say that numbers of ballot-boxes were stolen in the Seventh district of South Carolina and never returned.

Mr. MASON. Yes, sir.

Mr. WILSON, of Missouri. That is not true.

Mr. MASON. You have not read the evidence.

Mr. WILSON, of Missouri. I say it is not true.

Mr. MASON. Then you do not know what you are talking about. [Laughter.]

Mr. WILSON, of Missouri. You do not know what you are talking about.

Mr. MASON. I am talking about the last Congress.

Mr. WILSON, of Missouri. I am talking about that.

Mr. MASON. Well, sir, I will refer you to the records. I can not give you the names of the precincts where the boxes were stolen, but there were more than one stolen and never returned.

Mr. WILSON, of Missouri. I challenge the record. I say the statement is not true.

Mr. MASON. Well, I say it is, and I will produce the record to prove that it is.

A MEMBER on the Democratic side. The burden of proof is on you.

Mr. MASON. I ask simply for time and I will prove it. Take the whole State of South Carolina; you talk about fair representation and about wanting to be fair. The Representatives of the first five districts in Illinois stand here, Democratic and Republican, with an average of 40,000 voters back of them, but you have an average of less than 10,000 to a district. Where are those voters in the South? You count the negro when the census is taken; you count him for the purpose of getting representation; you count him as a voter, and we propose now to do him justice and let him vote. [Applause on the Republican side.] One of your Senators said within the last two years, "We know we suppress the negro vote, but what are you going to do about it?" Read the answer in this little bill that is pending before the House. That is what we propose to do about it. [Laughter and applause on the Republican side.] Here is an extract from a good Democratic paper, The Columbia Register, in which the editor says:

We have carried this thing too far. We are fast becoming a set of rascals, if we have not already got there.

That is the exact language, but I suppose some gentlemen will deny it, although I have quoted it from a clipping that I made from the paper myself. Your own paper admits the fact: "We are fast becoming a set of rascals, if we have not already got there." Now, I will be honest with you, gentlemen. When the gentleman from New York [Mr. COVERT] made a plea against this bill because Northern men and Northern capital had gone down South, it made no impression on me. I confess that I had a prejudice two years ago against Southern men; that was before I knew them. I said two years ago that a man who would steal a vote would steal a horse; but I have changed my mind. I know a number of gentlemen on the other side of the House that I am sure would not steal a horse, but I would not trust them with a negro vote five feet in a dark alley. [Laughter.] No, I believe I have no prejudice now. [Laughter.]

Mr. OATES. You have mentioned only one district yet.

Mr. MASON. Well, you must give me unanimous consent for time, and I will cite the whole list.

Mr. OATES. If I had the time I would yield to the gentleman for that purpose.

Mr. MASON. We have been told by several gentlemen, we were told by my friend from North Carolina [Mr. EWART] the other day, that there is no negro problem in the South. Why, Mr. Speaker, there is a problem wherever there is a human being. The gentleman from North Carolina pleads for education for the negro, and I agree with him. I agree with him that both the Republican party and the Democratic party have neglected the negro in that respect——

The SPEAKER. The time of the gentleman has expired.

Mr. MASON. I do not think I have had five minutes, Mr. Speaker.

The SPEAKER. The gentleman from Illinois and the other gentlemen who have shared the time with him have had five minutes. [Laughter.]

* * * * * * *

Mr. MASON. Mr. Speaker, I desire to reply to the statement of the gentleman from Missouri that I had misstated the record in regard to the box being stolen in the Seventh district of South Carolina. I have here the record of the evidence taken at that time, and I wish to state to the gentleman—I do not see him now in his seat—the names of the boxes that were stolen and the circumstances under which they were taken.

Mr. HEMPHILL. Print that.

Mr. MASON. It will be printed, but I would like the pleasure of stating it also. I will not take up more than five minutes.

The first box that was stolen by the disinterested Democracy of the State of South Carolina was known as Fort Motte box.

Mr. ELLIOTT. I deny that it was stolen.

Mr. MASON. I know you deny it.

Mr. ELLIOTT. And the record shows that it was not stolen.

Mr. MASON. I know you deny it. Passing by the evidence I will read the certificate of the officer as to the stealing of this box. This is the certificate of the officer of Congress, not of this Congress, but of the previous Congress. This is what he certifies to the House of Representatives.

It was a box that had never been properly reported. It disappeared in some way, and when they attempted to offer that box in evidence this happened: The notary public who was taking the evidence for the benefit of the Fiftieth Congress, and was, in fact, an officer of the House of Representatives, wrote:

> It is to be regretted that I am unable to forward with the testimony taken here the ballot-box purporting to be the "Fort Motte ballot-box, returns and ballots," offered in evidence by counsel for contestant, marked by me "Exhibit B," for the reason that after the examination had concluded I was in the act of taking charge of the box when Mr. Wanamaker, counsel for the contestee—

That is your counsel.

Mr. ELLIOTT. Yes.

Mr. MASON. The notary public proceeds:

> took forcible possession of the same and refused to surrender it to me. I demanded the custody of the box, and was informed by Mr. Wanamaker that I should not have the box, and that if I attempted to take it away there would be a disturbance. He being supported by a large number of his friends, and not wishing to precipitate a row, I made no further attempt to obtain it.
>
> JNO. H. OSTENDORFF,
> *Notary Public, South Carolina.*

Your friends stole that box.

Mr. ELLIOTT. What right had the notary public to take an election-box?

Mr. MASON. That box was stolen. If it had been a commissioner of the United States holding in possession the ballot-box of any district, even all your hirelings would not have dared to rob him of it, backed, as he would be, by the United States. [Applause on the Republican side.] He would have stopped that fraud in a South Carolina district, and with the Government of the United States behind him no coward would have dared to take the ballot-box from an officer of this House.

Mr. ELLIOTT. It was not taken from any officer of this House. It was in the hands of——

Mr. MASON. It was in the hands of the notary and taken from him by your counsel and friends. You deny the record. Your counsel refused to surrender it that it might be certified, and you took it for purposes of your own.

Mr. ELLIOTT. I say it was in the hands of an officer of the State.

[The Speaker rapped loudly for order.]

Mr. MASON. And by its aid the last Congress retained you in your seat.

Mr. ELLIOTT. Go on. You have the reputation of having helped to seat me in the last House.

Mr. MASON. You were seated by your own party.

The SPEAKER. The gentlemen from South Carolina will be in order. The Chair desires to state that by the practice of the House when a gentleman speaks out of order he does not get into the RECORD, and if that is better understood perhaps gentlemen may not speak out of order.

Mr. ELLIOTT. The gentleman from Illinois did not object to the interruption.

The SPEAKER. It is impossible to preserve order unless gentlemen observe the rules of the House.

Mr. ELLIOTT. He was talking to me, and he did not object to the interruption, and I protest against the Chair objecting for the gentleman.

Mr. HEMPHILL. Would the gentleman object to a statement?

Mr. MASON. If it does not come out of my time I will not.

The SPEAKER. It does come out of the time of the gentleman from Illinois.

Mr. MASON. Then I do object.

Here is another place where I say a ballot-box was taken. I do not read from the brief, but I read from the record in the case. They took that box—these Democratic judges—and passed it from one to another until it finally disappeared forever from the view of humanity. The box was never produced before any court. It could not be produced here, and the votes were counted by your returning boards against the negro Smalls and for you; or at least, by leaving out that box that was stolen, it gave you an additional majority of 60 or 70 votes. There are two instances.

They were talking about stealing boxes. Of course it may not be stealing when you take it by force. There may be some difference between highway robbery [here the hammer fell] and stealing them in the way they were stolen in South Carolina, but here were four districts where the boxes had been taken —— [Loud cries of "Regular order!"]

Mr. ALLEN, of Mississippi. I insist that the gentleman shall be called to order. He is proceeding after his time has expired. [Renewed cries of "Regular order!"]

Mr. MASON. Mr. Speaker, I deny that I have spoken five minutes.

The SPEAKER. The gentleman himself may not have occupied five minutes, but with the interruptions he has had five minutes.

Mr. MASON. Then I claim the time that was taken up by interruptions. I claim the right to say that here are four districts. [Cries of "Regular order!"] I claim the right to insert four districts where this was the case [renewed cries of "Regular order!"], where they have stolen the boxes [renewed cries of "Regular order!"], and I have got the names of the boxes. [Cries of "Regular order!" and applause on the Republican side.]

Again I say to you that no man has yet given any reason against the passage of this bill based upon a statement of fact that it will deprive any citizen of his right to cast a ballot.

The gentleman from Virginia said:

> Suppose it is true that we do prevent the negro from voting, would it be any better for you to allow him to vote and then purchase his vote before it was cast?

Does the gentleman mean to insinuate by his question that if they can not bulldoze they will buy? And, if so, I answer him by saying that buying a vote is better than stealing it; buying anything is better than stealing it. Buying a vote involves simply a crime against the election laws of the country. Stealing the vote adds to that crime the crime of larceny. But the gentleman from New York [Mr. COVERT] eloquently pleads against the bill. He says:

> Can any fair-minded man seriously believe that necessity exists now for changing the plan and policy that has stood the test of a century's trial?

Let me call his attention to the fact that it has not stood the test for a century, that the great body of black citizens were not citizens until the adoption of the constitutional amendments within the last quarter of a century, and it has been tested only since the dark days of reconstruction of the South. It has been weighed in the balance and found wanting. He says that the honest public sentiment of the Northern districts would be against the local enforcement of the law, and that the bill is intended only to affect the South. I say to the gentleman that if the South is the only part of the country to be affected by an honest election law, so much the worse for the South. And it is a doubtful compliment he pays the South when he says that frauds are com-

mitted there and not in the North. He says that the South alone furnishes districts where there are one hundred citizens who believe that there is fraud in their elections. But when the gentleman goes so far as to say that "it is intended to prevent, by Federal intervention, the freedom and fairness of elections in the South," I wonder if he has read the evidence in any of the contested-election cases for the past four or six years. His eloquent appeal to gentlemen on this side of the Chamber that men from the North are now living in the South could have no effect upon me. A Northern man is no less and no more a citizen of the Republic than the man of the South.

If I have ever been prejudiced against the honorable Representatives on the other side of this Chamber, and I admit that I have been, if I can judge my own heart and my own conscience that hour of prejudice is past and gone. I can see excuses for things now which I could not see before, but excuse is not justification. My colleague [Mr. COVERT] says that—

> Smoke clouds point no more from fields of carnage, but from the chimneys of factories, conducted by men and means coming from the North and South alike.

Better the fire of the forge go out and the chimneys stand against the Southern sky a monument to a past prosperity than that the citizens of the States be deprived of their civil liberties and political rights. I know it is true, as he says—and I am thankful for it—"that cattle may be heard lowing from the hillside and from the valleys more than a quarter of a century ago devastated by the tread of contending armies." What matter a thousand herds if the citizen still continues a political slave? What matters it how many cattle there are on the hills, if political cattle are covered by the roofs of their homes? It is a poor freedom that lets a man wander where he will, eat, sleep, and drink where he will, if when standing in the multitude that governs the country his lips must be silent. What is the wealth, the factories, the herds, plantation and farm, home and hamlet, to that citizen who in the hour that he should be the greatest must kneel at the feet of his political master?

Oh, my friend from North Carolina, you tell us that there is no negro problem in the South. Listen to me a moment. You are mistaken. Wherever there is a human heart and a human soul, a human brain, a human aspiration, wherever there is a man, there is a problem. In the same speech in which you tell us there is no negro problem you disclose yourself one of the most serious branches of that problem; you give a solution to it—education. I agree with you—agree with you fully. How shall we learn from the books but by using them? How shall we learn to walk but by walking? How shall we learn to read but by reading? How better can we learn to vote than by voting? The use of your arm makes it strong. The use of the power of citizenship makes a better citizen. Tie the arm to the side and it withers and dies. Destroy the power to use the citizen's right and he becomes an enemy to the law, disheartened, discouraged, and in his heart an alien to our institutions.

You upon the other side of the Chamber have appealed to us to destroy this bill. Be patient; I would appeal to you to vote for the passage of this bill. If by the terms of the bill it will disfranchise any American citizen, show me where and how, and I will vote to amend it. If by the terms of the bill the alien and stranger have a voice in the affairs of the nation, show me when, where, and how, and I will vote with you to amend it. If the bill does, as I say, give to each party representation at the ballot-box then I appeal to you to vote for it.

The hour for argument is past. Without one feeling of bitterness I charge it; I know it; the record proves it. It can not be denied. These black men who piled up the treasure for the South, whose unrequited toil stands charged against our country in the records of a just God, are deprived of their rights as citizens; you know it is true. Give them one trial and see whether or not in the exercise of that citizenship they will not grow even faster than in the past. You say they are ignorant. Yes, we made them so. Your governor of South Carolina has said, to the applause of the multitude, that—

> God Almighty had stamped upon them the impress of inferiority.

That is not true. It was not the hand of God, but the barbaric iron heel of the Anglo-Saxon, our countryman, who beat them and cursed them who for a hundred years developed this country we call a land of freedom, and gave no compensation for that labor, not one lesson of refinement, not one suggestion of progress, not one glimmer of hope for the future that lay before them. The law of compensation is as fixed and immutable as the stars. That debt must be paid.

I beg of you, as citizens of a common country, to know that it is more important that justice be done by the citizens of this country, that is to live forever, than that your party or my own should remain in power, and when my Brother COVERT invites us to view from above the sons and daughters of America basking in the sunlight of peace, let us make it a peace based upon honor, upon justice, based upon the equality of all men before the law, and it becomes a peace, not for to-day or to-morrow, but perpetual, peace lasting through all the coming ages of time.

The Original-Package Bill—Nullification Threatened in Kansas.

REMARKS
OF
HON. AMOS J. CUMMINGS,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 19, 1890,

On the bill (S. 398) to limit the effect of the regulations of commerce between the several States and with foreign countries in certain cases.

Mr. CUMMINGS said:

Mr. SPEAKER: It seems to me that the question involved in the pending discussion is, what are the rights of the States, what is the power of Congress, and do they conflict? The grant of power to Congress is very plain. It is in these words, "The Congress shall have power to regulate commerce among the several States." It is an absolute grant, and confers a paramount but it seems to me not an exclusive power.

Commerce existed before the grant. Congress was given power to regulate it; but that power is to be rationally exercised. If no regulation is required, of course Congress will not interfere. There seems to be some confusion as to what the phrase "regulate commerce" means.

Tariff laws are not enacted to regulate commerce. The purpose is to obtain revenue; but, of course, incidentally, they affect commerce. The penalties attached to them are to make them efficient. They affect commerce, but they do not regulate it.

Navigation laws and the interstate-commerce act were made directly to regulate commerce. The latter raises a question as to where the paramount power of Congress ends and the State power to make police regulations begins. If all State laws that incidentally affect commerce are to be deemed regulations and to infringe upon the power of Congress, and are for that reason unconstitutional, then State statutes will require a tremendous purging. The confusion is almost interminable and the difficulty almost insurmountable. It seems to me that if the law of Iowa, which has raised this question and caused the litigation, was a police regulation, then the Supreme Court has made a mistake.

I am not a lawyer and have not the presumption to enter upon a criticism of that tribunal. But of one thing I am quite certain: That as a department of the Government it oversteps the bounds of propriety when it suggests to Congress that it had better give permission to the States to get over the difficulty.

In the first place, Congress has no right to return to the States any power that has been constitutionally granted to it. If it can return one power, why can it not return all? And even if it could, it is certainly very presumptuous in the court to suggest to Congress that it has been delinquent in not surrendering some of its power. While the different departments of the Government are contrived to act in harmony, it is the spirit of the Constitution that they should each act entirely independently of the other's dictation. And for one to suggest to another that it has been remiss is assuredly impertinent. Congress was established before the Supreme Court, and has by law, to a great extent, fashioned that court and given it its jurisdiction. It is an unseemly spectacle, when the court finds itself driven into an almost inexplicable difficulty, to turn around and ask Congress to help it out.

I am opposed to prohibition; but if Iowa wants it and can get it, let her have it. If she has not the power to get it, I for one am not going to help patch the Constitution with a law to confer it upon her. There is a plain way to amend the Constitution, but no constitutional way for Congress to patch it. It should be pre-eminent with this House. If we undertake to amend what we are pleased to consider its defects, Heaven only knows into what vagaries we may run. If the Supreme Court stands in the way of the desires of Iowa, I can not help it. I am inhibited by the Constitution from even considering how to remove that august difficulty. I shall not vote for this bill.

Nevertheless, I am pleased to learn that the Prohibitionists have at last found out that there are or ought to be State rights. But I am sorry to be advised that they are on the eve of rebellion to enforce them. In illustration of this I subjoin the following letter from a well known Republican lawyer:

TOPEKA, KANS., *July* 14, 1890.

DEAR SIR: I take it for granted from a remark you made in the House a few days ago that you will oppose the bill to amend the interstate laws, known as the Wilson bill, or any substitute therefor. It will no doubt be argued by the Kansas delegation in Congress that Kansas is solid for this bill. That is not a fact. It is only the Prohibitionists who see that their pet doctrine is undermined by the decision of the Supreme Court of the United States that are asking this extraordinary legislation. Since that decision nullification has been as common an utterance among the Prohibitionists of Kansas as it ever was in South Carolina. The Supreme Court of the United States has been reviled in the most outrageous manner. They speak of the "original-package" houses as Supreme Court saloons.

Senator INGALLS is quoted in a letter to a Prohibitionist in Kansas as saying that the Supreme Court decision is an outrage. Lieutenant-Governor A. J. Felt in a recent speech used this language:

"While I respect the mandates of the Supreme Court of the United States, I

consider that I owe my first allegiance to the constitution and laws of my State."

Such utterances as these have been common among the Prohibitionists—the people who are asking this legislation.

Every one knows, of course, that the decision of the United States court affects no class of liquor laws except prohibition, either as declared by statute or by a vote of the people in local-option States. It is argued that it affects licensed States as well, but up to the present time no "original-package" house has been started in a single place where prohibition does not exist. The question is, what power has Congress to enact this proposed legislation? The decision of the Supreme Court was that the State legislation is unconstitutional. How can Congress make it constitutional?

Congress can not pass any law investing the States with any power which they do not possess under the Constitution. If the State has not the power under the Constitution to do an act, no act of Congress can supply the want of power. Congress can not delegate its powers. If it can delegate and abdicate one of its powers given it by the Constitution, why not all? If that bill or any substitute becomes a law it will simply be an expedient of doubtful constitutionality passed at the dictation of Prohibitionists.

To show you the sentiment that exists here: At a meeting in this city on Saturday evening, July 13, the following among other resolutions was unanimously passed by an audience of 5,000 people:

"Believing that any law that Congress may enact to allow the States to regulate interstate commerce, thereby surrendering powers expressly conferred upon Congress by the Constitution, would be unconstitutional, null, and void, and knowing that such legislation is demanded by the advocates of prohibition only, and to bolster up prohibitory laws only, we enter our solemn and united protest against the Congress of the United States enacting the so-called 'Wilson bill' or any substitute therefor."

The sentiments embraced in this resolution are the ones that prevail in Kansas to-day outside of the adherents of prohibition. If Congress will allow matters to remain as they are, it is only a question of a few months when prohibition will be obliterated entirely. Why not take this method to get rid of this incubus in politics? It is the quick and easy road to tear down this disturbing element.

It may surprise you that nullification has taken so deep a hold on Kansas soil, but yet it is true. The fellows here that have been spelling nation with a big N say that their first allegiance is to prohibition, and these are the fellows that are begging legislation at your hands.

I can not believe that Congress will lend its aid to such a bill, one which lawyers do not believe can be made constitutional, that will open up a great field to litigation, and will take years for the questions to be finally decided by the highest tribunals. I trust you will use all of your endeavors against the enactment of this proposed law. Should you desire any further facts about the legislation of Kansas under the prohibitory constitution, I should be glad to furnish them.

This doctrine has brought on a revolt in the ranks of the Republican party in Kansas. Look in November for a political cyclone such as no other State has ever experienced. If you should have seven Democrats as your colleagues from Kansas in the next Congress, do not be alarmed. I am a Republican and am simply giving you a few facts as they exist here to-day.

Very truly yours,

A. L. ALLEN.

Hon. AMOS J. CUMMINGS, *Washington, D. C.*

It has been said that the decision of the Supreme Court in the Dred Scott case led to the great rebellion of 1861. Now we seem to be threatened with a rebellion of the Prohibitionists, because of this original-package decision. I can not forget that rum and negroes were once the twin commercial articles of the progenitors of both the Abolitionists and the Prohibitionists. In view of what has happened and what is threatened, it would perhaps be well for the Supreme Court hereafter to consider the consequences of its rulings before they are made.

Original-Package Bill.

REMARKS
OF
HON. MARK H. DUNNELL,
OF MINNESOTA,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 19, 1890.

The House having under consideration the bill (S. 398) to limit the effect of the regulations of commerce between the several States and with foreign countries in certain cases—

Mr. DUNNELL said:

Mr. SPEAKER: It is not my purpose to occupy even all of the ten minutes allowed me. It has always been very easy and natural for me to hold all courts in very high esteem, and certainly the Supreme Court of the United States is and has been justly entitled to the esteem which has been given to it from the very beginning of the Government. There are men upon the bench of that court who properly inspire the confidence of the entire country.

Some of the judges who joined in the decision which calls for the pending legislation or which is the occasion for it, from their long service, their eminent learning, and universally admitted probity, have a very strong hold upon the people of the whole country, and especially the people of the Northwest. It is not necessary in the discussion of this question to reflect upon those members of the Supreme Court who pronounced or joined in the decision now involved.

We have no right to challenge the integrity of any one of the judges who thus acted, nor indeed should that decision lower the court in our estimation. The men composing that tribunal are gentlemen of high character and learning. Congress should not seek to lower it in the estimation of the people of the United States. The court may sometimes pronounce a decision which for the time will be very severely condemned. It did so when it decided that spirituous liquors could, under a proper construction of the interstate-commerce law, be taken into a State where the law of that State prohibited their sale and be sold there in their original packages.

This decision meets with great opposition on the part of the American people. Still, Mr. Speaker, the court itself has opened up a way whereby we may avert the evils which flow from that decision. We may proceed straight forward and avert those evils without attempting to detract from the integrity, purity, and high standing of the Supreme Court of the United States.

I am very ready to vote for the House bill, and indeed feel constrained to do so, because it would cover the articles of commerce that may be put in peril by this decision of the Supreme Court of the United States, unless Congress takes the same action in regard to those articles of commerce that the Senate bill proposes to take in regard to spirituous liquors.

Oleomargarine, compound lard, and illuminating oils are among the articles to be protected by our legislation at this time against the evil effects of the original-package decision. Hence the importance of the House substitute for the Senate bill.

In the State of Minnesota we have a high-license law. We have no prohibitory law there; and yet this decision affects us as much as it does the States of Maine, Kansas, or South Dakota, which have prohibitory laws. Public sentiment in Minnesota is very well crystallized in support of high license. It has made a large reduction in the number of places where intoxicating liquors can be bought. It has reduced the number by one-half.

I have not been an advocate of prohibition in the State which I have the honor in part to represent, and I do not think the time has come in that State when prohibition would be a success. Perhaps we may, at some time, be able to have prohibition there; but I have not advocated the attempt up to the present time. Prohibition is not always a success, and yet very largely it may be. I always come to the rescue of prohibition as a principle. We are told that it has not been a success in my native State, Maine. I know it has been a very great success in the rural portions of that State.

You may travel 150 miles in that State without being able to get a single glass of whisky—rum, as it is called in Maine. It is all rum there.

In some little towns prior to prohibition, there would be fifteen or twenty places where it was sold, and it would be hauled to those places by four-ox teams. You can not get any of it there now. It can be bought in Portland and some other places in Maine, I have no doubt. Yet there has been a mighty advance in that State in that respect.

Minnesota is different from many other States in the Union. Its population is made up of a number of different nationalities. It may be well for us, in all the States, when the time shall come, to have prohibition; but that is not the question here. The Supreme Court has made a decision which puts in peril not simply prohibition, but also high license. It affects the State of Minnesota as much as the State of Iowa; and therefore I shall be very ready to vote for the Senate bill. I hope, however, the House bill may first come up for action, for I shall vote for the House amendment; and, if that cannot be carried, then I shall cheerfully vote for the Senate bill.

Now, Mr. Speaker, it is not necessary for me to say anything more. It is of no use to talk about the evils of intemperate drinking. It is not really legitimate as a matter of debate. The court itself opens up the way for the remedy. The demand is upon Congress to enter and legislate. We are here to represent the wishes of the people of the country in the passage of a bill on this subject as much as in anything that will come before us. There would come up to-day a louder demand for this legislation than for anything else. The American people would not be so well united on anything else as they would upon the passage of this bill. The emergency has come; the exigency has been thrown upon us, and I trust Congress will meet it. This is not a party question; it ought not to be used in that way. I do not like to hear it spoken of in that way.

The proposed legislation is not a Republican measure; it is not a Democratic measure. This is a national question, which has come upon us by the action of the Supreme Court—a co-ordinate branch of the Government—and I do not think it necessary to speak derisively of that court or to imply in any way that there were operating in that decision motives or influences other than those that came from deep convictions of the true interpretation of the Constitution of the United States. [Applause.]

Before closing I will call the attention of the House to the Senate bill and the House substitute.

The bill (S. 398) to limit the effect of the regulations of commerce between the several States and with foreign countries in certain cases is as follows:

Be it enacted, etc., That all fermented, distilled, or other intoxicating liquors or liquids transported into any State or Territory, or remaining therein for use, consumption, sale, or storage therein, shall, upon arrival in such State or Territory, be subject to the operation and effect of the laws of such State or Territory, enacted in the exercise of its police powers, to the same extent and in the same manner as though such liquids or liquors had been produced in said State or

Territory, and shall not be exempt therefrom by reason of being introduced therein in original packages or otherwise.

The amendment proposed by the Committee on the Judiciary of the House is as follows:

Strike out all after the enacting clause and insert the following:

"That whenever any article of commerce is imported into any State from any other State, Territory, or foreign nation, and there held or offered for sale, the same shall then be subject to the laws of such State: *Provided*, That no discrimination shall be made by any State in favor of its citizens against those of other States or Territories in respect to the sale of any article of commerce, nor in favor of its own products against those of like character produced in other States or Territories. Nor shall the transportation of commerce through any State be obstructed except in the necessary enforcement of the health laws of such State."

It is proper to state that there is no State in the Union where laws to restrict and to some extent control the sale of intoxicating liquors have not been passed. While the Senate bill fully meets the case in regard to liquors, yet the House bill does that and at the same time protects the dairy, farming, and other industrial interests of the people of the country.

Original-Package Bill.

SPEECH

OF

HON. JOHN H. ROGERS,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 19, 1890.

The House having under consideration the bill (S. 398) to limit the effect of the regulations of commerce between the several States and with foreign countries in certain cases—

Mr. ROGERS said:

Mr. SPEAKER: I had intended to prepare, with care, something of an argument upon the propositions now presented to the House. I could not add to or elucidate—I do not know that I could elaborate to any sort of advantage—the observations of my distinguished colleague upon the committee [Mr. CULBERSON, of Texas] on yesterday, and therefore I shall not undertake to cover the ground discussed by him; but I subscribe to every remark he made, as I understood him.

It is a matter of profound regret that I am unable to support either the Senate bill or the House substitute. I could get the sanction of my conscience much more nearly to the support of the amendment of the gentleman from Illinois [Mr. ADAMS] as being within the purview of constitutional power. The Senate bill came to us with the almost unanimous support of that body. I think I can safely say that the elaborate and learned debate in that body did not develop the fact that a single Senator believed the decision of the court in the Iowa case was correct or that Congress had the power to pass that bill. They simply yielded their convictions to the exigency of the situation.

The bill came here and was sent to the Judiciary Committee, and there it failed to secure favor, and a substitute was reported. I think I can say that neither the Supreme Court decision, the Senate bill, nor the House substitute commands the sanction of one-third of the members of that committee. That committee yielded also to the exigency of the situation.

And here we are, considering the House substitute, under a special order, as usual, that deprives us of the right of amendment and withholds the power to mature any measure of relief commanding the respect of our judgment.

I can not vote for the Senate bill for the reasons assigned by the gentleman from Texas; and I desire to supplement those reasons by a single line from the most distinguished jurist this country ever produced—Chief-Justice Marshall—in the case of Gibbons against Ogden. Said he:

Although Congress can not enable the State to legislate, Congress may adopt the provisions of a State on any subject.

Unfortunately the Senate bill does not adopt the "provisions" of any State of this Union, but it seeks to confer power on the several States to enforce their own laws; and this is done at the suggestion of the very court which held those laws unconstitutional. If they are unconstitutional, can Congress make them constitutional except by adopting them as the laws of the United States? Judge Marshall said not.

The Senate bill reads as follows:

That all fermented, distilled, or other intoxicating liquors, or liquids transported into any State or Territory, or remaining therein for use, consumption, sale, or storage therein, shall, upon arrival in such State or Territory, be subject to the operation and effect of the laws of such State or Territory.

What courts enforce State laws? If this bill becomes a law, what courts are to enforce the laws of the States attempted to be made valid by it—the State courts or the United States courts? The answer to this question, I submit, is a true test as to whether this bill adopts the laws of the State as the laws of the United States or confers power on the States to legislate, or, what is the same thing, makes valid State laws now held to be invalid so far as they affect commerce among the States. There is but one answer to this question. The State courts will enforce these laws, for that is the very thing the bill is intended to accomplish.

It is to confer power on the States which the Supreme Court of the United States has denied that they now possess. Moreover, the language of the bill shows this to be true. Liquor is to be, by its very terms, "subject to the operation and effect of the laws of such State," etc. Again, if the bill confers no power on the States, why pass it? If they do acquire power by it, is not the delegation of power to a State denied by Judge Marshall?

It will not do to say that power is acquired by the bill, but not power to legislate, for the bill by its very terms applies to the State laws now held invalid and seeks to give them force and effect. But if Congress has the power to make valid State laws now invalid, so that the States may enforce them, surely it is logically true that it can authorize the States to pass valid laws on the same subject. In other words, it can delegate to the States power to legislate, which is the very thing, as we have seen that the Supreme Court of the United States, by Judge Marshall, held could not be done.

In the case Judge Marshall was discussing the State laws adopted by Congress were valid laws when passed. Congress adopted them, having the power to legislate on the same subject. In that case the jurisdiction was in the Federal courts, *ex parte* McNeil, 13 Wall., 243; but in the case at bar the State laws as they affect interstate commerce have been held to be invalid because the States were without power to pass them.

In this Senate bill Congress seeks to make them valid without adopting them as the laws of the United States. It attempts to give life to unconstitutional State statutes and to delegate to the States power to enforce them, for to give them life without conferring power to enforce them would be a nugatory and a foolish thing.

Any action by Congress on any subject implies a necessity to act and power to do it. But the power over interstate commerce is exclusive in Congress. If exclusive, Congress can not abdicate that power or delegate it to the States, from which it acquired all its powers. It is clear, undeniable, that Congress by the Senate bill does not attempt to enact any laws of its own, regulating interstate commerce over the liquor tariff.

It simply tries to enable the States to do what it is claimed the Constitution vested in Congress the power to do, namely, regulate interstate commerce. One of two things, I submit, is true. If Congress acquired the power by the Constitution to regulate interstate commerce in liquors, it must exercise it. It can not delegate it. If it did not acquire it, it was reserved to the States, and Congress can not delegate it, for the simple reason it did not have it to delegate. My own conclusion is the States reserved this power as a part of their police power, and that Congress never had it, and that the Senate bill is unauthorized by the Constitution, and its passage will be a vain and a nugatory thing.

On the other hand, if it be said that the effect of the act is to adopt the laws of the several States, and therefore that it is within the rule above laid down, then it is manifest that the laws of the States become the laws of Congress, and the Federal courts would at once be called in to enforce the State regulations as so many Federal laws in so far as intoxicating liquors are concerned.

Are we ready for this? I speak for myself; I am not.

All that I have said of the Senate bill applies with equal force to the House substitute.

Indeed, the latter is the more objectionable by far. It is a remedy far worse than the disease, independent of the constitutional question.

Let us examine it.

As stated on yesterday by the gentleman from Texas [Mr. CULBERSON], the overpowering and controlling reason for the adoption of the Federal Constitution was to get rid of retaliatory legislation by the several States of the Confederation. Two things were found by bitter experience essential to the life of Federal sovereignty, and those two things the Confederation did not possess. One was the power to tax and the other was the requirement that in a Government like ours the different constituent sovereignties of the Union—the States—should not be allowed to retaliate against each other in their commercial transactions; and the contemporaneous history, as disclosed in The Federalist, demonstrates this, and Judge Story, in his work upon Constitutional Law, lays these down as the controlling considerations which led to the adoption of the Federal Constitution.

The Supreme Court has repeated this over and over again:

It can not be too strongly insisted upon—

Said this court in Wabash, etc., Railroad Company *vs.* Illinois (118 U. S., 557, 572)—

that the right of continuous transportation from one end of the country to the other is essential in modern times to that freedom of commerce from the restraints which the States might choose to impose upon it, that the commerce clause was intended to secure.

In other words, lest the States of this Union might legislate against each other in their commercial transactions, in the formation of the Union under the Constitution the commerce power was delegated to

the United States, so far as the States were concerned, in order that the United States might prohibit non-intercourse laws between the States. The decision proceeds:

This clause, giving to Congress the power to regulate commerce among the States and with foreign nations, as this court has said before, was among the most important of the subjects which prompted the formation of the Constitution. (Cook *vs.* Pennsylvania, 97 U. S., 566, 574; Brown *vs.* Maryland, 12 Wheaton, 419, 448.) And it would be a very feeble and almost useless provision, but poorly adapted to secure the entire freedom of commerce among the States, which was deemed essential to a more perfect union by the framers of the Constitution, if, at every stage of the transportation of goods and chattels through the country, the State within whose limits a part of the transportation must be done could impose regulations concerning the price, compensation, or taxation, or any other restrictive regulation interfering with and seriously embarrassing this commerce.

Commerce with foreign countries and among the States, strictly considered, consists in intercourse and traffic, including in these terms navigation and the transportation and transit of persons and property, as well as the purchase, sale, and exchange of commodities.

For the regulation of commerce as thus defined, there can be only one system of rules, applicable alike to the whole country; and the authority which can act for the whole country can alone adopt such a system. Action upon it by separate States is not, therefore, permissible.

In this connection I quote from the dissenting opinion of Justice Harlan in the same case, since he states well the position of Judge Marshall in Gibbons *vs.* Ogden, as to where the States got the right of intercourse with each other, as well as to what is meant by the word "regulate."

In Gibbons *vs.* Ogden it was said by counsel that the Constitution does not confer the right of intercourse between State and State, and that such right has its source in those laws whose authority is acknowledged by civilized man throughout the world. Chief-Justice Marshall said: "This is true. The Constitution found it an existing right and gave to Congress the power to regulate it." (9 Wheat., 211.) In the same case he said that this power is "the power to regulate; that is, to prescribe the rule by which commerce is to be governed." (Page 196.) It may be said, generally, that free commercial intercourse exists among the several States by force of the Constitution.

The court, in the same case, while discussing the reasons why certain acts of Congress were passed, say:

The power to regulate commerce among the several States was vested in Congress in order to secure equality and freedom in commercial intercourse against discriminating State legislation.

I remark at this point, if the States intended by the commerce clause of the Constitution to grant the power to Congress to prohibit the products of one State from going into another, they also conferred the power under the decision just read to prevent the citizens of one State from going into another, because commerce includes persons as well as goods and merchandise in transportation.

Finally, mark this language in the same opinion:

In view of the commercial anarchy and confusion that would result from the diverse exertions of power by the several States of the Union, it can not be supposed that the Constitution or Congress have intended to limit the freedom of commercial intercourse among the people of the several States.

Now let us look at the House substitute for the Senate bill:

That whenever any article of commerce is imported into any State from any other State, Territory, or foreign nation and there held or offered for sale, the same shall then be subject to the laws of such State: *Provided*, That no discrimination shall be made by any State in favor of its citizens against those of other States or Territories in respect to the sale of any article of commerce, nor in favor of its own products against those of like character produced in other States or Territories. Nor shall the transportation of commerce through any State be obstructed except in the necessary enforcement of the health laws of such State.

Here, then, is not only a delegation of power to the States, which the court has said Congress could not do, but it is a delegation of power to do the very thing which the Constitution was adopted to prevent, and this power is extended to all articles of commerce. It is a return to the old Confederation and an abandonment of the Constitution.

It is not confined to the evils that we are seeking to remedy. By its terms it says that whenever any article of commerce is imported into any State from any other State, Territory, or foreign nation and held or offered for sale therein the same shall then be subject to the laws of such State. In the States of Iowa and Kansas they have, theoretically, absolute prohibition. If these prohibition States, including Maine and others, have the power to enforce absolute prohibition as to liquors, and if this power is conferred as to all other articles of commerce, as in this bill provided, why may not the State of Maine, for example, have actual prohibition, if she choose, upon cotton-seed oil?

Why may not the State of Kansas, striking at that other twin evil with liquor, have actual prohibition upon the use of tobacco? Why may not Illinois, or Indiana, or Ohio, or Iowa, or any hog-producing State of this Union turn the sword of its legislative power against the products of the State in which I live. Why may not the State of Arkansas and the other cotton-producing States of this Union, which are interested in the growth and development of the cotton-seed-oil industry, turn the sword of their legislative power against the hog-producing States?

Already New York and Pennsylvania have placed the ban of prohibition on oleomargarine. Minnesota placed it on all beef imported which was not inspected in Minnesota by its own officers while on foot. If this power is conferred on the States, where shall such legislation end?

And when we have begun this retaliatory system of legislation, in these times when competition in various lines is far more sharp than in years gone by or in times contemporaneous with the adoption of the Constitution, when we have thrown our whole country into anarchy by this retaliatory legislation, then we shall find ourselves driven back to where the Confederation was driven, to the landmarks of the Constitution upon which is erected the whole commercial fabric of this great nation: freedom of commercial intercourse among the States. I can not give my assent to the adoption of the House substitute for these reasons in brief: the Senate bill is an entering wedge only; the House bill overturns our whole commercial fabric.

Mr. Speaker, I do not know but that it may be said—and yet upon that subject I entertain grave doubt—that by direct Congressional legislation we may prescribe the packages and the quantities they are to contain in which intoxicating liquors are to be shipped from one State to another State of this Union. The adoption of an amendment in that direction, if inside of the Constitution, when supplemented by other State legislation not yet enacted perhaps by any State, will at least minimize the evils under which the country is now suffering as the result of this decision of the Supreme Court. I had endeavored to formulate an amendment to the measure now presented so as to express my views upon this subject, but, as I have said, by the terms of the order under which we are operating I am denied that right.

Mr. Speaker, having said this much, I propose now, for the sake of presenting to the country my own views upon this opinion of the Supreme Court, to run briefly over what I conceive to be the errors into which the courts have fallen in the interpretation of the commerce clause of the Constitution, resulting in the perplexing problem we are now considering.

The first two cases seeking to interpret the commerce clause of the Constitution are Gibbons *vs.* Ogden and Brown *vs.* The State of Maryland, both decided by Chief-Justice Marshall. Those two decisions did not apply to intoxicating liquor. They applied to articles of commerce which are not commodities falling within the police powers of the States as affecting the life, morals, or health of the people. I believe that the error in the construction of the Constitution into which the court has fallen proceeds from an effort to apply the principle laid down by Judge Marshall, namely, "that the right to import carries with it the right to sell," to a case that was never in his mind when he delivered those opinions. This view is supported by the License Cases in 5 Howard, and never overruled until the Iowa case was decided.

It will be remembered that the Supreme Court of the United States, in the Mugler case, from Kansas, decided in substance that the Legislature of the State has absolute power and control over the sale and manufacture of liquors within the limits of the State. The State may prohibit either absolutely. Here is the plenary recognition of the fact that this article, intoxicating spirits *per se*, falls within the police power of the State, as affecting the peace, morals, and health of the citizens. We therefore find, when we consider the Mugler case in conjunction with the cases decided by Judge Marshall, that we have one class of articles falling exclusively within the commerce clause of the Constitution, as dry goods, and another class of articles falling not only under the commerce clause of the Constitution, but likewise under the police power of the States, as affecting the health, life, or morals of the community. What is this police power?

In Stone *vs.* Mississippi, 101 United States Reports, 818, the Supreme Court said:

Many attempts have been made in this country and elsewhere to define the police power, but never with entire success. It is always easier to determine whether a particular case comes within the general scope of the power than to give an abstract definition of the power itself, which will be in all respects accurate. No one denies, however, that it extends to all matters affecting the public health or the public morals.

Judge Story lays down the broad principle that when you come to construe the Constitution it is to be construed as any other instrument, so that every provision of it shall stand. One provision of this instrument is to be found in the tenth amendment, wherein it is declared that—

The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

The court itself is estopped, as I have shown, from saying that this article of intoxicating liquors is not exclusively within the police power of a State as between its own citizens; and I hold that the Supreme Court of the United States, in applying the principle declared by Judge Marshall in Gibbons *vs.* Ogden and Brown *vs.* The State of Maryland, should have so construed the commerce clause of the Constitution as to uphold the reserved powers of the States.

I hold, Mr. Speaker, that it is as much the duty of the supreme judicial tribunal and of the Congress of the United States to avoid encroachment upon the reserved powers of the State as it is to support and defend the delegated powers found in the Constitution; and if the Supreme Court had excepted from the principle laid down by Chief-Justice Marshall intoxicating liquors, because they fell within the police power of the State, and hence reserved to the State, as essential to the health and morals of its people, a result would have been reached corresponding with the practice from the foundation of the Government and in accordance with the contemporaneous construction of the Constitution, as shown by the action of all the people and the courts.

Mr. Speaker, it may be said that the construction for which I contend and which reaches the same result as is reached in the license cases, though perhaps by a different course of reasoning, would prevent the importer of goods into this country after having paid the import tax from selling them at all in some States of the Union. The answer to that objection, Mr. Speaker, is that if intoxicating drink is a commodity falling within the police powers of a State as affecting health and morals, the Federal Government can neither take from nor add to it by virtue of any legislative powers vested in it. And if the importer of intoxicating drinks from abroad understands that, notwithstanding the Federal Government, which has control over all foreign imports, has exacted from him a tariff or a tax for the privilege of introducing his commodities, yet, when introduced, that commodity must find its market subject to the laws of the States of this Union, no wrong can be done him, for he imports with a knowledge of that fact and is therefore neither deceived nor wronged.

Mr. Speaker, there is one other point which I desire to discuss. I listened, as the debate ran on in the Senate, to the ablest constitutional lawyers of that body when they discussed this question. I remember distinctly that one Senator inquired of another then occupying the floor whether the Legislatures of the several States or the Congress had the power to determine whether or not an article falls within the police power of a State; and the Senator propounding that inquiry seemed to think (for he put the interrogatory in a triumphant manner) that the very statement of the proposition was an answer in favor of the Federal Congress.

I deny either branch of the proposition. I say that the States of this Union in the exercise of their reserved powers have authority to legislate with reference to police regulations. I say the Federal Government within the scope of its delegated power has the right to legislate upon the subject of what falls within the commerce clause of the Constitution; but I say that when the question arises whether either the one or the other has transcended its power, it becomes a question of judicial inquiry and oftentimes one of fact.

I know that in the recent oleomargarine case in Pennsylvania, where the Legislature of that great State had passed an act prohibiting the sale or manufacture of oleomargarine, either then in existence or afterwards to be imported or manufactured within the State, the supreme judicial tribunal of Pennsylvania upheld the constitutionality of that act; and it has been subsequently affirmed by the Supreme Court of the United States.

Mr. STRUBLE. On what theory was it affirmed by the Supreme Court of the United States?

Mr. ROGERS. On the theory that the Legislature of Pennsylvania had the sole power to determine that question. The court not only held that the power was in the Legislature of the State, but they excluded testimony tending to show that the oleomargarine involved was itself in existence and the property of one of its citizens when the law itself was enacted; and, moreover, they excluded testimony tending to show that the particular oleomargarine was in itself a healthful food product, composed of heathful ingredients.

Mr. STRUBLE. Then, may I inquire, did the court adopt the theory that the oleomargarine was unhealthful, and hence unmerchantable?

Mr. ROGERS. Not at all. They simply followed the case from Kansas, holding that the determination of the question as to what was a subject for the exercise of the police power among the citizens of the State was a matter confided to the Legislature of the State, so as to preclude judicial inquiry or an investigation by the court. I say that decision was as great an error as the decision which has been made with reference to this case from the State of Iowa, for it should have been remembered that when the authorities of the State undertook to confiscate this property in existence and belonging to a citizen of the State, lawfully in existence and lawfully belonging to him, it was a confiscation of property without compensation or due process of law.

Mr. MILLIKEN. I trust the gentleman will allow me one question. I have listened with much edification to his argument. He seems to deplore the decision of the Supreme Court, but he declares he will not sustain any of these bills. What remedy has the gentleman to offer for this state of things? When your house tumbles down you want to get something to shelter you.

Mr. ROGERS. Mr. Speaker, if my friend from Maine had heard the earlier remarks I have made upon this subject——

Mr. MILLIKEN (interrupting). That is a practical question.

Mr. ROGERS (continuing). Or if he had listened to the able, yes, the powerful, argument of the gentleman from Texas [Mr. CULBERSON] on yesterday, in which, to use an expression of one of my colleagues, "he reversed the Supreme Court," he would not have found it necessary to ask that question. Sir, if we are to have a remedy, let us have a remedy such as that pointed out by the Constitution. If the Constitution, as construed by the Supreme Court, is not the will of the people of the United States, let us amend, but not mangle, the Constitution. That is my answer to the gentleman from Maine.

Mr. MILLIKEN. Yes; but what is the remedy?

Mr. ROGERS. Amend the Constitution.

Mr. Speaker, in the discussion of this question I do not want to be misunderstood. I have the honor to represent a portion of a State which stands abreast with the times in intelligent thought and successful action upon the question of the liquor traffic. I represent in part a State upon whose statute-books is to be found inscribed a law still yet in advance of public thought, so far as I know, in any of the other States of this Union.

We have a statute to this effect, that no person either in the State or out of the State shall carry within its borders that class of pistols not used in warfare, either offensive or defensive, or shall keep them there for the purpose of sale, barter, gift, or exchange. And this provision, as I now recollect it, speaking solely from memory, extends also to cartridges manufactured for that particular class of weapons.

But the law goes still a step further. To make secure to the people that provision of the Federal Constitution which guaranties to every citizen the right to bear arms it provides when he carries a pistol falling within that class known as army weapons he shall carry it exposed to view. So that, by our law, we exclude from our markets in that State the traffic in what are known as concealed weapons. It is due to truth to say, doubtless, that the enforcement of that act is, perhaps, like the enforcement of prohibition in Maine, not perfect. But such is the law. And, if we have reached that stage, how soon will some other State build a Chinese wall around its limits against that class of manufactured articles which emanate from pious New England?

I allude to this, not only because it is an historical fact, but I use it in illustration here for the double purpose of showing to what extent this amendment of the House Judiciary Committee will go with reference to the manufactured articles included in the term "commerce" in this country. How much time, Mr. Speaker, have I remaining?

The SPEAKER *pro tempore* (Mr. ALLEN, of Michigan). The gentleman has twenty-four minutes.

Mr. ROGERS. I yield ten minutes to the gentleman from Iowa [Mr. HAYES].

Original-Package Bill.

SPEECH

OF

HON. ISAAC S. STRUBLE,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 19, 1890.

The House having under consideration the bill (S. 398) to limit the effect of the regulations of commerce between the several States and with foreign countries in certain cases—

Mr. STRUBLE said:

Mr. SPEAKER: At this stage of the discussion of the measures now before the House I appreciate that it is hardly possible to say anything new in favor of or against either. Nevertheless, as a member of this body and as one who introduced a bill early in the present session bearing on the subject of the transportation of intoxicating liquors into a State or Territory contrary to the laws thereof, I desire to make a few observations on the pending bill and the substitutes proposed therefor.

There can be no doubt that the decision of the Supreme Court to which reference has been so often made in this discussion, and which is now so aptly designated as the "original-package case," is not only far-reaching in its scope, but most serious and alarming in its consequences. And, sir, while, if the decision simply involved the question or principle of prohibition, I, as a prohibitionist, would feel called upon to exercise myself in efforts to secure a remedy for the evils now flowing from the decision, when I reflect that on the consensus of legal and judicial opinion a most serious blow has been struck, not at prohibition alone, but at high license, high license and local option, and, in short, every possible form of regulation or repression of the liquor traffic; when I realize that this adjudication absolutely takes from the States all power to deal with this traffic and paralyzes the strong arm of State power in respect of this monster vice, I am aroused as never before, and feel that to the utmost of my ability I am called upon to assist in bringing about, through national legislation, a way of escape to all these States and Territories from the direful consequences of this surprising, and I may say astounding, judicial deliverance by our highest court, that body of men who perhaps compose the most honored and august judicial tribunal in the civilized world. I have denominated this decision as surprising and astounding, and, sir, in my opinion this language is not extreme, nor does it do injustice to the distinguished jurists composing our Supreme Court.

It is not my purpose to utter one word in this debate that can be reasonably construed as disparaging or disrespectful of the great and final court of the United States. On the contrary, I hold it to be the plain duty of every loyal citizen not only to entertain on his part an abiding respect for the tribunal, but to acquiesce cordially in such de-

cisions as it may render while the same may stand unreversed, but that each of us who may have occasion to refer to or discuss in public or private the rulings or decisions of that body should, as good citizens, advocate on the part of others that deference and respect due the men and the tribunal whose province and duty it is to consider and determine the supremest questions and interests arising under the Federal Constitution and statutes not only, but such other and kindred controversies arising under the various constitutions and laws of all the States and Territories as, under the Federal laws, may be carried from the State or Territorial courts to this tribunal of highest authority and wisdom.

I do not mean by what I have just said that every citizen should meekly and without thought of opposition bow to every deliverance this court may make. Not by any means. But that, whatever our individual opinions differing with those of the court, we should never lose sight of the fact that the Constitution of the land has wisely ordained this body and defined its powers and duties, and that, while we may, as in this case many of us do, differ with the court, our whole bearing and treatment of the court and the decision should be of a character to challenge the respect of mankind.

Now, why is this decision astounding and surprising? First, because by another decision of this same court (the license cases, 5 How., 504, etc.), and quoted at length by Chief-Justice Fuller, a decision rendered forty-three years ago by another distinguished Chief-Justice (Taney), supported by a united court, in separate opinions, and differing somewhat as to grounds, instead of a divided one, as in this instance, it was held that liquors shipped from one State into another and being in the original package could not be sold there in violation of the laws of the latter State; second, because of the well known and recognized authority existing with every State to administer its police power unhindered in the least by Federal interference or domination. To make these reasons more plain and effective, let me call attention to the case of Pierce *et al. vs.* The State of New Hampshire (one of the three license cases) more fully, and thereafter make further enlargement on the principle known as the police power of the State.

A barrel of gin was purchased in Boston by a dealer and shipped to Portsmouth, N. H., coastwise, and there was offered for sale without payment of the license required to be paid by a vendor of such an article. The New Hampshire statute was as follows:

SECTION 1. *Be it enacted by the senate and house of representatives in general court convened*, That if any person shall, without license from the selectmen of the town or place where such person resides, sell any wine, rum, gin, brandy, or other spirits, in any quantity, or shall sell any mixed liquors part of which are spirituous, such person so offending, for each and every such offense, on conviction thereof upon an indictment in the county wherein the offense may be committed, shall forfeit and pay a sum not exceeding $50 nor less than $25 for use of such county.

Section 2 simply repeals section 3 of an act passed July 7, 1827.

I can not do better than to quote at this time the language of Chief-Justice Taney:

Upon the whole, therefore, the law of New Hampshire is in my judgment a valid one. For, although the gin was an import from another State and Congress have clearly the power to regulate such importations, under grant of power to regulate commerce among the several States, yet, as Congress has made no regulation on the subject, the traffic in the article may be lawfully regulated by the State as soon as it is landed in its territory, and a tax imposed upon it, or a license required, or the sale altogether prohibited, according to the policy which the State may suppose to be its interest or duty to pursue.

It is fair to say that the principal ground on which a number of the concurring justices rested their judgment is the right of a State in the exercise of its police power to regulate and control its own domestic affairs, and not on the ground above stated by the Chief-Justice. When it is remembered that this decision has all these years stood as the plain doctrine of the highest court of the land, and that lawyers, courts, and people generally, in so far as the latter may have investigated this line of adjudications by our Supreme Court, have known and understood this doctrine, is it unreasonable that I should unequivocally designate the opinion of Chief-Justice Fuller as surprising and astounding, notwithstanding what is said by the justice who delivered the opinion in the case of Bowman *vs.* Chicago and Northwestern Railroad Company (125 U. S., 465), and so much of the language of Justice Matthews, in delivering the opinion in that case, as is quoted by Chief-Justice Fuller in this now under consideration?

In the case of Bowman *vs.* The Railroad Company the question of the right to sell was not involved, but only the right to ship into the State. The question of sale within the State was not decided, but was expressly reserved, as will appear from the following language of Justice Matthews:

But it is not necessary to express any opinion upon the point (the right of an importer to sell in unbroken packages at the place where the transit terminates), because that question does not arise in the present case.

Every lawyer knows that *obiter dictum* in any decision can never be relied on as indicating what the opinion and judgment of a court may be upon a case arising subsequently and involving similar issues. A good lawyer will only treat as authority that point in the case which the court decides, and not what may be said on collateral questions, however closely related they may be to the point or points actually determined.

Therefore I say, and without fear of successful contradiction, that, with Pierce *et al. vs.* New Hampshire and the undivided judgment of the court, although separate opinions of the judges were filed, standing undisturbed by any direct reversal, the opinion in Bowman *vs.* The Railroad Company deciding nothing more than the right under the interstate-commerce clause of the Federal Constitution to transport liquors from one State or foreign country into another, every lawyer and every reader of judicial opinions had an unquestioned right to anticipate, under the well known and heretofore clearly understood police power of the States, that while, under the Federal Constitution, in the absence of a law of Congress, a State may have no right to prohibit shipment of articles of commerce into her borders from without by non-residents, yet, when such articles as come plainly within the police power, as do liquors, are so shipped from one State into another, they shall on arriving at their destination immediately become subject to the police statutes of the State within whose borders they have been lodged.

And I maintain this is a reasonable and just view of the proper limitation of the interstate-commerce clause of the Federal Constitution, while at the same time it admits of the reasonable recognition and exercise of that police power of a State which is so essential to the preservation of the peace and good order of the State, in which is manifestly involved the protection of the rights of person and property of the citizen. Every man of ordinary sense well knows that intoxicating liquors are not free and privileged articles of commerce in such sense as are clothing, wholesome food, and many other commodities in common use among the people.

Intoxicating liquors of all kinds, by common consent and action of mankind as exhibited in certain laws in this country, Federal, State, and municipal, are essentially contraband. The undeniable brand of Cain, among many other brands, is on them. They are everywhere treated by law and by unchallenged public opinion as productive of incalculable and irreparable harm to those using them to any but a very moderate extent. Every man engaged in the business understands this. He knows he can not legally ship and sell his liquors without first recognizing the Federal laws taxing him, and second the State, and finally the municipal laws obtaining where he seeks to sell, and taxing, regulating, or prohibiting their sale.

He knows full well that nowhere under the shining sun in civilized lands can he have absolute freedom of commerce in intoxicating liquors; and, if this be so, and intoxicating liquors are clearly within the police power of a State, which is exclusively charged with the enforcement of laws maintaining public peace and safety of persons and property, what is more reasonable and just than to hold that, while under the Federal Constitution liquors may be shipped into another State, yet, when once there, the shipper must take his chances with State and municipal law and authorities? If allowed to sell there he may sell, but, if not so permitted, he must reship and find a more indulgent community before he can vend his dangerous and damaging wares.

It seems to me that such a view might well and consistently have been adopted by our Supreme Court in Leisy *vs.* Hardin, and particularly when is borne in mind the universality of law branding liquors as articles never to be set free from legal burdens, always and ever dangerous to personal welfare and the public good, and constantly and in all places requiring the watchful eye and strong arm of power to confine them within what in most liberal phrase may be termed "reasonable bounds." No other class of property is under such universal condemnation, though other articles of dangerous tendencies and powers do demand and receive the care and restraint of public authority; and yet our Supreme Court, by a majority of its judges, has decided that such a commodity as I have described must be honored with every right and privilege under the interstate-commerce clause of the Federal instrument as wholesome food and the most valuable apparel, and this because in an accepted sense intoxicating liquors are "articles of commerce."

Verily Congressional legislation in harmony with the suggestions of Chief-Justice Fuller is needed to save us, not only from the curse of rum, but from the misfortune of further similar findings by our Supreme Court.

But what are the propositions now before us? First, we have the Senate bill, in the following language:

Be it enacted, etc., That all fermented, distilled, or other intoxicating liquors or liquids transported into any State or Territory, or remaining therein for use, consumption, sale, or storage therein, shall, upon arrival in such State or Territory, be subject to the operation and effect of the laws of such State or Territory, enacted in the exercise of its police powers, to the same extent and in the same manner as though such liquids or liquors had been produced in said State or Territory, and shall not be exempt therefrom by reason of being introduced therein in original packages or otherwise.

Second. The proposed substitute reported from the Judiciary Committee, which is as follows:

Strike out all after the enacting clause and insert the following:

"That whenever any article of commerce is imported into any State from any other State, Territory, or foreign nation, and there held or offered for sale, the same shall then be subject to the laws of such State: *Provided*, That no discrimination shall be made by any State in favor of its citizens against those of other States or Territories in respect to the sale of any article of commerce, nor in favor of its own products against those of like character produced in other States or Territories. Nor shall the transportation of commerce through any State be obstructed except in the necessary enforcement of the health laws of such State."

Third. The substitute offered by the gentleman from Illinois [Mr. ADAMS]:

That it shall not be lawful to import into any State or Territory, from any other State or Territory or from the District of Columbia, any fermented, distilled, or other intoxicating liquor, except in one or more original packages, as defined by this act.

SEC. 2. That for the purposes of this act an original package of intoxicating liquor, in bottles, shall be a case containing not less than one dozen quart bottles and an original package of liquor not in bottles shall contain not less than five gallons: *Provided, however*, That an original package of liquor imported from any foreign nation shall contain the quantity required by the laws relating to duties upon imports.

SEC. 3. It shall not be lawful to sell within any State or Territory any intoxicating liquor imported into such State or Territory, except in the original package in which the same has been imported, and subject to the reasonable police regulations of such State or Territory regulating the sale of such liquor as a beverage.

Of these three my preference is the first on the ground that it promises more certain and speedy results and is aimed directly at the existing evil. To adopt the House substitute will endanger the measure by making it uncertain of passage and necessitating a conference committee with a possibility of final disagreement. But for this objection I would favor the House substitute.

In regard to the proposed substitute of the gentleman from Illinois [Mr. ADAMS] it may be passed with the remark that I agree with one or more gentlemen who have referred to it with the observation that it might well be entitled "A bill to provide the size of a drink and to give Congressional sanction to the liquor traffic."

Speaking for myself, I desire in commenting on the Senate bill to say that I could wish it went further and, instead of permitting liquors to be shipped into a State promiscuously and generally, prohibited all shipments except in conformity to the laws of the several States. A bill (H. R. 5978) of this sort was introduced by me early in the session and referred to the Select Committee on the Alcoholic Liquor Traffic, and on April 24, 1890, was reported by that committee favorably with amendments.

The plain fact of the matter, in my judgment, is this: That, if Congress is to make recognition of the right of States to control the traffic in ardent spirits within their own borders, no liquors should be permitted to enter such borders except in accordance with the statutes of the States. Gentlemen who reside in States whose people are attempting anything like a serious enforcement of prohibitory laws know how difficult such enforcement is where local sentiment may not be strongly in favor of it. To permit free shipment for purposes not authorized by the State laws is to place within the power of lawless classes the very instruments enabling them to enter at once on violation of the law. But to prohibit shipments, except in accordance with the State statutes, is to pay suitable regard to those statutes and contribute in large measure friendly aid to their observance and enforcement.

The urgent demand for some legislation to avert the consequences of the late decision of the Supreme Court can not be ignored without willful blindness. In my own State the effect of it has been to prostrate the whole power of the State for the time being at the foot of the rum power. Before the decision there were perhaps sixty to seventy counties of the ninety-nine in Iowa as free from the curse of liquor selling and drinking as it is possible for communities to be while men will prostitute everything of manhood to make money out of it. I assert here in my place as one of the Representatives from Iowa, and responsible to public sentiment at home and elsewhere for the truthfulness of my utterances, that in a large majority of the counties in Iowa, prior to this decision, the law prohibiting illegal sales of liquor was well enforced. The evidence of this would be plainly visible on going into the towns and villages of those counties, and the fact has been clearly substantiated by the opinions of judges, the governor of the State, and official statistics.

Mr. Speaker, I had not intended, until my friend and colleague, Judge HAYES, attacked to-day the policy of prohibition in Iowa, to say anything whatever bearing upon that question in any partisan sense. I think the question now before us is above the question of prohibition. It is higher than that, because it involves the right of the State to say what the policy of the State shall be; it involves the very existence of the State as a power adequate to protect the life and property of the citizen. But my colleague, Judge HAYES, has seen proper to attack the Republican party in our State and the administration of our laws during the years we have had absolute prohibition upon our statute-books. He has to-day, upon this floor, not only assailed the principle of prohibition, but has undertaken to condemn and disgrace that principle and the prohibitory statutes of Iowa before the people of this country by alleging the total failure of the principle and of the law seeking to enforce it in that State.

Now, I maintain here, as a citizen of Iowa for more than eighteen years past, that, with the exception of the large cities, and particularly the cities along the river, a number of which are in his district, in three-fourths if not more of the counties of Iowa, until this decision was let loose as a thunderbolt to break down the police power of the State, the prohibitory laws of Iowa were admirably administered. The law went into effect July 4, 1884, and I maintain that since 1885 and up to the time of this unfortunate decision, with the exception of the river towns and two or three central counties with large foreign populations, the law was well enforced throughout the State of Iowa. But what is the condition now? In those interior counties of the State, three-fourths of which, as I have said, have had an admirable administration of the prohibitory law, what is the condition to-day?

The fact is unquestioned that these "original-package" saloons, as they are called in Iowa—it seems that in Kansas they are called "United States Supreme Court saloons" or something of that kind—these original-package saloons have sprung up in every county in the State, and I think I am justified in saying in almost every town in the State. My friend Judge HAYES represents the opposite extreme to what I may be said to represent on the temperance question in Iowa. Some people in Iowa call me a prohibition crank.

Now, if I am a prohibition crank, I want to say, without any personal reflection upon my friend Judge HAYES, that he is a license crank of the extremest kind, and I want to say further, with all due respect for my friend—because we all like him as a pleasant, social, and accommodating gentleman—I want to say that if prohibition has failed in Iowa, or in any part of Iowa, there is no man who, in an important sense, is so responsible for its failure as he. He is the district judge who a few years ago led in the opposition to prohibition in Iowa, and rendered that famous decision invalidating the constitutional amendment adopted in 1882 by a majority of 30,000 of the voters of our State, and the influence of Judge HAYES in Iowa on this question of prohibition has been greater and far more harmful to the State than that of a thousand men, private citizens, who might be marshaled together.

But it is not alone because of his decision above referred to when district judge that his influence has been so powerful in the State, for that opinion was sustained by the supreme court of Iowa; but because he is known to have openly and continuously in public and private condemned and derided this law, and by other decisions from the bench taught disregard and disobedience of it. His hostility was of such character as to clearly warp his judgment, and as an illustration of this it may not be improper to inform the House that in a cause in his court, involving, if I remember correctly, the prosecution of a liquor-seller, on objection being made to the evidence of a man who had purchased liquors of the defendant, on the ground that he was *particeps criminis* with the defendant, my colleague [Mr. HAYES] sustained the objection, and was of course promptly reversed on appeal. With such decisions as these and such outspoken hostility to the laws of his State, coming from one occupying an influential judicial position, it can be readily understood that the citizens of the State disposed to disregard the law would be greatly encouraged in acts of disobedience. And for these reasons I have affirmed my opinion that his influence against prohibition in the State has been of so great potency.

As I have said, my colleague [Mr. HAYES] has to-day on this floor attacked the principle and policy of prohibition and has declared them to be a failure in Iowa. And, further than that, he has charged the Republican party of the State with straddling the question in the platform adopted at the recent State convention held at Sioux City. Now, sir, I flatly deny this statement and propose to prove its incorrectness.

In their platform of 1889 the Republicans declared:

That we reaffirm the past utterances of the Republican party of Iowa upon prohibition, which has become the settled policy of the State and upon which there should be no backward step. We stand for the complete enforcement of the law.

This was after repeated and unqualified statements of position in previous platforms and after ample and sweeping legislation by the State Assembly, which legislation is still the law of the State.

The following is the position of the party as shown by the platform adopted a few weeks ago:

We declare against any compromise with the saloon, and stand with the people of this State in their hostility to its existence, spread, and power. We favor such legislation on the part of Congress as shall protect the police power of the States in their effort to regulate, confine, or prohibit the public bar, and for approval of the work and record of the Republican party of this State in the great cause of temperance, involving the public peace and the safety of good government, we appeal confidently to the electors of Iowa. We congratulate the people of Iowa upon the promise of the year, upon the measure of success that has attended the past, upon the confidence and courage with which the State awaits the future.

My colleague may choose to designate these clear statements "straddling," being accustomed to Democratic ingenuity and practice in platform construction to avoid committing the party, but in Iowa Republicans plainly understand that this position of the Republican party on the saloon question is that of hostility, opened and avowed, and it occurs to me no one on this floor, unless it be my colleague, will pretend that he does not understand such to be the attitude of the party.

Mr. Speaker, one point more in reply to my colleague and I am done. He has not only ventured to assail the Republican party in Iowa, but he has had the audacity to deny the statement of my colleague [Mr. HENDERSON, of Iowa] made to-day to the effect that "original-package saloons" are being opened all over Iowa, in places where, heretofore, the traffic has been suppressed.

I know from a recent trip to the State and from correspondence with constituents in other portions of the district I have the honor to represent that the statements of my colleague [Mr. HENDERSON, of Iowa] are correct and those of my other colleague [Mr. HAYES], in so far as they may have reference to Northern and Northwestern Iowa, are incorrect.

I firmly believe they are incorrect as to all sections of the State heretofore free from the saloon. Since this evening session opened a gentleman from Northern Central Iowa, an employé of this House, has handed me a letter of recent date written by Hon. H. W. Holman, county attorney for Buchanan County, in which is Independence, the county seat of that county and the place of Mr. Holman's residence, and in Colonel HENDERSON'S district. This letter was written to a friend, who is also an employé of this House, and is as follows:

We were very much disappointed to see the original-package bill laid over yesterday. You can have no idea what a "hell on earth" it has created here in Iowa. We have now four joints, and Jim Dougherty has come back and is to start, which will mean five; and they are starting in all of the little towns in the county.

Everybody can get all they want and drink all they want—minors, intoxicated persons, and everybody else. There has been more intoxicating liquor shipped into Independence, more liquor drank, and more drunkenness in the last thirty days than in two years preceding, all put together.

I wish you would give me your judgment of the bill on this subject. From what you can learn there, will it pass at this session? We are more anxious here than you can imagine without being here to see just how bad it is.

Very truly,

W. H. HOLMAN.

Mr. Speaker, this letter is only one of hundreds, I have no doubt, received from constituents of members in Iowa and other States where the alleged agents of non-resident beer and whisky venders are defying local statutes in consequence of this late disastrous decision.

The rum power is always disobedient and until severely punished defiant of all law. It will respect no provision of the statutes of any State or Territory of the land, no matter how reasonable, how humane it be.

It disregards youth and old age alike, and there is no distressed condition or circumstance of the drinker or his family which, unsupported by a rigorous law and law officers, is sufficient to stay the hand that "putteth (for cash) the cup to his neighbor's lips."

Prohibitory States, license States, license and local-option States are all alike being overrun with the alleged "original-package" vender. For once, from whatsoever States we come, we find ourselves confronted by an enemy who is no respecter of persons, localities, or statutes. Defying all sentiment, outraging the most sacred considerations of individual, of home, and society, he proposes to employ the days and nights at his nefarious work until Congress shall exercise its power under the Constitution, and by suitable enactment enable the several States and Territories to resume once more the enforcement of their respective statutes in regulation or prohibition of the liquor traffic. In the face of such an emergency as now confronts us I hope we may find ourselves a unit in favor of speedy action.

Uniform System of Bankruptcy.

SPEECH

OF

HON. JOHN A. CALDWELL,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 22, 1890,

On the bill (H. R. 3316) to establish a uniform system of bankruptcy throughout the United States.

Mr. CALDWELL said:

Mr. SPEAKER: The necessity of a bankrupt law is generally conceded, although there are many who honestly believe it pernicious and claim that it offers a premium for commercial rascality. But the fact that the leading mercantile nations of the world, except our own, have laws for the relief and discharge of the insolvent debtor, is an argument the force of which can not be gainsaid when considered in connection with the fact that such laws have been in existence for centuries.

It appears to me harsh and unjust to punish a man for the sins of others or the acts of Providence. A dishonest or corrupt merchant may contrive to defraud his creditors, or a reckless or imprudent one may bring upon himself disaster and ruin, or even a successful and prosperous merchant may find his wealth and property swept away by floods or tornadoes, and each of these in turn causes the failure of others, who should not suffer indefinitely and without hope or inducement to go to work again to recover their lost fortunes. It may be claimed that if a man be honest and has met with financial reverses he will have no difficulty in compounding with his creditors, but there should be an appropriate tribunal for such a proceeding, and a bankrupt law affords the only medium for the establishment of such tribunals.

Besides it is within my own knowledge that many merchants, and among them are some of the leading houses in the land, make it a rule never to compromise a debt due them. Such arbitrary and inflexible conduct can not be commended in the concrete, however admirable it may seem in the abstract. While there has been a growing sentiment favorable to the re-enactment of a bankrupt law, it does appear difficult to agree upon a law satisfactory in its details to all interests concerned. But I believe that we ought to pass the present measure, as I consider it as free from objection as can reasonably be expected in a law of such comprehensive scope and results.

Statutes for the settlement of the affairs of insolvent debtors have been enacted in all of the States, but their provisions and operations are unfortunately far from uniform.

In some States preferences are permitted even in the deed of assignment, while in others they are prohibited. The result is a confusion and complication leading to endless controversies and litigation between creditors and the assignees and trustees of insolvents.

In some States also provision is made for the release and discharge of the debtor. This, however, has no extraterritorial force, except as to such creditors as become parties or participate in the assignment. So that all any creditor had to do in order to preserve his claim was to keep aloof from the proceedings. But where preferences are not allowed in the deed of assignment it is the universal custom of the failing debtor to make preferences a few days or hours prior to executing the assignment. Practically, therefore, it is left for the insolvent debtor himself to determine how much of his estate shall be distributed among his creditors, and, of course he is not slow to take advantage of this right to secure his friends or relatives to the prejudice of other equally as worthy creditors.

All this the present act is designed to correct, and its effect and operation is made uniform throughout the land, and while it thus prevents one class of creditors from being favored, and placing all upon an equality, it extends to the unfortunate debtor a relief which he could in no other manner obtain, namely, a discharge from all obligations, valid and binding in all jurisdictions, whether creditors become parties to the proceedings or not.

Another cogent reason for the enactment of the bankrupt law is the fact that it provides for the punishment of any fraudulent proceedings on the part of the bankrupt or his creditors. Such safeguards are unknown under the State insolvent laws or at least of a large majority thereof.

State laws are confined to State limits, while commercial transactions ignore all territorial boundaries, and it would seem that some general law emanating from a general head or seat of government should be enacted, universal in its application and uniform in its operation. This I conceive to be the object of the present bill, and, while it may be imperfect and may include some objectionable provisions or features, yet I prefer to overlook its few defects for its many excellences, for the greater and general good I believe it will accomplish.

I am not unmindful of the forcible opposition which the gentleman from Texas, Mr. CULBERSON, has presented to the enactment of the bill, and I mention him individually because his views reflect in general terms all that has been said against the measure. Reducing these objections to propositions and I find they are,

First, the creation of numerous offices and consequently the payment of large expenses; and,

Secondly, the bill is unjust to the debtor class, and, therefore, is in the interest of the creditor.

Each of these objections, I think, has been fairly met and answered by the arguments of the gentlemen from New Jersey [Mr. BUCHANAN], Misaissippi [Mr. CATCHINGS], West Virginia [Mr. WILSON], and the gentleman who introduced the bill [Mr. EZRA B. TAYLOR].

It is impossible to enact a law of such practical importance involving the administration and settlement of the various affairs of business men without more or less detail and expense. Much of the same detail and in many respects the same expense are involved in the proceedings under the State insolvent laws, and whatever extra cost may be incurred under the bankrupt bill is more than justified and counterbalanced by the benefits to be derived by all concerned, the debtor as well as the creditor, the one in the release and discharge he will obtain and the other in the protection and security he acquires through the equitable distribution of the bankrupt's estate.

It is a mistake, in my opinion, to claim that the bill is unjust to the debtor because it subjects him to involuntary bankruptcy. It would be a misnomer to term the proposed measure "A bill to establish a uniform system of bankruptcy," unless it embraces the involuntary as well as the voluntary proceedings, and I do not believe any act embracing but one of these features would be satisfactory to the people, nor remain in existence twelve months before it would become so obnoxious as to imperatively call for its repeal. The opponents of the involuntary proceedings overlook, it appears to me, the fact that the creditor can harass his debtor by attachments and judgments and thereby not only embarass, but force the debtor into an assignment, or see his property taken in execution to satisfy the particular creditor.

It is common observation that as soon as the debtor allows himself to be sued a large number of his creditors immediately follow suit, and the result is more oppressive and harsh than it would be under proceedings to force him into bankruptcy.

The substitute bill offered by the gentleman from Texas [Mr. CULBERSON] only begs the question; it admits the necessity of a bankrupt law, and only removes the proceedings for the distribution of the insolvent's estate to the State tribunals, but leaves the discharge to be granted only in the Federal courts.

This is complicating instead of simplifying, and in the end would be fully as expensive to the parties interested, creditor and debtor, as the proceedings contemplated under the present bill; indeed, I am quite sure it would work greater hardship to the debtor, because he must bear all the expense and burden of the action in the Federal court wherein he is to petition for his release and discharge, and as every creditor is required to be made a party thereto, and hence may appear and answer, argument is not necessary to demonstrate what such a proceeding may entail in the way of costs.

The questions presented for adjudication in the Federal court would be numerous, and, with the delays attendant upon the hearing and trial, the poor yet honest debtor might have to spend years in prosecuting the case, forsooth, through the malice and spite of some particular or unfriendly creditor. During all this period the debtor can not and dare not launch into new enterprises or engage in business. The result practically is to deprive him of all opportunity of earning bread for himself and family. I will therefore support the present bill and would feel constrained to vote against the substitute, even were the alternative presented of that or nothing.

The Torrey Bankrupt Bill.

SPEECH
OF
HON. LITTLETON W. MOORE,
OF TEXAS,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, July 22, 1890,

On the bill (H. R. 2316) to establish a uniform system of bankruptcy throughout the United States.

Mr. MOORE, of Texas, said:

Mr. SPEAKER: I submit that the bill under consideration ought to become a law and that the substitute offered by my distinguished colleague ought not to be passed.

Commercial intercourse would be extended, the hazard of doing business lessened, and the price of commodities reduced to the consumers by the enactment of the bill now before the House.

It is confidently anticipated that the enactment and operation of this measure will decrease the number of mercantile failures because of its equitable provisions for the prevention of contests between creditors to secure a lien upon the property of the common debtor and the conservative influence that will be exercised by the fact that compulsory liens and attachments will be of no avail if the bankruptcy occurs within four months after they are created.

The rigid economy provided for the administration of the bill seems sure to bring about an increase in the average dividends paid by the estates of insolvents.

The substitution of one uniform law for the many and varying laws of the States can not but simplify the procedure incident to bankruptcy administration and lessen the expenses which must be borne by the estates.

If State laws could be uniform, which they practically can not be, and if the construction placed upon them by the several supreme courts were likely to be the same, which is improbable, still such laws would not meet the necessities for the discharge of honest insolvents, because by the Federal Constitution the impairing of the obligation of contracts is forbidden.

There are certain rights we enjoy as citizens of the State; there are certain responsibilities we assume as citizens of the United States. When we participate in the affairs of commerce we act rather as a member of the commercial world than as a citizen of a State or of the United States, and such act ought to be governed by a law which has been formulated and passed for the government of that world in relation to such acts.

It is not States, but individuals as such, who conduct the transactions the grand aggregate of which constitutes commerce, and in so doing they do not deal with political subjects, but with cost values, transportation charges, and the rapid receipt and distribution of goods. They have no interest as commercial men in State lines, and the variance of State laws is only an obstruction and charge upon commerce which ought to be obviated.

This is the era, if you please, of the railroad and telegraph. There should be a wise and equitable bankrupt law to foster and promote the wonderful commerce made possible by these agencies.

The States, as such, have no interests to serve which are opposed to the law under discussion. The citizens of the several States respectively have no interests that will not be benefited by the national legislation which is demanded from citizens in all parts of the country.

The credit system is necessary to commercial intercourse in this country. Transactions in the commercial world for cash are the exception, while transactions on credit are the rule. Credit is founded upon (1) the ability of the debtor to pay his debts, (2) the character of the debtor, and (3) the provisions of the laws to which the creditor must appeal for redress in the event compulsory process becomes necessary.

If credits are protected the debtor will thereby have greater ability to liquidate his indebtedness; if credits are debased, men in trade will have less confidence in each other, and as a result the debtor's ability to meet his maturing obligations will thereby be lessened.

The character of the debtor will be enhanced if there are just laws framed and administered so as to exercise a preventive influence as to forbidden commercial transactions. The creditor will always have greater confidence in the character of the debtor if he knows that a proper and certain punishment awaits the evil-doer.

Every creditor contemplates in given possible emergencies the necessity for an appeal to law for the collection of his dues. If he knows the laws to be equitable and just and is assured of the collection, at a minimum expense, of all or a part of the selling price of the goods sold, he is more generous with his credits and does a larger volume of business, and as a result the debtor is awarded a greater purchasing power of the capital invested than he would have if the conditions were reversed. In general terms, credits will be advanced by laws which make property secure, require men to practice the golden rule, and enable creditors to secure all or a part of the amounts due to them. The result of making credits secure is to increase the volume of trade, lessen the per cent. of profits and increase the aggregate profits received, and lessen the cost of all commodities to consumers. Reverse the conditions and you will at once reverse the results.

It follows as a necessary sequence that the manufacturer will extend a line of credit to the jobber in the exact proportion that he is secure against loss. The jobber will be governed by the same rule in extending credit to the retailer. The consumer will be benefited, in the ordinary course, by the fact that his credit also is increased. The result will be that the capital invested by the manufacturer, the jobber, and the retailer will in fact be increased by the fact that their credit is extended, and they will accordingly be enabled to do a larger business, and all of them will be able to transact their business at a smaller margin of profit by reason of this increased volume, and the consumer, as a result of the reduction of profits, will share in the general prosperity that will be thereby conduced.

The giving of preferences is pernicious to the debtor, because it is possible by their instrumentality to save the property from being applied to the payment of debts by a skillful arrangement under the laws of most of the States, and at the same time, in the ordinary course, to keep out of the penitentiary. The temptation to resort to this means of saving a part of one's estate for, say, the commendable purpose of protecting one's family, is a temptation to which a great many good men yield. Where preferences are given, with the result of payment of bona fide indebtedness, it ought not to be of any benefit to the creditor, and would probably result in destroying whatever standing he might have left in the commercial world. To prevent preferences would be to prevent both the wrong and the misfortune as above outlined.

Preferences are to the creditor a species of hit-and-miss speculation that ought not to be experienced. It is not infrequently the case that the creditor is driven into bankruptcy by reason of the fact that one or more of his important debtors give preferences to other creditors and leave him to go empty-handed. It is not infrequently the case that a given person, firm, or corporation has a large number of debtors who are subjected simultaneously to a calamity, *e. g.*, yellow fever or a drought. If all of the debtors honestly pay pro rata parts of their debts, the loss can probably be sustained without going into bankruptcy, but if it should happen that it is possible for the debtors to give preferences, and they do so, the result is likely to be a calamity to the indulgent creditor.

The enactment of this law is designed in the best and truest sense to bring about the greatest good to the greatest number, and I respectfully submit, therefore, that it should be enacted.

THE CULBERSON SUBSTITUTE.

The substitute as offered (bill H. R. 7994) provides that an insolvent may upon petition to the United States district court, accompanied by proper schedules of his liabilities and assets and a list of creditors, be discharged from all liabilities whatever. I think that it would be ruinous to the debtor classes of the whole country to pass such a law.

This substitute does not embody the usual and necessary provisions that should be contained in such a law; it is incomplete, as follows:

First. It does not provide for any compromise of claims due the bankrupt, nor for any arbitration of controversies.

Second. It does not provide for the exemptions of bankrupts and other persons.

Third. It does not provide for the extradition of bankrupts.

Fourth. It does not make any specific arrangement for appeals from the district court.

Fifth. It does not make any provision for the trial of plenary suits in the State courts.

Sixth. It does not provide for the trial of the question of bankruptcy,

nor any other question of fact, except upon deposit of a $50 jury fee and other burdensome obligations.

Seventh. It does not provide for the reference of the case after adjudication to any one, but leaves it to the court to drag and grope through the never-ending labyrinth of chancery practice.

Eighth. It does not provide any rules, forms, or orders for the conduct of the cases, but leaves the practice to the old, and for the purpose unsuitable, rules of chancery.

Ninth. It does not provide any punishment for crimes of the bankrupt committed before or after bankruptcy.

Tenth. In the matter of fees it is open to all the abuses known to the old law.

Eleventh. It does not provide for the collection of bankruptcy statistics.

Twelfth. It does not provide for any composition with creditors.

Thirteenth. It does not provide for the completion of the administration of the estate in the event of the death of the bankrupt.

Fourteenth. It does not provide for any meeting of creditors, nor allow them any voice at all in the selection of a receiver or trustee.

Fifteenth. It does not provide for the proof or allowance of claims.

Sixteenth. It does not make provisions for the payment of dividends.

In general, it is incomplete and not comprehensive of the subject.

It is respectfully submitted that this body ought not to pass a law providing only for voluntary bankruptcy, and especially this one.

I earnestly hope, in behalf of what I believe to be the best interests of the people of my State and of my district, that the bill favorably reported by the Committee on the Judiciary may become a law.

Uniform System of Bankruptcy.

SPEECH

OF

HON. EZRA B. TAYLOR,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 23, 1890.

The House having under consideration the bill (H. R. 3316) to establish a uniform system of bankruptcy throughout the United States—

Mr. EZRA B. TAYLOR said:

Mr. SPEAKER: The two amendments that were called to the attention of the House while the gentleman from Louisiana [Mr. BOATNER] was speaking I will offer in this connection and also two others.

Mr. HOPKINS. While the chairman of the committee is on the floor I would like to call his attention to section 25, and get some explanation of why that section is placed in the bill. I think it is an innovation in legislation of this kind.

Mr. EZRA B. TAYLOR. The gentleman from Arkansas [Mr. ROGERS] is preparing an amendment to strike out section 25 and also section 31, and as soon as it is prepared I shall be very willing to accept it.

Mr. ROGERS. Will the chairman yield to me for a moment?

Mr. EZRA B. TAYLOR. Certainly.

Mr. ROGERS. I have so amended the first amendment as to embrace section 31 as well as section 25. I wish to ask the chairman of the committee at this point whether or no he has prepared, and will offer in due time, the amendments which the committee directed should accompany the report.

Mr. EZRA B. TAYLOR. Oh yes. They were supposed to be offered in the beginning. Perhaps they were not offered formally, but they were the amendments that accompanied the report, having been recommended by the committee.

Mr. ROGERS. I call the attention of the chairman to what I understand to be the fact, though I have not read the report, that neither the bill nor the report shows what amendments the committee did recommend.

Mr. EZRA B. TAYLOR. Oh, yes; the report shows them.

Mr. ROGERS. All the amendments?

Mr. EZRA B. TAYLOR. Yes, sir; every one of them.

Mr. ROGERS. Then I have been misinformed. They ought to be pending.

Mr. EZRA B. TAYLOR. It shows them all, and they are pending by virtue of the report.

Mr. Speaker, I propose also to amend section 42 by striking out, commencing in line 15, the following:

(8) Neglected for sixty days after written demand shall have been personally served on him, to pay an open account which was, at the time of such demand, due by him for goods, wares, or merchandise sold and delivered.

That is the entire provision in regard to accounts. I propose also to amend section 37 by striking out subdivisions 1, 2, and 3, and renumbering the subdivisions following; so that the section as amended shall read as follows:

SEC. 37. Qualifications of referees. Persons shall not be eligible to appointment as referees unless they are, respectively, (1) not related by consanguinity or affinity within the third degree, or by marriage, to any judge of the courts of bankruptcy, or to any justice or judge of the appellate courts of the districts wherein they may be appointed, and (2) residents of the territorial districts for which appointed.

The object of one of the amendments I have just read was to meet a suggestion of the gentleman from Kansas that in certain Territories there are no persons who have resided there as long as the original bill requires. In reference to another of the amendments, I will state that, while I am confident no court would appoint anybody as referee except a lawyer, I am entirely willing that the word "lawyer" shall disappear from the bill as connected with referees.

Mr. Speaker, I understand that the gentleman from Louisiana [Mr. BOATNER] in his remarks of yesterday expressed his general satisfaction with this bill, and, in fact, stated that until yesterday morning he had been in favor of it. Of course he had carefully considered it or he would not have formed that opinion. I have no doubt, therefore, he is still in favor of the bill and appreciates its good qualities, while he desires by the amendments he has proposed to perfect the measure, so that he may more earnestly support it.

Several of the amendments which he has suggested are, I think, entirely immaterial, and one of them I believe would operate contrary to his own view of the matter. I think, under the bill as now drawn, there will be fewer persons liable to the action of the provision for involuntary bankruptcy than there would be under his amendment. The fact that a farmer does something besides raising agricultural products is not a test; that would not change the general principle contemplated in this bill. The provision is one which would be liberally construed by the courts. Of course no man is so situated as to be exclusively engaged in raising agricultural products. Every man so engaged does many other things, both of a business nature and not of a business nature, a fact which any court would recognize. The word "chiefly," suggested by the gentleman from Virginia [Mr. BUCHANAN], would add nothing to the construction that would be given to the language of the bill.

The word "trader" or "merchant," suggested by the gentleman from Louisiana [Mr. BOATNER], is a word the significance of which, so far as I know, has not yet been so thoroughly settled in any bankrupt law in any country as to describe exactly the occupation sought to be designated. The farmer may be a trader in the ordinary acceptation of the term. As suggested by other gentlemen, he is a trader; becomes indebted as such; it may be continuously a part of his business. While some courts have held that the word "trader" would not apply to such incidental business, other courts have held to the contrary effect, and the question now is one of construction. I apprehend that the language employed in this bill would exclude from the operations of the involuntary provisions fully as many persons and would operate more wisely than the language proposed in the amendments of the gentleman from Louisiana.

On the other hand, under that amendment large classes of persons would be excluded from any advantage of this measure. All the professions, all persons except those belonging to the three occupations named, with the exception of the farmer and the wage-worker, would be denied any door by which they could enter into the benefits of this law and secure the discharge of their indebtedness.

Now, I am opposed in the first place on principle to any other kind of a bankrupt law than a mutual one, one of which both sides interested can take advantage on proper occasion. In the matter of principle there ought to be no exemption from the voluntary or the involuntary clauses of the bill; and it was only because of the reasons suggested yesterday that these two classes—the agriculturist and the wage-worker—were exempted from involuntary bankruptcy, while allowed the advantage of voluntary bankruptcy.

Now, the chief object of a general law of this nature is in my mind the elevation of commercial honesty throughout the whole country. And, Mr. Speaker, there is no part of this country that does not need such an influence; there is no part of the country in which a uniform bankrupt law would not operate to elevate commercial honesty and honor. That is the highest and noblest purpose which can be effected by a measure of this kind; and it is for that reason chiefly that I advocate and have always advocated legislation of this character.

Mr. Speaker, I am neither a creditor nor a debtor; I have no friends who to my knowledge desire to take advantage of this legislation, either on the one side or on the other; but I have lived a great many years and have enjoyed some opportunities for observation, as a result of which I say that, among other things, the condition of commercial disjointure, so to speak, in this country is such as creates more rapidly than any other cause a want of honor in commercial transactions East, West, North, and South. I speak of the period before the war and since the war. How can it be otherwise? In the various States there are different methods of collecting and enforcing debts. In Pennsylvania a man may give a note due in ten years and confess judgment on it at once; and to enforce that note the creditor does not have to go to court. In Ohio, about half the time a man may prefer his creditors in an assignment for the benefit of creditors or any other disposition of his property, and the other half of the time he can not do so. These things depend upon the manner in which Legislatures may think and act. In other States the local creditor has a greater advantage still.

He has the enginery of the law by which he can force the collapse of a debtor who is quivering; the debtor knows that he can, and is at his mercy; he realizes that the creditor is saying, "Do this or I will proceed against you." The objection—I do not say the objection urged in this House, but the objection raised against this bill outside—is mainly from the fact that local interests can take advantage of these various conditions.

Talk about the Eastern creditor; talk about the lawyer. The lawyer is interested in his own locality; and the lawyer who collects at home and has the advantage of being on the spot and the ability under the law to force payment by his threats, will be sure to oppose this bill, because his interest is that way.

Let some general law be enacted by which assurance is given that when a man in failing circumstances goes to the wall his estate shall be divided honestly and equally among all of his creditors, everywhere, and all of the chicanery, all of the enginery of deceit, all of the preferences, dishonest preferences, that I have suggested or hinted at, will be known no more. Commercial honor will rise; commercial confidence will lessen the price of goods; and there is no place where goods are bought and sold but that this necessity exists; in Kentucky equally as in Massachusetts, and everywhere else. The community where local preferences are allowed have no advantages, whatever they may suppose. The wise men who sell them goods put a tariff on all they sell them in order to equal the risk they run of collection, and the general consumer is losing in that way while the particular Shylock is gaining and growing in dishonesty and fraud.

Mr. McMILLIN. Will the gentleman allow a question?

Mr. EZRA B. TAYLOR. Yes, sir.

Mr. McMILLIN. Under the bill there is a provision, I believe, for the appointment of some three hundred commissioners or receivers, if I remember correctly?

Mr. EZRA B. TAYLOR. They may be appointed, if so many are needed.

Mr. McMILLIN. It is provided that they shall be paid $1,500 a year.

Mr. EZRA B. TAYLOR. One thousand dollars.

Mr. McMILLIN. One thousand dollars out of the Treasury of the United States.

Mr. EZRA B. TAYLOR. Yes, sir.

Mr. McMILLIN. Now, where is the justice in requiring the people to pay both debts and taxes; to pay the expenses in winding up bankrupt estates?

Mr. EZRA B. TAYLOR. The bill provides where the money shall come from. It provides that those who go into bankruptcy shall pay as far as practicable. But I have not time to enter into the details of the bill. They have been pretty fully gone over heretofore. There would be no cost, as I understand it and as I believe, to the Government of the United States. It would do no more than give its assurance of this payment, because the referees are really judicial officers.

A second reason for urging the passage of the bill is that it is for the advantage of the unfortunate individual who finds himself unable to pay his debts, and to the advantage through him of the whole community, for a working bee is worth more than a drone. The man who is under a burden of failure, who is unable to pay his obligations at once, becomes a deceitful man, and necessarily. He must be either an idle or a deceitful man. He must become a secretive man. He goes into business as the "company" of somebody known or unknown; he goes as the "agent" for somebody. He secretes his earnings from his creditors and becomes demoralized. On the other hand, remove from him the burden which no man can stand up against; remove the restriction which hampers his efforts, and he springs anew into the arena of action and becomes often, and I was about to say ordinarily, the best business man in the community. His experience becomes of vast importance to him. Ninety per cent. of traders fail, and yet they recover, if they have an opportunity to do so.

And lastly, Mr. Speaker, this bill is for the benefit of the creditor, the creditor who may be also a debtor.

It is a universal law, acting all over the country alike. It is one that will protect the creditor in his rights; it is one which is merciful to the debtor; it is ennobling to him rather than demoralizing and humiliating. It gives him an opportunity again to work his way in the world, and so far as the general commercial aspect of the case is concerned it increases our sense of commercial honor and the volume of commercial honesty. There are gentlemen who look over the bill and see at a glance that there is this provision and that provision they would wish changed, notwitstanding the fact that it may be and often is the case that the very thing they wish is provided somewhere else in the bill. Some condition is to be added which is to be found somewhere else in the bill. They will hastily make a motion to amend, and if the motion is not acted upon favorably they will proclaim their intention of voting against the bill, while the amendment is really a matter of little consequence, even if not provided elsewhere in the bill.

This bill of fifty-nine pages, general in its workings and large in its details, ought to have had a fuller consideration than we have been able to give it, I admit. But I do ask gentlemen who simply see a fault in it not to condemn the whole on that account. I can understand those who believe that there should be no bankrupt law, but I can not see why those who admit the necessity of a bankrupt law, and who concede that this is the best bill ever presented to Congress on the subject, should oppose it.

Other gentlemen will find a little flaw here and there which they say, if not corrected, will cause them to vote against the bill. It reminds me, Mr. Speaker, of being at the dinner-table of a hotel in a little city where was spread an abundant feast, a magnificent dinner. A gentleman sat nearly opposite to me and called for plum sauce. The waiter said: "We have no plum sauce to-day." "No plum sauce! What kind of a hotel is this?" And he got up in anger and refused to eat his dinner. I learned afterwards he was a little wrong in his head, but my illustration is not weakened by that fact. So, I say we had better not exaggerate the plum sauce before the roast beef.

Now, a word in regard to a proposed substitute that provides, in the first place, merely that these estates of the bankrupts shall be settled by the ordinary chancery practice in the courts of equity; second, that it is voluntary only—a scheme that has received the conditional promise of the support of the distinguished gentleman from Kentucky [Mr. BRECKINRIDGE]. It seems to me that no man can consider such a proposition even very briefly without seeing that it would not do for a single moment. In the first place, in the adjustment of the estates it would never become completed. Go into the general chancery practice as it exists wherever that practice does exist and it would be a repetition only of Jarndyce vs. Jarndyce in every case, and would have no end until every dollar of the estate was expended. In the next place, it would be infinitely expensive—bills and answers, replications, cross-answers, motions, interlocutory orders and decrees, hearings and rehearings, examinations, and submissions without end.

In the third place, it would open the doors so wide to fraud that no rascal need afterward commit burglary or highway robbery. The law would allow him all the advantages he wanted. You might guard it as you pleased, and unless you had the eye of Omnipotence it would give him time to make his arrangements, both as to the purchase, the credit, and the disposition of his property, with the assurance that after he has bought and taken the avails of his purchase and put those avails out of sight, with sufficient time intervening so that nobody can see the place of concealment and no footstep can follow it, he then can coolly come into court and pay the indebtedness by getting a discharge in bankruptcy and proceed again in the same way.

Mr. BRECKINRIDGE, of Kentucky. Does it interrupt the gentleman from Ohio if I make this suggestion? That can not be done, under the suggestion I make, in the State of Kentucky. My suggestion was that the estate should be wound up by the State court under the insolvency law of Kentucky, and that upon the debtor filing the decree of that court in the bankruptcy court of the United States, with an opportunity to creditors to deny the allegation that there has been no fraud committed by him, then to allow the Federal court to give the bankrupt a discharge, which can only be given, under the decisions of the Supreme Court, by the Federal courts, as otherwise it impairs the obligation of contracts.

Mr. EZRA B. TAYLOR. Of course.

Mr. BRECKINRIDGE, of Kentucky. Therefore, there could never be any money brought into the Federal courts and no assets. Therefore, there could be no fraud committed, because the estate would have all been wound up under the State law and distributed amongst the creditors.

Mr. EZRA B. TAYLOR. But, Mr. Speaker, that could not be. Such a law as that is not proposed and such a law as that could not exist; but the remarks that I have made apply to the case in hand; that is, to the pending substitute; and I do not know of anything that was ever suggested that was so impracticable, that would be so expensive, and so fraudulent.

Before I take my seat I beg to state a fact in regard to Mr. Torrey, inasmuch as he has been referred to in this debate. On account of his acquaintance with the subject of bankruptcy, the committee invited him to meet with and assist them in their deliberations, and he did so to their great satisfaction; being the author of the bill he was familiar with all its details. I also desired him to make a synopsis and to assist me in other proper ways. What he has done has been done by request of the committee or at my solicitation. His ability, energy, and high personal character have impressed the committee very strongly, and if the bill becomes a law the country will be largely indebted to him for its beneficent results.

Mr. HAYES. Mr. Speaker, I would like to ask the gentleman from Ohio [Mr. EZRA B. TAYLOR] a question. In these amendments that the committee have suggested, have they made any change in subdivision 11, section 42, in regard to the non-payment of commercial paper for fifteen days?

Mr. EZRA B. TAYLOR. No, for that is supposed to refer to commercial paper that ought never to go to protest.

Mr. HAYES. That is what it ought to refer to.

Mr. EZRA B. TAYLOR. It does refer to that.

Mr. HAYES. To make that more specific, I would like to amend by adding to that the words "being a manufacturer or merchant."

Mr. EZRA B. TAYLOR. Let the amendment be printed.

The SPEAKER *pro tempore*. The amendment will be printed in the RECORD.

Sundry Civil Appropriation Bill.

SPEECH
OF
HON. CHARLES H. TURNER,
OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Friday, July 25, 1890.

The House being in Committee of the Whole and having under consideration the amendments of the Senate to the bill (H. R. 10884) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1891, and for other purposes—

Mr. TURNER, of New York, said:

Mr. CHAIRMAN: My purpose in rising at this time is not altogether to discuss the pending bill or amendments thereto, but to take this, the first opportunity that has offered itself to any member of the Committee on Labor, of which I have the honor to be a member, to criticise somewhat the extraordinary course of this House in relation to the disposition of its time and the measures that it has taken under consideration.

In the course of the many months of this session many important committees, I am aware, have been unheard; but the Committee on Elections has certainly had plenty of time. Special rules have been from time to time brought in and forced through by a majority vote, giving consideration to questions having more or less of a partisan bias. But, sir, throughout all the days of this session, the Committee on Labor has thus far been unheard; and, Mr. Chairman, gentlemen on the majority side of the House have risen and taunted that committee with lack of diligence. The gentleman from Ohio, for whom I have the profoundest respect, said the other day that we of the minority were obstructing the consideration of labor measures brought in here.

For the purpose of setting myself right in the eyes of the distinguished member from Ohio, to show that we are not obstructing labor measures, and for the purpose also of defending my committee from the charge that it has not been duly diligent in the prosecution of the work committed to its hands, I take this opportunity—possibly somewhat out of the usual course—that I may call the attention of the House to the extraordinary situation in which it now finds itself. I find that the Committee on Labor was first instituted in the Forty-eighth Congress—a Democratic Congress—and very appropriately, too, because the laboring man turns naturally to the Democratic party as the party of his home and the party of his friends.

I find, in spite of all the fine words that have been wasted in this Congress about devotion to the laboring man from people representing great capitalistic and great monopolistic interests, that no Republican Congresses ever found that there was any need of any special committee for the consideration of labor measures. But, sir, when, under the operation of a most iniquitous tariff system, labor became restive and restless and its voice rising louder and louder came clamorous to the doors of this Chamber—when the Forty-eighth Congress assembled, a Democratic Congress, a committee was appointed where the protests of labor might be heard and heeded and its request acceded to. And who, sir, was the first Representative to win the honorable distinction of demanding a hearing for organized labor in these legislative halls? Hon. John J. O'Neill, who, in defining his position, said:

Mr. Speaker, I stand here as a Democrat, but I stand here as a representative of the laboring element in my district. I sprang from that element, and it is not with the words of a demagogue I stand here to argue that you shall dignify the calling of labor by creating a committee in this House to which the representatives of the laboring element can submit their claims. You had better do it now, for you must realize as well as I do that there must be a vent through which the feelings of that element can reach the law-making power. You do not want this terrible rumbling and uneasiness to culminate, as it did formerly, in the celebrated railroad strike. You desire to find what they want. Give them, then, the right to be heard.

Sir, in that Democratic Congress for the first time was created a committee that should devote its entire time to the consideration of labor matters. Every workingman in the land may thank the Democratic party, dominant in the Forty-eighth Congress, for the recognition that it extended by this action to the labor interests. But, sir, of what avail is it that a Committee on Labor should exist, that it should meet, that it should hold sessions, that it should give hearings, that it should formulate measures, if it shall be denied consideration on this floor? The Committee on Labor created by a Democratic Congress exists in this. It has been faithful and diligent in its work; it has formulated new measures for the relief of the labor interests of the country; its reported bills have stood for months upon the Calendar of this House, but this House has given no single hour to their consideration. Its every effort has been paralyzed, and the resolution introduced on the 2d of June, setting apart two days for the consideration of labor measures, still slumbers in the Committee on Rules, and I begin to fear that this slumber is the sleep of death.

Let this House pause and mark the contrast between its record and the record of the three preceding Democratic Houses. Sir, the Forty-eighth Congress not alone created the Committee on Labor, but under the auspices of that committee it created the National Bureau of Labor Statistics, and the Democratic House at least passed a law prohibiting the importation of contract labor. The Forty-ninth Congress, also a Democratic Congress, considered and acted upon no less than seven labor measures, and if some of these failed of becoming laws the failure is to be charged not to the Democratic House, but to the Republican Senate.

Among these was that great boon to American labor known as the alien-contract law. This law, compelling ships to return to the old nations of Europe all immigrants coming here under contract, was reported by Mr. O'Neill, amended and made more stringent by Mr. MCMILLIN, passed by a Democratic House, and after slumbering a year in the Senate was signed by a Democratic President and became a law. In my judgment this is the most valuable labor legislation ever had in this country, and the credit of this is due to the Democratic party. Then came another Democratic Congress.

The Fiftieth Congress, that memorable Congress of the long session, although a great measure that involved a change in the entire tax system of this country was considered and considered at great length, nevertheless, however pressing and urgent might have been the demand back of that Democratic majority for the consideration of that measure, which the Administration itself had approved, halted and gave four full days to the various demands that the organized labor of this country made upon Congress. In the four days that were given by the Fiftieth Congress to the consideration of the labor measures, six measures were passed. But in this Congress we have been in session month after month, under a code of rules that we were told were enacted for the purpose of doing business; yet the Committee on Agriculture, representing the great farming interests of the country, have ready for consideration in this House several important measures, and the great voice of the agricultural interest of this country has been stifled.

The demands of labor have been unheard; but wherever a protected industry, or one that would be protected, has knocked at the doors of this Congress, it has found a ready response. They may tell us that by and by the Committee on Rules, when there is nothing else to be done, will give us plenty of time for the consideration of these labor matters. They can not plead ignorance of these bills, for on June 3 a resolution was introduced giving two days to the Committee on Labor. It is possible that the distinguished members of the majority of the Committee on Rules never have had their attention called to it any more than they had to the resolution introduced by my friend from Indiana [Mr. COOPER] calling for an investigation of the Pension Office. It is possible that in their zeal to press forward partisan legislation they never have noticed this resolution. They have, indeed, been wonderfully diligent in the consideration of party measures. And I see no particular reason why they should have slighted labor matters, had they had any interest in them. "But," says some one, "there is a bill proposed from the committee that might possibly involve the expenditure of some money."

Well, I submit, Mr. Chairman, even in this most economical Congress, in which we have, I suppose, succeeded in dissipating the surplus that Democratic economy had heaped up [applause on the Democratic side]—I submit, Mr. Chairman, that if there be any bill from the Labor Committee for the workingmen of this country, for the payment of money that is justly due them which is withheld by the United States from them, that even in this most remarkably economical Congress, that bill, which embodies their demands, should be heard. Ah, Mr. Chairman, it is not enough to say that it would cost something, because measure after measure has gone through here expending far more money than can possibly be involved in this bill, measures which became laws without any thought or consideration of the amount of money involved therein.

I can see in this—and I say that the record of at least two of the gentlemen upon the majority side of that committee would very well bear out this supposition—I can see in this only that this Congress has been so busy in its partisan enactments, so reckless in its expenditures of the public money where it thought there would be votes for itself, that it has never heeded the great voice of labor, though organized labor has been clamoring at its doors, and labor might as well not have been represented by a committee as by this committee thus stifled.

Mr. KERR, of Iowa. Will the gentleman yield for a question?

Mr. TURNER, of New York. Yes, with great pleasure.

Mr. KERR, of Iowa. What particular bills do you desire to have passed?

Mr. TURNER, of New York. Well, I want an opportunity to discuss all the bills. If the gentleman, who has been very attentive and studious here, will notice the Calendar with the same assiduity as he studies it when he gets a bill of his own thereon, I think he will have no difficulty in discovering that there is one bill that has been reported three times in three separate forms in the hope of getting the ear of the Committee on Rules; that it has been referred back to the committee, and the committee has done its work over again in the vain hope that some day and somehow in some way they might prevail upon that obdurate body of gentlemen to give consideration to this measure.

Mr. KERR, of Iowa. Will the gentleman mention the particular bill?

Mr. TURNER, of New York. The eight-hour back-pay bill is one bill. The bill remedying certain defects in the eight-hour law is another, a bill that the distinguished gentleman from New York, my colleague upon that committee [Mr. FARQUHAR], says the Typographical Union assembled in Atlanta indorsed.

Mr. GROSVENOR. Will the gentleman from New York yield for a question? Is there any labor bill that was not pending in the Fiftieth Congress?

Mr. TURNER, of New York. Well, now, the gentleman was a member of the Fiftieth Congress, and if he had attended to his duty in that regard with all the earnestness with which he attends to all other matters he would have helped to pass all those bills of the Fiftieth Congress.

Mr. GROSVENOR. But "the gentleman" was in the minority in the Fiftieth Congress.

Mr. TURNER, of New York. But the majority of the Fiftieth Congress did pass six bills from the Labor Committee, and only one has come over to this House from that Congress. Why do not the majority in this House pass these bills? The eight-hour back-pay bill is not passed, the amended eight-hour bill is not passed, and the resolution of my distinguished friend from Nebraska [Mr. CONNELL] asking for an investigation of labor matters has thus far been unable to get a hearing in this House.

That resolution was not in the other Congress, and the $2 a day bill was not in the last Congress. The only bill left over by a Democratic Congress, which has been considered in this Congress, was the so-called eight-hour back-pay bill. Thus, Mr. Chairman, has a hearing been denied the Labor Committee during the present Congress, and yet in season and out of season, at all times, on every possible occasion which was presented, we have exerted ourselves to the utmost, we have tried our best to secure legislation. And I desire, for the purpose of informing the gentleman from Ohio [Mr. GROSVENOR], who adverted to the position of the minority in regard to these questions as obstructive to the labor movement, to call his attention to this statement which I have submitted, in no sense an exaggerated one, and ask him how he himself or the leaders of his party, when they go before their constituents, the laboring people of this country, expect to be able to justify the action of this Congress in dealing with labor matters, or rather in refusing to deal with them.

This, Mr. Chairman, is the shameful record of the Fifty-first Congress, a Congress more dominated by partisan spirit, more submissive to the demands of the capitalists, more shameless and unblushing in its subserviency to the demands of the trusts and corporations than any other ever convened in this Capitol. It is the first Republican Congress assembled since this Labor Committee was constituted; it is the first to stifle and silence the voice of that committee, and I trust, Mr. Chairman, it shall prove the last representative body of the great American people where the voice of labor shall be unheard. [Applause.]

[Here the hammer fell.]

Arid Lands Survey.

SPEECH

OF

HON. ANTONIO JOSEPH,

OF NEW MEXICO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 26, 1890,

On the Senate amendments to the bill (H. R. 10884) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1891, and for other purposes.

Mr. JOSEPH said:

Mr. SPEAKER: In the sundry civil appropriation bill of October 2, 1888, the following provision was enacted:

For the purpose of investigating the extent of which the arid region of the United States can be redeemed by irrigation, and the segregation of the irrigable lands in such arid region, and for the selection of sites for reservoirs and other hydraulic works necessary for the storage and utilization of water for irrigation and the prevention of floods and overflows, and to make the necessary maps, including the pay of employés in field and in office, the cost of all instruments, apparatus, and materials, and all other necessary expenses connected therewith, the work to be performed by the Geological Survey, under the direction of the Secretary of the Interior, the sum of $100,000, or so much thereof as may be necessary. And the Director of the Geological Survey, under the supervision of the Secretary of the Interior, shall make a report to Congress on the first Monday in December of each year, showing in detail how the said money has been expended, the amount used for actual survey and engineer work in the field in locating sites for reservoirs, and an itemized account of the expenditures under this appropriation. And all the lands which may thereafter be designated or selected by such United States surveys for sites for reservoirs, ditches, or canals for irrigation purposes, and all the lands made susceptible of irrigation by such reservoirs, ditches, or canals are from this time henceforth hereby reserved from sale as the property of the United States, and shall not be subject after the passage of this act to entry, settlement, or occupation until further provided by law: *Provided*, That the President may at any time in his discretion by proclamation open any portion or all of the lands reserved by this provision to settlement under the homestead laws.

The amendment of the Senate to the pending bill proposes to repeal a portion of the above-quoted act, in the following words:

So much of the act of October 2, 1888, entitled "An act making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1889, and for other purposes," as provided for the selection and location of reservoirs and canals upon the public lands and the reservation of irrigable lands is hereby repealed: *Provided*, That reservoir and canal sites heretofore located or selected shall remain segregated and reserved from entry or settlement until otherwise provided by law.

The circumstances under which the act of October 2, 1888, became a law are worthy of careful attention. For many years the Representatives and Delegates in Congress from the Western States and Territories have realized the necessity of comprehensive action on the part of the Government towards setting aside sites for reservoirs and canals for the purpose of irrigation, so as to make available for homes a large part of the public domain unfit without irrigation for agricultural purposes. By this act it was intended to take the first steps in that direction by a preliminary appropriation for beginning the work of surveying the sites. Provision was accordingly made in this bill as it passed the Senate, in such terms that it was hailed with joy by all the Western people. Upon consideration by a committee of conference upon the disagreeing votes of the two Houses of Congress as to this and other matters contained in the same bill, the language was inserted which is quoted above, and in this form it afterwards became a law.

This particular language was not considered by either House of Congress, but was inserted by the conference committee at the close of one of the longest sessions of Congress ever known, and adopted by both Houses without any debate, and, indeed, without the knowledge of a large portion of members of either House as to exactly what the bill contained. No one believed at the time of its passage that it was possible that the bill could have any such effect as was subsequently given it, nor was any such effect intended. No such provision of law could have commanded the support, after full discussion, of more than a handful of members of either House of Congress.

After the passage of this law the settlement of the Western States and Territories continued the same as in the past. Entries under all the public land laws were received by the land offices throughout the West, and it was not until nearly a year after the passage of the law that it was announced by the Secretary of the Interior that under the construction of the law which he held, and in which he was supported by the opinion of the Attorney-General, he was obliged to declare that all entries of land west of the one hundredth meridian made since October 2, 1888, were wholly void and must remain suspended. After a long delay this decision was officially promulgated in some of the land districts and notice was sent to the land office to receive no more filings, while in other districts no official promulgation has ever taken place, and, so far as I am informed, until a very recent date, the officers have continued to receive entries as in the past. The result of this decision of the Secretary of the Interior was most unfortunate upon the whole of the public land within its operation.

It was never expected or supposed by a single member of Congress who was in Congress when this bill passed that it would have any such effect. Homesteaders who have gone upon the public lands, filed their entries, and taken all the requisite steps under the law, have been thrown into the most absolute confusion. All titles have been unsettled by the official declaration that every step, though taken in perfect good faith, has been wholly void and of no effect. Immigration into the public-land States and Territories has been almost entirely stopped by the announcement that the benefits of the homestead laws were no longer open. In many of the States and Territories, and particularly in New Mexico, large investments for canal purposes had been made prior to the promulgation of this decision, under which vast improvements, to result in the greatest benefits to the people of New Mexico, have been begun and in part carried to a successful issue; but with the stopping of entries upon the public lands and the ceasing of immigration these investments have been suspended and the prospects for obtaining water for irrigation in many of the fertile valleys of New Mexico have been postponed to the far-distant future.

Among the many canal and irrigation projects already under way in New Mexico may be mentioned the following:

The Pecos Valley Irrigating Canal Company has already expended $700,000, and before the completion of its enterprise will spend $300,000 more. It has already built at least 100 miles of canal, now in operation, and has 50 miles additional under contract. The total number of acres which can be finally brought under cultivation by this canal will be between 350,000 and 500,000. The Rio Grande Canal and Irrigation Company have already expended $150,000, and when completed will reclaim from three to four hundred thousand acres by a canal from 150 to 200 miles long. A vast capital will be invested in this enterprise, which will be of the greatest benefit to the people of the Rio Grande Valley. The Taos Valley Canal and Irrigation Company has begun the irrigation system of that valley by the initial expenditure of $100,000, and expects, by a canal 125 miles long, to irrigate some of the finest agricultural land in New Mexico. The Jornada del Muerto Canal and Irrigation Company has made preliminary surveys for a canal which will be 250 miles long, and a number of other canal and irrigation companies have made surveys looking to the reclamation of many thousands of acres in New Mexico.

Besides these, numerous other similar enterprises have attracted capital from the Eastern States, promising to New Mexico a speedy development of her great resources. Many of the lands to be reclaimed are adapted to the cultivation of suitable grapes for making wine as well as of the finer-flavored and less hardy fruits. The future value of these lands when under irrigation can hardly be estimated at the present time.

But the act of October 2, 1888, has effectually stopped all these enterprises, as well as checked the tide of immigration on the part of settlers, already attracted by the prospects of certain crops, without recurrent failure, under the beneficent system of irrigation.

It is not surprising that the Western people, through their Senators, Representatives, and Delegates, have demanded with one voice the repeal of the law of October 2, 1888, in so far as it withdraws from settlement and entry the public lands.

I am, therefore, strongly in favor of the amendment of the Senate to the pending bill repealing the law of 1888 under which these lands were closed to settlement. But this amendment does not meet all the necessities of the situation. The Western people will not be satisfied with the mere repeal of the law of 1888. They believe that the step then taken towards the survey and setting aside of reservoir and canal sites is a wise step worthy of continuance. They therefore demand that, while the obnoxious provision preventing entries upon the public lands should be repealed, the work of marking the irrigation districts and setting aside the reservoirs and canals should be continued. The people of New Mexico do not wish by this to be deprived of the great benefits which have already accrued to them and will accrue in the future from the investment of private capital in such enterprises, but they believe that they are rightly entitled to the assistance and aid of the Government in making surveys where no surveys have been made, and in determining for the future the proper location of the essential works for irrigation purposes. This is essentially a work to be done by the public rather than by private associations.

But I am satisfied that, while this work should continue, the only ultimate solution of the desert-land problem will be to turn over to the States and, through properly constituted officers, to the remaining Territories all of the arid lands within their limits which have not been disposed of under the public-land laws. The needs of the different localities are varied, and Congress can not determine as well as the local Legislatures the particular disposition which should be made in each State of the desert lands so as to secure their irrigation in the best manner and at the earliest possible date. A bill (H. R. 971) making provision for this was presented by me in the first days of this session. It has not yet received the action of Congress. I am glad to notice the many expressions of debate in both Houses of Congress in favor of this proposition, and hope that before this Congress adjourns provision will be made for the admission of New Mexico as a State, under the enabling act presented by me, and a transfer to New Mexico and the other States of all desert lands within the borders of each.

Fears have been expressed in the pending debate that upon the construction of the reservoirs and canals by private associations of capitalists the people of the various irrigation districts would find themselves dependent entirely upon the will of the canal companies.

I believe that the work of setting aside the reservoirs and canals is properly a duty devolving upon the General Government. I believe, too, that the title to the reservoir and canal sites, as well as to all the waters, should in every instance be ultimately reserved, without power of alienation, to the people of the States and Territories. And I think that the best interest of the people demands that the canal system should be under the direct control of the people of the irrigating districts.

But I am not willing that New Mexico should lose the benefit of the numerous irrigating systems already in process of construction by private enterprises. New Mexico has the best system of irrigation laws in the world, founded upon the old Spanish laws and transferred to New Mexico before the settlement of the Atlantic seaboard. These have been modified and developed by actual experience. The people are protected by them from oppression by canal-owners. The very laws under which the canal companies have organized and operated fix the maximum charges for water, and in nearly every instance a perpetual water right can be bought at a very moderate sum. As new emergencies arise the people will be prepared to meet them and to apply the needed remedies. In the State of Colorado all questions between the canal-owners and the water-users have been settled, and while proper encouragement has been given to capital to develop the country the rights of the people have been effectively guarded. There will be the same result in New Mexico.

For these reasons I favor the amendment of the Senate restoring the public lands to entry, but this should be further modified by providing:

1. For the continuance of the survey for irrigation purposes.

2. For the perpetual reservation to the people of the ultimate title to all reservoir and canal sites and of all the waters of the States and Territories.

With these provisions the people of the respective localities can guard and protect their interests, while the development of the West will not be retarded.

Restriction of Immigration.

SPEECH

OF

HON. ELIJAH A. MORSE,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, August 6, 1890,

On the report of the committee of conference on the disagreeing votes of the two Houses on the bill (S. 398) to limit the effect of the regulations of commerce between the several States and with foreign countries in certain cases.

Mr. MORSE said:

Mr. SPEAKER: Having addressed the House at length upon the pending bill at a previous stage, I avail myself of the large liberty and latitude allowed in this discussion to speak upon another subject.

I think I represent my constituents when I say that I believe in restricted immigration. I would by no means confine the restriction to the Chinese, but I would go further. I do not believe our country desires, or can assimilate, or that it is safe to open its doors to the unrestricted admission of any considerable portion of the four hundred and fifty millions of that people who constitute the Chinese Empire.

It is also a serious question in my mind as to how far our country can go in incorporating into its body-politic the dangerous and hostile elements that are pouring in upon us from European countries. We have been calling our country "an asylum for the down-trodden and oppressed," and so it is and ought to continue to be.

But in view of the class of immigrants who are coming to us now, I have sometimes wondered how it would do to turn around and call the country "a sewer for the scum of all God's creation to empty into."

I would extend a cordial welcome to the honest immigrant seeking these shores who desires to become an American citizen, but I submit that we want no more bomb-throwers, anarchists, nihilists, paupers, tramps, and lunatics, and we want no more Mormon immigrants.

I would favor immediate and radical legislation to prevent these dangerous classes from coming to this country. The insane asylums, charitable and reformatory institutions of Massachusetts have numerous illustrations of this class of assisted and vicious immigrants, who went straight from the ship to these reformatory and penal institutions.

The governor of the Commonwealth of Massachusetts recently made this the subject of a message to the Legislature.

While I entertain these views in regard to the Chinese and other undesirable immigrants, I can not command language strong enough to condemn the abuse which in some sections of the country, particularly in the Pacific States, is being heaped upon these innocent and inoffensive heathen who have been allowed to come to our shores, by sand-lot orators of the type of Dennis Kearney.

I believe the Book which says that God "hath made of one blood all nations of men for to dwell on all the face of the earth." The dictates of humanity and religion forbid persecution, murder, and violence, that are frequently perpetrated in this country upon the Chinese who are already here, and it is a disgrace to our country that these criminals have so often gone unwhipped of justice. Wise statesmanship and policy alike forbid this injustice. If continued, it will result in retaliation upon our missionaries and residents in China, if not in non-intercourse.

I will not take the time of the House further. I will extend my remarks in the RECORD by printing a memorial upon the subject from a constituent of mine, an eminent citizen of Massachusetts, without necessarily indorsing all his views.

A memorial upon the subject of Chinese immigration.

BOSTON, *May 2*, 1890.

DEAR SIR: The alarm existing in some of the Western States where the Chinese have appeared in great numbers would naturally lead one not familiar with the subject to infer that these people have come unbidden, that their presence is injurious to the interests of white labor, and that they are likely to increase in this country to such an extent as to threaten our institutions and even mongolize some portions of our territory.

This feeling of alarm is said to seize upon one who visits the Chinese quarter in San Francisco. There he sees eighty thousand or more of the lower order of Chinamen and several thousand Chinawomen, mostly prostitutes, living apart from the white residents, retaining their national language, costume, and manner of living, worshiping their foreign gods, and regulating their affairs not by our standards and in accordance with our laws, but by standards and laws imported from their own country. They show no disposition or ability to become americanized or to adopt any of our institutions.

The thought naturally arises, on seeing such a sight, how deplorable would be the state of affairs in this country if the untold millions of China, who are supposed to be waiting an opportunity to come to our shores, should succeed in establishing themselves here.

So strongly are the people of the Pacific coast impressed with a fear of Chinese immigration that they have caused the matter to be made an issue in State politics to the exclusion of other issues, and induced both of the great national parties to insert anti-Chinese planks in their platforms. They have also brought such pressure to bear upon both Houses of Congress and the President as to secure the passage of that unwise and therefore unnecessary piece of legislation in 1882 prohibiting the Chinese for ten years from coming here, and also to wring from China an unwilling consent to discrimination on our part against her own people.

Not satisfied with having secured the passage of laws to arrest immigration, they have risen at Rock Springs, Seattle, and other places with that appearance of spontaneity and determination which men generally show in a good cause, when the case is desperate and the laws inoperative, and attempted to rid themselves of their trouble by waging a war of extermination against the Chinese, hardly equaled in violence and atrocity by anything that occurred during our early wars with the Indians.

This is not the first time in American history when prejudice and fear have led to an uprising on the part of the people, accompanied sometimes by acts of violence and bloodshed. The wars against the Indians by our New England forefathers were caused by fear of those people, not shared in by the settlers of Delaware, Pennsylvania, and Virginia, nor by our neighbors in Canada, all of whom acted on the belief that kind treatment and a few trinkets would do more to keep the peace than tons of gunpowder.

The alien and sedition laws of June 25 and July 7, 1798, were passed through fear of an invasion of the French which never came. The war of 1812 was not caused so much by the impressment of our seamen as by the fear that England meditated other encroachments upon our rights and independence, and this is shown by the treaty made at the close of the war, when the original cause of the trouble was not even mentioned. The immediate cause of the great rebellion was the fear that Lincoln and the Northern people, supposed sympathizers with John Brown, intended to destroy the right of property in slaves, and with it the cotton interest, and it was prolonged more than a year by the mistaken fear of a negro insurrection and Northern vengeance.

Perhaps a calm investigation of the Chinese question will show that we have nothing to fear from the coming of these people any more than from the coming of French-Canadian, Russian, or Italian immigrants; and that the dangers which appear so threatening to Western alarmists are not real, but exist only in an imagination excited by unreasoning fear.

Let us look at the statistics of this immigration and consider the influences which brought these people to our country and now keep them here. In 1860 there were 34,933 Chinese in the United States, nearly all of whom came to California as gold-diggers. During the next four years there was a net gain of arrivals over departures and deaths of about 4,000 a year, caused principally by the demand for laborers to construct the Union Pacific Railroad. During the next four years the tide turned the other way, in consequence partly of the cessation in demand for labor in railroad construction and partly by the unprofitableness of placer mining after machinery was introduced; and the Chinese population fell off 1,855 in 1864, and 2,555 during the next three years. Here was a net loss in four years of 4,440 out of a total of 51,474, or nearly 9 per cent.

In all probability this decrease would have continued if the reclamation of the tule lands, the digging of irrigating canals in connection with wheat production, and the construction of the Central Pacific Railroad had not called for the importation of more laborers. The Chinese responded to the new call, and there was a net gain of 6,126 in 1868, 9,289 in 1869, and 5,760 in 1870. Here immigration made another pause, and the increase was only 1,376 in 1871 and 3,929 in 1872.

The tendency toward a decrease was soon arrested, however, by the fresh demand for labor in manufacturing. Up to 1872 California had confined itself principally to gold mining, railroad construction, and wheat raising. Now the time had come for the introduction of manufacturing, and the people of California, profiting by the successful experiments tried in North Adams and a few other places of training the Chinese to make boots and shoes, soon caused those people to be employed on the Pacific coast in making clothing, hats, and caps, boots, and shoes, furniture, cigars, and a dozen other staple articles of manufacture. As laborers were difficult to get at any price, inducements, in the way of prepaid passage money and a promise of high wages, were offered to the Chinese to come here. Under the stimulating influence of these inducements the arrivals from China again showed a large net increase, and in the four years, 1873 to 1876, that increase was over 9,000 per annum. Some of this increase, however, may have been due to the construction of the Southern Pacific and the Evans-Mendocino Railroad lines. In 1876, or as soon as the railroads just named were completed, and the factories supplied with workmen, the demand for Chinese labor again fell off, and has never since been renewed.

The work of gold-mining, tule-land reclamation, railroad construction, canal-cutting, wheat-farming, and manufacturing rapidly fell into the hands of white laborers, principally from Europe, whose superior strength and ability to use machinery caused them to be preferred to the Chinese, and the latter were driven from these employments to domestic service, laundry work, and petty shop-keeping. The Chinese promptly recognized the cessation in demand for their labor and took immediate steps for their return to China. In 1877 the increase of immigrants fell to only 627, against 9,119 the year before. In 1878 there was a net decrease of 600. In 1879 the decrease was 1,805, and in 1880, when the sand-lot agitation against the Chinese commenced, the decrease was 2,494.

To recapitulate: There was an increase during four years (1860–1863); then a positive decrease during four years (1864–1867); then another increase during three years (1868–1870); then a strong tendency toward a decrease during two years (1871–1872); then a very large increase during four years (1873–1876); and, lastly, another positive decrease during four years (1877–1880).

These figures show that the flow has not been steadily hitherward, but fluctuating, with a tendency, if uninterrupted by us, to turn slowly homeward. Left to itself the tide which had set so strongly in this direction, when better labor could not be secured, would have slowly ebbed away, never to return again.

But the foolish agitation in 1880 and 1881, born of hatred and ignorant fear, instead of preventing further Chinese immigration, as was intended, had just the opposite effect, and resulted in a fresh influx of thirty thousand laborers, who rushed over here in the course of eighteen months for no other purpose than to get into the country before the restriction act went into effect. These fresh arrivals were not needed, and the inducements before offered, in the way of prepaid passage money and promise of employment, were not held out to them. They came because of the restriction act and, not finding employment in California, went almost immediately to Idaho, Oregon, British Columbia, and other parts of the West, as miners and railroad laborers, many of them drifting eastward as laundrymen, cigar-makers, and shop-keepers. In 1883 there were 381 Chinese immigrants; in 1884 there were 84; in 1885 there were 57; and in 1886 there were only 8. The decrease by death during these four years may be fairly estimated at 4,800.

History has many instances where restriction and prohibition has had the opposite effect to that which was intended. The Chinese built a wall 1,500 miles long to exclude the Tartars, whom they feared and hated; but the Tartars, who had been contented before that time with making short incursions in small numbers, saw in this expensive work the evidence of wealth beyond, and, massing themselves, overran the whole country.

The martyrdom of the early Christians, the persecution of the Jews, and the attempt of the Inquisition to extinguish Judaism and Protestantism all had different results from those which were intended.

A certain king of France, having failed to introduce the potato into his country through a gratuitous distribution of the seed, tried the experiment of putting a high board fence around his potato patches, with a warning of death to any who should steal the king's property, and he soon had the satisfaction of seeing his tubers on the table of every family in his kingdom.

A certain king granted a pension to an old man who had never, in eighty years, gone beyond the walls of his native city; but he coupled the pension with the restriction that the man should never go outside the gates, and in less than a week the old man lost his pension by yielding to a new-born but irresistible desire to see something of the world outside.

The Chinese Government wishing to continue the profitable monopoly in opium, which it had enjoyed for centuries, passed stringent prohibitory laws and made war against the English importers; but the attempt to restrict the traffic resulted in their own humiliation and the establishment of the English opium trade for all time.

Congressional restriction, instead of preventing Chinese immigration, undoubtedly increased it temporarily. In 1881 the arrivals were 20,711; in 1882, before August 1, when the restriction act went into effect, the arrivals were estimated at 10,000. From August 1, 1882, to October 20, 1885, a period of nearly three years and four months, the arrivals were only 17,656, while the departures were 42,085, and the deaths, estimated, 5,300; or a net loss of 29,729. According to these figures the present Chinese population should be about 10,000 less than in 1880, when it was 105,465; but competent judges in California estimate the total at 110,000, as thousands landing in British Columbia are finding their way here across our northern border.

This increase will not continue, however, as the Chinese now thoroughly realize that the demand for their labor is not equal to the supply, and this fact will speedily cause them to turn their faces again homeward. The six Chinese companies of California, against which there has been so much foolish talk by the sand-lot orators, will do much to expedite the return of unemployed laborers, as one object of their organization and a large part of their capital is for that very purpose. Four thousand Chinese left British Columbia and over 5,000 left San Francisco during the months of September, October, and November, 1885, 2,300 being on board vessels in harbor at one time. Very few of them had any intention of returning.

One thing on our part, however, may do much to arrest the Chinese in their homeward flight, and that is the discovery in the Middle and Eastern States that they are excellent domestic servants, and can supply a demand long standing for better cooks, waiters, and scullions than are found among colored people or than come to us from European countries. Irish menials have already made this discovery, and their jealousy of the Chinese will largely account for the cry against the "haythens" in San Francisco.

Another thing may prevent their going or at some later day may cause their return in large numbers, and that is a demand for miners and railroad laborers in our Southwestern States and in Northern Mexico, where the climate and other conditions are more favorable than in California. But even the more favorable conditions of a southerly region are not likely to induce them to come with the intention of making their permanent residence in America. Similar favorable conditions exist in Australia, South Africa, Java, Japan, Peru, and the Sandwich Islands, where the Chinese have gone in great numbers; but in every case their stay has been but temporary, and except in Java their numbers are now slowly but steadily diminishing.

If the limits of this letter permitted, something might be said concerning the constitutional and treaty rights of the Chinese to residence and protection here, also concerning their fitness for citizenship and the position they would probably occupy if they came in great numbers with the idea of a permanent residence; but such discussion is entirely unnecessary, as we shall probably never be called upon to consider the Chinese immigrants except as laborers and aliens. The Chinese never have come, and probably never will come, with the intention of taking up a permanent residence here.

In discussing their presence here, they are not to be compared with the Irish, Germans, Swedes, Russians, and others, who are homogeneous with our Anglo-Saxon stock, and capable of rapid absorption and assimilation by us; nor are they to be compared exactly with the French-Canadians and Italian laborers, who come for the same purpose as the Chinese, to make a little money and then return to their native land. The differences between the Chinese and other immigrants, and between the Chinese and ourselves, in race, language, religion, habits, education, ideas of government, and the pursuit of happiness, are all essential differences, and our celestial friends after a short residence among us have no desire to take up their domicile permanently with us or to adopt any of our ways or institutions.

The soil of China is as good as ours; the climate as good, if not better; and the semi-communal, semi-patriarchal system of government in that country much better suited to their genius than anything they find here. Their intense love of country, their affection for their families, especially their deceased ancestors, the greater economy of living in China, and the superstitious dread of having their bones left in a foreign land will do much to keep them at home.

The only Chinese who are likely to come here will be like those who have come before, the boatmen, outcasts, adventurers, and other low people on the shores of China near Hong-Kong, who drift first to that island, and by contact with the English become in a measure fitted for emigration to this country, or, at any rate, ready to emigrate when a demand for their labor calls them here. Their number, however, is limited. Many of them belong in Hong-Kong, are subjects of Her Britannic Majesty, and have as much right to be here under our treaty with England as any of her lighter-skinned and more favored children.

Something might be said of the folly committed by both national parties in 1880 in putting an anti-Chinese plank in their platforms, and something on the other hand of the wisdom of President Cleveland in 1885 in announcing to the Austrian Government, when Keiley was rejected as our minister, that we made no distinctions here on account of race or religion.

In view of the probability of an early attempt in the so-called labor interest to restrict immigration from Europe, it would be well for us to remember the declaration contained in our national Constitution and in the constitution of nearly every State in favor of free immigration to all who seek their happiness here; which declaration debars us from ever making such a restriction if we have any regard for consistency or respect for the wisdom of those who founded our Government. It would be well for us also to consider the advantage to laborers already established here of having other laborers arrive to take their places and free them for more elevated employments, a higher social life, and better wages.

The consequences of the restriction act and of the recent outrages on the Chinese in the West will be far-reaching and we shall suffer from those acts in our future dealings with China, as we deserve. We have shown the Chinese that we were insincere when in 1868 we joined Burlingame in his flowery statements concerning the right of expatriation and universal brotherhood. We have shown them that we, like England and France, can disregard a solemn treaty obligation with a weaker government when it suits our interests to do so. In passing the restriction act we, unfortunately for the world's progress, admitted what China has all along contended for, that one country has a right to exclude the people of another country, instead of taking the higher ground that the whole earth is man's heritage and that each individual has a natural God-given right to go wherever he will and be protected in his pursuit of happiness.

The Chinese, after they were helped by Americans secretly with money in their war with England and France in 1857, and up to 1881, regarded us with less fear and more favor than any other nation on earth; but they have evidently changed their views, as the contracts for $70,000,000 just reported as given out for the construction of railroads in China are none of them given to us, though we should naturally have had the principal share of them.

Poor China feels that in passing the restriction act we deliberately insulted her, and we must not be surprised if her wounded pride leads her to retaliate. With just and friendly treatment on our part she might have been made as valuable to us as an outlet for our produce and manufactures and as a field for the

employment of our young men as India has been to England; but we have now thrown away our golden opportunity, perhaps never to be recovered.

The objections commonly made to our Chinese immigrants seem to me not well taken, but, on the contrary, to be points in favor of their being here. There might be, with some show of reason, objection to them, if, like the ignorant, unskilled, and sometimes offensive immigrants from Europe, they came intending to stay, bringing their families, mixing in our society, filling our schools, prisons, and poor-houses, exercising the right of suffrage and combining together for their own political ambition or private benefit, underbidding American laborers, or in any way willfully disturbing the public peace. But no such character can be given them.

During thirty-five years' residence here they have shown themselves to be industrious, peaceful, law-abiding, sober, honest, and frugal, without political ambition, minding their own business, taking care of themselves and each other, offering no offense to anybody, and only asking in payment for their drudgery to receive the crumbs which drop from our bountifully supplied table.

Joaquin Miller says: "I never, during all my years of intercourse with this people as miner and four years as magistrate, saw a single drunken Chinaman. I never saw a Chinese beggar. I never saw a lazy Chinaman."

Their very inoffensiveness is probably the principal reason for their ill-treatment by the inferior but more aggressive hoodlums of the West. It is a true saying that "only those have rights who dare maintain them," and this is as true concerning the Chinese as it is concerning the Quakers, Jews, colored men, and others, who are non-combatants through principle or weakness; but this truth is no reason why hoodlums and desperadoes should abuse them, and every lover of justice must approve the action of President Cleveland four years ago in using the force of the United States Government to protect them in Oregon and Washington Territory.

One objection made to the Chinese in California is that they send large sums of money out of the country. That this is absurd can easily be shown. About five thousand Chinese return to their native country annually, taking on an average about $600 each, or $3,000,000 in all. This sum may seem large to some, but by comparison it is very small, a mere trifle, and not one-twentieth part of the permanent value created by them annually and left here for us to possess. It is not equal to the sum taken out of the country by French-Canadians who work in New England factories; nor to the sum remitted by the Irish to their friends in the old country; nor to the sum that we spend annually for imported kid gloves. It is not one-fifteenth of the money paid to other countries for coffee, and not one-sixth of the sum voluntarily sent by us to China, their own country, to pay for that mere luxury, tea.

The point I wish to make in regard to the Chinese problem is this: Since the abatement of the gold fever and until the restriction act went into effect the comings and goings of the Chinese have been governed by demand and supply, the laws of which are well understood and obeyed by them; and if we will permit the operation of these laws without stimulating their coming by unwise restriction acts, there will be nothing to fear from the hordes which are erroneously believed to be waiting on the shores of China for transportation to this country. In legislating concerning the Chinese we should keep in mind that they are not here as permanent citizens, but as temporary laborers, and that our care of them during their short stay is purely a matter of police and sanitary regulation.

The cry that "the Chinese must go" proceeds from ignorance or malice, and very largely from European immigrants in California, who have but recently been admitted to the benefits of our institutions.

I am, dear sir, yours very truly,

EDMUND D. BARBOUR.

Hon. ELIJAH A. MORSE, *M. C., Washington, D. C.*

Original-Package Bill.

SPEECH

OF

HON. DANIEL KERR,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, August 6, 1890,

On the report of the committee of conference upon the disagreeing votes of the two Houses on the bill (S. 398) to limit the effect of the regulations of commerce between the several States and with foreign countries in certain cases.

Mr. KERR, of Iowa, said:

Mr. SPEAKER: The Senate bill, the adoption of which is recommended by the conference report now before the House, is intended to allow the States, in the exercise of their police power, to control the traffic in intoxicating liquors in such way as they may deem most conducive to the public welfare, whether it be by restriction, by high or low license, or by restriction of the sale for such uses as the State may deem legitimate, and to such persons as the State may think competent to purchase, by such persons as may be authorized to sell.

Until recently it had not been questioned by the highest court in the country that the State had full power over this entire subject. Its police power to protect the public health or the public morals was supposed to have been settled by the continued decisions for a long series of years. The decision in the Bowman case, made more than two years ago, which denied the power of a State to place any restrictions on the transportation of any article of commerce on any interstate road, contained declarations which, taken in connection with that decision, gave rise to the belief that the recent decision would be made in due time.

At that time I introduced a bill providing that interstate roads and express companies should be subject to the same restrictions as the State placed on its own roads. This, it seemed to me, and still seems to me, the best method of dealing with the subject, leaving the State to be the judge as to the best and proper method of restriction to be placed on its transportation. I introduced the same bill into this Congress. It, with several others, was referred to the Committee on Commerce. As the effect of that bill would be substantially the same and perhaps more comprehensive than the House substitute for this bill, I need not say that I should have preferred either of them to the bill now under consideration, if it had been possible to obtain either.

Mr. STRUBLE, of my State, introduced a bill (H. R. 5978) which limited the restriction to the single article of alcoholic liquors, as the Senate bill does, and that bill went to the Committee on the Alcoholic Liquor Traffic and was favorably reported by me by direction of that committee. The report in favor of that bill applies so clearly to the Senate bill now under consideration that I adopt it as a part of my remarks. The report is as follows:

The Select Committee on Alcoholic Liquor Traffic, to whom was referred the bill (H. R. 5978) to prohibit the transportation of intoxicating liquors into any State or Territory in violation of law, have had the same under consideration, and recommend the passage of the bill with certain amendments.

The bill gives legislative authority of the General Government to the State to regulate the transportation of intoxicating liquors by railroad companies and other common carriers. This action has been rendered necessary by the decision of the United States Supreme Court in what is known as the Bowman case. The court in that case, in rendering the decision, made use of the following language (125 U. S., 493) in reference to the power of a State:

"For the purpose of protecting its people against the evils of intemperance it has the right to prohibit the manufacture within its limits of intoxicating liquors. It may also prohibit all domestic commerce in them between its own inhabitants, whether the articles are introduced from other States or from foreign countries. It may punish those who sell them in violation of its laws. It may adopt any measures tending even indirectly or remotely to make the policy effective until it passes the line of power delegated to Congress under the Constitution."

But the court says further:

"It can not without the consent of Congress, express or implied, regulate commerce between its people and those of other States of the Union in order to effect its end, however desirable such a regulation might be."

This opinion was dissented from by a minority of the court, including the late Chief-Justice Waite, Justices Harlan and Gray, who maintained that the State had full power to prohibit or regulate transportation in the exercise of its police powers, but the decision must stand as the law, and the object of the bill is to give to the State the express consent of the General Government to the exercise of the same power over interstate commerce for the suppression of the unlawful traffic in intoxicating liquors as it now exercises without question over State commerce.

The Supreme Court in reaching their conclusion in the Bowman case, speaking of the law of Iowa especially, said (125 U. S., pages 475, 476):

"It may, therefore, fairly be said that the provision in question has been adopted by the State of Iowa not expressly for the purpose of regulating commerce between its citizens and those of other States, but as subservient to the general design of protecting the health and morals and the good order and peace of the State against the physical and moral evils resulting from the unrestricted manufacture and sale within the State of intoxicating liquors."

The court, after reaffirming the opinion in the case of Mugler vs. Kansas (123 United States, pages 623, 657) and others where the power of the State to prohibit was expressly recognized, says:

"These cases rest on the acknowledged right of the States of the Union to control their purely internal affairs, and in so doing to protect the health, morals, and safety of their people by regulations that do not interfere with the powers of the General Government."

We do not think it was the intention of the framers of the Constitution in granting the power to regulate commerce between the States to prohibit the exercise of its legitimate police power, the object being only to prevent unjust discriminations against the products of other States. There is no theory of our Government deeper seated in their minds and dearer to the people than the right of local self-government, the theory that the mass of governmental powers, except such as are delegated to the General Government by express grant or by implication, are vested in the Legislatures of the several States, to be exercised for the protection and improvement of the people. The minority of the court in the Bowman case (125 U. S., 520) make use of the following language:

"It may be said generally that free commercial intercourse exists among the several States by force of the Constitution; but as by the express terms of the Constitution the powers not delegated to the United States nor prohibited to the States are reserved to the States, respectively, and to the people, and as by the repeated adjudication the States have not surrendered, but have reserved the power to protect by police regulations the health, morals, and safety of the people, Congress may not prescribe any rule to govern commerce among the States which prevents the power and reasonable exercise of this reserved power. Even if Congress, under the power to regulate, had authority to declare what shall or what shall not be subjects of commerce among the States, that power would not fairly imply authority to compel a State to admit within her limits that which in fact is, or which on reasonable grounds she may declare to be, destructive of the health, morals, and peace of her people.

"The purpose of committing to Congress the regulation of commerce was to insure equality of commercial facilities by preventing one State from building up her own trade at the expense of sister States, but that purpose is not defeated when a State employs appropriate means to prevent the introduction into her limits of what she lawfully forbids her own people from making. It certainly was not meant to give citizens of other States greater rights in Iowa than Iowa's own people have."

As a matter of fact, whatever may have been the purpose of the court in the Bowman case, however they may have been impelled to decide by virtue of the provision on which they base their judgment, the effect has been virtually to destroy in many cases, and in all cases greatly to impair, the efficiency of the laws of the States for the prevention of an evil of great magnitude. As was said by an eminent judge—

"That is doing more to endanger society and impair the capacity of men for self-government than all other evils combined."

In view of the fact that it is conceded by all the court that Congress may grant the power to the State to apply the same restriction to interstate as to State roads and in view of the further fact that the States that have adopted the policy of prohibition find the difficulty of enforcing their laws, as the result of the decision of the court on this question, very greatly increased and demand that their police power over this subject shall be unrestricted, to the end that their local policy be enforced, your committee recommend that the second section of the bill be stricken out, and that as thus amended the bill pass.

This report, which was printed before the recent decision known as the original-package decision, presents the argument for the Senate bill as succinctly as I could do, and the difficulties which existed in enforcing the law under the former decision have been greatly increased by the recent decision. In fact, the law of the State for the protection of society is practically nullified by the recent decision, and to restore its force it is necessary to follow the suggestion of the court and pass this bill that subjects the imported liquors to the police laws of the State for the protection of the citizen.

Original-Package Bill.

SPEECH
OF
HON. CLIFTON R. BRECKINRIDGE.
OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, August 6, 1890,

On the report of the committee of conference upon the disagreeing votes of the two Houses on the bill (S. 398) to limit the effect of the regulations of commerce between the several States and with foreign countries in certain cases.

Mr. BRECKINRIDGE, of Arkansas, said:

Mr. SPEAKER: I desire to say only a few words on the pending proposition. No member of this body desires more earnestly than I do that the whole question of regulating the liquor traffic, as it is usually called, should be left exclusively to the people of the respective States. It is essentially a "home-rule" question, involving the social well-being of the different communities and their rational police regulations. It also comes, to a large degree, under the regulation incident to the exercise of the taxing power of the States. For more than a hundred years this view, in a general way, is the one which has prevailed, and it was held that these powers had never been delegated by the States to the Federal Government, and hence that they still reposed with the States.

Without going into the nicer shades and distinctions involved, it is sufficient to say that the Supreme Court practically and broadly decided that these powers are not with the States, but that they are with the Federal Government.

While I expected to vote for some such bill as the one we have and wholly favor the object it has in view, yet upon examination and reflection it is plain that we can not take a power out of the Constitution and transfer it to the States simply by an act of Congress.

Why, sir, the Constitution, under which alone we have or claim any power here, and which we are sworn to uphold and observe, to obey and defend, plainly says that Congress has no power to do this thing. All that Congress has the power to do is to "propose amendments to this Constitution," and it requires "two-thirds of both Houses" to do even this. When it comes to passing the proposed amendment, how is that to be done? It is "valid" only "when ratified by the Legislatures of three-fourths of the several States, or by conventions in three-fourths thereof, as the one or the other mode of ratification may be proposed by the Congress." (Article V of the Constitution.) Now, here we are proposing practically to amend the Constitution, for it is nothing less, by simply an act of Congress. Is that right? Is it wise? Everybody wants this object attained; but, if it is done this way, it can be undone this way. If this be done this way and the people acquiesce in it, then what have we left of constitutional limitations? Other cases and desires will come after this precedent, and we no longer have a government of limited and prescribed powers here.

If we can give a constitutional power to the States we can take from them. This does away with the whole principle of restricting the Federal and State governments to their respective spheres, as defined by the Constitution. Congress is to give and Congress is to take. The States, then, are mere provinces.

If it be said that one of the now pending propositions is to regulate commerce between the States, a power we clearly have, then the trouble is that at best this is to regulate it in the States, and that power we clearly have not, and the Constitution makes no distinction between commodities. Under our powers we are forbidden to consider spirits except as any other commodity. Whatever may be our feelings this is not the place to exercise them. We are forbidden by the Constitution to do so.

Suppose we try to regulate commerce "between" the States, can we destroy an article that we are given power simply to "regulate" as "commerce?" It then ceases to be commerce. We are not given the power to destroy, but to regulate. If we can destroy one we can destroy all, for the Constitution forbids any distinctions. I do not say that if we destroy one we must destroy all; but if we can do this with one we can do it with all, and clearly we have no such power.

Then, again, national laws must be equal. In one place here it is proposed to let it vary, being one thing in one place and another in another place. This not only is unequal, but it confers power that, if we have it, can only be restored to the States by an amendment to the Constitution taking it away from us and restoring it to the States.

I voted for the substitute proposing a regulation of commerce in this article, liquors, proposed by the gentleman from Illinois [Mr. ADAMS], and it was defeated; but neither the House nor the Senate proposition is such as I think we are competent to pass. They exceed our delegated powers. Far better, Mr. Speaker, to give the court a chance to correct the error we all think it has committed, and thus leave these matters to the States, as we think the Constitution intends. If the court fails, then let us propose an amendment to the Constitution clearly placing the power back with the States. Congress is not a court to review the Supreme Court, nor are we a supreme body to make and unmake the Constitution, the great sheet-anchor of the people, made to restrain us.

The present propositions are but makeshifts. They are far worse than that. They carry the principle of unlimited power here, and we can not plant the seed of this and fail to reap the bitter fruit in the future. It comes to us under an urgent call and under a pleasing guise. Our people want it, and they will applaud it for the moment; but I do not think this will meet with their approval upon reflection.

I know good men differ upon this question, and most sincerely; but this is my view of right and duty and of permanently sound policy. These propositions are not even necessary, as we all favor the object, and I think it far better that we should remedy this matter in the way that we know makes no infraction of the Constitution and that plants no dangerous principle looking to the exercise of unusual power by this body. Especially should we, who so often need to invoke the restraints of the Constitution as a protection against the greed and passion of factions unjustly hostile to our prosperity and peace, be careful how we loosen its ties. We should set the example of standing patiently and sufferingly, if need be, by the Constitution, enduring its restraints, and of not infracting or straining it even for a virtuous end. Any policy has its ills, but this one of a strict construction of the Constitution and a faithful observance of all its requirements is the one which in the long run will give us the greatest degree of liberty, justice, and peace.

Samuel Sullivan Cox.

REMARKS
OF
HON. WILLIAM M. EVARTS,
OF NEW YORK,

IN THE SENATE OF THE UNITED STATES,

Tuesday, July 8, 1890.

The Senate having under consideration resolutions of respect to the memory of Hon. Samuel Sullivan Cox, late a Representative from the State of New York—

Mr. EVARTS said:

Mr. PRESIDENT: I might well ask to occupy some closing moments of the declining hours of this day in speaking of my dead friend if I had no other relation to him and to his character and his career than that which attends him as an eminent public servant of the State which he so long represented so ably in Congress, or for those varied excellences of character and of life which made him a notable figure in our history for so many years. But it so happens, Mr. President, that for more than twenty years I had the pleasure of enjoying his friendship, at all times agreeable to me, never broken and always accompanied with esteem for his life and his manners and his career.

It is difficult to conceive a career more versatile and at the same time more ample and attractive than that which marks the course of this young native of Ohio from the time when he started—and at a great pace, which he kept up to the end of his life—until the time of his death, when he had become the most eminent of the public men of his party in the great State of New York. He was a scholar; he was an editor; he was a lawyer; he was a politician; he was an orator; he was a philosopher; he was a traveler; he was an author; he was a diplomatist; he was a wit; and yet the whole warp and woof of his life was that of a member of Congress and in the active pursuit of politics.

In all these regards, if it can not be said of him that he ever did any one thing that no other man could do, yet no one but must say and feel that, within the field of our observation and our contemporary history, no man has done so many things so well as our deceased colleague, Mr. Cox.

But we must add to our estimate of this career the circumstance that he lived in an age and in a sphere in public life when the nation was awakened and aroused, rent and torn, restored and re-established, and that the thirty years of what makes up his public notice and his public service was always upon such a theater and occupied with great actors and great actions. We must, then, all agree that in our calm civilization and in our established institutions, ever accepted and ever expected to endure—we must agree that there have been great opportunities of the highest dignity and the highest responsibility, and that these opportunities were well used by this Ohio statesman, this New York statesman, whose death we lament.

Mr. President, in all the intercourse that I had with Mr. Cox, though we were always opposed to one another in politics, always representing on every scene of action in our own State opposite views, with opposite alliances, I do not know that in any instance I can recall any action of his that seems to me unsuitable to that career which he had espoused, that duty which he had undertaken to fulfill. It is idle to talk under free institutions, under representative government, in derogation of parties and of partisans.

All the public life of a free country is carried on by parties and all are led by partisans. You might as well criticise the career and the methods of the soldier and of the great captains of armies for being devoted to the warfare and the battle and the storm through which their paths of duty lie. These are our paths, these are our duties, and the proper criticism of us all is with what fidelity and with what advantage to the interests that we espouse we have maintained our place in them.

I do not think, in looking back through thirty years among the eminent men of the Democratic party in the State of New York, there is any one that can be fairly considered as having been more engaged and more usefully engaged and more constantly engaged in public affairs than Mr. Cox.

This is a singular honor to one who comes from a native, a great State, with a career there established, that Mr. Cox was received with open arms by the great party and the great population of our city and all that make up the interests of our State. But this is nevertheless true. He became the idol of the earnest and warm-hearted and sometimes too tumultuous Democracy of our great city; but he also had a warm place in the affection and regard of his political opponents in that wide community. There is no trace or token throughout his life of bitterness or resentment towards him in all this busy scene of his activities. And thus, throughout and in all regards, Mr. Cox stands out a notable figure, from the boy editor on to the final death scene of the statesman. All may study it; all may reflect upon it.

Mr. President, these mortuary meditations and reflections which arise upon the contemplation of death, whether they be in the secret chambers of our own hearts or whether among faithful friends, or on this larger scene of public observation of men whose lives have served the community—these are not without their greatest and most beneficial effects upon the personal life and upon the public conduct of all who submit to these reflections. The patriarch who had known all of the vicissitudes of joy and sorrow, of pride and contumely, and had learned patience by this experience, was yet forced to cry out, Man that is born of a woman is of few days and full of trouble. But the royal poet of Israel, who knew every step of life himself also, from the sheep-cote to the throne, he, with exultant and triumphant view of human life and of the endowments of man by his Maker, said: Thou hast made him a little lower than the angels, and hast crowned him with glory and honor.

This wide sweep in human affairs between that view which deplores man's life as lamentable and that which exalts him as in nature and faculty almost divine—in this life of ours of cultivated, educated, christianized communities—takes in all the pessimists and all the optimists; all the egoists and all the altruists; all those who build up and those who destroy; all those who touch nothing that they do not adorn and all those who touch nothing that they do not defile; all those of the evil eye of envy and all those of the pitiful eye of charity; all those who ennoble and expand and all those who belittle and bedraggle; all those who sap the virtues of society and those who feed their healthful growth; all those, in fine, that would lift a mortal to the skies and all those that would drag an angel down.

Mr. President, when a man's days are ended there comes after his death a judgment even in this life. Nature and society pass in a kind and yet a just survey upon each completed life. On which side of these opposing views of human interests and human hopes which I have portrayed shall the life and conduct of our deceased friend find a place? When the woven tapestry of the fabric of his life, with its many bright colors and its gay and graceful figures, is folded away among the leaves of fate for the instruction and the delight of those who shall peruse that great book, all men shall read of him that he "served the state from boyhood up, labored for, loved her," and as for society and friendship and mankind, all his work was to adorn, to ennoble, and to expand; all such are enrolled in memories that will not suffer their remembrance to die.

I move, Mr. President, the adoption of the resolutions.

The Silver Question.

SPEECH

OF

HON. JOHN S. HENDERSON,

OF NORTH CAROLINA.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 12, 1890.

The House having under consideration the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 5381) directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes—

Mr. HENDERSON, of North Carolina, said:

Mr. SPEAKER: The bill under consideration, as agreed upon in conference, is the result of a compromise between the rich bonanza silver kings and the millionaire bondholders and speculators of Wall street. It may be a good thing for them, but it is not what the people demanded or expected. The complete demonetization of silver is accomplished. Every Senator and Representative who supports this measure deliberately commits himself to a bill which will stop the coinage of the silver dollar after July 1, 1891, and makes every bond and Treasury note or other obligation owing by the Government redeemable in gold alone. The notes issued for the purchase of silver are redeemable in gold at the option of the holder; and under the provisions of existing law the Secretary of the Treasury is required to provide the gold which may be necessary to redeem such notes by the sale of United States bonds. I do not believe that the bill will put an additional dollar of currency in circulation; and it is certain that there may be a dangerous contraction of the currency whenever the Secretary of the Treasury shall choose to have it.

If the new bill contemplates an increase of the currency, why should its authors and supporters insist upon the repeal of the Bland silver-coinage act of 1878? If that act had been executed by the Secretary of the Treasury in accordance both with its letter and spirit, not less than an average of $62,000,000 could have been coined annually and added to the circulation.

The bill under consideration directs the Secretary of the Treasury to purchase in the aggregate 4,500,000 ounces of silver bullion monthly, or so much thereof as may be offered, at the market price; but there will be no coinage of any part of this bullion unless the Secretary of the Treasury can not otherwise provide means to redeem the new notes. It may safely be predicted, therefore, that no such contingency will ever happen. The contest which began in 1873 has finally ended in a complete victory for the Republican conspirators who fraudulently and secretly secured the passage through Congress of the original demonetization scheme of 1873.

The Republican party in the year 1890 publicly ratifies what it attempted to accomplish indirectly and clandestinely seventeen years ago. That party is entitled to the entire responsibility and sole credit for this iniquitous measure. The meaning of it all is that the Republican party of the United States deliberately rejects the free and unlimited coinage of silver, makes gold the exclusive standard of value, completely demonetizes silver and treats it as a mere commodity. It will be a rich man's law and the poor man's loss. I shall be grievously disappointed if the American people do not overwhelmingly repudiate this abominable measure at the ballot-box in the November elections. The passage of this bill will give unalloyed satisfaction to the Administration and to the rich speculators, bondholders, and brokers of Wall street, but it should not command the approval of the people of the United States.

The logical effect of the new law will be to inaugurate another system of legalized robbery in favor of the rich man at the expense of the poor. The Republican party has always been actuated by this policy in taxing the country. No scheme of taxation ever devised and imposed by the Republican party has been for the sole purpose of raising revenue to defray the expenses of the Government economically administered. Republican bills to raise revenue are always framed so as to enrich one class and one section, and to make another section and the other classes poor.

A remedy must be found somewhere to relieve the farmers of the country from the unjust burdens which have kept them in bondage to other classes and to corporate capital. The farmer sells his products in the cheapest markets of the world, and owing to an unjust system of tariff taxation he is compelled to buy in the dearest. The home market is being contracted and he is not only losing, but is not allowed to compete freely in the foreign markets. The farmers do not ask for any special privileges, but they are entitled to fair play and an equal chance with every other class in the struggle for existence. The relief they are seeking will be obtained if they are true to themselves and will act with prudence and wisdom. One thing which will be certain to bring relief is the repeal of all laws which discriminate against them. The next thing to do is to make the wealth of the country pay its just proportion of the taxes. The third thing necessary is a financial system which will give to the people a supply of legal-tender currency equal in amount to the demands of trade and of business, and this amount should be increased in proportion to the increase of business and of population. The policy which gives a discretion to the Secretary of the Treasury to expand or contract the currency at his pleasure, which discretion is always exercised by him against the interest of the people, should never have been tolerated and ought to be instantly abandoned.

For the purpose of future reference, I herewith append a statement, which has been carefully prepared by a competent person, at the request of myself and of some of my colleagues, showing the record of the two great parties on some of the burning questions which have divided them during the past quarter of a century. The statement is a very able one and will prove instructive reading to all who are studying the causes and are seeking to find remedies for the present financial troubles of this country. The farmers especially will be glad to have the information which the statement contains, as it will enable them to put the responsibility where it belongs for much of the vicious and oppressive legislation of which they are grievously complaining.

The following is the statement I have referred to:

TARIFF LEGISLATION.

The Whig protective tariff of 1842 overturned Mr. Clay's compro-

mise tariff of 1833, which at the end of nine years would have reduced the average rate of duties to the revenue standard; in other words, to the standard required by the wants of the Government instead of that demanded by the manufacturers. This revenue standard was to be an average of 20 per cent., and experience proves that it would have produced a revenue more than sufficient for the support of the Government if the free-list had not been extended beyond all precedent. Thus, in 1836, of the $189,980,000 of total imports, only $88,690,000 paid duty, and in 1839, of the total imports, amounting to $113,717,000, only $48,391,000 paid duty.

The obvious thing to do in the circumstances in order to increase the revenue was to impose duties on many articles which the act of 1833 admitted free of duty. But, instead of this and in violation of the understanding arrived at in 1833, to which Mr. Clay and the Whigs of that day were parties, the compromise was overthrown, the revenue standard was abandoned, and the protective system was revived in a form as oppressive as that of 1828, which had been justly characterized as the "bill of abominations," and which brought the nation to the verge of civil war.

The tariff of 1842 was tolerated by the people for but four years. It was projected in the interest of the manufacturers and revenue was a secondary consideration. While it imposed heavy taxes on the people for everything they ate or wore or used in their farming and other operations, it failed to raise revenue at all in proportion to the taxes paid by the people; and the reason is plain, namely, that seven-eighths of the taxes paid by the people went into the pockets of the manufacturers. This was the estimate of that clear-headed Southern statesman, Dixon H. Lewis, of Alabama, and no one attempted a reply to him. This enormous disproportion between the amount of revenue received by the Government and that received by the manufacturers results from the fact that seven-eighths of the goods consumed by the people are manufactured in this country, and the prices of the home-made goods are raised, of course, up to the standard which the tariff compels foreigners to ask for their goods. The avowed object of a protective tariff is to raise prices; and if it fails to have that consequence, it is of no use.

When the tariff of 1846 was enacted such able men as Mr. Webster, of Massachusetts, and Mr. Evans, of Maine, predicted that it would not raise an amount of revenue sufficient to support the Government; and yet at the end of six years from the date of its going into operation it produced more than twice as much revenue as the tariff of 1842 had ever done. Thus the greatest amount of revenue ever produced by the protective tariff of 1842 in one year was $27,528,000—this was in 1847—while the revenue tariff of 1846 produced in 1853 $58,931,000, and the next year, 1854, it produced $64,224,000!

The cry then was raised, and among others by Mr. MORRILL, of Vermont, that the tariff of 1846 raised too much revenue; and the remedy proposed by the protectionists was, not to reduce the duties or taxes, but to raise them higher, so as to keep foreign goods out of the American markets, and thus turn the constitutional provision for raising revenue into a scheme for putting money into the pockets of the manufacturers.

But, instead of listening to this selfish suggestion of the monopolists, the Democratic Congress in 1857 accomplished the object of reducing the annual revenue by a still further reduction of the taxes, while the reciprocity treaty with Great Britain, with reference to our trade with Canada, tended in the same direction, to a reduction of the superfluous revenue and to a mitigation of the public burdens. The act of 1857 reduced the taxes on most articles. The tariff of 1842 was based on the system of specific duties, or duties imposed upon the quantity of the several articles, with little regard to their relative values, and, of course, discriminated heavily against the plainer and cheaper articles, which are consumed by the masses of the people, whose means are limited.

The tariff of 1846, and also that of 1857, was on the same principle: it was strictly an ad valorem tariff, or a tariff imposed upon the value of articles and in exact proportion to their values.

The following table will show the rates of duty or tax paid by the people under these several tariffs of 1842, 1846, and 1857:

Tariff of—	On dutiable imports.	On total imports.
1842, average duty	30.90	23.19
1846, average duty	25.54	20.59
1857, average duty	20.12½	15.66

The act of 1842 was passed in the House of Representatives by 103 yeas to 99 nays, and of the yeas 93 were from Northern States and 10 from the South. Of the 99 votes against the bill 28 were from the North and 71 from the South.

The tariff act of 1846 was passed in the House by 114 yeas to 93 nays, and of the yeas 63 were from the South and 51 from the North. Of the nays 20 were from the South and 73 from the North.

The tariff act of 1857 was passed in the House by yeas 118, nays 72, and of the affirmative vote 56 were from the North and 62 from the South. Of the negative vote 67 were from the North and 5 from the South. Of the 5 negative votes from the South against this strictly revenue tariff 3 were from Missouri and 2 from Kentucky.

The House of Representatives at that time was controlled by the Republicans, although neither of the great parties had a majority. Mr. BANKS, Republican, of Massachusetts, had been elected Speaker, not by a majority, but by a plurality, by agreement of the majority, after a vain struggle, lasting seven weeks, to elect in the usual way. The House passed a tariff bill which was by no means an extreme protective measure; and so far was it from that character that it failed to receive the support of the more ultra protectionists. Mr. Lewis D. Campbell, of Ohio, was chairman of the Committee on Ways and Means. But moderate as the bill was it was not acceptable to the Democratic Senate; and Mr. Hunter, of Virginia, when it was sent up to the Senate, moved a substitute, which was substantially the bill as it became a law, that is to say, the lowest tariff the country has had since the war of 1812, and based exclusively on the ad valorem principle. The vote in the Senate on Mr. Hunter's amendment, or substitute, was as follows:

YEAS—Messrs. Adams and Brown, of Mississippi; Allen and James, of Rhode Island; Bell, of New Hampshire; Benjamin and Slidell, of Louisiana; Biggs and Reid, of North Carolina; Clay and Fitzpatrick, of Alabama; Douglas, of Illinois; Evans, of South Carolina; Fish, of New York; Fitch, of Indiana; Foster and Toucey, of Connecticut; Green, of Missouri; Gwin, of California; Houston and Rusk, of Texas; Hunter and Mason, of Virginia; Iverson and Toombs, of Georgia; Johnson and Sebastian, of Arkansas; Jones, of Iowa; Mallory, of Florida; Pugh, of Ohio; Stuart, of Michigan; Sumner and Wilson, of Massachusetts—33.

NAYS—Messrs. Bell, of Tennessee; Bigler and Brodhead, of Pennsylvania; Collamer and Foot, of Vermont; Durkee, of Wisconsin; Geyer, of Missouri; Nourse, of Maine; Seward, of New York; Thompson, of Kentucky; Trumbull, of Illinois, and Wade, of Ohio—12.

A committee of conference settled the points of difference between the two Houses very much in favor of the Senate substitute, and the bill became a law March 3, 1857, by the approval of President Pierce.

It will have been noticed that among those who voted for the bill were several Republicans, namely: Messrs. Allen and James, of Rhode Island; Bell, of New Hampshire; Fish, of New York; Foster, of Connecticut; Sumner and Wilson, of Massachusetts. And that the following Democrats voted against the bill, namely: Messrs. Bigler and Brodhead, of Pennsylvania; Geyer, of Missouri, Democrats, together with Messrs. Bell, of Tennessee, and Thompson, of Kentucky, Americans. But it was eminently a Democratic measure.

THE MORRILL TARIFF ACT.

Mr. MORRILL, of Vermont, then a member of the House of Representatives, introduced from the Committee on Ways and Means, March 12, 1860, a bill, No. 338, "to provide for the payment of outstanding Treasury notes, to authorize a loan, to regulate and fix the duties on imports, and for other purposes."

This act increased the duties imposed by the act of 1857 upon every article except such as enter as raw material into American manufactures, and upon these the duty was generally taken off or lowered. But the system of specific duties—they should always be called taxes—imposed upon the quantity of the article instead of the value, affords the protectionists the best opportunity for killing two birds with one stone, that is to say, for protecting or giving bounties to the manufacturers and at the same time exempting them from the heavy burdens of taxation. The American manufactures are not so fine, in many respects, as those of Europe. The finest carpets, for instance, are imported and consumed here by the wealthy classes, while the plainer articles of the kind, which are made in this country, are used by plain, honest people, who have more honor, character, and intelligence than money. Now, the Democratic revenue tariffs of 1846 and 1857 imposed the taxes on carpets, as on everything else, in exact proportion to their value, so that the duty or tax of 24 per cent. upon a yard of carpeting worth a dollar would be 24 cents, and the duty upon a yard of carpeting worth $5 would be five times as much or $1.20.

But the protectionists know a trick worth two of this. Thus, "patent velvet (carpets), Tournay velvet, tapestry velvet, printed on warp, etc., value over $1.25," tax, per square yard, 50 cents. Supposing the square yard to be worth $1.30, and the tax will be 50 cents, or at the rate of 38½ per cent. If the carpet should be worth $5 per yard, the tax would still be 50 cents per yard, and the rate would be only 10 per cent. If the value of certain carpets is less than $1.25 per yard, the tax is 40 cents per yard. The value might be only half of $1.25, or even less, and yet the people who are under the necessity of using plain carpets are required to pay a double tax on them, in proportion to their value.

This rascally system of putting the heaviest burdens upon the people of moderate means has been changed in some of its details, but it is still preserved.

Perhaps no more flagrant instance of its injustice can be imagined than its application in the Morrill bill to ready-made clothing. A suit of clothes may be worth $10 or $100, and it may be doubtful if the millionaires and wealthy manufacturers would condescend to wear a suit worth only $100. The Democratic tariff of 1857 imposed 24 per cent. upon ready-made clothing, so that the man who bought a $10 suit would pay on it a tax of $2.40, while the man who bought a $100 suit would pay upon it $24 in taxes.

But the protectionists, who are always looking out for the interests

of the rich and powerful, arrange the taxes differently. They tax clothing, not according to its quality and value, but by the pound! They make the people pay 12 cents per pound, and in addition 25 per cent.

Now, everybody knows that plain clothing is about as heavy as fine clothing, sometimes heavier. The plain overcoat worn by a man whose business it is to drive a team or to expose himself to the weather, for any purpose, needs to be quite as thick and warm as that worn by the man of wealth and fashion. Yet he is required to pay as much per pound for his coarse wrapping as the millionaire pays for his elegant and costly article.

This most unjust discrimination against people of moderate means was greatly aggravated by subsequent acts. That of 1863 raised the tax per pound to 18 cents, with 30 per cent. ad valorem added. In 1866 the tax per pound was raised to 24 cents, with 40 per cent. ad valorem added. In 1867 the tax per pound on clothing was raised to 50 cents, with an addition of 40 per cent. ad valorem, and at this rate it was continued until 1883, when it was reduced to 40 cents per pound and 35 per cent. ad valorem, at which rate it still continues.

Heavy additional duties were imposed by the Morrill tariff on iron and manufactures of iron. But it would become tedious to read the hundreds of details of articles on which the duties were greatly increased. In many instances, and, indeed, wherever practicable, specific duties were substituted for ad valorem, in order to discriminate in favor of the rich.

The Morrill bill was passed in the House May 10, 1860, by yeas 105, nays 64. The yeas were all from Northern States, except 1 from Delaware, 4 from Kentucky, 2 from Maryland, and 1 from Tennessee—8 in all. These eight Southern members belonged to the "American party."

The nays were all Democrats, though not all of them from the South.

The bill was sent to the Senate for its concurrence, and was referred to the Committee on Finance, and on June 15 Mr. Hunter, of Virginia, reported back the bill from the committee with instructions to move its postponement until the second Monday in the following December. He gave his reasons at some length for the motion, and was replied to by Messrs. Bigler (Democrat) and Cameron (Republican), of Pennsylvania, and Mr. Simmons (Republican), of Rhode Island, after which the vote was taken on the adoption of the motion to postpone, which resulted—yeas 25, nays 23; as follows:

YEAS—Messrs. Bayard and Saulsbury, of Delaware; Bragg and Clingman, of North Carolina; Chesnut, of South Carolina; Davis, of Mississippi; Fitzpatrick, of Alabama; Pugh, of Ohio; Green and Polk, of Missouri; Gwin, of California; Hemphill and Wigfall, of Texas; Hunter, of Virginia; Johnson and Sebastian, of Arkansas; Johnson, of Tennessee; Lane, of Oregon; Mallory and Yulee, of Florida; Pearce, of Maryland; Powell, of Kentucky; Rice, of Minnesota; Slidell, of Louisiana; and Toombs, of Georgia—25.

All Democrats.

NAYS—Messrs. Anthony and Simmons, of Rhode Island; Bigler and Cameron, of Pennsylvania; Chandler, of Michigan; Clarke and Hale, of New Hampshire; Dixon and Foster, of Connecticut; Doolittle, of Wisconsin; Fessenden and Hamlin, of Maine; Foot, of Vermont; Harlan, of Iowa; King and Seward, of New York; Latham, of California; Sumner and Wilson, of Massachusetts; Ten Eyck, of New Jersey; Trumbull, of Illinois; Wade, of Ohio; and Wilkinson, of Minnesota—23.

All Republicans except Messrs. Bigler and Latham.

SECOND SESSION, THIRTY-SIXTH CONGRESS.

In the Senate, December 5, 1860, Mr. Bigler, of Pennsylvania, moved that the House bill No. 338, which passed that body at the last session, be taken up, his object being that a day might be fixed for its consideration. But the Vice-President, Mr. Breckinridge, decided that under the rules it could not be considered until after six days from the assembling of Congress.

December 11 Mr. Cameron, of Pennsylvania, moved to take up the House tariff bill No. 338.

Mr. Hunter, of Virginia, opposed the motion on the ground that other more important business should occupy the attention of the Senate.

Mr. Cameron called for the yeas and nays, which were ordered, and resulted—yeas 29, nays 27; as follows:

YEAS—Messrs. Anthony and Simmons, of Rhode Island; Baker, of Oregon; Bigler and Cameron, of Pennsylvania; Bingham and Chandler, of Michigan; Clark and Hale, of New Hampshire; Collamer and Foot, of Vermont; Crittenden, of Kentucky; Dixon and Foster, of Connecticut; Doolittle and Durkee, of Wisconsin; Fessenden and Hamlin, of Maine; Grimes and Harlan, of Iowa; Kennedy, of Maryland; King and Seward, of New York; Sumner and Wilson, of Massachusetts; Ten Eyck, of New Jersey; Trumbull, of Illinois; Wade, of Ohio; and Wilkinson, of Minnesota—29.

NAYS—Messrs. Bayard and Salisbury, of Delaware; Benjamin and Slidell, of Louisiana; Bragg and Clingman, of North Carolina; Brown and Davis, of Mississippi; Douglas, of Illinois; Fitch, of Indiana; Fitzpatrick, of Alabama; Green and Polk, of Missouri; Gwin and Latham, of California; Hemphill and Wigfall, of Texas; Hunter, of Virginia; Iverson, of Georgia; Lane, of Oregon; Johnson and Nicholson, of Tennessee; Pearce, of Maryland; Powell, of Kentucky; Pugh, of Ohio; Thompson, of New Jersey; and Yulee, of Florida—27.

The yeas were all Republicans, except Messrs. Bigler, Democrat, and Crittenden and Kennedy, "Americans."

The nays were all Democrats. The Vice-President announced that the bill was before the Senate as in Committee of the Whole and that the question was on the amendment of the Senator from Oregon [Mr. Lane] to substitute the tariff act of July 30, 1846, and that it be referred to the Finance Committee. The motion was carried, yeas 29, nays 27—Messrs. Grimes (Republican) of Iowa and Kennedy (American) voting with the majority. December 20, Mr. Hunter, from the Finance Committee, reported back the House bill No. 338 with a recommendation that it be postponed until the 4th of March. He asked that it lie on the table.

January 18, 1861, on motion of Mr. Cameron, the House bill No. 338 was made the special order for Wednesday, the 23d; and on that day it was referred to a select committee consisting of Messrs. Simmons, Hunter, Bigler, Fessenden, and Gwin. Mr. Fessenden was excused from serving and Mr. Collamer (Republican) of Vermont, was appointed in his place. The majority of this select committee was Democratic, but, Mr. Bigler being a protectionist, a majority was at the same time in favor of that policy.

February 1, Mr. Simmons reported back the bill with amendments; and February 13, Mr. Simmons addressed the Senate in support of the bill. He stated that the tariff act of 1857 had failed to produce a sufficiency of revenue, that the average income of the Government had been about $46,000,000, while the expenditures had reached $66,000,000. The bill, he said, would add about or near one-third to the rates imposed by the act of 1857. Mr. Simmons alluded to the financial panic of 1857 as a trifling affair, which only interfered in a slight degree with commerce and revenue from customs; and, like most protectionists, he no doubt attributed that financial disaster to the effects of a revenue tariff; whereas everybody knows that it resulted from the overissue of bank paper by the hundreds of ill regulated institutions of that kind in the country.

President Buchanan, who, though a Democrat, was a protectionist—most Pennsylvanians have always been of that school—states the causes and consequences of the financial collapse of 1857, in his annual message at the opening of Congress in that year, as follows:

It is apparent that our existing misfortunes have proceeded solely from our extravagant and vicious system of paper currency and bank credits, exciting the people to wild speculations and gambling in stocks. These revulsions must continue to recur at successive intervals so long as the paper currency and bank loans and discounts of the country shall be left to the discretion of fourteen hundred irresponsible banking institutions, which, from the very law of their nature, will consult the interest of the stockholders rather than the public welfare.

The revulsion of 1837 caused the revenue from customs to fall off from $23,000,000 to $11,000,000. But this panic and its consequences were attributed by the protectionists of that day to the compromise tariff. Then what will they say in regard to the causes and consequences of the still greater financial collapse of 1873? The people will remember its effects upon themselves; they can not have forgotten the widespread bankruptcy and ruin that overtook millions of them; and they are aware that they were groaning then, as they still are, under a heavy protective tariff.

A reference to the reports of the Secretary of the Treasury made during those years of sorrow will show, at the same time, that there was a heavy falling off of revenue. The panic occurred in September, 1873. The fiscal year 1873 terminated at the end of June preceding. So that 1874 was the first year that felt the effects of the collapse. Now, going back to 1871, the revenue from customs was $202,000,000; in 1872 the revenue was $212,000,000; and 1873 it was a few thousands short of $185,000,000. But the next year the revenue from customs fell down to $160,000,000, and continued to fall from year to year until 1878, when it was down to $127,000,000. It rallied a little the next year, when it reached $133,000,000; but it was not until 1882, nine years after the panic, that the high protective tariff produced a revenue equal to that of 1871.

It will not do, then, to attribute financial disasters and failing annual returns of revenue to low tariffs.

After a reply by Mr. Hunter to the statement of Mr. Simmons, the Senate came to a vote on the passage of the bill, which was passed February 20 by—yeas 25, nays 14; as follows:

YEAS—Messrs. Anthony and Simmons, of Rhode Island; Baker, of Oregon; Bigler and Cameron, of Pennsylvania; Bingham and Chandler, of Michigan; Clark and Hale, of New Hampshire; Doolittle and Durkee, of Wisconsin; Fessenden and Morrill, of Maine; Foot, of Vermont; Foster, of Connecticut; Grimes and Harlan, of Iowa; King and Seward, of New York; Sumner and Wilson, of Massachusetts; Ten Eyck, of New Jersey; Trumbull, of Illinois; Wade, of Ohio, and Wilkinson, of Minnesota—25.

All Republicans except Mr. Bigler.

NAYS—Messrs. Bragg and Clingman, of North Carolina; Douglas, of Illinois; Green, of Missouri; Hunter, of Virginia; Johnson and Sebastian, of Arkansas; Johnson and Nicholson, of Tennessee; Lane, of Oregon; Latham, of California; Pearce, of Maryland; Powell, of Kentucky, and Rice, of Minnesota—14.

All Democrats.

February 21 the bill was sent back to the House with amendments, and on motion of Mr. SHERMAN, of Ohio, who was then a member of the House of Representatives, it was ordered printed.

February 23 Mr. SHERMAN moved a resolution that the tariff bill be taken up and referred to the Committee of the Whole on the state of the Union, and to be considered as a special order; that general debate on it terminate within ten minutes after it is taken up, and that the House now resolve itself into a Committee of the Whole on the bill.

On a motion to suspend the rules to take up the bill, the yeas were 122, nays 49. The Americans, Messrs. Leach, Smith, and Vance,

of North Carolina, and the Anti-Lecompton Democrats, Clark, of New York, and Davis, of Indiana, voted with the Democrats in the negative. Messrs. Etheridge, Hatton, and Stokes, of Tennessee, Anderson, Bristow, Mallory and Moore, of Kentucky; Harris and Davis, of Maryland, and Bouligni, of Louisiana, Americans, voted in the affirmative with the Republicans. Others of these classes failed to vote.

Mr. SHERMAN then moved the previous question, which was agreed to, and the resolution was adopted by yeas 93, nays 26.

February 25 the Senate amendments, one hundred and fifty-six in number, were taken up for consideration, and all of them agreed to except one. That one was to impose a duty on tea and coffee. A committee of conference settled the difference in favor of the House, and the duty on those articles was stricken from the bill. The bill was then sent to President Buchanan, and approved, March 2, 1861.

The first session of the Thirty-seventh Congress met July 4, 1861.

July 16 Mr. Stevens, Republican, of Pennsylvania, introduced a bill to provide increased revenue from imports, etc., which was read a first and second time, referred to the Committee of the Whole on the state of the Union, ordered to be printed, and made the special order for to-morrow at 1 o'clock.

Mr. Vallandigham expressed the hope that reasonable time would be given for the discussion of the measure.

July 17, on motion of Mr. Stevens, the tariff bill was taken up, and ordered that debate should close in one hour.

Mr. Vallandigham proposed as a substitute the act of 1857 and the repeal of the act of the last session.

Mr. Stevens, after moving three amendments, briefly replied to Mr. Vallandigham.

The bill increased the duties on a great variety of articles, but its chief features were the imposition of a duty of 15 cents per pound on tea of all kinds, 4 cents per pound on coffee, and an increase of the duties on sugar unrefined from three-fourths of a cent to 2 and 2½ cents per pound. No changes were made in the duties on iron, cotton, or woolen manufactures.

The bill was amended in Committee of the Whole, but Mr. Stevens moved the original bill as a substitute for the amended bill; and the substitute was adopted by yeas 82, nays 48.

The affirmative vote was all Republican and all from the Northern States, except that of Mr. Frank Blair, of Missouri, who was also a Republican.

All the Democrats present voted against the bill, together with several Northern Republicans, among whom were Messrs. Windom of Minnesota, Shellabarger of Ohio, Buffinton of Massachusetts, Colfax of Indiana, Rollins of New Hampshire, Kellogg of Illinois, and Van Wyck of New York, afterwards a Senator from Nebraska. The father of President Harrison also voted against this bill—Scott Harrison, an "American," from Ohio.

The bill went to the Senate and was referred to the Finance Committee.

July 25 Mr. Simmons, Republican, of Rhode Island, reported back the House bill, with an amendment, as a substitute, which was adopted—yeas 32, nays 18. The substitute, besides other changes, embraced a tax on incomes, ranging from 2½ to 7½ per cent.

The yeas were all Republicans, except Mr. McDougall, of California. The negative vote included all the Democrats, together with Messrs. Browning and Trumbull, of Illinois, Carlile, of Virginia, Grimes and Harlan, of Iowa, and Harris, of New York, Republican.

A committee of conference was appointed, which, August 2, reported a substitute which included with the tariff bill a provision for a direct tax of $20,000,000 upon lands, lots of ground, buildings, or dwelling-houses, and an income tax upon incomes exceeding $800 per annum. The Senate agreed to the report of the conference committee by yeas 34, nays 8. The nays were Messrs. Breckinridge and Powell, of Kentucky; Bright, of Indiana; Johnson, of Tennessee; Polk, of Missouri; Kennedy, of Maryland; Latham, of California, and Saulsbury, of Delaware—all Democrats.

The House concurred in the report of the conference by yeas 80, nays 39.

Of the affirmative vote, Messrs. Cobb of New Jersey, Bailey of Pennsylvania, and Steele of New York were Democrats. There were also 5 "Americans" or "Unionists" who voted for the bill, namely, Messrs. Harrison, of Ohio, Brown and Sheffield, of Rhode Island, Calvert and Leary, of Maryland. So, of the 80 votes for the bill, 81 were Republicans.

The negative vote of 30 embraced all the Democrats except three, together with Messrs. Beaman and Trowbridge, Republicans, and Messrs. Wright, of Pennsylvania, Crittenden, Dunlap, Grider, Harding, Jackson, Mallory, Menzies, and Wadsworth, of Kentucky, and Rollins, of Missouri, who were classed as Unionists.

This act was approved by President Lincoln August 5, 1861. The act of December 24, 1861, was introduced in the House on the preceding day by Mr. MORRILL, of Vermont, from the Committee on Ways and Means. It increased the duties imposed by the act of August 5, upon tea, sugar, and coffee, on the recommendation of Secretary Chase. It passed the House by, yeas 77, nays 29. Mr. Aldrich, Republican, of Minnesota, voted with the Democrats and Unionists against the bill.

The bill passed the Senate the same day without debate and without amendment, and was signed by the President the following day.

The act of July 14, 1862, was passed through each House with little debate, and no vote was taken on its passages, although there was a committee of conference appointed to settle the differences between the two Houses. This act increased the duties on most articles. Mr. Elijah Ward, of New York, moved an amendment reducing the duties on a number of articles and addressed the House in support of his motion. The Democrats despaired of defeating or modifying the bill and deemed it useless to call for the yeas and nays.

This act substituted specific in place of ad valorem duties on most articles of importance, where it had not been done by previous acts.

The act of March 3, 1863, made some slight changes in the foregoing act, but without affecting its general character.

The act of June 30, 1864, was a further increase in the rates of duty. It elicited a lively debate between Mr. S. S. Cox, then of Ohio, and others, and Messrs. MORRILL and Stevens. In the course of his able remarks Mr. Cox said:

> By the joint resolution passed a few weeks ago we increased the tariff rates of 1862 50 per cent. The present bill, while repealing that resolution after the 1st of July, does not lessen, but increases largely the same rates. It adds to them on most articles the amount of the internal tax. The duties are paid in gold. This adds the premium of gold to the tariff rates. So that in considering the effect of these measures I must consider them as affected by the paper money which has been showered upon the country with such prodigality.

Mr. Cox proceeds to show that 39.538½ tons of pig-iron, which cost in England $542,952 in gold, when imported cost the American consumer in depreciated paper, with tariff tax of 43 per cent., freight, insurance, and importer's profit, $1,685,301, or three times the original cost.

June 3 the bill was passed by yeas 82, nays 26.

The Pennsylvania Democrats voted with the Republicans for the bill.

The bill was amended in the Senate and passed June 17, by yeas 22, nays 5, not voting 22.

The affirmative vote was all Republican and the negative all Democratic.

A committee of conference settled the differences between the two Houses, and their report was adopted in each, June 29, without a call of the yeas and nays.

The act of March 3, 1865, was amendatory of that of June 20, 1864, in many particulars. It was introduced February 27 in the House by Mr. MORRILL, and was passed March 1. The yeas and nays were not called, but a motion of Mr. Cox to lay the bill on the table was lost—yeas 43, nays 85, not voting 54. The opposition vote was all Democratic.

On March 2 the bill was passed in the Senate with amendments without a call of the yeas and nays. A committee of conference adjusted the differences between the two Houses and the bill became a law March 3.

This act increased the internal taxes to correspond with the increased tariff taxes on spirits and other articles, or it increased the tariff taxes to correspond with the internal-revenue taxes. Among these was the iniquitous and unconstitutional tax of 5 cents per pound on the production of cotton.

The House bill to provide increased revenue, No. 718, was passed in that body July 10, 1866, by yeas 95, nays 52, a non-partisan vote. It was sent to the Senate, and on motion of Mr. Grimes, Republican, of Iowa, its consideration was postponed until the second Wednesday in December.

The act of July 28, 1866 (H. R. 780), reduced the internal tax on raw cotton to 3 cents per pound and made changes in the taxes on tobacco and distilled spirits. It passed the House by yeas 87, nays 36, 59 absent. The nays were all Democrats or anti-Republicans.

The bill was passed in the Senate with amendments, but without a call of the yeas and nays. It is entitled "An act to protect the revenue, and for other purposes," and the sections relating to changes in the duties and taxes were of secondary importance.

December 11 the House bill 718, which passed that body July 10 and was postponed to the second Wednesday in December, was now taken up in the Senate, and 500 copies ordered printed, and referred to the Finance Committee.

January 11, 1867, Mr. Fessenden, from the Finance Committee, reported a substitute for the House bill. This bill failed to become a law. Pending the consideration of the Senate substitute in that body, Mr. B. Gratz Brown, Republican, of Missouri, said:

> Mr. President, I think any one who has listened to the debate on this bill will be satisfied that it is not a measure for increasing the public revenue. Whatever may be alleged generally as the opinions of some members of the Finance Committee, yet whenever a single item has come up for discussion, whenever any point in the bill has been subjected to criticism, it has been found that the duty laid is a duty laid for some other purpose, and not for revenue.

The Senate substitute was adopted by that body by yeas 27, nays 10, absent 15. The yeas were all Republicans except Messrs. Reverdy Johnson, of Maryland, and McDougall, of California.

The nays were Messrs. Davis, of Kentucky, Doolittle, of Wisconsin, Henderson, of Missouri, Fowler and Patterson, of Tennessee, Grimes and Kirkwood, of Iowa, Hendricks and Lane, of Indiana, and Trumbull, of Illinois—10.

There were fifteen absentees, of whom four were Democrats, namely,

Messrs. Buckalew, of Pennsylvania, Guthrie, of Kentucky, Nesmith, of Oregon, and Salisbury, of Delaware.

The two Houses could not agree upon the amendments, and the bill failed.

But another act to provide increased revenue from imported wool, etc., which was passed in the first session, was now passed in the Senate and bears date March 2, 1867.

FORTY-FIRST CONGRESS, SECOND SESSION.

The act of July 14, 1870, entitled "An act to reduce internal taxes, and for other purposes," embraced a tariff reduction also.

It was passed in the House by yeas 153, nays 35, 42 absent. The negative vote all Democratic.

The reductions failed to satisfy the Democratic demands.

In the Senate the debate turned upon the proposition of Mr. Conkling to repeal the income tax. It was urged by that gentleman and others, and opposed by Mr. SHERMAN.

The motion to strike out the income tax prevailed by yeas 34, nays 23. The vote was non-partisan. In place of the revenue from the income tax the Committee on Finance restored the duty on sugar, and in this form the bill was passed in the Senate by yeas 43, nays 6, absent 23. The House and Senate came to an agreement as to the terms of the bill, and it became a law July 14, 1870.

FORTY-THIRD CONGRESS, FIRST SESSION.

May 25, 1874, in the House Mr. DAWES, Republican, of Massachusetts, reported a bill from the Committee on Ways and Means (H. R. 3491) to amend existing customs and internal-revenue laws, and for other purposes.

May 26, Mr. DAWES called up the bill, and said:

The leading manufacturing interests of the country have been represented before the committee and have been heard patiently and thoroughly. The committee have also heard, on the other hand, the officers of the Treasury Department, who are anxious, as we had occasion heretofore to say to the House, that increased taxation should be the policy of Congress.

It never seems to have occurred to Mr. DAWES that anybody but the protected manufacturers and the tax-collectors on the part of the Government had any business to inquire into the matter. He said, in reply to Mr. COX, that the most gratifying feature of the whole bill, to him, was the fact that it would not add to the public revenue. In other words, that he, as the representative of the manufacturers, looked after their interests first, and that the higher the tariff the higher their profits and the lower the revenue to the Government.

June 1 Mr. DAWES introduced from the Ways and Means Committee a substitute for the original bill. It was passed on the same day, by yeas 177, nays 49. The affirmative vote was made up of all parties, chiefly Republican. The negative vote was all Democratic. The test vote was on suspending the rules.

The bill was passed in the Senate June 22, with amendments.

A conference committee made a report, which was agreed to by the Senate, but disagreed to by the House, and the bill was postponed to the first Monday in December.

Second session. January 1875, the conference committee amended their report, which was agreed to by both Houses, and the bill was signed by the President February 8, 1875.

FORTY-SEVENTH CONGRESS, FIRST SESSION.

The tariff act of 1883 was made a part of the "act to reduce internal taxation, and for other purposes." It was introduced in the House of Representatives in March, 1882, by Mr. Kelley, of Pennsylvania; it was referred to the Committee of the Whole on the state of the Union, but was not taken up for consideration until June 21.

June 27, 1882, the bill was passed in the House by yeas 128, nays 80. In the Senate the tariff feature was added. The Senate also proposed taking the taxes off of bank capital and deposits and the repeal of the stamp tax on bank checks, patent medicines, and friction matches, but no let up on tobacco or spirits.

The bill was debated until August 3, when it was abandoned. Mr. MORRILL, then a Senator from Vermont, proposed to drop the tariff features of the bill and pass it as it came from the House, but no action was taken upon that motion.

SECOND SESSION, DECEMBER 8, 1882.

The House bill was again taken up, on motion of Mr. MORRILL, and recommitted to the Finance Committee.

January 4, 1883, Mr. MORRILL, by direction of the Finance Committee, reported back the House bill to reduce internal-revenue taxation, with an amendment embracing an entire revision of the tariff, including the machinery for collecting the duties.

According to Mr. MORRILL'S estimate the bill would make reductions upon imports amounting to $45,049,000. The articles on which the reductions were to take place were cotton manufactures, iron and steel, silks, wools and woolens, sugar, molasses, and some other articles.

There was to be also a reduction of internal taxes amounting to $34,790,324, making in all a reduction in taxation amounting to $79,839,324.

Mr. MORRILL stated that the Finance Committee had followed, in making the tariff revision, the report of the Tariff Commission, which he lauded very highly. To this Mr. Beck replied at some length, and indulged in some pointed criticisms upon the work of the commission. It was in the course of this debate that Mr. SHERMAN made the extraordinary blunder of stating, first, that it had "got to be an axiom of tariff policy to levy specific duties;" that "it is now an admitted axiom by every man who has ever undertaken in the last forty years to frame a tariff bill that specific duties are better than ad valorem duties." Having laid down these "axioms" he goes on to state that—

Therefore it is that from the tariff of 1842, including the tariff of 1846 and every tariff which has been made in this country from that time, it has been an admitted axiom of legislators that specific duties should be substituted for ad valorem as far as practicable.

Now, what stranger to the laws of this country could suspect, in the face of this broad statement of the leading financier of the Republican party, that the tariffs, both of 1846 and 1857, are exclusively ad valorem tariffs and that neither of them contains a solitary specific duty? Yet such is the fact. These tariffs classify every imported article under schedules A, B, C, etc., and impose ad valorem duties upon them. On schedule A, embracing only spirits, the duty is 100 per cent. On schedule B, 40 per cent. On schedule C, 30 per cent., and so on down to 5 per cent. and a free-list. The tariff of 1857 is simply a further reduction of these several rates. Mr. SHERMAN must have derived his *ex cathedra* dictum from a country newspaper printed high up in Vermont.

During this Senate debate Mr. VANCE, of North Carolina, quoted the statement of a gentleman engaged in the business of pottery.

Mr. Sewell (Republican), of New Jersey, said the gentleman referred to manufactured no pottery except Portland knobs, which he does with machinery and which he can do at the present tariff rates.

Mr. VANCE. He comes under the generic term, as I understand.

Mr. SEWELL. But it is a class of pottery where they can use machinery in manufacturing. * * *

Mr. VANCE. As to the statement made by the Senator from New Jersey, and which I saw stated by several orators before the New York tariff convention, that 90 per cent. of this pottery business is labor, I desire to call the attention of the Senate to the tables prepared by the Tariff Commission on the pottery interest. In 1880 there were 686 establishments, there were 9,494 hands employed, there were $6,380,610 capital invested, there were wages paid $3,279,536, and the product was $7,943,229. They were lacking right smartly of 50 per cent. instead of 90.

Mr. VANCE continued his remarks and exposed the enormous taxes on window-glass. He showed that the importations for 1882 amounted to $1,454,833; that the revenue received was $1,114,165; and that domestic manufactures consumed were about three times as much as the imported articles; so that the people paid to the American manufacturers three times as much tax as to the Government.

The bill was passed, February 20, by yeas 42, nays 19.

Ten Democrats voted for the bill, namely, Messrs. Barrow and BROWN, of Georgia; Bayard, of Delaware; Camden and Davis, of West Virginia; GORMAN, of Maryland; Jackson, of Tennessee; Jones, of Florida; MCPHERSON, of New Jersey; and Slater, of Oregon. One Republican, Mr. Mitchell, of Pennsylvania, voted with the Democrats against the bill.

A committee of conference settled the differences between the two Houses in regard to the amendments, and the bill was signed by the President, Arthur, March 3, 1883.

INTERNAL TAXES.

It is a curious fact that the man, Alexander Hamilton, whom protectionists claim as the author or father of their policy, was the first to protest against the extension of the system of taxation upon foreign goods imported, and that at a time when those taxes amounted to less than 9 per cent. He held that higher duties would discourage commerce and be unjust to that important branch of business. In his report on the public credit of December 13, 1790, he says:

It need scarcely be observed that the duties on the great mass of imported articles have reached a point which it would not be expedient to exceed. There is at least satisfactory evidence that they can not be extended further without contravening the sense of the body of merchants.

In one of his letters in The Federalist, letter No. 12, he says that the duties imposed by the several States had never exceeded upon an average more than 3 per cent., but he thought they might under the Federal Government be "increased to treble their present amount," in other words, to 9 per cent. And it was at this point, in this report on the public credit, when the duties were less than 9 per cent., that he called a halt and proposed what would now be thought extremely moderate taxes on domestic distilled spirits; that is to say, 11 cents per proof gallon if distilled from grain or fruits grown in the United States, and 13 cents per proof gallon if distilled from sugar, molasses, or other foreign-grown articles. There was then no sugar or molasses produced in the United States.

The act as drawn by Hamilton was passed in both Houses of Congress, but not without strenuous opposition on the part of the Southern members. Among the ablest of these were the Representatives from North Carolina. They were inflexibly opposed to the system of excise taxes. The vote in Committee of the Whole on striking out the thirteenth section, imposing the tax on distilled spirits, as the bill was originally reported, was as follows:

YEAS—Messrs. P. Muhlenberg, Heister, and Scott, of Pennsylvania: Brown Moore, and Parker, of Virginia; Stone, of Maryland; Bloodworth, Sevier, Steele, and Williamson, of North Carolina; Burke and Tucker, of South Carolina; Baldwin, Jackson, and Matthews, of Georgia—16.

NAYS—Messrs. Foster, Gilman, and Livermore, of New Hampshire; Ames, Goodhue, Grout, Leonard, Partridge, Sedgwick, and Thatcher, of Massachusetts; Sherman, Sturgis, Trumbull, and Wadsworth, of Connecticut; Benson, Floyd, Lawrence, Sylvester, and Van Rensselaer, of New York; Boudinot, Cadwalader, Schureman, and Sinnickson, of New Jersey; Clymer, Fitzsimmons, and Wyncoop, of Pennsylvania; Seney and Smith, of Maryland; Griffin, Giles, Lee, Madison, and White, of Virginia; Smith, of South Carolina; Vining, of Delaware, and Bourne, of Rhode Island—36.

After settling the machinery of the bill it was passed by the House and went to the Senate. The Senate then sat in secret session and no debates are preserved. On the passage of the bill in that body the yeas were 20 and nays 5. Messrs. Johnston and Hawkins, Senators from North Carolina, voted for the bill. The nays were Messrs. Dalton and Strong, of Massachusetts; Foster, of Rhode Island; Gunn, of Georgia, and Maclay, of Pennsylvania—5. The New England Senators voted against the bill because it imposed higher taxes on the distillation of spirits from sugar and molasses, in which their constituents were extensively engaged, than on spirits distilled from grain and fruits of domestic growth.

The act was approved by President Washington March 3, 1791, and went into operation July 1 of that year.

In 1794 an act was passed which imposed taxes on the manufacture of tobacco, snuff, and refined sugar. On this question the North Carolina delegation was divided. Messrs. Blount, Macon, McDowell, and Winston voted to reject the bill, while Messrs. Dawson, Gillispie, Locke, Mebane, Grove, and Williams voted to sustain it.

Other internal taxes were imposed, but it is needless to go into the particulars.

The act of 1797, imposing stamp duties, was passed in the House by yeas 47, nays 41. It was supported by the Federalists and opposed by the Republicans, or followers of Jefferson, without regard to sections.

The bill was passed in the Senate by yeas 20, nays 7. Messrs. Bloodworth and Martin, of North Carolina, voted against it.

The act of July 9, 1798, providing for the assessment of lands, houses, and slaves, was passed in the House by yeas 69, nays 19. The opposition chiefly from the South and West. It was passed unanimously in the Senate.

The foregoing act only prepared the machinery for the direct tax, which was passed, and became a law July 14.

It provided for raising two millions by taxes on lands, houses, and slaves.

It passed the House by yeas 62, nays 18; and passed the Senate with little opposition.

The foregoing internal taxes were imposed for the purpose of paying off the Revolutionary public debt and for meeting and preparing for the contingency of a war with England or France. They were all repealed about the beginning of the present century, after which no internal taxes, whether direct or excise, were found necessary until 1813, when the war with Great Britain was on hand. War was declared in June, 1812; but, strange to say, the first war tax was not proposed until July of the following year. Mr. Madison was President, and the Jeffersonian Republican or Democratic party was in power, and would be responsible for whatever taxes it became necessary to impose to meet the emergency. The invasion of our independent rights as a nation by Great Britain had made war necessary, and heavy taxation necessary.

The country had then become more populous and wealthy than it was fifteen years before, and a three million direct tax was laid upon lands, houses, and slaves, and excise taxes were imposed upon spirits manufactured in the country, upon refining sugar, upon pleasure carriages, upon licenses, upon sales at auction, upon banks and bankers, and a stamp tax was imposed upon legal instruments.

But it is needless to go into a history of these several measures. Being proposed by the Republicans, or Democrats, they were opposed by the Federalists, who though not so relatively numerous as formerly, were still powerful in talent, wealth, and influence, especially in New England. The several measures were necessary; but they were in their nature unpopular, though framed with a view to avoiding friction, and they were laid aside as soon as possible.

INTERNAL TAXES IMPOSED IN 1861 AND FOLLOWING YEARS.

The direct tax proposed in the bill as it came from the Ways and Means Committee was to raise $30,000,000. It was introduced by Mr. Stevens, of Pennsylvania. The chief opposition to it came from the Republicans, Messrs. Conkling and Colfax. The former proposed to make requisitions upon the States and allow them to collect their quotas in their own way. He was reluctant to vote for the bill; but its most obnoxious feature was that it created an army of officers to collect the taxes.

Mr. Colfax proposed a substitute, which was to levy the tax on bonds, stocks, money at interest, and incomes.

Mr. Conkling's resolution was adopted—yeas 70, nays 67. This was July 24, 1861.

But the next day Mr. Stevens reported back from the Ways and Means Committee that they were unable to frame a bill in conformity with the resolution of Mr. Conkling and consistent at the same time with the Constitution.

Finally the House passed a bill providing for the collection of twenty millions in the usual way.

Mr. Vallandigham demanded the yeas and nays; which being taken, resulted—yeas 77, nays 60.

Many Republicans voted against the bill. In the Senate the bill was annexed to the tariff bill and was passed and became a law, as has been stated above in the account of tariff legislation.

This direct-tax act included an income tax of 3 per cent. upon incomes which exceeded $800, with half that rate upon holders of United States notes and bonds, but 5 per cent. if such holders resided abroad. The direct tax was suspended and never fully enforced.

INTERNAL REVENUE—EXCISE TAXES.

The act of July 1, 1862, entitled "An act to provide internal revenue to support the Government and to pay interest on the public debt," was the foundation of the present internal-revenue system.

It imposed a tax of 20 cents per gallon on first-proof spirits; and on malt liquors of every kind the tax was $1 per barrel of 31 gallons.

Licenses were required of all sorts of dealers, manufacturers, and of persons engaged in every imaginable occupation, and the yearly prices of the licenses varied according to the real or supposed importance of the business.

The act of March 7, 1864, increased the tax on distilled spirits to 60 cents per gallon. And the act of June 30, 1864, increased the tax on distilled spirits to $1.50 per gallon prior to February 1, 1865, and after that date to $2 per gallon.

Brandy distilled from grapes was taxed 25 cents per gallon. Further additions were made to the list of taxed articles and occupations, "too numerous to mention." Heavy additions were made to tobacco taxes in all the varieties of its manufacture and use.

Little opposition was made to the passage of these acts, which, in the main, were necessary to meet the wants of the Government, although needlessly oppressive in many respects and in some flagrantly unconstitutional. This was particularly true of the taxes on the mere production of raw cotton and tobacco. But they were Southern products, and it afforded pleasure to bitter partisans to inflict them, not so much for the revenue as for the hardship they imposed, on the principle, stated by Macaulay, that the Puritans in Cromwell's time suppressed bull-fights, not on account of the pain given to the animals, but because they gave pleasure to the spectators.

The act of July 20, 1868, reduced the duty on spirits to 50 cents per gallon. The tax on manufactured tobacco was also reduced from 50 cents per pound to 32 cents. Other changes were made.

The yeas and nays were not called on the passage of this bill.

The act of July 14, 1870, entitled "An act to reduce internal revenue, and for other purposes," repeals a large number of special taxes and stamp taxes.

The act of June 6, 1872, increased the tax on distilled spirits from 50 to 70 cents per proof gallon. It reduced the tax on tobacco from 32 to 20 cents per pound.

But it is noticeable that all these taxes, whether reductions or other, are based on the favorite Republican idea of taxing plain people more heavily than the wealthy. In other words, they place the same amount of tax on cheap goods that they do on finer and more costly articles. Thus:

On all chewing and smoking tobacco—

The act reads—

fine-cut, cavendish, plug, or twist, cut or granulated of every description; on tobacco twisted by hand, or reduced to a condition to be consumed, or in any other manner than the ordinary mode of drying and curing, prepared for sale or consumption, even if prepared without the use of any machine or instrument, and without being pressed or sweetened, and on all fine-cut shorts and refuse scraps, clippings, cuttings, and sweepings of tobacco, a tax of 20 cents per pound.

This clause of the act is about as searching as the iron-clad oath, and the object of its Republican authors was to make poor white men and negroes pay as much tax on their twisted ground leaves and "sweepings" as fine gentlemen pay on their fine-cut, their cavendish, and plug. And this principle runs through the whole tariff and internal-revenue legislation of the Republican party. The act of March 3, 1875, "to further protect the sinking fund and to provide for the exigencies of the Government," raised the tax on distilled spirits from 70 to 90 cents per proof gallon.

The act of March 1, 1879, reduced the taxes on snuff and tobacco to 16 cents per pound. The tax on cigars was raised to $6 per 1,000 and on cigarettes to $1.75 per package weighing 3 pounds.

The act of March 3, 1883, entitled "An act to reduce internal-revenue taxation, and for other purposes," relieved the banks from taxation and repealed all stamp taxes. The special taxes were also reduced.

But the Republicans, true to their instincts, while abolishing bank taxes and income taxes, still hold on to the taxes on the farmer, the tobacco grower and consumer, and still discriminate in taxes on tobacco in favor of the rich and against the poor.

It is needless to add that the Democratic party has favored every reduction of taxation, and has opposed every needless increase of taxes; and especially has it opposed measures which, under the pretense of being intended to increase the revenue, have been designed to put money into the pockets of the manufacturers at the expense of the people

and to the injury of the public revenue. In the several cases in which tariff acts have been united with internal revenue acts, the course of parties has been shown already.

MODIFICATION OF INTERNAL-REVENUE LAWS.

[Forty-ninth Congress, second session.]

March 3, 1887, Mr. HENDERSON, of North Carolina, moved to suspend the rules and pass this bill.

A bill to modify the internal-revenue system of legislation, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the proviso contained in subdivision 6 of section 3244 of the Revised Statutes of the United States, which reads as follows: "*Provided*, That nothing in this section shall be construed to exempt from a special tax any farmer or planter who, by peddling or otherwise, sells leaf-tobacco at retail directly to consumers, or who sells or assigns, consigns, transfers, or disposes of to persons other than those who have paid a special tax as leaf-dealers or manufacturers of tobacco snuff, or cigars or to persons purchasing leaf-tobacco for export," be, and the same is hereby, repealed.

SEC. 2. That section 3361 of the Revised Statutes of the United States, and all laws and parts of laws which impose restrictions upon the sale of leaf-tobacco by the producers thereof, or by guardians, executors, or trustees having the control of the land on which the same was produced, or by owners of land who have received tobacco as rent from their tenants, and all laws and parts of laws imposing penalties therefor, be, and the same are hereby, repealed; and none of the persons or classes of persons above mentioned shall be deemed dealers in leaf-tobacco or retail dealers in leaf-tobacco or be subject to any special or other tax as such.

SEC. 3. That section 3255 of the Revised Statutes shall be amended by adding at the end of said section the following:

"The Secretary of the Treasury shall exempt all distilleries which mash five bushels of grain or less per day from the operations of the provisions of this title relating to the manufacture of spirits, except as to the payment of the tax, which said tax shall be levied and collected on the capacity of said distilleries; and said distilleries shall be run and operated without storekeepers or 'storekeepers and gaugers.' And the Commissioner of Internal Revenue, with the approval of said Secretary, may exempt any distillery or all distilleries which mash over five and not more than twenty-five bushels of grain per day from the operations of the provisions of this title relating to the manufacture of spirits, except as to the payment of the tax, which said tax shall be assessed and collected upon the capacity of the distillery so exempted, as hereinbefore provided. And the said Commissioner, with the approval of said Secretary, may establish special warehouses, in which he may authorize to be deposited the product of any number of said distilleries to be designated by him, and in which any distiller operating any such distillery may deposit his product, which, when so deposited shall be subject to all the laws and regulations as to bonds, tax, removals, and otherwise as other warehouses. The Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, is hereby authorized and directed to make such rules and regulations as may be necessary to carry out the provisions of this section: *Provided*, That such regulations shall be adopted as will require that all the spirits manufactured shall be subject to the payment of the tax as required by law."

SEC. 4. That section 3255 of the Revised Statutes of the United States be amended by striking out all after said number and substituting therefor the following:

"The Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may exempt distillers of brandy made exclusively from apples, peaches, grapes, or other fruits from any provision of this title relating to the manufacture of spirits, except as to the tax thereon, when in his judgment it may seem expedient to do so."

SEC. 5. That the provisions of an act entitled "An act relating to the production of fruit-brandy, and to punish frauds connected with the same," approved March 3, 1877, be extended and made applicable to brandy distilled from apples or peaches, or from any other fruit the brandy distilled from which is not now required, or hereafter shall not be required, to be deposited in a distillery warehouse: *Provided*, That each of the warehouses established under said act, or which may hereafter be established, shall be in charge either of a storekeeper or a storekeeper and gauger, at the discretion of the Commissioner of Internal Revenue.

SEC. 6. That section 3332 of the Revised Statutes, and the supplement thereto, shall be amended so that said section shall read as follows:

"When a judgment of forfeiture, in any case of seizure, is recovered against any distillery used or fit for use in the production of distilled spirits, because no bond has been given, or against any distillery used or fit for use in the production of spirits, having a registered producing capacity of less than 150 gallons a day, every still, doubler, worm, worm-tub, mash-tub, and fermenting-tub therein shall be sold, as in case of other forfeited property, without being mutilated or destroyed. And in case of seizure of a still, doubler, worm, worm-tub, fermenting-tub, mash-tub, or other distilling apparatus of any kind whatsoever, for any offense involving forfeiture of the same, it shall be the duty of the seizing officer to remove the same from the place where seized to a place of safe storage; and said property so seized shall be sold as provided by law, but without being mutilated or destroyed."

SEC. 7. That whenever in any statute denouncing any violation of the internal-revenue laws as a crime or misdemeanor there is prescribed in such statute a minimum punishment, less than which minimum no fine, penalty, imprisonment, or punishment is authorized to be imposed, every such minimum punishment is hereby abolished; and the court or judge in every such case shall have discretion to impose any fine, penalty, imprisonment, or punishment not exceeding the limit authorized by such statute, whether such fine, penalty, imprisonment, or punishment be less or greater than the said minimum so prescribed.

SEC. 8. That no warrant, in any case under the internal-revenue laws, shall be issued upon an affidavit making charges upon information and belief, unless such affidavit is made by a collector or deputy collector of internal revenue or by a revenue agent, nor unless such affidavit is first approved by the district attorney and written instructions given by him for the issuing of the warrant; and, with the exception aforesaid, every such warrant shall be issued upon a sworn complaint, setting forth the facts constituting the offense and alleging them to be within the personal knowledge of the affiant; and no warrant shall be issued upon the affidavit of a person other than such collector, deputy collector, or revenue agent, unless the commissioner or other officer having jurisdiction shall indorse upon the warrant and shall enter upon his docket an express adjudication that the examination on oath of the affiant shows that there is probable cause for charging the person prosecuted with the offense.

SEC. 9. That whenever it shall be made to appear to the United States court or judge having jurisdiction that the health or life of any person imprisoned for any offense, in a county jail or elsewhere, for a period of one year or less, is endangered by close confinement, the said court or judge is hereby authorized to make such order and provision for the comfort and well-being of the person so imprisoned as shall be deemed reasonable and proper.

SEC. 10. That the circuit courts of the United States and the district courts of the Territories are authorized to remove from office any commissioner appointed or authorized to be appointed by said courts under sections 627 and 1983 of the Revised Statutes.

SEC. 11. That all clauses of section 3244 of the Revised Statutes, and all laws amendatory thereof, and all other laws which impose any special tax upon manufacturers of stills, are hereby repealed.

SEC. 12. All laws in conflict with this act are hereby repealed.

SEC. 13. This act shall be in force from and after the 1st day of April, in the year 1887.

Mr. HENDERSON, of North Carolina, demanded the yeas and nays on suspending the rules.

The yeas and nays were ordered.

The question was taken; and it was decided in the negative—yeas 139, nays 112, not voting 68; as follows:

YEAS—139.

So (two-thirds not having voted in favor thereof) the rules were not suspended, and the bill was not passed.

One hundred and thirty Democrats and 9 Republicans voted for this bill and 106 Republicans and 6 Democrats voted against this bill. This vote shows that the Republicans are opposed to giving the people any relief from the oppressions of the internal-revenue system.

Sections 4 and 5 of the foregoing bill were enacted into law by the Fiftieth Congress, and the other sections of the bill, with slight alter-

ations, were passed through the House of Representatives of said Congress, some of the sections being contained in bill H. R. 5931, which passed the House, on motion of Mr. HENDERSON, of North Carolina, February 7, 1888, and all of them were contained in the Mills tariff bill as it passed the House.

THE NATIONAL-BANKING SYSTEM.

The present national banking system was established in 1863, on the recommendation of the late Judge Chase, who was then Secretary of the Treasury. Herecommended the system is his first annual report, in December, 1861. The idea of hypothecating United States bonds as the basis of banking and circulation was borrowed from the State of New York, where it had prevailed from 1838, and where State bonds were used instead of those of the United States.

There can be no doubt that it is the safest possible system of bank circulation. But the question arises, why give to individuals the enormous power as well as the enormous advantage of doing that which the Government can do in the interest of the whole people?

Bills establishing a national-banking system were introduced in both Houses in January, 1863, but the Senate bill, introduced by Mr. SHERMAN, of Ohio, was preferred.

Mr. Powell, Democrat, of Kentucky, February 4, thought that the United States could not charter a bank in the States without the consent of the Legislatures thereof. He also moved to amend the bill by striking out the clause authorizing the redemption of the bank bills in lawful money and inserting gold and silver. He held that Congress could not make paper a legal tender. He at the same time gave notice of a motion to make United States notes receivable for all public dues. He was replied to by Mr. SHERMAN.

Mr. Powell's proposed amendment, requiring each banking association to keep in its vaults an amount of gold and silver coin equal to at least one-fourth of its circulation, was then voted down by yeas 14, nays 22; as follows:

YEAS—Messrs. Bayard (James A.) of Delaware, Carlile of Virginia, Davis and Powell of Kentucky, Foot of Vermont, Grimes of Iowa, Harding of Oregon, Howard of Michigan, Kennedy of Maryland, Rice of Minnesota, Trumbull of Illinois, Turpie of Indiana, W ll of New Jersey, and Wilson of Missouri—14.

NAYS—Messrs. Anthony and Arnold of Rhode Island, Chandler of Michigan, Clark of New Hampshire, Dixon and Foster of Connecticut, Doolittle and Harlan of Iowa, Fessenden and Morrill of Maine, Harris and King of New York, Hicks of Maryland, Lane of Indiana, Lane and Pomeroy of Kansas, Sherman of Ohio, Sumner and Wilson of Massachusetts, Ten Eyck of New Jersey, Wilkinson of Minnesota, and Willey of Virginia—22.

The eight Democrats in the Senate, namely, Messrs. Bayard, Davis, and Powell, Kennedy, Rice of Minnesota, TURPIE, Wilson of Missouri, and Harding of Oregon, all voted for Mr. Powell's amendment. The other gentlemen who voted in the affirmative were Republicans. The vote against the amendment was all Republican.

Mr. Powell moved that the banks should be required to resume specie payments within twelve months after the close of the war.

The vote on this motion was a tie—18 to 18—and was therefore lost. All the Democrats present voted for the amendment, among them Messrs. Latham of California, Nesmith of Oregon, and Richardson of Illinois, who were not present at the former vote. The nays were all Republicans.

Mr. Collamer, Republican, of Vermont, then took the floor and made a strong speech against the bill.

February 12, 1863, the bill was passed by yeas 23, nays 21, all the Democrats, except Mr. Nesmith, of Oregon, voting against it, namely, Messrs. Davis and Powell, of Kentucky; Kennedy, of Maryland; Latham and McDougall, of California; Rice, of Minnesota; Richardson, of Illinois; Saulsbury, of Delaware; and TURPIE, of Indiana.

IN THE HOUSE OF REPRESENTATIVES.

February 19 the bill passed the House with little debate by yeas 78, nays 64.

The Democrats with two or three exceptions, voted against the bill, together with a number of Republicans.

The act was signed by President Lincoln February 25, 1863. It has undergone several modifications, but the essential features are retained. In fact, the act of June 3, 1864, superseded that of 1863, but is so much like it as to render a particular account of its history unnecessary. The changes made were only matters of detail.

The Democrats in the Senate voted against the bill. It was explained by Mr. SHERMAN.

The act contained no provision for taxing the State banks, and that was added afterwards. The tax is 10 per cent. on the circulation of State or local banks, the effect of which has been to drive their notes completely out of use.

The act of July 12, 1882, authorized any national-banking association organized under the acts of February 25, 1863, June 3, 1864, and February 14, 1880, or under certain named sections of the Revised Statutes "at any time within two years next previous to the date of the expiration of its corporate existence under the present law, and with the approval of the Comptroller of the Currency," to extend its charter for not more than twenty years.

This act was passed in the House May 19, 1882, by yeas 125, nays 67, absent or not voting 99.

The vote in the House for the bill consisted of 107 Republicans and 18 Democrats, and the vote against the bill consisted of 64 Democrats and 3 Republicans.

In the Senate 26 Republicans and 8 Democrats voted for the bill, and the vote against the bill in the Senate consisted of 12 Democrats and 1 Republican.

The recharter of the national banks was, therefore, an eminently Republican measure.

UNITED STATES NOTES, OR GREENBACKS, AND BONDS.

The first act authorizing the issue of United States notes, or "greenbacks," was passed February 25, 1862. It authorized the Secretary of the Treasury to issue United States notes to the amount of $150,000,000. They were made receivable for all taxes, internal duties, excises, debts, and demands of the Government, except for duties on imports, which were to be paid in coin consisting of gold and silver, and they were made a legal tender for all debts, public and private, except for interest on the public debt, which was to be paid in coin.

The Secretary was authorized to issue United States bonds and to sell them for coin or other "lawful money" at par. The bonds bore 6 per cent. interest, payable in coin. A sinking fund was established, and the coin revenue from imports was devoted to the payment of the interest semi-annually and to the redemption of 1 per cent. of the principal. The bonds were redeemable at the option of the Government after five years and were payable at the end of twenty years.

All subsequent acts authorizing the issue of United States notes made them receivable for 6 per cent. bonds on the above terms.

These measures encountered Democratic opposition, but to no purpose, as the Republicans were all-powerful.

The act of March 18, 1869, "solemnly pledged" the faith of the United States "to the payment in coin or its equivalent of all the obligations of the United States not bearing interest, known as United States notes, and of all the interest-bearing obligations of the United States, except in cases where the law authorizing the issue of any such obligation has expressly provided that the same may be paid in lawful money or other currency than gold and silver."

The resumption of specie payments by the Government—in other words, the redemption of the United States notes, or greenbacks, in coin—did not take place until ten years later, on January 1, 1879.

The vote upon the passage of the act of March 3, 1869, above quoted, was—yeas 120, nays 60, not voting 42.

There were then 49 Democrats in the House, of whom 13 voted for the bill and 9 failed to vote, leaving 27 Democrats who voted against it, together with 33 Republicans.

Two facts are to be taken into view in reference to this vote. In the first place, the act of February 25, 1862, which laid the foundation for the national debt, provided a sinking fund, as has been stated, for its redemption in the coin paid for duties on imports, and, in the second place, the effect of the declaratory act was to enable the Government to call in the original 6 per cent. bonds and replace them by bonds bearing 4½ and 4 per cent. interest. This could not have been done while a doubt remained as to the redemption of the bonds in specie.

IN THE SENATE.

The act passed the Senate February 27, 1869, by yeas 30, nays 16, not voting 20, as follows:

YEAS—Messrs. Abbott, of North Carolina; Cattell and Frelinghuysen, of New Jersey; Conkling and Morgan, of New York; Conness, of California; Corbett and Williams, of Oregon; Cragin and Patterson, of New Hampshire; Dixon and Ferry, of Connecticut; Edmunds and Morrill, of Vermont; Fessenden and Morrill, of Maine; Grimes and Harlan, of Iowa; Harris, of Louisiana; Howard, of Michigan; Nye and Stewart, of Nevada; Robertson and Sawyer, of South Carolina; Sherman, of Ohio; Sumner and Wilson, of Massachusetts; Thayer and Tipton, of Nebraska; and Willey, of West Virginia—30.

NAYS—Messrs. Cole, of California; Davis and McCreery, of Kentucky; Doolittle, of Wisconsin; Fowler and Patterson, of Tennessee; Henderson, of Missouri; Hendricks and Morton, of Indiana; McDonald, of Arkansas; Osborn and Welch, of Florida; Pomeroy and Ross, of Kansas; Spencer, of Alabama; and Wade, of Ohio—16.

Mr. Dixon, of Connecticut, who voted for the bill, ranks as a Democrat. Of the 16 negative votes 4, namely, Messrs. Davis and McCreery, of Kentucky, Mr. Hendricks, of Indiana, and Mr. Patterson, of Tennessee, were Democrats, and of the twenty absent or not voting, were Messrs. Bayard and Saulsbury, of Delaware, BUCKALEW, of Pennsylvania, Norton, of Minnesota, and Whyte and Vickers, of Maryland.

DEMONETIZATION OF SILVER.

The founders of the Government made the silver dollar the standard coin of the United States; and gold coins, though recognized as the equal of silver at 15½ of the latter to 1 of the former, still stood second in rank. In 1834 the relative proportions of the two metals in the coins was changed to 16 of silver to 1 of gold, and in February, 1873, silver, according to this standard, was worth 3 cents in the dollar more than gold.

It was on this ground, that the standard silver dollar was worth more than the gold dollar, that Senator JOHN SHERMAN, in the Senate, and Samuel Hooper, of Massachusetts, in the House of Representatives, smuggled through Congress a bill which provided that only gold coins of various sizes should be coined and circulated as money. But this was done by indirection. After providing for the coinage of gold dollars, two-and-a-halfs, fives, tens, and twenties, and declaring them to be a legal tender,

provision was made for what is called a subsidiary silver coin, having less than the standard weight of the precious metal and to be a legal tender only to the extent of $5 in any one case.

Then follows a clause which declares that no other coins shall be made; and the effect of this act was to stop the coinage of silver dollars and to reduce silver to the rank of copper.

But the act said nothing about the old silver dollars which were then in the hands of the people; and they remained good money until another fraud was perpetrated by the revisers of the statutes, which was done in concert no doubt the next year. The guilt of SHERMAN and Hooper consisted in stopping the coinage of the silver dollar sneakingly, without the knowledge ot the Congress which passed the measure. This was demonstrated a few years later, when the discovery was made that the silver dollar was no longer to be coined or treated as money. There was a general confession made to this effect, in both Houses, in 1878. Such men as Blaine, Thurman, VOORHEES, STEWART of Nevada, Kelley of Pennsylvania, and others confessed that in voting for the bill they had not a remote idea that they were demonetizing silver. The act merely purported to be an act for regulating the mints.

And so with the clause smuggled into the Revised Statutes in violation of the act which authorized the revisal. The section is numbered 3586. It is surprising that the forgers had not had the audacity to refer it to the act of February 12, 1873, but they seemed to shrink from that responsibility, and have left it without a reference, which always accompanies a revised clause. It was a forgery as palpable as would be the insertion of words in a will after the decease of the testator; for the act authorizing the revision provided that only the acts on the statute-books which had not been repealed or become obsolete should find a place in the revisal.

Section 3586 is as follows:

The silver coins of the United States shall be a legal tender at their nominal value for any amount not exceeding $5 in any one payment.

The book containing this fraudulent entry contains 1092 pages, and, of course, no single Congressman read it before voting to accept it as an honest revisal.

In 1878 silver was partially restored to its place as a national coin. Prior to 1873 any one having silver or gold bullion could go to the Mint and have it coined, in any amount. But the act of 1878, while restoring the legal-tender character of silver, restricted the coinage. The law as it now stands provides for and authorizes, as of old, an unlimited coinage of gold, at the pleasure of the holders of gold bullion; but only a limited amount of silver can be coined. The maximum allowed is $4,000,000 per month, but the minimum of $2,000,000 has never been exceeded. The silver is to be purchased by the Government.

The effect of this discrimination against silver is to keep down its value and keep up that of gold. The cry of the demonetizers is now no longer that silver is too dear, but that it is too cheap. But the people know that a silver dollar will buy as much as a gold dollar and they demand the free coinage of both metals.

But the pending act will entirely stop the coinage of silver after July 1, 1891.

The effect of this bill will be to carry out the knavish conspiracy of 1873, for the demonetization of silver, and in future the bonds of the United States can only be redeemed in gold. The Republicans have thus done what the bondholders—a large part of them foreigners—demanded. They have made gold the sole standard of value, while greenbacks and silver certificates are to be the money of the people. They will never see any gold.

THE CIVIL RIGHTS BILL.

The act entitled "An act to protect all citizens in their civil and legal rights" bears date March 1, 1875. The first and second sections define those "rights" and the penalties for their denial or violation.

SECTION 1. That all persons within the jurisdiction of the United States shall be entitled to the full and equal enjoyment of the accommodations, advantages, facilities, and privileges of inns, public conveyances on land or water, theaters, and other places of public amusement, subject only to the conditions and limitations established by law and applicable alike to citizens of every race and color regardless of any previous condition of servitude.

SEC. 2. That any person who shall violate the foregoing section by denying to any citizen, except for reasons by law applicable to citizens of every race and color and regardless of any previous condition of servitude, the full enjoyment of any of the accommodations, advantages, facilities, or privileges in said section enumerated, or by aiding or inciting such denial, shall, for every such offense, forfeit and pay the sum of $500 to the person aggrieved thereby, to be recovered in an action of debt, with full costs; and shall also, for every such offense, be deemed guilty of a misdemeanor, and, upon conviction thereof, shall be fined not less than five hundred nor more than one thousand dollars, or shall be imprisoned not less than thirty days nor more than one year.

This infamous act was based on an old English common-law requirement of inn-keepers, which was never adopted or enforced in any part of this country. That common-law requirement grew out of the fact that inn-keepers in the towns and villages in that country, centuries ago, were given a monopoly on condition that they should entertain all travelers who were able to pay the fare. And this condition being fulfilled, no rival inn could be set up in the town.

Every intelligent man knows that no such law or custom ever had force in this country, and the attempt to enact it into a law in the latter part of the nineteenth century was a stupid piece of fanaticism, as barbarous in principle as it is unconstitutional and unjust.

The Supreme Court of the United States decided, October, 1883, the foregoing sections of the act to be unconstitutional and void. Judge Bradley delivered the opinion of the court. Several cases were determined at the same time. The language of the court is as follows:

The first and second sections of the act of Congress of March 1, 1875, entitled "An act to protect all citizens in their civil and legal rights," are unconstitutional and void, and that judgment should be rendered upon the several indictments in those cases accordingly.

The bill originated in the House of Representatives. It was reported from the Judiciary Committee December 18, 1873, by Mr. B. F. Butler, of Massachusetts, a Republican, but it was not passed until the second session, February 4, 1875; the yeas 162, nays 99, not voting 28.

YEAS—Messrs. Hays, Pelham, Rapier, Sheats, and White, of Alabama; Hodges, Hynes, and Snyder, of Arkansas; Clayton, Houghton, and Page, of California; Hawley, Kellogg, and Starkweather, of Connecticut; Whiteley, of Georgia; Barrere, Burchard, Cannon, Clements, Corwin, Fort, Hawley, Hurlbut, Martin, McNulta, and Ward, of Illinois; Cason, Coburn, Hunter, Orth, Packard, Sayler, Shanks, Tyner, Wilson, and Williams, of Indiana: Cotton, Donnan, Kasson, Loughridge, McCrary, McDill, Orr, Pratt, and Wilson, of Iowa; Cobb, Lowe, and Phillips, of Kansas; Darrall, Morey, Sheldon, Smith, and Syphers, of Louisiana; Burleigh, and Hale, of Maine; Albert, of Maryland; Buffington, Butler, Dawes, Gooch, Harris, E. R. Hoar, Hooper, Pierce, and Williams, of Massachusetts; Begole, Bradley, Burrows, Conger, Field, Hubbell, Waldren, Willard, and Williams, of Michigan; Averill and Dunnell, of Minnesota; Howe, Lynch, McKee, and Niles, of Mississippi; Hyde and Parker, of Missouri; Crounse, of Nebraska; Clark, Dobbins, Hazleton, Scudder, and Ward, of New Jersey; Pike and Small, of New Hampshire; Bass, Clark, Crooke, Duell, Hale, Hathorn, Hoskins, Lamport, Lansing, Lawson, MacDougall, Merriam, Roberts, Scudder, Sessions, Smart, Smith, Tremaine, and Wilber, of New York; Thomas, of North Carolina; Bundy, Foster, Garfield, Gunckel, Lawrence, Monroe, Parsons, Robinson, Smith, Sprague, and Woodworth, of Ohio; Albright, Bierz, Curtis, Cessna, Harmer, Kelley, Myers, Moore, O'Neill, Packer, Richmond, Ross, Negley, Scofield, Shoemaker, Smith, Strawbridge, Taylor, Todd, and Townsend, of Pennsylvania; Evans and Pendleton, of Rhode Island; Cain, Carpenter, Rainey, and Wallace, of South Carolina; Lewis, of Tennessee; Hendee, Poland, and Willard, of Vermont; Platt and Stowell, of Virginia; Hagans, of West Virginia; Barber, Hazleton, McDill, Rusk, Sawyer, and Williams, of Wisconsin—162.

NAYS—Messrs. Bromberg, Caldwell, and Sloss, of Alabama; Gunter, of Arkansas; Luttrell, of California; Loffland, of Delaware; Bell, Blount, Cook, Harris, Stephens, Sloan, and Young, of Georgia; Eden, Knapp, Morrison, and Robinson, of Illinois; Holman, Niblack, and Wolf, of Indiana; Adams, Arthur, Beck, Brown, Crossland, Durham, Milliken, Reed, Standiford, and Young, of Kentucky; Archer, Lowndes, O'Brien, Swann, and Wilson, of Maryland; Lamar, of Mississippi; Bland, Buckner, Clarke, Cormingo, Crittenden, Glover, Hatcher, Stanard, Stone, and Wells, of Missouri; Parker, of New Hampshire; Hamilton and Phelps, of New Jersey; Chittenden, Cox, De Witt, Perry, Potter, Roberts, Schell, Schumaker, Whitehouse, and Wood, of New York; Ashe, Leach, Robbins, Vance, and Waddell, of North Carolina; Banning, Berry, Finck, Lamison, Neal, and Taylor, of Ohio; Nesmith, of Oregon; Clymer, Magee, Randall, Speer, and Storm, of Pennsylvania; Atkins, Bright, Butler, Crutchfield, Harrison, Thornburgh, and Whitthorne, of Tennessee; Giddings, Hancock, Herndon, McLean, Mills, and Willie, of Texas; Bowen, Harris, Hunton, Smith, Thomas, and Whitehead, of Virginia; Davis and Hereford, of West Virginia; Eldredge, of Wisconsin—98.

In the Senate the bill was passed, February 27, by yeas 38, nays 26; as follows:

YEAS—Messrs. Alcorn and Pease, of Mississippi; Allison and Wright, of Iowa; Anthony, of Rhode Island; Boreman, of West Virginia; Boutwell and Washburn, of Massachusetts; Cameron and Scott, of Pennsylvania; Chandler and Ferry, of Michigan; Clayton, of Arkansas; Conkling, of New York; Conover, of Florida; Cr gin, of New Hampshire; Edmunds and Morrill, of Vermont; Flanagan, of Texas; Frelinghuysen, of New Jersey; Harvey and Ingalls, of Kansas; Howe, of Wisconsin; Jones and Stewart, of Nevada; Logan and Oglesby, of Illinois; Mitchell, of Oregon; Morton and Pratt, of Indiana; Patterson and Robertson, of South Carolina; Ramsey and Windom, of Minnesota; Sargent, of California; Sherman, of Ohio; Spencer, of Alabama; West, of Louisiana—38.

NAYS—Messrs. Bayard and Saulsbury, of Delaware; Bogy and Schurz, of Missouri; Carpenter, of Wisconsin; Cooper, of Tennessee; Davis, of West Virginia; Dennis and Hamilton, of Maryland; Eaton and Ferry, of Connecticut; Goldthwaite, of Alabama; Gordon and Norwood, of Georgia; Hager, of California; Hamilton, of Texas; Kelley, of Oregon; Lewis, of Virginia; McCreery and Stevenson, of Kentucky; Merrimon and Ransom, of North Carolina; Sprague, of Rhode Island; Stockton, of New Jersey; Thurman, of Ohio; and Tipton, of Nebraska—26.

Every Democrat voted against this bill in each House, and in the House of Representatives 14 Republicans voted with them.

In the Senate 6 Republicans voted with the Democrats against the bill.

It is needless to add that the Southern votes in each House for the bill, with two or three exceptions, were given by carpet-baggers.

Senator EDMUNDS, who poses as a great lawyer, voted for this shameful and preposterous act, which the Supreme Court, an almost unanimously Republican body, has pronounced unconstitutional and void.

Mr. Carpenter, his equal, if not his superior, as a lawyer in every respect, it will be seen, voted against the bill.

One Republican in the House, from North Carolina, voted for the bill, as will be seen, and not one voted against it.

The second section, as will be seen, makes it a crime, punishable by fine and imprisonment, to deny the right of any fellow, however base or nasty, to equal accommodations of bed and board in any hotel. That sacred right must not be questioned.

It is needless to say that an inn or tavern or hotel is private property in as strict a sense as is a private dwelling. The proprietor has no monopoly. Anybody, black or white, or brown or yellow, may establish an inn in any town or at any cross-road in America, and he has the inalienable right to say who shall be his guests. The so-called civil-rights act was a gross invasion of this right as cruel and as indefensible as the most tyrannical edict of the Czar of Russia.

Original-Package Bill.

SPEECH

OF

HON. ROBERT M. LA FOLLETTE,

OF WISCONSIN.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 19, 1890.

The House having under consideration the bill (S. 398) to limit the effect of the regulations of commerce between the several States and with foreign countries in certain cases—

Mr. LA FOLLETTE said:

Mr. SPEAKER: For a century the General Government has exercised the powers delegated to it by the States as defined in the Constitution expressly and by implication. The national spirit of our people has been magnificently attested in support of that national authority many times in our history. They have watched those powers and the interpretation of the Constitution on which they rest expand to meet the growth and changing conditions of the country. They have, without stint, liberally and loyally given that approval which the general welfare of the people under the Constitution demanded and sanctioned. Along the lines of that broad policy they have seen the nation gather strength year by year, and rise to more than imperial power, but only to enlarge the opportunities and liberties of its people and extend the sovereign authority of every citizen.

Mr. DOLLIVER. Good!

Mr. LA FOLLETTE. And, sir, they have ratified this exercise of those powers the more freely and ungrudgingly because in the minds of each there have ever been certain clearly defined limitations, within which, by the common consent of all, each State would govern for itself. Within this exclusive domain, among other reserved powers, the supreme authority over all matters relating to the protection of life and health, the preservation of good order and decency, and the advancement of public morals has always been conceded to be purely local.

Not only has it ever been admittedly a matter of State control alone, but so essentially is it an inherent right of the people that it has always been held inalienable. It is beyond the power of the State to part with it at all or to delegate it to others. The exercise of this power is primarily vital to the existence of society itself, and it belongs, therefore, of divine right to the people who constitute that society. Hence whatever endangers the public safety or the public health or threatens public morals is, so far as it concerns and involves the people of the State, under the supreme control of the State, through its Legislature, in the exercise of its police powers.

This doctrine has been laid down in an unbroken line of decisions from the beginning. Without exaggeration it may therefore be said that in a hundred years of national history few decisions of the Supreme Court have so surprised and shocked the people of the United States as the recent one handed down in the case of Leisy and others *vs.* Hardin, now known as the "original-package case."

By one more than a bare majority—three judges dissenting—the court decided in this case that as "ardent spirits, distilled liquors, ale, and beer are subjects of exchange, barter, and traffic, like any other commodity in which the right of traffic exists," they are articles of commerce, and may be transported from one State into another State, and there lawfully sold in the original package in which transported, even though such sale be in direct violation of the laws of the State where it takes place. Indeed, they declare that until after the sale takes place the property has not "become mingled in the common mass of property within the State" and is not subject to any law of the State interfering with its unrestricted transportation and sale. They hold that the article shipped from one State into another, after it reaches its destination, after it has ceased to be an article of interstate transportation, after it has even been offered for sale, and until actually once sold and delivered within the State, is still an article of interstate commerce, and not subject to any restrictions through State laws.

It matters not how long it may have been within the State, what it was brought into the State for, or what may have been done with it since it reached its destination, if it has not been once sold it is still beyond the reach of State interference. After it has been once sold, however, within the State, should it again be sold in violation of State law it is held to have undergone some mysterious transmutation in passing from the first to the second purchaser, which brings it within the reach and scope of State restriction.

Sir, it is idle to waste time in criticism of the decision or in predicting its ultimate reversal by the Supreme Court. Whatever may be the settled opinion of lawyers upon this floor, the responsibility for immediate action rests upon this House to-day and can not be ignored. It is manifest that, if local government within the States is to be preserved, if the public safety, health, and morals of the States are to be under the shield and protection of the police power of the State, this opinion of the court must be promptly followed by Congressional legislation.

It is surprising that gentlemen here should oppose any legislation restoring to the States the powers which they have so long exercised without injury to or attempted interference with interstate commerce, when the direful results of this decision are so imminent. Pause for an instant, gentlemen, and contemplate it. Under it distillers and brewers of any State can ship to their agents in another State intoxicating liquor in packages, bottles, or flasks of any size, and the agents may there retail the same from their bars or from wagons upon the streets and highways without let or hinderance. If within a State which prohibits the manufacture and sale of intoxicants, the prohibitory laws would not apply to them. If within a State which permits the manufacture and sale under restrictions and upon payment of heavy fees and taxes, they would escape them altogether. They would sell in the original package without State or local permission, without restriction, and without the payment of any fees or taxes whatever. No State law fixing penalties for selling to habitual drunkards, to men intoxicated or bordering on intoxication, or to minors, or for selling upon election day, or upon the Sabbath, could reach them. In defiance of all State laws, in defiance of all public sentiment, the open, unrestricted, uncontrolled traffic in free whisky would hold its demoralizing sway.

I know of no State in this Union, I know of no civilized people on this earth, which wholly fails to subject this business at least to police supervision and restriction. I know no man of any intelligence whatever who opposes its subjection to certain limitations and control; and yet here is a decision which practically nullifies at one blow every State law in the land on the subject, wipes out all State lines and levels every barrier of defense.

In my State we have a local-option law which gives the control of this subject absolutely to the town, city, or village. Any township in Wisconsin by a majority vote of its electors may prohibit the sale of intoxicating liquors in such town or may decide to grant license and fix the rate of the same. But under the law as here laid down the action of any town, city, or village is liable to be reversed and set aside by some man who lives outside of the State, who pays no taxes, maintains no industry, is utterly indifferent to its business advancement, to its educational, social, and moral development, who contributes nothing to its lasting prosperity, who cares nothing for the injury and wrong and misery he may inflict upon any family or any home in that community, and who is beyond the reach of all law for the consequences of his acts. Think sir, of the results certain to follow handing over every community, every town, and village to such an invasion. No power to restrain its ravages, no power to protect its confirmed victims, no power to shield the inexperience and innocence of youth.

Something has been said in this discussion touching the political consequences involved to those who favor or oppose this measure. Sir, I believe that gentlemen upon both sides will rise above those considerations. This is a question of government, a question of preserving the political entity of the State, a question of the protection of society and the home. The whole police power of the State is either to be revived in the essentials vital to civil society by this proposed legislation or left broken and powerless where this decision leaves it. For one I am in favor of local government and home rule wherever it can be exercised without violating the express and implied powers delegated to the Federal Government by the States.

And for these very reasons I shall vote for the House substitute instead of the Senate bill.

The Senate bill aims only to restore to the States the control of intoxicating liquors which they have exercised without dispute for more than a generation of time. It goes no further than this, though it is conceded that the reasoning of this decision reaches much beyond the one article of interstate commerce involved in this particular case. It nullifies to the same extent all State legislation prohibiting, restricting, or controlling traffic in explosives, illuminating oils, oleomargarine, butter, cheese, and lard substitutes, and all food adulterations.

The House substitute for the Senate bill provides that *any article* of commerce when imported into any State and there *held* or *offered for sale* shall be subject to the laws of the State. It also wisely provides that no State shall by its legislation discriminate in favor of its own as against the products of another State.

This bill will effectually prevent any hinderance or obstruction to free interstate commerce and exchange, and will also enable each State to enforce its laws for the protection of the health, the peace and good order and morals of society.

Without a broad, comprehensive measure such as the House bill—unless the Supreme Court shall hereafter reverse its decision—Congress will be called upon to meet this great question piecemeal. There will be an imperative demand to extend the principle involved in the Senate bill to illuminating oils, compounds and imitations of butter, cheese, and lard, and all other articles of interstate commerce, which, from their character are or may be the subjects of State regulation under the police power.

Adulterations of every character, under the cloak and mask of the "original package," will make their way, in open defiance of all State laws, across every State line, into every home, and onto every table,

and there will be no immunity and no protection for the citizen anywhere if this legislation is to be defeated.

Sir, there is an opportunity offered here to guard the great dairy and agricultural interests of Wisconsin and the country against a danger plainly threatened by the manufacturers of adulterated dairy, lard, and other food products whose cause is openly and ably championed on this floor. There is an opportunity to insure to the States the necessary and unhindered exercise of their police powers. There is an opportunity to accomplish all this to-day, protecting the State at every point by one stroke. I shall therefore stand to the last for the House bill. Failing to secure that—if we should fail for the present—we are then under the rules certain to have immediate consideration of the Senate bill. [Applause.]

[Here the hammer fell.]

Original-Package Bill.

SPEECH

OF

HON. JOHN A. PICKLER,

OF SOUTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 19, 1890.

The House having under consideration the bill (S. 398) to limit the effect of the regulations of commerce between the several States and with foreign countries in certain cases—

Mr. PICKLER said:

Mr. SPEAKER: No question of greater interest to the people will come before Congress during the session than the one under discussion.

Whatever the belief as to the liquor traffic, there is the deepest interest felt in this legislation.

The saloon-keeper, the drinking man, the low-license man, the high-license man, local optionist, and prohibitionist are all interested in this question and discussing it. The cities, with their great revenues from the license of the sale of liquor, are anxiously watching this question and demanding legislation to protect them in the collection of these licenses, as well as to protect them from the confusion, debauchery, and anarchy which will be the certain results of the unlicensed, unrestricted sale under the decision of the Supreme Court.

The towns of Iowa, Kansas, and the Dakotas which have prohibited its sale, and where the saloon is not known, are anxiously waiting the action of Congress to stay the curse of the incoming original package into their midst.

And the people everywhere—the lovers of law and order, the lovers of peace and morality, the lovers of home, the school, and the church—are, all over this great nation, anxiously watching the American Congress.

The unguarded, unrestricted, unrestrained sale of intoxicating liquors staggers the boldest and startles the most daring. Neither in the tariff question nor the silver question nor in any other question is there felt such universal interest as is felt in the action Congress shall take in this matter.

The advocates of license and the regulation of the traffic see all their theories swept away and confusion only under the decision of the court.

The believer in local option is likewise left helpless.

The prohibitionist, who believes that evil and only evil comes from the saloon; who believes the traffic iniquitous; who believes the sale of intoxicating liquors is a great evil, a wrong to society, and who so believing will never consent to license a wrong; who holds the city or municipality licensing its sale equally responsible with the seller; who regards the voter who sanctions the sale by his vote a copartner in results with the seller; who believes that a compromise with evil is a contract with the devil; who wages an unrelenting and untiring warfare against the saloon; who is seven days in the week and twelve months in the year opposed to its existence; whose conscience is against it; who believes he is engaged in a godly warfare for the right; whose hand and heart are against it, and through whose influence and teaching the evil effects of alcohol upon the human system are being taught in the public schools of our land; who believes this the greatest moral question of the age; who believes it the conscience question of the nation; who forces this question into politics, and demands that all political parties shall deal with it; who believes the erection and maintenance of peaceful and happy homes in the nation is the highest duty of the political party; who is active, vigorous, aggressive; who does not fight for money, but for principle; who is not dismayed at being called narrow, of one idea, and a crank by fawning sycophants of the liquor interests; who has enlisted for the war; who is rapidly gaining, but seldom losing recruits to his cause; who bears aloft the banner of prohibition, and with the war-cry of God and home and native land expects to bear it victoriously to the end—the prohibitionist, Mr. Speaker, I repeat, entertaining these views, is appalled at the results which must follow the decision of the Supreme Court unless modified by legislation. I know of no class of men who are willing to take the risk, to his town, to his city, his family, and himself, of the liquor traffic without restrictions as to times and place of sale.

It is alarming to contemplate, and the very great force with which this matter was yesterday presented by the chairman of the committee [Mr. JOSEPH D. TAYLOR] must carry conviction to every mind as to the necessity of action.

I have been highly interested in the constitutional and legal aspects of this question so ably presented by the members of the committee.

It is clear that the decision of the Supreme Court of the United States in the case of Gus Leisy & Co., plaintiffs in error, *vs.* A. J. Hardin, now so famous, to modify which is the intent of this legislation, was wholly unexpected and a surprise to the lawyers as well as the people of the country.

To my mind the argument and conclusion of the dissenting opinion are unanswerable, and I quote from the same as follows:

Mr. Justice Gray, with whom concurred Mr. Justice Harlan and Mr. Justice Brewer, dissenting, said:

Mr. Justice Harlan, Mr. Justice Brewer, and myself are unable to concur in this judgment. As our dissent is based on the previous decisions of this court, the respect due to our associates, as well as to our predecessors, induces us to state our position, as far as possible, in the words in which the law has been heretofore declared from this bench.

The facts of the case, and the substance of the statutes whose validity is drawn in question, may be briefly stated.

It was an action of replevin of sundry kegs and cases of beer, begun in an inferior court in the State of Iowa against a constable of Lee County, in Iowa, who had seized them at Keokuk in that county under a search-warrant issued by a justice of the peace pursuant to the statutes of Iowa, which prohibit the sale, the keeping for sale, or the manufacture for sale of any intoxicating liquor (including malt liquor) for any purpose whatever, except for pharmaceutical, medicinal, chemical, or sacramental purposes, and under an annual license granted by the district court of the proper county, upon being satisfied that the applicant is a citizen of the United States and of the State of Iowa, and a resident of the county, and otherwise qualified.

The plaintiffs were citizens and residents of the State of Illinois, engaged as brewers in manufacturing beer at Peoria in that State and in selling it in the States of Illinois and Iowa. The beer in question was manufactured by them at Peoria, and there put up by them in said kegs and cases, each keg being sealed and having upon it, over the plug at the opening, a United States internal-revenue stamp, and each case being substantially made of wood, containing two dozen quart bottles of beer, and sealed with a metallic seal which had to be broken in order to open the case. The kegs and cases owned by the plaintiffs, and so sealed, were transported by them from Peoria by railway to Keokuk, and there sold and offered for sale by their agent, in a building owned by one of them, and without breaking or opening the kegs or cases.

The Supreme Court of Iowa having given judgment for the defendant, the question presented by this writ of error is whether the statutes of Iowa, as applied to these facts, contravene section 8 of article 1, or section 2 of article 4 of the Constitution of the United States, or section 1 of article 14 of the amendments to the Constitution.

By section 8 of Article I of the Constitution, "the Congress shall have power," among other things, "to regulate commerce with foreign nations, and among the several States," and "to make all laws which shall be necessary and proper for carrying into execution the foregoing powers."

By section 2 of Article IV, "the citizens of each State shall be entitled to all privileges and immunities of citizens in the several States."

By section 1 of the fourteenth amendment "no State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws."

By the tenth amendment, "the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

Among the powers thus reserved to the several States is what is commonly called the police power, that inherent and necessary power, essential to the very existence of civil society, and the safeguard of the inhabitants of the State against disorder, disease, poverty, and crime.

The police power includes all measures for the protection of the life, the health, the property and the welfare of the inhabitants, and for the promotion of good order and the public morals. It covers the suppression of nuisances, whether injurious to the public health, like unwholesome trades, or to the public morals, like gambling houses and lottery tickets. (Slaughter-house cases, 16 Wall., 36, 62, 87; Fertilizing Company *vs.* Hyde Park, 97 U. S., 659; Phalan *vs.* Virginia, 8 How., 163, 168; Stone *vs.* Mississippi, 101 U. S., 814.)

This power, being essential to the maintenance of the authority of local government, and to the safety and welfare of the people, is inalienable. As was said by Chief-Justice Waite, referring to earlier decisions to the same effect, "No Legislature can bargain away the public health or the public morals. The people themselves can not do it, much less their servants. The supervision of both these subjects of governmental power is continuing in its nature, and they are to be dealt with as the special exigencies of the moment may require. Government is organized with a view to their preservation, and can not divest itself of the power to provide for them. For this purpose the largest legislative discretion is allowed, and the discretion can not be parted with any more than the power itself." (Stone *vs.* Mississippi, 101 U. S., 814, 819. See also Butchers' Union Company *vs.* Crescent City Company, 111 U. S., 746, 755; New Orleans Gas Company *vs.* Louisiana Light Company, 115 U. S., 650, 672; New Orleans *vs.* Houston, 119 U. S., 265, 275.)

The police power extends not only to things intrinsically dangerous to the public health, such as infected rags or diseased meat, but to things which, when used in a lawful manner, are subjects of property and of commerce, and yet may be used so as to be injurious or dangerous to the life, the health or the morals of the people. Gunpowder, for instance, is a subject of commerce and of lawful use, yet, because of its explosive and dangerous quality, all admit that the State may regulate its keeping and sale. And there is no article the right of the State to control or to prohibit the sale or manufacture of which within its limits is better established than intoxicating liquors. (License cases, 5 How., 504; Downham *vs.* Alexandria Council, 10 Wall., 173; Bartemeyer *vs.* Iowa, 18 Wall., 129; Beer Company *vs.* Massachusetts, 97 U. S., 25; Tiernan *vs.* Rinker, 102 U. S., 123; Foster *vs.* Kansas, 112 U. S., 201; Mugler *vs.* Kansas and Kansas *vs.* Ziebold, 123 U. S., 623; Kidd *vs.* Pearson, 128 U. S., 1; Ellenbecker *vs.* Plymouth County, 134 U. S., 31.)

The clause of the Constitution which declares that "the citizens of each State shall be entitled to all privileges and immunities of citizens in the several States" has no bearing upon this case. The privileges and immunities thus

secured are those fundamental rights and privileges which appertain to citizenship. (Conner *vs.* Elliott, 18 How., 591, 593; Curtis, J., in Scott *vs.* Sandford, 19 How., 393, 580; Paul *vs.* Virginia, 8 Wall., 168, 180; McCready *vs.* Virginia, 94 U. S., 391, 395.) As observed by the court in Bartemeyer *vs.* Iowa, "The right to sell intoxicating liquors, so far as such a right exists, is not one of the rights growing out of citizenship of the United States." (18 Wall., 133.)

Nor is the case affected by the fourteenth amendment of the Constitution. As was said in the unanimous opinion of this court in Barbier *vs.* Connolly, after stating the true scope of that amendment, "But neither the amendment—broad and comprehensive as it is—nor any other amendment, was designed to interfere with the power of the State, sometimes termed its police power, to prescribe regulations to promote the health, peace, morals, education, and good order of the people, and to legislate so as to increase the industries of the State, develop its resources, and add to its wealth and prosperity." (113 U. S., 27, 31.) Upon that ground the amendment has been adjudged not to apply to a State statute prohibiting the sale or manufacture of intoxicating liquors in buildings long before constructed for the purpose, or the sale of oleomargarine lawfully manufactured before the passage of the statute. (Mugler *vs.* Kansas, 123 U. S., 623, 669; Powell *vs.* Pennsylvania, 127 U. S., 678, 683, 687.)

The remaining and the principal question is, whether the statute of Iowa, as applied to the sale within that State of intoxicating liquors in the same cases or kegs, unbroken and unopened, in which they were brought by the seller from another State, is repugnant to the clause of the Constitution granting to Congress the power to regulate commerce with foreign nations and among the several States.

In the great and leading case of Gibbons *vs.* Ogden (9 Wheat., 1), the point decided was that acts of the Legislature of New York granting to certain persons for a term of years the exclusive navigation by steam-boats of all waters within the jurisdiction of the State were, so far as they affected such navigation by vessels of other persons licensed under the laws of the United States, repugnant to the clause of the Constitution empowering Congress to regulate foreign and interstate commerce.

Chief-Justice Marshall, in delivering judgment, after speaking of the inspection laws of the States and observing that they had a remote and considerable influence on commerce, but that the power to pass them was not derived from a power to regulate commerce, said: "They form a portion of that immense mass of legislation which embraces everything within the territory of a State not surrendered to the General Government; all which can be most advantageously exercised by the States themselves. Inspection laws, quarantine laws, health laws of every description, as well as laws for regulating the internal commerce of a State, and those which respect turnpike roads, ferries, etc., are component parts of this mass. No direct general power over these objects is granted to Congress; and consequently they remain subject to State legislation."

The unanimous judgment of this court in 1847 in Peirce *vs.* New Hampshire, reported together with Thurlow *vs.* Massachusetts and Fletcher *vs.* Rhode Island as the license cases, 5 How., 504, is directly in point, and appears to us conclusively to govern the case at bar.

The case of Peirce *vs.* New Hampshire directly involved the validity, as applied to liquors brought in from another State, of a statute of New Hampshire, which imposed a penalty on any person selling any wine, rum, gin, brandy, or other spirits, in any quantity, "without license from the selectmen of the town or place where such person resides." (N. H. Laws of 1838, c. 369; 5 How., 555.) The plaintiffs in error, having been indicted under that statute for selling to one Aaron Sias in the town of Dover, in the State of New Hampshire, one barrel of gin without license from the selectmen of the town, at the trial admitted that they so sold to him a barrel of American gin and introduced evidence that "the barrel of gin was purchased by the defendants in Boston, in the Commonwealth of Massachusetts, brought coastwise to the landing at Piscataqua Bridge, and from thence to the defendants' store in Dover, and afterwards sold to Sias in the same barrel and in the same condition in which it was purchased in Massachusetts."

The defendants contended that the statute was unconstitutional because it was "in violation of certain public treaties of the United States with Holland, France, and other countries, containing stipulations for the admission of spirits into the United States," and because it was repugnant to the clauses of the Constitution of the United States restricting the power of the States to lay duties on imports or exports, and granting the power to Congress to regulate commerce with foreign nations and among the several States. Chief-Justice Parker instructed the jury "that this State could not regulate commerce between this and other States; that this State could not prohibit the introduction of articles from another State with such a view, nor prohibit the sale of them with such a purpose; but that, although the State could not make such laws with such views and for such purposes, she was not entirely forbidden to legislate in relation to articles introduced from foreign countries or from other States; that she might tax them the same as other property, and might regulate the sale to some extent; that a State might pass health and police laws, which would, to a certain extent, affect foreign commerce and commerce between the States; and that this statute was a regulation of that character, and constitutional." After a verdict of guilty, exceptions to this instruction were overruled by the highest court of the State. (5 How., 554-557; 13 N. H., 536.)

In that case, as in the case at bar, the statute of the State prohibited sales of intoxicating liquors by any person without a license from municipal authorities, and authorized licenses to be granted only to persons residing within the State; and the liquors were sold within the State by the importer, and in the same barrel, keg, or case, unbroken and in the same condition in which he had brought them from another State. Yet the judgment of the highest court of New Hampshire was unanimously affirmed by this court.

It only remains to sum up the reasons which have satisfied us that the judgment of the supreme court of Iowa in the case at bar should be affirmed.

The protection of the safety, the health, the morals, the good order, and the general welfare of the people is the chief end of government. *Salus populi suprema lex.* The police power is inherent in the States, reserved to them by the Constitution, and necessary to their existence as organized governments. The Constitution of the United States and the laws made in pursuance thereof being the supreme law of the land, all statutes of a State must, of course, give way, so far as they are repugnant to the national Constitution and laws. But an intention is not lightly to be imputed to the framers of the Constitution, or to the Congress of the United States, to subordinate the protection of the safety, health, and morals of the people to the promotion of trade and commerce.

The police power extends to the control and regulation of things which, when used in a lawful and proper manner, are subjects of property and of commerce, and yet may be used so as to be injurious or dangerous to the public safety, the public health, or the public morals. Common experience has shown that the general and unrestricted use of intoxicating liquors tends to produce idleness, disorder, disease, pauperism, and crime.

The power of regulating or prohibiting the manufacture and sale of intoxicating liquors appropriately belongs, as a branch of the police power, to the Legislatures of the several States and can be judiciously and effectively exercised by them alone, according to their views of public policy and local needs; and can not practically, if it can constitutionally, be wielded by Congress as part of a national and uniform system.

The statutes in question were enacted by the State of Iowa in the exercise of its undoubted power to protect its inhabitants against the evils, physical, moral, and social, attending the free use of intoxicating liquors. They are not aimed at interstate commerce; they have no relation to the movement of goods from one State to another; but operate only on intoxicating liquors within the territorial limits of the State; they include all such liquors without discrimination, and do not even mention where they are made or whence they come. They affect commerce much more remotely and indirectly than laws of a State (the validity of which is unquestioned) authorizing the erection of bridges and dams across navigable waters within its limits, which wholly obstruct the course of commerce and navigation; or than quarantine laws, which operate directly upon all ships and merchandise coming into the ports of the State.

If the statutes of a State restricting or prohibiting the sale of intoxicating liquors within its territory are to be held inoperative and void as applied to liquors sent or brought from another State and sold by the importer in what are called original packages, the consequence must be that an inhabitant of any State may, under the pretext of interstate commerce, and without license or supervision of any public authority, carry or send into, and sell in, any or all of the other States of the Union intoxicating liquors of whatever description, in cases or kegs, or even in single bottles or flasks, despite any legislation of those States on the subject and although his own State should be the only one which had not enacted similar laws. It would require positive and explicit legislation on the part of Congress to convince us that it contemplated or intended such a result.

The decision in the license cases, 5 How., 504, by which the court, maintaining these views, unanimously adjudged that a general statute of a State, prohibiting the sale of intoxicating liquors without license from municipal authorities, included liquors brought from another State and sold by the importer in the original barrel or package, should be upheld and followed; because it was made upon full argument and great consideration; because it established a wise and just rule, regarding a most delicate point in our complex system of government, a point always difficult of definition and adjustment, the contract between the paramount commercial power granted to Congress and the inherent police power reserved to the States; because it is in accordance with the usage and practice which have prevailed during the century since the adoption of the Constitution; because it has been accepted and acted on for forty years by Congress, by the State Legislatures, by the courts, and by the people; and because to hold otherwise would add nothing to the dignity and supremacy of the powers of Congress, while it would cripple, not to say destroy, the whole control of every State over the sale of intoxicating liquors within its borders.

The silence and inaction of Congress upon the subject, during the long period since the decision in the license cases, appear to us to require the inference that Congress intended that the law should remain as thereby declared by this court, rather than to warrant the presumption that Congress intended that commerce among the States should be free from the indirect effect of such an exercise of the police power for the public safety, as had been adjudged by that decision to be within the constitutional authority of the States.

For these reasons we are compelled to dissent from the opinion and judgment of the majority of the court.

The majority of the court in this opinion, however, after some discussion of the question, makes the following declaration and inquiry:

That ardent spirits, distilled liquors, ale, and beer are subjects of exchange, barter, and traffic like any other commodity in which a right of traffic exists, and are so recognized by the usages of the commercial world, the laws of Congress, and the decisions of courts, is not denied. Being thus articles of commerce, can a State, in the absence of legislation on the part of Congress, prohibit their importation from abroad or from a sister State, or when imported prohibit their sale by the importer? If the importation can not be prohibited without the consent of Congress, when does property imported from abroad or from a sister State so become part of the common mass of property within a State as to be subject to its unimpeded control?

And the court, closing the opinion, to the great surprise of the country, answers the query in these words:

The plaintiffs in error are citizens of Illinois, are not pharmacists, and have no permit, but import into Iowa beer which they sell in original packages, as described. Under our decision in Bowman *vs.* Chicago, etc., Railway Co. (*supra*), they had to import this beer into that State, and in the view which we have expressed they had the right to sell it, by which act alone it would become mingled in the common mass of property within the State. Up to that point of time we hold that, in the absence of Congressional permission to do so, the State had no power to interfere by seizure, or any other action, in prohibition of importation and sale by the foreign or non-resident importer.

As I understand from the argument of the gentlemen of the Judiciary Committee, the members of the committee are unanimous in the opinion that the decision of the court, unless modified by legislation, must result in great evil, lawlessness, and disgrace to the country in its permission of the unrestrained sale of liquors. The gentleman from Texas [Mr. CULBERSON], however, and from Arkansas [Mr. ROGERS] take the position that the legislation proposed by this bill is in effect an effort by Congress to confer power upon the States to enact police regulations for the government of their people, a power which is supremely vested in the States, as admitted by all. And therefore these eminent lawyers contend that they will not by supporting the measure place their States in the attitude of suppliants to the national Congress, asking that body to grant a power the States already possess, a power never granted by the Constitution to Congress, and one which has ever been retained by the States.

On the other hand, the chairman of the committee [Mr. EZRA B. TAYLOR, of Ohio] and the gentleman from Iowa [Mr. REED] with like ability and earnestness contend that the passage of this act can not be construed as an undertaking by Congress to confer any power of police regulation upon the States, but that it is the proper exercise by Congress of its power under the Constitution to regulate commerce with foreign nations and among the several States and with the Indian tribes; that the proposed legislation is a regulation of the commerce of the articles embodied in its provisions.

Whatever may be the opinion of the lawyers and however they may differ upon the question, the highest tribunal of this land, the Supreme Court of the United States, has taken the view that such a statute would be the Congressional permission alluded to in the decision and a regulation of commerce.

From a practical standpoint, therefore, the question is settled; the court has pointed out the necessity of such a statute under its decision, and has specifically called the attention of Congress to this necessity.

The people everywhere demand this legislation, and Congress would certainly be exceedingly remiss in duty not to grant it.

The people are anxious for speedy action, in order that the disgraceful scenes inaugurated by these original-package vendors in Iowa, Kansas, and other States, as detailed by their representatives upon this floor, may not be allowed further continuance.

Three propositions are before us.

First, we have the Senate bill, in the following language:

Be it enacted, etc., That all fermented, distilled, or other intoxicating liquors or liquids transported into any State or Territory, or remaining therein for use, consumption, sale, or storage therein, shall, upon arrival in such State or Territory, be subject to the operation and effect of the laws of such State or Territory, enacted in the exercise of its police powers, to the same extent and in the same manner as though such liquids or liquors had been produced in said State or Territory, and shall not be exempt therefrom by reason of being introduced therein in original packages or otherwise.

Second, the proposed substitute reported from the House Judiciary Committee, which is as follows:

Strike out all after the enacting clause and insert the following:

"That whenever any article of commerce is imported into any State from any other State, Territory, or foreign nation, and there held or offered for sale, the same shall then be subject to the laws of such State: *Provided*, That no discrimination shall be made by any State in favor of its citizens against those of other States or Territories in respect to the sale of any article of commerce, nor in favor of its own products against those of like character produced in other States or Territories. Nor shall the transportation of commerce through any State be obstructed except in the necessary enforcement of the health laws of such State."

Third, the substitute offered by the gentleman from Illinois [Mr. ADAMS]:

That it shall not be lawful to import into any State or Territory, from any other State or Territory or from the District of Columbia, any fermented, distilled, or other intoxicating liquor, except in one or more original packages, as defined by this act.

SEC. 2. That for the purposes of this act an original package of intoxicating liquor, in bottles, shall be a case containing not less than one dozen quart bottles; and an original package of liquor not in bottles shall contain not less than five gallons: *Provided, however*, That an original package of liquor imported from any foreign nation, shall contain the quantity required by the laws relating to duties upon imports.

SEC. 3. It shall not be lawful to sell within any State or Territory any intoxicating liquor imported into such State or Territory, except in the original package in which the same has been imported, and subject to the reasonable police regulations of such State or Territory regulating the sale of such liquor as a beverage.

I am in favor, Mr. Speaker, in order that we may have a law at the earliest moment, and a law concerning the restraint of the liquor traffic, the great question which agitates the country, and upon which the people are aroused—I repeat, I am in favor for this reason of passing the Senate bill rather than the House substitute. I shall be content, however, if the House substitute shall become the law, and shall cheerfully vote for it should the Senate bill fail.

The substitute of the gentleman from Illinois is, to my mind, vicious in the extreme in that it would be a practical legalization by Congress of the sale of intoxicating liquors, which is a proposition to which in my opinion the American people will never submit. This amendment is not characteristic of the good judgment, ability, and devotion to duty of the gentleman from Illinois and, I take it, does not express his own sentiments.

Should Congress fail to counteract the influence of this decision of the Supreme Court, the alarming increase of its sale and consumption without restrictions can only be contemplated with the greatest concern and anxiety.

We are appalled at the amount consumed under the present system of restraints, licenses, and prohibitions.

The quarterly report of Col. W. F. Switzler, chief of the United States Bureau of Statistics, for the quarter ending March 31, 1890, shows that during the year 1888 there were consumed in the United States distilled spirits amounting to 75,845,352 gallons; of wines, 36,335,068 gallons; of malt liquors, 767,587,056 gallons; making a total of all kinds of 879,767,476 gallons, amounting to between 14 and 15 gallons (14.30) to each individual, old and young, in the nation. The total money cost was over $800,000,000. It required 16,122,509 bushels of grain for the production of the distilled spirits, besides many millions of bushels of barley and other materials used in the production of malt liquors.

And we may pause a moment to inquire what effect this great consumption of liquors is having upon the health of the nation. In this connection I desire to quote from the scientific paper of N. S. Davis, M. D., LL. D., of Chicago, entitled "The influence of alcohol on the human system," a work of undoubted authority. He says:

The popular belief is that alcohol, in moderate doses, stimulates the nervous system and increases the force and efficiency of the heart's action. That this popular belief concerning the stimulating effects of alcohol is erroneous has been fully conceded by Dr. Anstie, himself an able and persevering investigator, when in his work on Stimulants and Narcotics, page 337, he says:

"A general review of the phenomena of alcohol narcosis enables me to come to one distinct conclusion, the importance of which appears to be very great, namely, that (as in the case of chloroform and ether) the symptoms, which are so commonly described as evidences of excitement depending on a stimulation of the nervous system preliminary to the occurrence of narcosis, are in reality an essential part of the narcotic, that is the paralytic phenomena."

The assumption that if any part of the alcohol taken is retained for a time in the system, it must of necessity be converted into some kind of force or energy, is not sustained by any known facts, either of scientific experiment or of clinical experience. On the contrary, it acts in the same direction as chloroform, ether, and other members of the same chemical group of substances, namely, as an anæsthetic to nerve sensibility, a relaxant to muscular contractibility, and a retarder of molecular movements in the tissues; these effects being produced in direct ratio to the amount taken relatively to the weight of the individual taking it.

These direct effects of alcohol, as demonstrated by rigid experimental inquiries, are in perfect harmony with the phenomena presented by its use in all grades and conditions of human society. The diminution of nerve sensibility, developed in proportion to the quantity of alcohol taken, may be seen in all stages, from simple exemption from all feeling of fatigue, pain, and sense of weight, as exhibited by ease, buoyancy, hilarity, etc., to that of complete unconsciousness and loss of muscular power. It is this anæsthetic effect of the alcohol that has led to all the popular errors and contradictory uses which have proved so destructive to human health and happiness. It has long been one of the noted paradoxes of human action that the same individual would resort to the same alcoholic drink to warm him in the winter, protect him from the heat in the summer, to strengthen when weak or weary, and to soothe and cheer when afflicted in body or mind. With the facts now before us, the explanation of all this is apparent.

The alcohol does not relieve the individual from cold by increasing his temperature, nor from heat by cooling him, nor from weakness and exhaustion by nourishing his tissues, nor yet from affliction by increasing nerve power, but simply by diminishing the sensibility of the brain and nerves, and thereby lessening his consciousness of impressions whether from cold or heat, weariness or pain. In other words, the alcohol, by its presence, has not in any degree lessened the effects of the evils to which he was exposed, but has diminished his consciousness of their existence, and thereby impaired his judgment concerning the degree of their effect upon him. It not only diminishes the sensibility of the nervous structures, however, but, as the scientific facts already adduced show, it also retards all the molecular movements, thereby diminishing the activity of nutrition, secretion, elimination, and the evolution of heat, constituting it a true organic sedative. When taken in small quantities, from one to three or four glasses of beer or wine daily, the individual usually slowly increases in weight, not from increased nutrition, but from retarded waste and the retention of old atoms longer in the tissues.

The law is that all the phenomena of life are associated with and dependent on molecular changes, and that each individual cell or aggregation of bioplasm constituting a living organic atom has its determinate period of growth, maturity, and dissolution. Therefore, to introduce into the living system any agent that will retard the molecular changes, is equivalent to retarding the phenomena of life. And if by retarding these changes, cells or atoms are retained in the tissues longer than the natural duration of their activity, such retention may increase the bulk and weight, but in the same ratio it embarrasses the tissues with the presence of material which is constantly becoming inert and tending to degeneration.

Consequently, the individual who thus increases his bulk and weight by taking simply enough of the weaker alcoholic drinks daily to retard the processes of secretion and waste, in the same proportion diminishes his activity, his power of endurance, and his ability to resist the effects of morbific agents of every kind. It is this sedative effect of alcohol on the molecular changes in the tissues, when maintained by a long-continued moderate use of the article, that favors and finally develops those degenerative changes which constitute tubercular, caseous, and fatty deposits in the lungs, liver, kidneys, heart, arteries, and brain, by which health is destroyed and the natural duration of life much shortened.

It is the same kind of interference with the processes of nutrition, disintegration, and waste, only exerted more actively, that causes gastritis, sclerosis of the liver and kidneys, and delirium tremens in the excessive drinker of distilled spirits.

That the various important structural changes here enumerated are produced by the ordinary use of both fermented and distilled drinks, the records of medicine afford abundant proof.

Dr. George Harley, who followed Dr. Payne in the discussion, after referring to the visible lesions produced in the digestive, circulatory, and urinary organs, the various tissue changes, etc., says:

"These tissue changes, however, formed but a small part of the morbid effects met with in practice, from the fact that for every drunkard there were fifty others who suffered from the effects of alcohol in one form or other; among them were persons who had never been intoxicated in their lives. Of this so-called class of moderate drinkers neither our hospital statistics nor our national mortality tables took any account, and yet it was those very moderate drinkers who were in reality the most numerous class of alcoholic victims."

He corroborated this statement by reference to the registrar-general's tables of comparative mortality of those engaged in different industries, in which it was shown that the death-rate of men between the ages of twenty-five and sixty-five years, engaged as brewers, commercial travelers, inn-keepers, publicans, wine, spirit, and beer dealers, was six times greater from diseases of the liver, and nearly two times greater from diseases of the urinary organs and the circulatory system than in farmers and graziers, drapers and warehousemen, gardeners and nurserymen.

The London Lancet of January 26, 1889, in a leading editorial on the discussion in the Pathological Society, has the following significant statement:

"What is eminently worthy of the attention of practitioners in this connection is the frequency of tubercular disease in cases of alcoholic paralysis. In fact, the association of chronic alcoholism in all forms and tuberculosis was brought out by almost every speaker, including Dr. Payne, who said truly that the inaccurate impression that habits of alcoholic excess were in any way antagonistic to tubercular disease must be regarded as swept away."

The detrimental influence of what is called the temperate or moderate use of both fermented and distilled liquors on health and the duration of life has been very clearly demonstrated by the practical workings of life-insurance organizations. These institutions, established and maintained exclusively on financial principles and for financial results, are developing facts of the greatest value in determining the effect of social habits and occupations on health and longevity. For example, in 1847 the United Kingdom Temperance and General Provident Institution of London began to issue life policies to total abstainers from all alcoholic drinks and to non-abstainers on exactly the same terms, but kept them in separate sections on the record. Up to December 31, 1888, the whole number of policies issued was 91,368, of which two-fifths were to total abstainers and three-fifths to non-abstainers. The rate of premiums paid for policies was the same in both sections and was based on uniform rules regarding the expected duration of life at any given age.

According to these rules of expectancy, 2,644 deaths were expected in the total-abstinence section during the seventeen years from 1865 to 1882, but only 1,861 actually occurred, being 783 less, or 29.5 per cent. of the total expectancy saved. Under the same rules and for the same period of time the number of deaths expected in the non-abstainers' section was 4,408, and 4,339 actually occurred, being only 69 less, or 1.5 per cent. of the total expectancy saved. The difference in favor of the abstainers is 28 per cent.

In the Scepter Life Association the deaths in the non-abstainers' section during seven years ending with 1882 were 335 out of 438 expected, or 24 per cent. below expectancy, while in the total-abstainers' section the deaths were only 73 out of 165 expected, or 56 per cent. below expectancy, making 32 per cent. in favor of the total abstainers. So uniform have been these results wherever the data have been furnished for comparison that the Briton Life Association issues

policies to total abstainers at a reduction of 10 per cent., and some other companies nearly the same.

From all the facts thus far adduced, whether from rigid experimental investigations in different countries; from the pathological results developed in the most scientific medical societies; from the most reliable official statistics of sickness and mortality, as influenced by occupations and social habits, or from the life-insurance records kept on a uniform basis through periods of ten, twenty, thirty, or even forty years, it is clearly shown that alcohol when taken into the human system not only acts upon the nervous system, perverting its sensibility, and when increased in quantity causes intoxication or complete anæsthesia or insensibility, according to the degree of increase, but it also, even in small quantities, lessens the oxygenation and decarbonization of the blood and retards the molecular changes in the tissues of the body. And when these effects are continued through months and years, as in the most temperate class of drinkers, they lead to permanent structural changes, most prominently in the liver, kidneys, stomach, heart, blood-vessels, and nerve structures, and lessen the natural duration of life in the aggregate from ten to fifteen years.

Consequently there is no greater or more destructive error existing in the public mind than the belief that the use of fermented and distilled drinks does no harm so long as they do not intoxicate. "It is not the temperate use but the abuse of alcoholic drinks that does harm," is the often-repeated popular phrase that embodies the error which helps to rob more than 100,000 persons of from five to twenty years of life each in the United States, through the gradual development of chronic structural diseases induced by the daily use of beer, ale, wine, or distilled spirits in quantities so moderate as at no time to produce intoxication. No more true or important remark was made in the noted discussion in the London Pathological Society, from which I have already quoted, than the one by Dr. George Harley, that "for every drunkard there were fifty others who suffered from the effects of alcohol in one form or other."

Another popular error but little less mischievous is the opinion that the substitution of the different varieties of beer and wine in the place of distilled spirits promotes temperance and lessens the evil effects of alcohol on the health and morals of those who use them.

Accurate investigation will show that beer and wine drinkers consume more alcohol per man than the spirit-drinkers; and while they are not as often openly intoxicated, they suffer fully as much from disease and premature death, in the aggregate, as do those who use distilled spirits.

Again, the beer-drinker drinks more nearly every day, and thereby keeps some alcohol in his blood more constantly; while a large percentage of spirit-drinkers drink only periodically, leaving considerable intervals of abstinence, during which the tissues regain nearly their natural condition. The more constant and persistent is the presence of alcohol in the blood and the tissues, even in moderate quantity, the more certainly does it lead to perverted and degenerative changes in the tissues, ending in renal and hepatic dropsies, cardiac failures, gout, apoplexy, and paralysis.

From all the foregoing considerations it is evident that the consumption of 579,767,476 gallons of fermented and distilled drinks in this country annually has neither aided to nourish the tissues nor added to the physical strength or mental activity of those who have consumed it, but, on the contrary, its consumption has perverted the nutrition, slowly and insidiously developing fatal diseases, diminished both physical and mental health and activity, thereby greatly lessening the amount of productive labor, and has shortened more than one hundred thousand lives. If we add to these strictly physiological and pathological results the enormous amount of moral deterioration and crime induced by the use of these drinks, it completes the aggregation of pecuniary impoverishment, mental demoralization, and sacrifice of human life, that has no parallel from any other one agency operative in human society.

I do not, Mr. Speaker, as a believer in the desirability of the abolition of the rum traffic, regret the results of this decision. I believe that its tendency will be toward the overthrow of the saloon.

The proposed or similar legislation must now or very speedily be enacted into law by the Congress of the United States. Thus Congress is brought face to face with the great evil of the liquor traffic, and must sanction and authorize restraining statutes.

The power to prohibit is authorized by the nation. The States thus have the moral support and direct assistance of the Congress of the United States in the enforcement of all laws enacted by the States restraining this traffic. It is a re-enforcement of the police power of the State Legislatures by the law of the nation. The power and policy to restrain the liquor traffic by Congress, if this legislation be enacted, is no longer a problem, it is a fixed fact.

There will be great rejoicing, Mr. Speaker, all over this land if this bill shall pass—rejoicing because this law will deal a very severe blow at the liquor traffic.

Criticism has been made in this debate of prohibitionists and the prohibition idea. The prohibitionist is characterized as "narrow," as of "one idea," a "crank," and a "hypocrite." Such epithets are undeserved and such appellations unwarranted. Prohibitionists are true to the American principle that the majority should rule.

If the majority of a State or municipality vote that a license shall be granted, the prohibitionist submits and obeys that law, and if the majority vote for prohibition he expects that that law should be obeyed, and moreover he is determined it shall be obeyed.

A prohibitionist simply believes in obeying the laws of his country; many of his opponents do not. He is determined to wage war against the liquor traffic along all lines; he believes he is right, Mr. Speaker, and he knows that right always eventually prevails. It will not fail on this question.

I will not discuss the magnitude of the evil which the prohibitionist seeks to overcome, but will close with a few quotations from an article in the May Forum, 1890, by Rev. Dr. Howard Crosby, who is not a prohibitionist, as to the character of this evil, or rather as to a government by rum-sellers. He uses the following language:

> Why not a government by rum-sellers? * * * The idea is unsavory. No pleasant associations are grouped about it. We instinctively picture a government of dirt and disorder when we use the phrase. Why is this? A government of iron-sellers or wool-sellers would not sound so.
>
> The rum-seller or saloon-keeper is engaged in an immoral business.
>
> It is an immoral business because it makes drunkards and ruins families. We know by the observation of years that the frequenters of the saloon are not moderate drinkers; that they do not come to slake a reasonable thirst, as one does when he goes to the water pitcher. There may be here and there one such, but the mass of those who enter the saloon go for the excitement of drink, not for the quenching of thirst. It is no slander to say that the saloon is the resort of idlers, loafers, and roughs. Any one who has eyes may see who go in and out of the saloon and who stand at its portals.
>
> Any one who has had experience in visiting and helping the poor of a city like New York knows that a very large part of the distress he sees arises from the waste of money on drink. Wages are spent at the saloon by the father, and the wife and the children suffer. The rent is not paid. The family move from place to place. The furniture is broken and soiled. The clothes are patched and ragged. The children become street Arabs and grow up to be criminals of all sorts. The father's drink has not only consumed the living of the family, but filled the family with strife and iniquity. This is but a plain, unvarnished statement of what is well known to every city missionary and to every benevolent visitor.
>
> No mother would have her child visit a saloon; no sister would see a brother frequent a saloon without shuddering. How, then, are the saloons supported? By the depraved and careless classes. These classes are very numerous. The depraved find their inspiration in the saloon. The vulgar jest, the obscenity, the quarrel, the fight, which find a home in the saloon, exactly suit the depraved, and in that resort they strengthen their depravity. The careless comprise those men who know all this about the saloon and inwardly despise it, but yet, for a moment's gratification in drinking, do not hesitate to drop in and take their glass at the bar, thus lending an air of respectability to the loathsome place. The careless are a legion in every community. They care nothing for the public good, and hence they care nothing for example or influence. They could easily turn the scale in favor of reform in any department of life, because of their great number, but they have not enough interest in humanity to bear a feather's weight of self-denial. They are not drunkards, nor akin to them, but they help to continue the evil quite as much as if not more than the depraved. Though moral persons they abet immorality by their abuse of responsibility.
>
> Were all right-minded electors to vote and to vote according to conscience, and not according to party, the rum power would be suppressed at once. The saloon would then be destroyed; this tap-root of evil annihilated, public office would be in purer hands, legislation would run in moral lines, and the people would be more prosperous and contented.
>
> This is the most important question now before the American public. Tariff, railroads, the negro, the fisheries, Canadian reciprocity, Pan-American alliance, and the silver question are all of secondary consequence when compared with this matter of the fundamental morals of legislation and society. It would be well if the attention of our citizens could be diverted from all other questions and concentrated on this, until it should be settled that rum is not to rule our land and spread its filth and corruption over the glorious potentialities of the heritage with which a gracious Providence has endowed us.

Commerce Among the States.

REMARKS
OF
WILLIAM M. SPRINGER,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES.

Wednesday, August 6, 1890.

The House having under consideration the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the House to the bill (S. 398) to limit the effect of the regulating of commerce between the several States and with foreign countries in certain cases—

Mr. SPRINGER said:

Mr. SPEAKER: I regret that so little time has been allowed for debate upon this important measure. Scarcely a bill has been considered this session which is of greater importance, yet only a very brief time is allowed for its discussion. I can not submit the numerous authorities on the subject, which I have collected, but must content myself by stating generally my views, and by inserting in the RECORD a citation of such authorities as are in point.

I was not here when the bill was originally discussed, and therefore did not participate in that debate; but since I have returned to the House I have taken some pains to look into the question, and it seems to me that the Senate bill is an attempt on the part of Congress to give validity to certain laws of Iowa and other States which the Supreme Court has held to be in violation of the Constitution of the United States. In the Leisy case the Supreme Court distinctly held that the law of Iowa, which permitted the seizure of the packages in controversy, was in violation of the Constitution of the United States, and they cited as authority to sustain this view the great case of Gibbons *vs.* Ogden, decided sixty-six years ago, the opinion having been pronounced by Chief-Justice Marshall. The doctrine laid down in this celebrated case has never been overruled by any formal decision of the Supreme Court.

COMMERCE AMONG THE STATES.

Mr. Speaker, what is the meaning of the clause in the Constitution "commerce among the States?" As was said by Chief-Justice Marshall in the case just mentioned, Gibbons *vs.* Ogden (9 Wheaton, 4):

> As men whose intentions require no concealment generally employ the words which most directly and aptly express the ideas they intend to convey, the enlightened patriots who framed our Constitution and the people who adopted it must be understood to have employed words in their natural sense and to have intended what they have said.

Then the learned Chief-Justice proceeded to give a definition of the word "commerce" and of the meaning of the clause "commerce among the States." It was conceded in argument and by the court, without dissent, that commerce meant "traffic, the buying and selling

or the interchange of commodities;" and the whole point in contention was whether the word also embraced navigation. The court said:

Commerce, undoubtedly, is traffic, but it is something more: it is intercourse. It describes the commercial intercourse between nations and parts of nations in all its branches and is regulated by prescribing rules for carrying on that intercourse.

The court held that the words in the Constitution—

Congress shall have power * * * to regulate commerce with foreign nations and among the several States and with the Indian tribes—

comprehended every species of commercial intercourse between the United States and foreign nations and carry the same meaning throughout the sentence.

Commerce among the States—

Said the learned Chief-Justice Marshall—

can not stop at the external boundary line of each State, but may be introduced into the interior.

In the case of Brown *vs.* Maryland (12 Wheaton, 419) Chief-Justice Marshall, in delivering the opinion of the court, after stating this doctrine, said:

If this power reaches the interior of a State and may be there exercised, it must be capable of authorizing the sale of those articles which it introduces. Commerce is intercourse; one of its most ordinary ingredients is traffic. It is inconceivable that the power to authorize this traffic, when given in its most comprehensive terms, with the intent that its efficacy should be complete, should cease at the point where its continuance is indispensable to its value. To what purpose should the power to allow importation be given, unaccompanied with the power to authorize a sale of the thing imported? Sale is the object of importation and is an essential ingredient of that intercourse of which importation constitutes a part. It is as essential an ingredient, as indispensable to the existence of the entire thing, then, as importation itself. It must be considered as a component part of the power to regulate commerce. Congress has a right, not only to authorize importation, but to authorize the importer to sell.

Thus we have, from the highest judicial authority in the land, the Supreme Court of the United States, not only a definition of the word "commerce," but a declaration of the meaning of the clause in the Constitution, "commerce among the States." Congress alone has the power to regulate this commerce among the States. Congress can not delegate this power to the several States. Judge Cooley, in his work on Constitutional Limitations (third edition, page 116), says:

One of the settled maxims in constitutional law is that the power conferred upon the legislature to make laws can not be delegated by that department to any other body or authority. Where the sovereign power of the state has located the authority, there it must remain; and by the constitutional agency alone the laws must be made until the Constitution itself is changed. The power to whose judgment, wisdom, and patriotism this high prerogative has been intrusted can not relieve itself of the responsibility by choosing other agencies upon which the power shall be devolved, nor can it substitute the judgment, wisdom, and patriotism of any other body for those to which alone the people have seen fit to confide this sovereign trust.

I call attention to the decisions of fifteen or twenty cases in State courts fully sustaining this position of Judge Cooley cited in his work already referred to, page 117. I also call attention to a very noted case, that of Roach *vs.* Van Riswick (MacArthur & Mackay's Reports, page 171, of the decisions of the supreme court of the District of Columbia). In this case the court unanimously held that Congress had no power under the Constitution of the United States to delegate general legislative authority to the local government of the District of Columbia, upon the ground that the Constitution had conferred this power upon Congress.

Now, Mr. Speaker, what are the provisions of the pending bill? The House conferees have recommended that we recede from the House amendment, or substitute, and agree to the Senate bill just as it passed that body. Let me read the Senate bill, the passage of which is now the pending question before the House.

It is as follows:

Be it enacted, etc., That all fermented, distilled, or other intoxicating liquors or liquids transported into any State or Territory or remaining therein for use, consumption, sale, or storage therein, shall, upon arrival in such State or Territory, be subject to the operation and effect of the laws of such State or Territory enacted in the exercise of its police powers, to the same extent and in the same manner as though such liquids or liquors had been produced in such State or Territory, and shall not be exempt therefrom by reason of being introduced therein in original packages or otherwise.

It will be seen that this bill delegates the whole question of commerce among the States, so far as "intoxicating liquors or liquids" are concerned, to the Legislatures of the several States. It is claimed that Congress may, in the rightful exercise of the power conferred upon it by the Constitution, adopt the State regulations on the subject, and thus make them—the State laws—the laws or regulations of Congress. But this Senate bill not only adopts existing State laws or regulations on the subject, but it subjects this traffic among the States to any laws the States may enact in the future. Chief-Justice Marshall, in the case of Gibbons *vs.* Ogden, already cited, said:

Although Congress can not enable a State to legislate, Congress may adopt the provisions of a State on any subject.

But in that case he was dealing with a statute which was confined to pilots within the bays, inlets, etc., which are in whole or in part within the limits of some particular State. The regulation of pilots, although remotely and sometimes materially affecting foreign or interstate commerce, was, at the same time, recognized as within the police powers of the States. But when it comes to traffic itself between the States, the regulation of it was committed alone to Congress, and the power could not be delegated to the States. As was so clearly and forcibly stated by the Supreme Court of the United States in the case of Robbins *vs.* Shelby Taxing District (120 U. S., 489):

In a word, it may be said that in the matter of interstate commerce the United States are but one country and are and must be subject to one system of regulations, and not to a multitude of systems. The doctrine of freedom of that commerce, except as regulated by Congress, is so firmly established that it is unnecessary to enlarge further upon the subject.

This doctrine was quoted with approval by the same court in the case of Bowman *vs.* Chicago and Northwestern Railway Company. (125 U. S. Reports, 497.)

The late Mr. Justice Matthews pronounced the opinion of the court in this case, and the same doctrine was affirmed in the Leisy case, recently decided by that tribunal.

It is true that there are some sentences or phrases in the opinion of the Supreme Court, pronounced by Mr. Chief-Justice Fuller in the Leisy case, which have somewhat confused the friends of this Senate bill—such expressions as this, for instance:

A subject-matter which has been confided exclusively to Congress by the Constitution is not within the jurisdiction of the police power of the State, unless placed there by Congressional action.

This is almost a judicial paradox. If the legislative power over the subject-matter has been confided exclusively to Congress, how can Congress delegate this power to the States? Congress can not delegate powers exclusively confided to it. This will hardly be disputed by any one. But the explanation of this apparent judicial paradox is this, it seems to me: The court was quoting from decisions in other cases, where Congress had adopted the laws of the States as to pilots, sanitary regulations, and other subjects which, while purely local in their operation, remotely affected interstate and foreign commerce. But the court very properly says, in the Leisy case, that—

The power thus exercised by the States is not identical in its extent with the power to regulate commerce among the States. The power to pass laws in respect to internal commerce, inspection laws, quarantine laws, health laws, and laws in relation to bridges, ferries, and highways, belongs to the class of powers pertaining to locality, essential to local intercommunication, to the progress and development of local prosperity, and to the protection, the safety, and the welfare of society, originally necessarily belonging to, and upon the adoption of the Constitution reserved by, the States, except so far as falling within the scope of a power confided to the General Government. Where the subject-matter requires a uniform system, as between the States, the power controlling it is vested exclusively in Congress, and can not be encroached upon by the States; but where, in relation to the subject-matter different rules may be suitable for different localities, the States may exercise powers which, though they may be said to partake of the nature of the power granted to the General Government, are strictly not such, but are simply local powers, which have full operation until or unless circumscribed by the action of Congress in effectuation of the general power. (Cooly *vs.* Port Wardens, 12 How., 299.)

With this explanation the meaning of the court is clear and free from doubt. The transportation of liquors from one State into another and the selling of them in original packages by the importer is a matter of interstate commerce. It is "commerce among the States," which Congress can alone regulate. The right to sell is inseparable from the right to transport. Hence, the Supreme Court in the Leisy case, and in numerous other cases, has held that the laws of Iowa and other States which prohibit the sale of such liquors in the original packages are contrary to the Constitution of the United States and are therefore null and void.

Notwithstanding this fact, Congress is now called upon to breathe into those unconstitutional laws by this bill the breath of legislative life. If those laws are unconstitutional, how can Congress give them vitality? Furthermore, the bill proposes to subject interstate commerce, so far as it relates to intoxicating liquors, to the police laws of the State as soon as it arrives within the border of the State, and it proposes to subject that commerce not only to existing State laws, but also to any laws that may hereafter be enacted on the subject by the States.

If gentlemen will reflect for a moment they will see that the present prohibition laws of Iowa and other States will not be adequate to meet the new condition of things; and such States will proceed to legislate for the purpose of ascertaining as soon as goods cross the border of the State whether the packages contain any of these contraband articles. Persons traveling from one State to another will soon find an inspector at the State line to examine their baggage and see whether they have in their possession any of these contraband goods.

The States will have the right under this law to stop every package of goods coming within the State and to determine whether such packages contain any of the articles which, under the police laws of those States, are subject to seizure. You gentlemen propose to put up this wall between the States of the Union, this wall which it is claimed may be established under the right of inspection for the purpose of protecting the people of each State. Under such a system unreasonable searches and seizures and confiscations may take place on the borders of the States anywhere throughout the country.

My friends, in attempting to pass a measure of this kind you are entering upon the most dangerous ground that Congress has ever occupied in its legislation. The measure is based upon a doctrine contrary to every principle of the Constitution; it strikes down the very fundamental principles of our Government, the object of establishing which, more than anything else, was that there should be perfect freedom of

communication between the States of the Union. If gentlemen desire to destroy this freedom which has been the chief glory of our Government from its foundation to the present time, this bill will do it.

The bill is the beginning of an effort on the part of certain gentlemen to destroy the right of the people of this country to go and come whereseever they please throughout this Union, taking their property with them. If you can pass this bill you can prohibit the taking of pig-iron from Alabama to Pennsylvania; you can prohibit the transportation of coal from Virginia to Maine, because it may come in competition with the cheaper coal obtainable from New Brunswick. The principle involved in this bill, if carried to its utmost extent and applied to other subjects, may authorize any State to set up barriers against the products of all other States and to establish inspection bureaus at the State line to ascertain whether any of the contraband goods are crossing the line. You thus inaugurate under this Government, which has boasted of its freedom, a condition of things similar to that which exists among the petty States of Euprope, where a gentleman traveling from one to another must have his baggage examined three or four times every day. [Applause.]

But gentlemen must not for a moment suppose that there is no relief for the abuses of which complaint has been made. The power to deal with this subject is confided exclusively to Congress, and Congress may now, if it sees fit, pass a law regulating the liquor traffic among the States. Let those who have this subject in their charge bring in a bill on that subject, and let us consider it now, and deal with the question as we are required to do under the Constitution. If we do not deal with this question ourselves, if we shirk our responsibilities, and endeavor to revive the defunct laws of the States on this subject, we will fail.

The Supreme Court will hold, whenever a case may come before it under this Senate bill, that it attempts to delegate to the States a power which has been confided exclusively to the Congress. The act, if passed and signed, will be declared by the Supreme Court null and void, and Congress will be obliged hereafter to perform its plain constitutional duty: to pass all laws that may be necessary to regulate commerce among the States.

Indian Appropriation Bill.

SPEECH
OF
HON. OSCAR S. GIFFORD,
OF SOUTH DAKOTA,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, August 9, 1890.

The House having under consideration the amendments of the Senate to the bill (H. R. 10726) making appropriations for the current and contingent expenses of the Indian Department and for fulfilling treaty stipulations with various Indian tribes for the year ending June 30, 1891, and for other purposes—

Mr. GIFFORD said:

Mr. SPEAKER: Probably no portion of this country has a greater interest in this bill than the State of South Dakota. In that State we have nearly twenty-five thousand Indians, about double the number to be found in any other State or that can possibly be in any other State of this Union or Territory, unless, perhaps, in the Indian Territory. A considerable amount of the appropriations carried by this bill is to be paid to those Indians in our State.

We have in South Dakota what is known as the great Sioux Nation of Indians. They have been for years past a war-like and hostile tribe. They have cost this Government, perhaps, as large an amount of money as any other tribe of Indians upon the continent. About fourteen years ago they were able to exterminate General Custer and his command. They carried on a border war for a period of about six years, from 1862 to 1868, to the terror of the people of the States of Minnesota and Iowa. They carried their warfare even to the eastern and the southern borders of the great State of Minnesota. They defied this Government for many years. Even as late as 1880, Sitting Bull was able to stand at bay against our forces upon the British border, and it was only through the influence of some friendly people, aided, perhaps, by his own necessities, that he was induced to surrender and again occupy the agency in South Dakota. These Indians occupy a position in the central portion of our State, and therefore it is of paramount importance to us that they shall be properly treated and cared for in this and all future bills making appropriations for their support and maintenance or to carry out any of the provisions of the treaties made with them. Any sort of hostile action now on the part of those Indians would terrorize the whole border, not only of our State, but of the adjoining States, and would cost this Government many millions in money.

I need not say in this connection that the Indian wars in which our Government has been engaged during the past three-quarters of a century have cost us not only thousands of lives of soldiers and of settlers, but also hundreds of millions of money.

This Government, however, has awakened recently to the advantages of a new policy in dealing with these Indians. That policy is partially developed in this bill. It is to treat them in a consistent and rational manner, to educate them, to teach them to work as well as to read and write, and not to depend wholly upon the efforts of benevolent people or of missionaries to christianize and civilize them and make them self-supporting, but that the Government shall use its strong arm and influence to that end and for that purpose. Now, we in South Dakota know that these Indians can be made self-supporting. We know it from actual experience, because we have those amongst us who are supported, or largely so, through their own exertions. But the provision of every agreement and every treaty with those Indians should be and must be carried out to the letter. It is the duty of the members representing that State as well as of those from other States of this Union to see to it that those agreements are carried out fully, not only in letter, but in spirit, and some of the provisions of this bill and some of the Senate amendments which have been incorporated into the bill provide expressly for carrying out certain portions of the treaties recently made with the Sioux Indians.

Now, one word in regard to this educational policy which has been to some extent criticised. This bill provides for the construction of industrial schools—one or two only. A few years ago this Government undertook the experiment—it was an experiment—of providing industrial education for some Indians at Carlisle, Pa. The experiment has proved a magnificent success; it has proved to be a wise move on the part of the Government; it has been attended with such success that the committee and Congress and the Government are willing to extend the work of giving the Indians an industrial education to some extent, not to embark upon the undertaking as a great enterprise, not to extend this industrial education to all of the Indians, but to a portion of them, so that the influence of those who receive education in these industrial schools may be felt among their people at home. When you select a few hundred Indian youth—boys and girls—and teach them to work, they in turn by their example will teach their associates among the tribes to work. A few thousand dollars or a few hundred thousand dollars or a few million dollars expended in that direction is of vastly more benefit to the Government and the people than the maintenance of a standing army as a menace or for the purpose of fighting the Indians.

The Indian policy of this Government in the past has been a failure, a miserable failure. The whole policy of the Government has been to drive the Indians out of the country. With us to-day there is no place to which to drive them.

Mr. SAYERS. The gentleman speaks of dispensing with the necessity of troops to protect our people from the Indians. Do we not keep up the Army at any rate? Do the appropriations or does the extent of our Army diminish?

Mr. GIFFORD. If it were not for these appropriations there would be to-day a greater standing Army kept up to protect the people; for these appropriations are very largely in accordance with treaties or agreements made with the Indians.

Mr. SAYERS. I do not understand that the numbers of our standing Army have been decreased in the last ten or twelve years; have they?

Mr. GIFFORD. Oh yes, indeed; or rather, while the numbers may not have been decreased, the fact is to be considered that an army engaged in warfare with the Indians costs the Government ten times as much as one maintained at our posts during peaceful times. A state of war, with a given number of troops engaged, costs the Government ten times as much as the same number of troops in time of peace. Everybody knows that. But the idea is to educate these Indians to a certain extent numerically, and thereby elevate and prepare them for civilized life; and we in South Dakota expect to perform our share in carrying out the wise and liberal policy adopted by the Government.

[Here the hammer fell.]

Lotteries.

SPEECH
OF
HON. THEODORE E. BURTON
OF OHIO,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, August 16, 1890.

On the bill (H. R. 11569) to amend certain sections of the Revised Statutes relating to lotteries, and for other purposes.

Mr. BURTON said:

Mr. SPEAKER: This bill seeks to diminish the evils arising from lotteries. Its aim is to prevent the use of the United States mails for the promotion of gambling schemes. While some of the lottery companies using the mails are located in foreign lands, beyond our jurisdiction,

nearly all the evils arising from this form of gambling may be traced to one corporation, the Louisiana State Lottery. Let us follow its history:

The Louisiana State Lottery Company owes its legal existence to an act passed by the Legislature of Louisiana in August, 1868, and printed in the Acts of Louisiana for 1868, on page 24. It is entitled "An act to increase the revenues of the State, and to authorize the incorporation and establishment of the Louisiana State Lottery Company, and to repeal certain acts now in force." In the printed copy of the statutes a minute is added by the secretary of state to the effect that the foregoing act, having been presented to the governor of the State of Lousiana for his approval and not having been returned by him to the house of the General Assembly in which it originated, within the time prescribed by the constitution of the State of Louisiana, has become a law without his approval.

Prior to this act other laws were in force, three of which were passed in the year 1866, of which the most important provided that any person selling lottery tickets should pay a license tax of $10,000. (It was provided that the person licensed might keep open several places of business, not exceeding ten in number, in not more than one parish.) It also provided that each lottery ticket sold should have a stamp, representing 5 per cent. of the amount for which it was sold, and that this percentage should be paid to the auditor of state.

The act for the establishment of the State Lottery Company contains, I make bold to say, the most unblushing declaration of intention to grant a privilege to plunder which can be found upon any statute-book. The preamble runs as follows:

Be it enacted, etc., That whereas many millions of dollars have been withdrawn from and lost to this State by the sale of Havana, Kentucky, Madrid, and other lottery tickets, policies, combinations, and devices, and fractional parts thereof, it shall hereafter be unlawful to sell, offer, or expose for sale any of them or any other lottery, policy, or combination ticket or tickets, devices or certificates, or fractional parts thereof, except in such manner and by such persons, their heirs, executors, and assigns as shall be hereinafter authorized.

Also, in articles of incorporation, article 2 provides as follows:

The objects and purposes of the corporation are, first, the protection of the State against the great losses heretofore incurred by sending large amounts of money to other States and foreign countries for the purchase of lottery tickets and devices, thereby impoverishing our own people.

Interpreted, this means: "Whereas the citizens of our State have been robbed by the swindling devices located at Havana, at Madrid, and in Kentucky, we will prevent this cheating of our own citizens by outside parties and legalize a similar swindling, within our own borders, by means of which, these fraudulent devices shall be utilized for the benefit of a corporation in our own State." How well this intention has been carried out is shown by the fact that, according to the best estimates, not over 7 per cent. of the amount paid for lottery tickets comes from citizens of Louisiana.

The statute, not only by implication, but expressly, points to the impoverishment of the people by lotteries; but, instead of placing the seal of disapproval upon such enterprises, it creates a worse enterprise in that State, gives it a charter of twenty-five years, and grants a monopoly for that time. By other provisions of incorporation, the acts licensing dealers in lottery tickets and all provisions giving authority to sell as agents for outside lottery companies are repealed. It would be difficult to find a statute in which the evils arising from the operations of lotteries are on the same pages clearly set forth and yet legalized and made permanent.

In 1879, by the constitution of the State of Louisiana, adopted in that year, the provision granting a monopoly to this company is revoked, and general authority is given the General Assembly to grant lottery charters or privileges, provided each shall pay not less than $40,000 per annum into the treasury of the State and that all charters shall cease or expire January 1, 1895. It is further provided in this constitutional provision, article 167, that the $40,000 payable annually by the Louisiana State Lottery shall belong to the Charity Hospital, of New Orleans. The original charter is recognized as a contract binding upon the State for the period therein specified, except this monopoly clause, which is abrogated. Of all additional sums from other companies, the hospital at Shreveport shall first receive $10,000 per annum, and the balance shall be divided among the several parishes of the State, for the benefit of their schools. No other company has been incorporated in the State under this provision.

It will doubtless be a surprise to many to know that the net profits of this institution, available for distribution among the stockholders, exceed those of any corporation in the United States. In making a comparison we may include any of the great railroad corporations. Its plan provides for twelve drawings in each year, ten so-called "ordinary" and two "extraordinary" drawings. The total amounts realized from these twelve drawings from the sale of tickets is $28,000,000, of which less than $15,000,000 is paid out in prizes. It is claimed that the expenses of transacting the business of the corporation, payment of commissions to agents, etc., add to its expenditures $4,000,000, aggregating $19,000,000 for disbursements, but leaving a clear net profit of $9,000,000. To these net profits must be added millions more, derived from incidental schemes in the way of daily drawings, which, it is claimed by persons having opportunities of information, would add at least $4,000,000 profit to the enormous sum of $9,000,000 already stated. It is probable that few who invest in these tickets examine the tables published in the advertisements, showing the amounts paid out in prizes at each drawing, or notice the disparity between the amounts received for tickets and the aggregate of prizes.

In this connection I wish to call attention to an advertisement which daily appeared in one of the papers in this city, the material part of which I will present herewith. In this advertisement a list of prizes is given, and the aggregate sum total of such prizes is stated. The advertisement should show that in the monthly drawing to which it refers, $2,000,000 is paid for tickets and only $1,054,800 paid back in prizes. By an error in the footing, which is very singular, the total amount of prizes, instead of $1,054,800, is given as $1,854,800. This error may or may not be intentional; but in an enterprise of this kind, where profits are so large, a few errors, more or less, amounting to $800,000, are hardly to be considered. This enormous profit is the more extraordinary when it is taken into account that the authorized capital stock of the lottery company is $1,000,000 only, of which it is provided that 10 per cent., or $100,000, is to be paid in before business is begun. It has never been claimed that more than $100,000 was paid in for a business capital for this corporation. Yet, on this inconsiderable sum profits are realized amounting, it is safe to say, to more than $10,000,000 per year. In the early history of the company its stock sold at 35 per cent. of the par value, or $35 per share. Sales have since been made at $1,400 per share, and yet in its advertisements it is proclaimed, "Incorporated by the Legislature for educational and charitable purposes."

And this statement is made because a stipend of $40,000 per year is paid toward the support of a hospital, and this sum the Supreme Court has decided must be accepted as an absolute equivalent for all taxes. Without going outside of the advertisement, attached herewith, for information, we may recognize the colossal gains and many other characteristic features of this institution. It is as follows:

LA. S. L. LOUISIANA STATE LOTTERY COMPANY.

Incorporated by the Legislature for educational and charitable purposes, and its franchise made a part of the present State constitution, in 1879, by an overwhelming popular vote.

Its grand extraordinary drawings take place semi-annually (June and December), and its grand single-number drawings take place in each of the other ten months in the year, and are all drawn in public at the Academy of Music, New Orleans, La.

* * * * * * *

Grand monthly drawing will take place at the Academy of Music, New Orleans, Tuesday, August 12, 1890—Capital prize, $300,000; 100,000 tickets at $20; halves, $10; quarters, $5; tenths, $2; twentieths, $1.

LIST OF PRIZES.

1 prize of $300,000 is	$300,000
1 prize of $100,000 is	100,000
1 prize of $50,000 is	50,000
1 prize of $25,000 is	25,000
2 prizes of $10,000 are	20,000
5 prizes of $5,000 are	25,000
25 prizes of $1,000 are	25,000
100 prizes of $500 are	50,000
200 prizes of $300 are	60,000
500 prizes of $200 are	100,000

APPROXIMATION PRIZES.

100 prizes of $500 are	50,000
100 prizes of $300 are	30,000
100 prizes of $200 are	20,000

TERMINAL PRIZES.

999 prizes of $100 are	99,900
999 prizes of $100 are	99,900
3,134 prizes amounting to	1,854,800

Agents wanted everywhere.

For club rates or any further information desired write legibly to the undersigned, clearly stating your residence, with State, county, street, and number. More rapid return mail delivery will be assured by your inclosing an envelope bearing your full address.

Important.—All ordinary letters containing postal notes, money-orders issued by all express companies on New York exchange.

Address

M. A. DAUPHIN, *New Orleans, La.*

Address registered letters containing currency to "New Orleans National Bank, New Orleans, La."

Remember that the payment of prizes is guarantied by four national banks of New Orleans, and the tickets are signed by the president of an institution whose chartered rights are recognized in the highest courts. Therefore, beware of all imitations or anonymous schemes.

Remember that the present charter of the Louisiana State Lottery Company, which the Supreme Court of the United States has decided to be a contract with the State of Louisiana and part of the constitution of the State, does not expire until January 1, 1895. The Legislature of Louisiana, which adjourned on the 10th of July of this year, has ordered an amendment to the constitution of the State, to be submitted to the people at an election in 1892, which will carry the charter of the Louisiana Lottery Company up to the year 1919

Adam Smith, in his Wealth of Nations, says:

The world neither ever saw, nor ever will see, a perfectly fair lottery or one in which the whole gain compensated the whole loss, because the undertaker could gain nothing by it.

And again, in speaking of public lotteries, he says:

In the State lotteries the tickets are really not worth the price which is paid by the original subscribers.

But it is not by any means the great financial accumulations of this corporation, nor the disparity between the investments of the ticket-buyer and his chances of return, which afford the greatest objections to its existence and influence.

The worst influence of such enterprises consists in the public demoralization arising from their extensive gambling operations and from the private demoralization of those who invest their savings in the desperate chances of obtaining prizes. It is probable that in no country in the world is the mania for speculation or the desire for the acquisition of sudden wealth more prevalent than in the United States. Much of the dishonesty which appears among those having public positions or fiduciary trusts can be directly traced to speculation, or, more correctly speaking, to gambling. The purchase of lottery tickets is one of the most injurious phases of this tendency. It is a well known fact that the persons engaged in the purchase of lottery tickets are not for the most part men or women of large or even moderate means.

These companies, by attractive circulars and by accounts of the drawings of great prizes, prey upon the poor and induce them to invest their meager earnings in the hope of acquiring great gains. It affords an opportunity for those who are unwilling to work, for those who have fallen into a rut out of which, except by some great strike of fortune, they can not find their way, to those who have become possessed of a mania for gambling, an opportunity to squander their substance. In the factories, among the employés of railway companies, among clerks in the service of the Government, and in many other places this mania for gambling has become prevalent, an evil of such magnitude that it may well be said to be of national importance. Whether these seekers for unearned gains are successful or unsuccessful, a wise public policy would alike seek to prevent the acquisition of large sums without honest labor, and the squandering of earnings which are needed for the support of the investors and their families. Actuated by this idea, nearly every State and Territory in the Union has, by statutory provisions, in many cases rendered more binding by insertion in the State constitution, prohibited the establishment of lotteries within its borders, and also provided severe penalties for the advertisement or sale of lottery tickets.

It must be admitted that this almost universal opposition to the existence of lotteries is due to the growth of public sentiment and an increased appreciation of the great evils arising from their operations in the different communities. Lotteries for alleged education or charitable purposes, or under the authority of the State for the benefit of its revenues, were in vogue in this country during the last century and for the first twenty years of this. Among the acts of this Congress before 1820 were a large number of statutes incorporating lotteries or facilitating and directing their operations.

A potent illustration of the change of public sentiment upon this subject may be found in the consideration of an incident growing out of a charter authorizing a lottery in this District of Columbia. In the year 1795 the Legislature of the State of Maryland passed an act to authorize two lotteries in the city of Washington for the purpose of raising $52,500. The money was to be used for drainage and in the construction of a canal. These acts were ratified by an act of Congress passed in 1812 and approved by James Madison, President of the United States. The tickets were offered for sale in the State of Virginia, but the vendor was arrested and sentenced for violation of the State law. Five of the most eminent lawyers in the United States, on the 27th of June, 1820, rendered an opinion in which the business of conducting lotteries is treated with rare consideration. They say:

> The corporation of the city of Washington have established lotteries * * * and the object for which the money * * * is to be applied has been submitted to the President of the United States, and has been approved by him. Have the Legislatures of the individual States the power, by any law which they can pass, to prohibit the sale of the tickets in the lotteries thus established? We think the State Legislatures have no such power.

And further on they say:

> It will be admitted by everybody that it is in the nature of the lottery that the tickets must be sold, and that they must be, as they always are, transferred from hand to hand by sale. * * * But surely a State law which forbids a citizen to buy or sell a ticket in a lottery well established under the authority of the Union * * * trespasses on the rights of the citizen as far as it goes, interferes with the general purposes for which the lottery is established, and changes the qualities of the tickets by impairing that saleable and transferable faculty to which it owes its value, and without which the lottery itself may be wholly defeated and must be greatly injured or delayed.

This opinion is signed by such eminent lawyers as William Pinkney, of Maryland, David B. Ogden, and Thomas Addis Emmet, of New York.

The very elaborate and ingenious argument of these lawyers was examined by the Supreme Court of the United States, and decided by it to be erroneous in the case of Cohens *vs.* Virginia, reported in 6 Wheaton. In that case, the Supreme Court of the United States sustained the right of the State of Virginia to forbid the sale of lottery tickets within its borders. During the past fifty years, there has been a marked improvement in public sentiment upon this subject of lotteries, so that, as before stated, their operations are now absolutely forbidden in nearly all the States and Territories.

It will be noticed that this legislation, forbidding the use of the United States mails for the distribution of advertisements of lotteries or the conveyance of letters containing money for the purchase of lottery tickets, is not now for the first time the subject of legislation by Congress. In the years 1872 and 1876, laws were passed strictly forbidding the use of the mails for advertisements or the carrying of letters containing money addressed to any lottery. The objection was made at the time, and has occasionally been raised since, that such legislation was in excess of the constitutional powers of Congress, but it is doubted whether this argument will now be used by any one.

To deny the right of Congress to legislate upon this subject would lead to very absurd conclusions. It would be saying that a post-office system may be established, but no control or direction is given to determine what matter shall be carried, and that the mails may be used for the promotion of fraudulent schemes, which nearly all the States have forbidden and made punishable by penal statutes. The existing law has been found to be faulty. Like almost all penal statutes dealing with a great evil in which selfish interests are involved and for the maintenance of which ingenuity and skill are brought into requisition, the law as first framed has been found to be insufficient.

The principal amendments proposed by the pending bill are three: First, the provision making the use of the mails for the promotion of lottery schemes a criminal offense, not only at the place of mailing, but also, at the place where the letters, or other mail matter, are addressed for delivery or distribution. Second, the prohibition of the use of the mails for the carrying of newspapers containing lottery advertisements. Third, authorizing postmasters to detain letters addressed to the agents of lottery companies, as well as when addressed to the company itself, or its immediate managers. The third amendment has been found necessary by reason of the practice, now universally followed, of directing mail matter to a national bank, or other corporation, or person, instead of sending it directly to the lottery company or its managers. It is hoped that these provisions will, as far as is possible by legislation, prevent the use of the United States mails for the promotion of these lottery schemes, so injurious to the communities in which their operations are conducted.

I can not agree with those who indiscriminately condemn the people of the State of Louisiana, for this evil, as if a lower standard of public virtue prevailed there. The existence of such an enormous financial institution, having the power to control the monetary forces of the State, would be a menace, and an almost insuperable corrupting influence, in any community. In describing the present situation there, it is sufficient to say that the potent moral and civilizing forces, which are such a mighty factor in the world's improvement, have not yet acquired sufficient momentum to influence the votes of a majority of the members elected to the Louisiana Legislature.

Notwithstanding the passage by the Legislature of an act submitting to the people of Louisiana a constitutional amendment continuing the charter of this company until 1919, the most casual observer must see that a great popular uprising against this iniquitous form of gambling has occurred there. This movement includes not only the residents of rural portions, but the representative men of the cities and business centers as well. With such aid as the passage of this bill will render to them, we may firmly believe that the people of Louisiana, the great Commonwealth in which the mighty waters of the Mississippi meet the sea, will display a degree of patriotism and public spirit which will soon banish this plague spot from their midst.

Compound Lard.

SPEECH

OF

HON. LUCIEN B. CASWELL,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, August 21, 1890,

On the bill (H. R. 11568) defining "lard," also imposing a tax upon and regulating the manufacture and sale, importation, and exportation of compound lard.

Mr. CASWELL said:

Mr. SPEAKER: The bill before the House is in the same line of the law attaching to the internal revenue the manufacture and sale of oleomargarine.

It requires those who manufacture compound lard to obtain from the Commissioner a license. Special taxes are levied upon the manufacturers and upon the dealers. The bill requires all parties who offer the article for sale to brand it, that people may know its real character. The article, under the guise of lard, brings in the market a price far above the real value of the ingredients. The manufacturers and dealers can well afford to pay special taxes thereon. It is wrong in principle to allow its sale without its real character being known to the trade.

Gentlemen tell us that compound lard is a nutritious food and that its sale should be neither taxed nor prohibited. We listened to arguments of this kind during the protracted discussion four years ago on the oleomargarine bill; yet we then knew, as every one knew, that in nine cases out of every ten when people purchased oleomargarine they believed it to be genuine butter or they never would have made the purchase. So with compound lard; not one in a hundred would buy and use it for food did he not suppose the article offered was pure lard.

Butter and lard are staple articles; they are known and have a reputation world wide. Everybody knows what lard is and what butter is. They can not know what the spurious or compound article is. When we want lard we do not want oil of any kind; our tastes rebel against it. People will not use the one for the other if they know it. But the deception is easy; hence so much the greater. The human eye can not detect the fraud; nothing, in most cases, but actual tests or use can determine the difference, and then it is too late. The deception is complete, and the object gained.

The evil consequences are not visited upon the purchaser alone. They reach far beyond him. The millions who sit at tables are victims. They must be continuously fed upon these spurious articles, through the instrumentality of fraud practiced upon the one who furnishes the food, that some manufacturer, or dealer, may enjoy an extraordinary profit in his business. The great mischief lies in the fraud and deception. If that is not so, why does the manufacturer of lard dislike to brand the character of the article upon the package. He knows at once that would destroy the sale. He is then bereft of the extra profit in his goods. The people want lard, they do not want oil or a compound of grease, oil, and drugs. They want the genuine article from the hog, and the cleaner and purer the better.

I do not claim, Mr. Speaker, that this legislation is friendly to the manufacture and sale of compound lard. I do not propose to proceed under false colors, if the manufacturers of these articles do. I concede this proposed legislation is intended to discourage their manufacture and sale. I believe the production of these articles is against the best interests of the people, and it should be discouraged, if not prohibited altogether. If I could have my way I would make it a penal offense to manufacture and sell oleomargarine or compound lard on every foot of land under the jurisdiction of the United States, and I would prohibit the importation of either. The deception which is practiced upon the people in their manufacture and sale is a severe blow to the honest producer of these great staples throughout the country.

Before the passage of the oleomargarine bill the entire dairy industry was paralyzed. Farmers, in many places, turned their cows into their pastures without milking. The country was flooded with a spurious substitute for butter. The imposition upon the people was complete. The production of butter, except at a loss, was an impossibility. The people were cheated and deceived on all sides. No man could purchase a pound of butter with safety. The price of dairy cows reached a point far below their cost, and the whole butter product would have soon been turned over to the manufacturer of the substitute, made of filthy grease. Some samples may have been made of healthful ingredients, but more frequently from deleterious and obnoxious substances against which mankind revolts. So with compound lard. To question it is to condemn it for use. Cotton-seed oil is no doubt useful in its place; it no doubt is very valuable for some purposes; so are linseed and other oils; but I protest against the use of either upon the market in disguise as hog's lard for common use in our families, hotels, and boarding-houses.

The hog crop is one of the great resources of the country. It is doubtful if its value to the whole people can be equaled by any other line produced by the farmer. Lard hogs are especially desirable. In the Northwest, where corn is produced in such abundance, the hogs bring to the farmer valuable support. They will always sell in the market at some price, and if Congress can do aught to encourage or increase their production, we should not hesitate for a moment to do it. The number of hogs raised in Wisconsin in 1888 was 1,123,866, valued at $7,766,798. It is in proof that hogs have been depreciated in value on an average 75 cents per head.

It is plainly our duty when a great industry is threatened or impaired to remove the cause, if we can. Not only that, but we should enact such laws as will protect and promote these industries. The great wealth of the country is earned through these sources. Not only should we protect the farmer in his legitimate pursuits, but we should protect the public, when we can, from impositions. No man should prey upon the people through deceptive sources, and a mischief within our reach should be cured as readily as by a State legislature. The arm of the Federal Government is much stronger than that of the State. Because of interstate trade and commerce, it is almost impossible to reach these evils by State legislation alone. Their laws are not uniform. The courts give them different constructions, and the sharp dealer will always find an avenue of escape. But the Federal laws are far-reaching and most effectual.

The manufacture of compound lard is a growing mischief. The public by it is grossly deceived. It is put on the market under the guise of "pure lard," "refined lard," and with various other devices to make the people believe that they are purchasing a choice, pure article of food. This deception ought go no further. It has taken a strong hold upon the markets already. With a slight reduction in price this bogus article is often sold in large quantities to the unsuspecting people, and at a large profit. The consequence is that genuine lard must be sold, if sold at all, at far reduced rates, and it is going lower and still lower. This inroad upon the hog product now causes annually an immense loss to the farmer. The compound lard, made from cotton-seed and various other ingredients, is rapidly taking the place of genuine lard; not because of its merits, but by reason of the deception practiced upon the consumer.

This bill is a step in the right direction. If not sufficient I would follow it with other and more effective enactments, even to its actual prohibition. I repeat, I do not wish to aim a blow at cotton-seed oil; far from it. But I protest against its manufacture and sale as lard. It is not lard, and no man should be permitted to sell it as such.

Some gentlemen say we might as well prohibit the mingling of cotton with wool in the manufacture of clothing that we wear. There is a different principle involved in the making of cloth. Its ingredients are visible to the naked eye, and the purchaser in most cases can see and understand the article offered for sale. Not so with lard or butter. The deception in these articles is beyond detection at the time of purchase.

The imposition can not be discovered in most cases until it is too late to avoid the purchase. Such is the case with most compounds and mixtures. It should be a penal offense to deceive the consumer of food by the sale to him of spurious articles, as much as the use of counterfeit money. The one is an offense against the people, while the other is against the Government. But the people are the sufferers in both cases. One affects the health and the other the pocket. There is no greater fraud or deception than that which affects the food we eat. It is an offense to manufacture or pass counterfeit money. It is a crime against nature to counterfeit the food which we use.

I have no doubt as to our duty in this case. The welfare of the people, both of the producer and the consumer, demands that we pass this bill, and compel the manufacturer to throw off his mask and subject his goods to the merit which they possess, and to that alone. I care not how soon we subject all articles to the same rule, especially when they bear the similitude of staples so necessary for common consumption. I am glad of the opportunity to vote for this bill, as I will for all others of like character.

The deceptions of sharp men practiced upon the people are very general, and it becomes our duty, as their representatives, to thwart their schemes whenever we can. And, while I would do this, I would promote every honest calling, every industry that may add to the welfare and prosperity of the people.

The Tariff and Taxation.

The people demand relief from all unjust and burdensome taxation.

"There can be no lawful tax which is not laid for a public purpose."—*Supreme Court.*

"The excise law is an infernal one."—*Jefferson.*

SPEECH

OF

HON. JOHN S. HENDERSON,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 19, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports, and for other purpose—

Mr. HENDERSON, of North Carolina, said:

Mr. CHAIRMAN: I do not hope that any words of mine will have the slightest influence upon the action of the gentlemen having charge of this bill, but a sense of public duty, a duty which I owe to myself and to my constituents, requires me to bring to the attention of Congress and of the country some considerations and reflections which impel me to vote against the bill under consideration. In one very essential particular the bill has been framed in deliberate violation of the declarations and promises contained in the Republican national platform adopted at Chicago June 21, 1888. That platform used the following language:

BROKEN PROMISES.

The Republican party would effect all needed reduction of the national revenue by repealing the taxes upon tobacco, which are an annoyance and burden to agriculture, and the tax upon spirits used in the arts and for mechanical purposes, and by such revision of the tariff laws as will tend to check imports of such articles as are produced by our people, the production of which gives employment to our labor, and release from import duties those article of foreign production (except luxuries) the like of which can not be produced at home. If there shall still remain a larger revenue than is requisite for the wants of the Government, we favor the entire repeal of the internal taxes rather than the surrender of any part of our protective system at the joint behest of the whisky ring and the agents of the foreign manufacturers.

This is the language of promise, plain and unequivocal. There is no room for ambiguity or deception. Of course everybody now sees that these promises were made to be broken. Standing, however, on such a platform, the Republican party elected Benjamin Harrison President of the United States and secured a majority of the Representatives who were elected to seats in this House. In North Carolina and in every other State where anything could be made by doing so the Republican candidates, the Republican press, and the Republican stump speakers distinctly and repeatedly promised the people, with every appearance of sincerity and truth and without any ifs or ands about it, that the entire internal taxes on tobacco should be immediately abolished when and as soon as a Republican Congress could

have an opportunity to do it. And the pledges thus solemnly given were not only in accordance with the Republican national platform, but were in literal agreement with the provisions of the Senate substitute for the Mills tariff bill as reported to the Senate by Mr. ALDRICH, from the Senate Committee on Finance, on October 4, 1888. In that report the committee state:

The proposition for a repeal of all internal taxes on tobacco is presented in compliance with a universal demand.

Is the public demand for the repeal of these taxes less imperative and less universal now than it was in October, 1888? There is nothing equivocal in the language of the platform, or in the provisions of the Republican tariff bill of the Senate, or in the declarations publicly and deliberately made by the leaders of the Republican party, both in and out of Congress, in the campaign of the year 1888. It will be noted, too, that the language of the Senate Finance Committee, and of the Senate substitute itself, was in entire harmony with the declarations of the Republican platform. And it must not be forgotten that this Republican substitute tariff bill passed the Senate at the second session of the Fiftieth Congress, after the result of the election for President and for Representatives in Congress in November, 1888, had been officially determined.

But this strangely inconsistent conduct of the Republican leaders can be accounted for by a closer inspection of the plank of their national platform which I have just quoted. It will be remembered that after announcing their purpose to repeal the tobacco tax and the tax on spirits used in the arts and for mechanical purposes, in order to reduce the surplus revenue, they declare that further reductions would be effected "by such revision of the tariff laws as will tend to check imports of such articles as are produced by our people, the production of which gives employment to our labor, and release from import duties those articles of foreign production (except luxuries) the like of which can not be produced at home."

ONE PROMISE FULFILLED.

The McKinley bill carries out the latter half of this resolution to the letter. It exempts from taxation most articles that would bring all the tax into the Treasury and imposes almost prohibitory duties upon all foreign articles that would come in competition with those that are manufactured in this country. The result must be a too great reduction of the revenue, and hence it is that the tobacco tax is not to be repealed or reduced. The Republican party wants revenue, a great deal of it, and the Republican leaders are determined to raise it at the expense of the farmers of the tobacco-growing States. Their avowed policy is at the same time flagrantly violative of the Constitution, which gives no power to "check imports," except so far as rates of duties which will produce the greatest revenue may incidentally have that effect. The "revenue standard" is the limit to which Congress can go, without criminal usurpation of power.

TAXATION FOR REVENUE.

The Democratic party says that unnecessary taxation is unjust taxation; and to exact from the people taxes beyond the requirements of the Government economically administered is robbery under the forms of law. The Democratic doctrine is the doctrine of the Constitution. The authority of Congress to levy taxes at all is defined in section 8, Article VII, of the Constitution of the United States, as follows:

The Congress shall have power to levy and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defense and general welfare of the United States.

Judge Cooley, in his work on Principles of Constitutional Law, thus defines the limits of constitutional taxation:

Constitutionally a tax can have no other basis than the raising of revenue for public purposes, and whatever governmental exaction has not this basis is tyrannical and unlawful. A tax on imports, therefore, the purpose of which is not to raise revenue, but to discourage and indirectly prohibit some particular import for the benefit of some home manufacturer, may well be questioned as being merely colorable, and therefore not warranted by constitutional principles.

And to the same purport is the opinion of the Supreme Court of the United States in the case of Loan Association vs. Topeka, 20 Wall., 655. Mr. Justice Miller, in delivering the opinion of the court, said:

Of all the powers conferred on the Government that of taxation is the most liable to abuse. Given a purpose or object for which taxation may be lawfully used, and the extent of its exercise is in its very nature unlimited. * * * This power can as readily be employed against one class of individuals and in favor of another, so as to ruin the one class and give unlimited wealth and prosperity to the other, if there are no implied limitations of the use for which the power may be exercised. * * * To lay with one hand the power of the Government on the property of the citizen and with the other bestow it upon favored individuals, to aid private enterprises and build up private fortunes, is none the less robbery because it is done under the form of law and is called taxation. This is not legislation. It is a decree under legislative forms. Nor is it taxation. We have established, we think, beyond cavil, that there can be no lawful tax which is not laid for a public purpose.

I quote to the same effect from one of the most capable, thoughtful, and upright men who ever sat in this House, in a speech delivered May 5, 1882. I mean the late Samuel J. Randall, of Pennsylvania, who said:

The existing overflowing Treasury brings a demand for reduction of the tariff and internal-revenue taxes. In my opinion, in such a condition of our finances reduction of taxation should at once begin. Unnecessary taxation is injurious to the interests of the people in many directions. Government has no justification for the collection of burdensome taxes in excess of the sum requisite for the support of its proper administration.

What have we seen in this Congress? The excess of our resources has induced the presentation of every conceivable scheme to deplete the Treasury, and our expenditures, unless checked in time, will reach enormous proportions and bring back again, as prior to 1874, a saturnalia of extravagance and disgrace. In the matter of taxation we are acting under a written constitution. * * * I do not favor a tariff enacted upon the ground of protection simply for the sake of protection, because I doubt the existence of any constitutional warrant for any such construction or the grant of any such power. It would manifestly be in the nature of class legislation, and to such legislation, favoring one class at the expense of any other, I have always been opposed.

Mr. Randall's mournful anticipations have been abundantly realized by the action of the Fifty-first Congress. "Every conceivable scheme to deplete the Treasury" has been resorted to by the Republican majority, the expenditures of the Government have reached "enormous proportions," and "a saturnalia of extravagance and disgrace" has been inaugurated. At the same time the taxation and burdens of the people are to be vastly increased. An annual surplus of about $100,000,000 has been wiped out and an immense deficit seems to be in sight. On this subject I wish to commend an extract from The Philadelphia Times:

The people of the country who for eight years past have been forcing all parties to declare in favor of reducing the Treasury surplus by reducing taxes must now face the fearful truth that the profligacy of the present Congress has already destroyed the surplus and bankrupted the Treasury nearly $100,000,000 independent of the proposed reduction of $50,000,000 of revenue by the new tariff bill; and, if the bill shall pass, the deficit will be increased fully $50,000,000 more, with increased taxes on very many of the common necessaries of life. Never in all the history of partisan folly has such midsummer madness been exhibited by any party in power; and if there is any wisdom and patriotism left in Republican leadership in Washington a sudden and peremptory halt will be called upon Republican suicide. Nero's fiddling over burning Rome has never had so bold a counterpart as is presented by party leaders seeking to force an increased tax-tariff bill that reduces the revenues over $50,000,000, and the force election bill to cost $12,000,000 more, when sheer profligacy has already bankrupted the Treasury nearly $100,000,000.

REPUBLICANS TAX NECESSARIES AND EXEMPT LUXURIES.

No revision of the tariff will be worth anything to the people unless the taxes on the necessaries and comforts of life shall be materially reduced. High tariff duties enable monopolies, trusts, and illegal combinations to exact excessive profits from the consumers of their products. It is Federal taxation which is crushing the people and keeping them in debt. No legislation by Congress can confer any real or lasting benefit upon the farmer as long as the existing high rates of tariff duties are maintained. Revenue laws, enacted by the Republican party, have always discriminated against the poor man and in favor of the rich. And reductions of revenue by that party have always been on the same line. Since the war the income tax—payable only by the rich—has been repealed, but the tariff tax on the poor man's sugar, salt, and clothes has not been decreased. Banks, railroads, and other corporations have been relieved from taxation, but the tariff taxes on blankets, tin-plate, and household furniture remain. The taxes on whisky, wine, and liquors have been reduced, but no reduction is made in the tariff on woolen goods worn by poor men and women. Taxes to the amount of $320,000,000 per annum have been removed from the wealth of the country, but there has been no corresponding reduction in the taxes paid by the farmers and laborers. The McKinley bill proposes to increase the tax on cotton-ties nearly 200 per cent. The bill also provides for higher rates of duties "on low-priced and staple articles necessary to the well-being and comfort of the people, thus materially increasing the cost of living, especially for the poorer classes, placing the American artisan and producer at a disadvantage in the production of all kinds of commodities."

The following statement is interesting reading for the tax-payers:

Here are some tariff absurdities and monstrosities. Attar of roses for the rich lady's handkerchief is imported free. Soap for workman's hands pays a tariff of 20 per cent. Agates for the rich child are imported free; dolls for the poor child pay a tariff of 35 per cent. Feathers and down for the rich man's bed are free; blankets for the poor man's bed pay a tax of 10 cents a pound and 35 per cent. ad valorem. Undressed furs for the rich man's wife are free; woolen cloaks for the poor man's wife are taxed 45 per cent. and in addition thereto 40 per cent. ad valorem. Meerschaum for the rich man's pipe is free; clay for the poor man's pipe pays a tax of 35 per cent. Mineral water, ivory, gold, and silver medals for the rich are free, but salt, sugar, wool, lime, lumber, hair, and cement are all heavily taxed. Here are a few of the more common articles out of the more than 4,000 articles on which the American is taxed, all taken from the tariff act:

	Per cent. tax paid.		Per cent. tax paid.
Castor-oil	194	Cutlery	43
Woolen blankets	79	Nails	43
Combs	30	Copper	41
Ready-made clothing	54	Carpets	46 to 52
Cotton cloth, bleached	75	Woolen dress goods for women	82
Household furniture	35	Woolen shawls	88
Hand-saws	40	Window-glass	93
Hollow ware	47	Iron and steel wire	66
Bolts and rivets	60	Woolen cloth for men	90
Files	65	Zinc	70
Wire cloth	114	Razors	50
Lead	60	Pins	30
Salt	80		

To show how the tariff affects the farmer I will quote an article from The St. Louis Republic:

THE FARMER'S DISCOUNTED DOLLAR.

The Republic showed some time ago that the dollar of the Western farmer will not buy over half as much as the dollar of the Eastern manufacturer, because, while the prices of farm products have tended naturally down, the downward tendency of the price of manufactures has been artificially checked under the working of the protective tariff. * * * Mr. T. E. Wilson has compiled several valuable tables of statistics confirming our conclusions. He has made

up the following table of average export prices from the annual report of the Treasury Bureau of Statistics:

Product.	1855.	1880.	1889.
Corn	$0.892	$0.543	$0.474
Wheat	1.663	1.245	.897
Flour	9.946	5.878	4.832
Beef	.088	.064	.055
Butter	.181	.171	.165
Cheese	.106	.095	.093
Cotton	.087	.115	.099
Tobacco	.....	.077	.088

From these official figures he does what any farmer may do, calculates the amount of corn, wheat, or other products necessary to pay off a mortgage in the different years. Thus, if a farmer owed a debt of $2,000 in 1855 under the low tariff and had paid $1,000 of the principal and all interest up to date, he would still owe the whole debt, because it would take as many bushels of his produce to pay $1,000 now as would have been required to pay $2,000 in 1855. Mr. Wilson summarizes and tabulates thus:

The mortgage of $2,000 in 1855 represented or could be paid with 2,242 bushels of corn; in 1889 the mortgage of $1,000 could not be paid with less than 2,123 bushels. In wheat, the $2,000 mortgage meant, in 1855, 1,202 bushels; the $1,000 mortgage means now 1,114 bushels. If we take his condition in 1868, when the tariff war upon him began, this table shows how much more he owes to-day, after paying off one-half of the mortgage, than he did when the mortgage was contracted.

His mortgage.

Articles.		1868, $2,000 represented—	1889, $1,000 represents—
Corn	bushels	1,702	2,113
Wheat	do	1,054	1,114
Flour	barrels	200	207
Cotton	pounds	10,526	10,101
Bacon	do	16,000	11,628
Lard	do	13,700	11,628
Pork	do	17,544	13,513
Beef	do	16,807	18,181
Butter	do	7,117	6,060
Cheese	do	14,598	10,753
Tobacco	do	18,018	11,363

As money is a mere medium of exchange, changes in the currency can give no relief against such conditions, because the same conditions would again recur after the price of money had adjusted itself to the quantity of the necessaries o life. The only remedy lies in the repeal of all laws which make manufactured goods scarce and therefore dear.

The American home market for farm products can not be increased except by an increase of the population. The diversification and multiplication of industrial pursuits will not add to the number of consumers. The prices of cotton, wheat, corn, and breadstuffs are fixed in Liverpool and London because this country has a surplus of these things which are sold in those markets and prices fixed in the foreign markets regulate the prices everywhere. The United States are losing their foreign market for agricultural products on account of foreign competition and the effect of a high protective policy. Take wheat, for an example. In 1880, the United States exported 144,483,007 bushels and in 1888 49,531,915 bushels, a loss of 94,951,092 bushels. On the other hand, Russia in Europe, in 1880, exported 36,565,653 bushels; in 1888, 126,114,726 bushels. British India exported, in 1880, 13,896,168 bushels; in 1888, 32,894,925 bushels. Strange to say, not only the exportation but the production of wheat in this country is on the decline. In 1880 the production of wheat in the United States was 488,549,868 bushels; in 1888 the production was 415,868,000; in 1889, 490,560,000. The production for 1890 is estimated to be 405,000,000 bushels. Notwithstanding an addition of 15,000,000 to the population, the value of the crop is also decreasing, being worth $474,201,850 in 1880 and only $342,491,707 in 1889. I have no time to dwell upon the subject, but a hurried glance at the tariff system as it affects agriculture and commerce may prove instructive.

HOW PROTECTION PROTECTS WHEAT-GROWING.

States.	Price per bushel in—		
	1877.	1883.	1889.
Ohio	$1.24	$0.99	$0.76
Michigan	1.22	.96	.74
Indiana	1.13	.95	.71
Illinois	1.04	.92	.70
Wisconsin	.93	.88	.70
Minnesota	.91	.80	.71
Iowa	.87	.80	.63
Missouri	1.00	.88	.64
Kansas	.82	.78	.55
Nebraska	.83	.70	.62
Dakota	.....	.72	.60

This table shows how beautifully the prices of the great staple agricultural product of the Northwest tapers down under the protective policy. In 1884 wheat sold in Kansas for 45 cents per bushel, in Nebraska for 42 cents, and in Dakota for 46 cents.

HOW PROTECTION PROTECTS CORN-GROWING.

Years.	Corn crop.	Price.
	Bushels.	*Cents.*
1880	1,717,434,543	39.6
1881	1,194,916,000	63.6
1882	1,617,025,100	48.4
1883	1,551,066,895	42.4
1884	1,795,528,000	35.7
1885	1,936,176,000	32.8
1886	1,665,441,000	36.6
1887	1,456,161,000	44.4
1888	1,987,790,000	34.1
1889	2,112,892,000	28.3

These are the market prices which the grain merchants paid. But in the country where the corn was grown the prices were much lower. The farm prices were as follows in good years when the crops were large. In years of scarcity prices were higher. From 1876 to 1889 there were only two years when the prices rose to 60 cents per bushel. In Missouri in 1881 the price of corn went up to 65 cents per bushel, but during the same year it sold for 39 cents in Nebraska:

States.	Price per bushel in—		
	1878.	1885.	1889.
	Cents.	*Cents.*	*Cents.*
Ohio	33	32	31
Indiana	27	29	27
Illinois	25	28	24
Iowa	16	24	19
Missouri	26	25	23
Kansas	19	24	18
Nebraska	16	19	17

If we had liberal trade with all the world these low prices could never prevail. But foreigners can not afford to buy of us unless we allow their goods to come into our country free of duty or at moderate rates of taxation. They can not afford to pay cash for everything.

The above prices are by no means the lowest. Corn sometimes goes down to 10 or 12 cents per bushel in the rich prairie lands of the West; and when that is the case it costs more to send it to market than the farm price. The farmers therefore find it cheaper to burn their corn for fuel than to buy coal brought hundreds of miles by railroad.

PROTECTION BREAKS DOWN COMMERCE.

The following tables show the effects of a revenue tariff and of a protective tariff, respectively, upon commerce and the fisheries.

Tonnage of the sailing and steam vessels of the merchant marine of the United States engaged in commerce and the fisheries under a revenue tariff.

Years.	Foreign.	Coastwise.	Whale fisheries.	Cod and mackerel fisheries.
	Tons.	*Tons.*	*Tons.*	*Tons.*
1854	2,151,918	2,321,114	181,901	146,909
1855	2,348,358	2,543,255	186,848	133,540
1856	2,302,190	2,247,663	180,461	132,339
1857	2,268,196	2,336,609	195,842	130,196
1858	2,301,148	2,401,220	198,594	148,846
1859	2,321,678	2,488,929	185,728	156,707
1860	2,379,396	2,644,867	166,841	162,764

So much for commerce and the fisheries under the Democratic tariffs for revenue. Now look at this picture:

Tonnage of sailing and steam vessels of the merchant marine of the United States under the high protective tariff.

Years.	Foreign.	Coastwise.	Whale fisheries.	Cod and mackerel fisheries.
	Tons.	*Tons.*	*Tons.*	*Tons.*
1883	1,269,681	3,538,354	32,414	95,038
1884	1,276,972	2,884,068	27,249	82,940
1885	1,262,814	2,896,371	25,184	82,565
1886	1,088,041	2,939,252	23,138	80,705
1887	989,412	2,929,217	26,151	79,548
1888	919,302	3,172,120	24,482	76,012
1889	999,619	3,211,416	21,976	74,464

The increase in the coastwise commerce was inevitable, as the laws practically exclude foreign competition, but the falling off in the foreign commerce and the fisheries, in view of the fact that our population has doubled between the two periods, is simply disgraceful. The purpose of the high protective policy has been to protect and encourage ship-building and the iron interest at the same time. To this end

merchants are not allowed to buy foreign ships and the ship-builders are not allowed to import foreign iron to work upon. The result of this stupidly selfish policy is further shown by the following tables:

DESTROYS SHIP-BUILDING.

Ship-building in the United States before and since the war.

Years.	Number of vessels.	Tons.	Years.	Number of vessels.	Tons.
1854	1,777	536,046	1883	1,268	265,429
1855	2,027	533,450	1884	1,190	225,514
1856	1,714	469,293	1885	920	150,056
1857	1,443	378,804	1886	715	95,453
1858	1,241	244,712	1887	844	150,459
1859	875	156,602	1888	1,014	218,086
1860	1,082	214,797	1889	1,077	231,134
Total	10,159	2,583,704	Total	7,028	1,336,122

These tables show that under a revenue tariff the amount of tonnage built was double the amount under a high protective tariff, and that, too, when the population was only half what it was during the latter period.

A HOUSE DIVIDED AGAINST ITSELF.

These facts show, what may be seen in reference to others, that the tariff policy is a house divided against itself. If the protectionists undertake to protect shipbuilding they find themselves making war upon commerce, and at the same time they can not aid shipbuilding consistently with the high tariff they place upon iron. In like manner they find that the wool-grower can not be "protected" without inflicting an unbearable tax upon the wool manufacturer; when one goes up the other must go down. And so with the iron-miner and the iron-manufacturer. To "protect" the former by high duties is to tax the latter and to protect the latter is to put the products of the former on the free-list. In many instances a high protective tariff is as unjust to the manufacturer as it is to the consumer. An unjust and selfish system of taxation mercilessly oppresses the whole people, the farmer, the laborer, the merchant, and the manufacturer.

MORE PROMISES BROKEN.

Now, let us examine the RECORD a little. On December 16, 1887, at the very beginning of the first session of the Fiftieth Congress, the gentleman from Maine [Mr. REED], now the Speaker of this House, then the leader of the Republican party on the floor of the House of Representatives, speaking for himself and for his party, said:

Many changes are proposed in the rules of the House—we have adopted none—and it is proposed here to adjourn until after the holidays and commence where it had been the custom heretofore to begin at the opening of the session. If there were no public matters of deep interest before the country awaiting legislation such a course might awaken only a passing comment. But to-day we are pressed upon by a serious public duty, which is a reduction of a surplus which is coming into the Treasury in a manner calculated, under the management of the Treasury Department, to become a serious embarrassment to the business affairs of the country. We are all agreed, at least upon this side of the House, that the surplus should be reduced, and we stand ready now, before the holidays, to make one reduction in which the other side of the House are agreed, and that is in relation to the tobacco tax, and I hope that an opportunity will be given us before we separate, by the powers that be and are to be, to vote thereon and show to the country some disposition proper and suitable in this matter.

If the other side of the House find it somewhat difficult to range themselves alongside the recent message which has been sent them, we can well understand it, because it was a summons from, I hope to some of the Democracy, a very great way off; and it requires that they should traverse a very great distance before they get alongside of their pioneer brother at the other end of the Avenue. If time is wanted for that purpose I hope the gentleman from Missouri will frankly say so. If there is a proposition, if the gentlemen on the other side of the House have grave doubts how they shall comply with the suggestions of the message, if after they have made up their minds in the interest of moderation and reform, that the more advanced of them will be contented with the destruction of a few of our industries, and they need time to select them which they see fit to destroy, that would be ground, of course, for this motion; and I hope the gentleman from Missouri, with the frankness which always characterizes him, will tell us if that is the reason underlying this resolution.

About five months afterwards, on May 18, 1888, the gentleman from Ohio [Mr. MCKINLEY], at that time second only in authority to the gentleman from Maine himself, as a leader on the Republican side of the House, made a speech on this floor, in which he said:

Our country is in an anomalous situation. There is nothing resembling it anywhere in the world. While we are seeking to find objects to relieve from taxation, in order that we may relieve an overflowing Treasury, the nations are engaged in exploring the field of human production to find new objects of taxation to supply their insufficient revenues. In considering the situation that thus confronts us and the bill that is presented here as intended to relieve it, it is well that we should understand at the beginning the things upon which all are agreed. They are, first, that we are collecting more money than is required for the current needs of the Government and, second, that the excess, whatever it may be, beyond the wants of the Government should be left with the people. Our contention, therefore, is upon the manner of the reduction, and not upon the reduction itself; not that no reduction shall or ought to be made, but how and upon what principle can it be best accomplished. We agree further that the tax upon tobacco shall be removed and thus leave with the people $30,000,000, which they annually pay upon this domestic product. Were we men of business governed by the principles which guide practical men of affairs, this burden would have been and could have been removed any time within the past two years, and if removed two years ago, no surplus would now vex the Administration or alarm the business of the country.

In passing, it is suitable that I should say that within the period named no hinderance from this side of the House would have been interposed to the abolition of the tax. It is suitable that I should say that gentlemen on this side and gentlemen on the other side of the House repeatedly made efforts during the last Congress to secure recognition for the purpose of offering a bill to abolish this tax, which request was refused by the presiding officer of the House, and refused, too, Mr. Chairman, when every intelligent Representative on this floor knew that, if an opportunity was given to vote upon a bill for the abolition of that tax, it would have received, not simply a majority, but the vote of fully two-thirds of the House. I repeat that if that had been done, if the House as then organized had given to the Representatives of the people an opportunity to vote upon a simple proposition to reduce taxation, no immediate surplus would be now in the Treasury to interrupt and disturb the business of the country. But this tax was not abolished; and, if done now, it still leaves about $40,000,000 of revenue collected in excess of the public necessity. How can this amount be remitted with the least disturbance to the business and employments of the people?

On February 16, 1889, at the second session of the Fiftieth Congress, the Committee on Appropriations made a favorable report on the bill (H. R. 12131) to amend the internal-revenue laws. The bill proposed a total repeal of the tax on tobacco and the amelioration of the hardships of the internal-revenue system. The reduction to be made in the revenues was about $31,000,000 per annum, "a result" stated by the committee, "whether viewed from the standpoint of an excessive revenue or as a relief from unnecessary taxation upon the people, most desirable." The report also stated that—

The internal taxes levied because of the necessities of war have heretofore all been removed from capital and from all manufactured articles, leaving the products of agriculture to bear all the burdens of the internal-tax system which remains. The taxes proposed to be repealed by the bill reported are particularly oppressive on the farmer, both in the amount of tax levied against his product as well as in the vexatious manner of its collection. There is no longer, in the opinion of your committee, any justification for the continuance of these taxes. There are no bonds which are due and payable at par at the option of the Government. Under existing conditions bonds will have to be purchased at a high premium in the market with the surplus revenue, or else the accumulation of money in the Treasury will result detrimentally to the commercial interests of the country.

This report was made by Mr. Randall, of Pennsylvania, but was concurred in by all the Republican members of the committee, to wit: Messrs. CANNON of Illinois, Ryan of Kansas, BUTTERWORTH of Ohio, Long of Massachusetts, MCCOMAS of Maryland, and HENDERSON of Iowa. Messrs. CANNON, BUTTERWORTH, MCCOMAS, and HENDERSON of Iowa are all distinguished members of the present House. Not one of these gentlemen will vote now as they talked and acted in the Fiftieth Congress on this question. Political consistency among these latter-day Republicans is indeed a jewel. A change has come over the spirit of their dream.

This is not all, President Harrison, in his message to the Fifty-first Congress, at the beginning of this session, in recommending the "necessary reduction in our public revenues," said:

The removal of the internal tax upon tobacco would relieve an important agricultural product from a burden which was imposed only because our revenue from customs duties was insufficient for the public needs.

And Mr. Harrison's Secretary of the Treasury, Mr. Windom, in his annual report for the year 1889, dated December 2, 1889, recommended the repeal of the entire tobacco tax. He said:

The tax collected on tobacco (during the last fiscal year) was as follows:

From cigars, cigarettes, and cheroots	$12,677,987.60
From snuff	645,089.67
From manufacturers of tobacco	17,026,899.94
From special taxes	1,466,883.31
Total	31,866,860.42

Whatever may be said of the moral or physical effects of tobacco, it has come to be regarded as a necessity by the poor as well as the rich. It is now the only product of agriculture that is directly taxed by the Government. The repeal of this tax would reduce the surplus about $32,000,000.

Notwithstanding this record of his party and in spite of its sacred pledges the gentleman from Ohio [Mr. MCKINLEY], the distinguished chairman of the Committee on Ways and Means of this House and the reputed author of the declaration for the repeal of the internal taxes in the Republican national platform, now announces that his party will not keep the pledges which have been so solemnly made and in consequence of which the people intrusted it with power. No good or sufficient reason can be given in justification for the present change of programme. In my opinion the new policy now being pursued by the majority of this House is entirely without excuse. I ask the people of the United States to read what the gentleman from Ohio said on May 18, 1888, and compare it with the Republican platform of that year, and then read what he says now in explanation of the failure of the Republican party to repeal the tobacco tax. If these several declarations shall be arranged in parallel columns and read together it will be observed that the McKinley bill, notwithstanding the statement made by the gentleman from Ohio [Mr. MCKINLEY], has not complied with the promise contained in the Republican platform to repeal the taxes upon tobacco. If this is the way the Republican party keeps its promises—and I admit this to be the usual style with that party—it is high time the American people should rise up and exclaim, in the language of Macbeth:

> And be these juggling fiends no more believed,
> That palter with us in a double sense;
> That keep the word of promise to our ear,
> And break it to our hope. I'll not fight with thee.

When the truth-loving citizens of this Republic shall find out who these "juggling" fellows are and how constantly "they say and do not," every one may well wish that there was a "lodging place" to

which to "go from them, for they be all * * * an assembly of treacherous men. * * * And they will not speak the truth; they have taught their tongue to speak lies, and * * * themselves to commit iniquity. * * * One speaketh peaceably to his neighbor with his mouth, but in heart he lieth in wait."

WHAT MR. BECK SAID.

It is not surprising, however, that a Republican Congress, in spite of the many pledges of the Republican party and its leaders to the contrary, now refuses to repeal the tobacco tax. The Republican party is naturally returning to its first love. In this connection I will quote what the late Senator Beck said in October, 1888, in the minority report written by him in opposition to the Senate substitute for the Mills tariff bill. Mr. Beck said:

And notwithstanding the demand now so earnestly made for free tobacco in every form, when the Democrats of the Senate in 1883 were insisting upon a reduction of the tobacco tax to 8 cents per pound, the Republican party were almost a unit in opposition to it, their candidate for the Presidency, Mr. Harrison, saying, among other things:

"I believe that we can not enter into the general subject of tariff reduction, and we ought not perhaps to reduce much now the taxes on those three articles, which I believe the common current consent and common sense of all the people agree should be the last subjects of internal revenue—I mean, whisky, beer, and tobacco. * * * I come then to saying that in supporting this measure from our Finance Committee we are reducing our internal-revenue taxes to those three articles which by common consent should remain, at least till the indefinite future, upon our list of products upon which excise taxes are to be levied." (CONGRESSIONAL RECORD, page 6250, part 6, volume 13, Forty-seventh Congress, first session.)

And the distinguished Senator from Ohio [Mr. SHERMAN] opposed the same proposition in language as strong as he knows how to employ, saying, among other things:

"Senators on the other side may think from the vote—I can almost refer to it as a party vote—that they can make political capital by reducing the tax on tobacco. I do not believe it. I believe the plain people of this country, as Mr. Lincoln called them, see through it. They are willing to pay the tax on tobacco, on whisky, and on beer. They are the only internal taxes that they are willing to pay, and I am willing to let these three taxes stand as they are until we can gradually reduce them, as the condition of our revenue may allow. Strip your internal revenue of all other classes, even if to do so does benefit some of the banks, even if it does repeal taxes that might be kept on a little while longer with no very great injury; yet it confines the system to these three articles, which in every country are the subjects of taxation. Then spread the balance of your reduction over the external taxes and do what little good you can until the Tariff Commission enables us to reduce the whole system of external taxes."

Again he said:

"But do not give away of our surplus revenue more than half of it on an article which is the proper source of revenue, the legitimate subject of taxation, on which the tax is more cheerfully paid and more easily collected than on any other in the whole range or gamut of taxes."

And when, on my motion, the right was demanded to allow the producer of tobacco to sell $100 of his own product it raised a storm of indignation among all the Republican Senators, who are now so clamorous for the protection of the producers of tobacco that a person who either listened to the debate, or reads it now, would suppose that the country would have been ruined by even allowing them the slight privilege which was given them by the votes mainly of the Democratic party.

In my opinion, Mr. Chairman, the change of front on this question by the Republican majority of this House can not be defended by any sort of reasoning.

THE MILLS BILL.

A reduction of the tax on manufactured tobacco from 8 cents to 4 cents per pound will satisfy no one, and is not made, so far as I know, in response to any public demand. The changes proposed in the existing law upon this subject by the McKinley bill are in the right direction, but the provisions of the Democratic tariff bill of 1888 were far preferable. That bill—commonly called the "Mills bill"—provided for the repeal of all restrictions upon the sale of tobacco by the producer and for the repeal of all internal taxes on tobacco, except on cigars, cigarettes, and cheroots, and of all privilege and license taxes, except those for manufacturing and selling cigars, cigarettes, and cheroots. The repeal of special and privilege taxes was also recommended, and the bill contained provisions greatly modifying and ameliorating the harsh and vexatious features of the internal-revenue system.

The total estimated reduction of internal revenue by the Mills bill amounted to $24,455,607. The McKinley bill proposes reductions to the amount of $10,412,916.27. The Mills bill proposed the entire repeal of the tax on smoking and manufactured tobacco. This bill reduces the tax thereon from 8 cents to 4 cents per pound, and it retains in force all the harsh and cruel provisions of the internal-revenue laws. If the Mills bill had become a law, the occupation of the odious, inquisitorial, and unpopular internal-revenue officer would have been gone. Tens of thousands of tax-payers would have been relieved of taxation and multitudes of internal-revenue officials would have been abolished. The McKinley bill does not propose to dispense with the services of any one of the numerous army of internal-revenue officials—no, not one. Every revenue agent, every deputy collector, every storekeeper and gauger, every raider, every deputy marshal, and every spy or informer, now doing work that is mean, and cruel, and perfectly hateful, will be retained. These men know no law, and if they commit crime are not judged by any law. If a revenue officer murders a citizen the United States judges assume jurisdiction of the case and adjudge that the killing was done by the officer under color of his office. The State courts are deprived of jurisdiction in every such case, and no revenue officer who violates the law while claiming to perform the duties of his office is ever punished.

Unless some law is passed by Congress to punish such offenders, it will not be surprising if the citizen retaliates by sometimes resisting to the death the internal-revenue officer who makes an unjust and illegal assault upon him. The person of an internal-revenue officer who commits crime is no more sacred than the person of any other American citizen who may violate the law. I appeal to Congress to intervene and come to the relief of the citizen against the unjust aggressions and lawless conduct of the internal-revenue officers. The American people are obedient doers of the law; and if they sin against the law they expect to be judged by the law. They think that the same law which "judges" them ought to be good enough for a Federal office-holder to be judged by.

If the tobacco-planters of the United States are to derive any benefit from the clauses in this bill intended for their relief, a separate bill containing them should have been reported to the House by the Committee on Ways and Means. Such a bill, when called up for consideration, would be certain to pass the House with scarcely any opposition. This was the plan advocated in the Fiftieth Congress by the Republican leaders; and this plan, if it had been adopted by the Democrats in that Congress, would have enabled the Democratic party to elect a majority of the present House. The hypocrisy of Republican pretensions is past finding out. Republicans in the Forty-ninth Congress who voted against any repeal of the tobacco tax professed to be for its entire repeal in the Fiftieth Congress, and expressed themselves again and again in favor of the passage of an independent bill to that effect. The very same Republicans now say it will never do to permit the consideration of a separate bill for that purpose. And, while all the Republicans in Congress now say the tax must not be repealed altogether, some of the very men who were loudest in their demands for the entire repeal of the tobacco tax in the last Congress are at this time opposed, not only to the repeal of such tax, but to any reduction whatever. It remains to be seen whether the Republican majority in the Senate will consent to any part of the reduction proposed.

A SCRAP OF HISTORY.

If the House will indulge me, I will here tell a short history. On the 3d day of April the following note was addressed to the Speaker of the House:

HON. THOMAS B. REED, *Speaker of the House of Representatives:*

The undersigned, members of the House of Representatives of the Fifty-first Congress, respectfully ask that one of their number, or some other member of the House of Representatives, be recognized, on the first Monday of April, 1890 (that being suspension day, under Rule XXVIII, for individual members), for the purpose of moving a suspension of the rules to put upon its passage a bill to repeal the internal-revenue tax on tobacco.

PAUL C. EDMUNDS.
CHARLES T. O'FERRALL.
JOHN A. BUCHANAN.
T. G. SKINNER.
GEORGE D. WISE.
H. ST. GEORGE TUCKER.
EDWARD C. VENABLE.
P. G. LESTER.
JOHN S. HENDERSON.
B. H. BUNN.
W. H. F. LEE.
WILLIAM H. H. COWLES.
ALFRED ROWLAND.

This paper is signed by every Democratic Representative from North Carolina and Virginia except Mr. MCCLAMMY, who is in hearty accord with the movement for the repeal of the tobacco tax. Mr. TUCKER, of Virginia, who circulated the paper, inadvertently failed to present the same to Mr. MCCLAMMY for his signature, and this accounts for the omission of the latter's name from the paper.

The Speaker of this House has never taken any notice whatever of the above request. He evidently entertains a very different view of the duty of a Speaker from that held by him in the Fiftieth Congress. He now declines to give recognition to any man whose views of public policy do not accord with his own. I wish the people of the United States everywhere to understand that the Speaker of this House has taken the responsibility upon himself to refuse consideration to any bill for the repeal of the tobacco tax, and in taking this responsibility he is supported by the entire Republican party in the House. Not one Republican on this floor has dared to raise his voice against this action of the Speaker and of his party. The truth is, the Speaker of this House rules the Republican party with a rod of iron and that party under him is as clay in the potter's hand. The individual members seem to be incapable of resistance and utterly devoid of all powers of thought and reasoning. Their consciences appear to be stifled and their convictions of duty suppressed. The party machine is well oiled so that it runs smoothly and without any friction or difficulty.

A great hue and cry was raised by the Republicans in the Forty-ninth Congress because a Democratic Speaker, Mr. CARLISLE, refused to give me or any other member recognition to make a motion to repeal the tax on tobacco. As I took the initiative in that movement, I will here give a brief statement of what occurred. The following correspondence will explain itself. The first letter and the last were written by me and then presented to Mr. Wise and Mr. Randall for their signatures.

HOUSE OF REPRESENTATIVES, *Washington, February* 5, 1887.

DEAR SIR: At the instance of many Democratic members of the House, we appeal to you most earnestly to recognize, on Monday next, some Democrat

who will move to suspend the rules for the purpose of giving the House an opportunity of considering the question of the total repeal of the internal-revenue taxes on tobacco. Many Republican members, we have reason to believe, are anxious to make such a motion. We believe the country is ready for the repeal of these taxes and that a large majority of the House will so vote when an opportunity occurs. For a Republican to make the motion would give the Republican party all the credit accruing therefrom, and would almost certainly cause the loss to the Democracy of not less than two Southern States at the general election in the year 1888. This is an isolated proposition, and we believe will command more votes than any other measure pending before the House looking towards a reduction in taxation; and favorable action on this proposition will not interfere with other efforts that are being made to reduce the burdens of the people.

Yours, respectfully,

GEORGE D. WISE.
JOHN S. HENDERSON.
SAMUEL J. RANDALL.

Hon. JOHN G. CARLISLE,
Speaker of the House of Representatives.

[Mr. CARLISLE's reply.]

SPEAKER'S ROOM, HOUSE OF REPRESENTATIVES,
Washington, February 7, 1887.

GENTLEMEN: Your favor of the 5th instant, requesting me to recognize some Democrat "who will move to suspend the rules for the purpose of giving the House an opportunity of considering the question of the total repeal of the internal-revenue tax on tobacco," was duly received and has been carefully considered.

A week ago, in compliance with the request made by you and other gentlemen, I consulted fully with the Democratic members of the Committee on Ways and Means for the purpose of endeavoring to formulate some measure for the reduction of taxation which would meet the approval of our political friends, and enable us to accomplish something practical in that direction during the present session of Congress. The bill which you then submitted for their consideration proposed legislation upon both branches of our revenue laws, and on the 3d instant it was returned to you with such modifications and changes as were necessary in order to make it acceptable to the gentlemen to whom it had been submitted.

In order, however, that our efforts to secure reduction of taxation might not fail on account of our inability to agree upon a measure in advance, we at the same time submitted certain alternative propositions, some one or more of which we hoped might be acceptable to you. Among other things, we proposed to submit the entire subject to a caucus of our political friends with the understanding that all parties would abide by the results of its action; and in case that course was not satisfactory to you we informed you that we would at any time, upon a reasonable notice, support a motion to go into Committee of the Whole on the state of the Union for the purpose of considering House bill 9702, introduced by Mr. Randall at the last session. The bill relates to internal-revenue as well as tariff taxes, and proposes to repeal the entire internal-revenue tax on manufactured tobacco, snuff, and cigars. We have received no response to that communication, and I consider that it would not be proper, under the circumstances, for me to agree to a course of action which would present for the consideration of the House a simple proposition for the repeal of the internal-revenue tax on tobacco, snuff, and cigars, to the exclusion of all other measures for the reduction of taxation.

Sincerely hoping that some plan may yet be devised which will enable the House to consider the whole subject of revenue reduction,

I am, very truly, yours,

J. G. CARLISLE.

Hon. GEORGE D. WISE, Hon. JOHN S. HENDERSON, Hon. SAMUEL J. RANDALL.

WASHINGTON, *February 8, 1887.*

DEAR SIR: We regret exceedingly that you could not see your way clear to give recognition on yesterday to some Democrat to enable him "to move to suspend the rules for the purpose of giving the House an opportunity of considering the question of the total repeal of the internal-revenue tax on tobacco." Your refusal to give this recognition, together with your letter of the 7th instant, deserves more than a passing notice. If two-thirds or more of the House are in favor of such repeal, it was a grave responsibility for you to oppose such a large majority of the Representatives of the people. Assuming, however, for the sake of the argument, that the friends of the proposition constitute a less number than two-thirds, their strength is certainly such that they ought to have been permitted to test the sense of the House upon the question, especially since the country is watching with intense interest the action of the House in respect thereto, and the constituents of a large number of the members of the House have been urging them to obtain, if possible, a consideration of this subject.

We do not wish to be misunderstood. We earnestly desire from a party standpoint that recognition should have been given to a Democrat to make the motion, but we would vote cheerfully for the proposition whether made by a Democrat or a Republican.

You assume in your letter to us that we ignored your communication of the 2d instant, and had deliberately failed to make a response thereto. Our friends did not have an opportunity of considering that communication until Friday evening, the 4th instant. It was of such a character as to require more than a formal reply. We called at your hotel the next day, Saturday, but, through no fault of yours or ours, we did not succeed in obtaining an interview until the day after.

We believed that the friends of the repeal of the tobacco tax were so strong in the House that we should save to the oppressed tax-payers of this country an annual reduction of taxation to the extent of $28,000,000 if the motion for repeal could be made in the House on Monday of this week, the latest day when such a motion, to be effective under the rules, would be in order during the Forty-ninth Congress. The motion, if made during the last six days of the session, would almost certainly be too late to secure favorable consideration for the question in the Senate.

We did not anticipate refusal of recognition for the purpose intended. We understood you to say to us verbally that if you gave to any one of our friends the desired recognition fair play all round would require you to give other Democrats an opportunity to make a like motion to pass some distinct proposition having relation to a reduction of the tariff duties. To this we assented. You instanced as one such proposition the putting of salt on the free-list. We think that a revision of the tariff and of the internal-revenue laws can be attained from time to time by reforming the obvious and greater grievances of the two systems, and that we should not refuse to make such reforms because sweeping changes have not been practicable.

The country is expecting to obtain from this Congress relief from the grievous burdens of taxation. If some of us can not get all we want we should take what we can get. Our single proposition for the repeal of the tax on tobacco was not intended and can not fairly be construed as intending to exclude from the consideration of the House "all other measures for the reduction of taxation." We wished to obtain consideration for that proposition, but we were not pressing for the reduction of the internal-revenue taxes to the exclusion of other measures for the revision and the reduction of the tariff.

A Democratic caucus can not successfully deal with "the whole subject of revenue reduction" at this late stage of the session. That suggestion comes too late. If the caucus could have controlled the legislation of the Forty-ninth Congress from the beginning the country might have been much better off. If the House was considered competent to deal with the silver question with the pension question, and with the oleomargarine question free from the dictation of a Democratic caucus, we think it ought to be competent to deal with the question of a reduction of taxation. The caucus ought not now to be invoked to justify a policy of delay and non-action on this subject.

We sincerely hope "some plan may yet be devised which will enable the House to consider the whole subject of revenue reduction" and revision "in a spirit of fairness to all interests" and in accordance with the letter and spirit of the platform of the national Democratic party adopted at the convention held at Chicago in 1884; and we assure you that we are ready to meet any of our Democratic associates who are prepared to treat with us on such basis.

JOHN S. HENDERSON.
GEORGE D. WISE.
SAM. J. RANDALL.

Hon. JOHN G. CARLISLE,
Speaker of the House of Representatives.

Note the difference between the courtesy shown by Speaker CARLISLE and the lack of courtesy shown by Speaker REED. In the one case Mr. CARLISLE replied promptly and with marked courtesy and politeness. In the other case Mr. REED would not condescend to notice the request for recognition signed by the entire Democratic delegations from North Carolina and Virginia in the present House.

Speaker CARLISLE could refuse to give recognition to a member, but he could not silence him. Speaker REED not only refuses recognition to a member of the House, but he so dominates his own party that no Republican dares to say a word against anything the Speaker does. Any number of Republicans in the Forty-ninth Congress could denounce Speaker CARLISLE for his action on this question. The gentleman from New York [Mr. PAYNE] warmed up with eloquent indignation and raised his hands in holy horror against a Speaker who would refuse recognition to a member who might wish to bring before the House an important public measure. In a speech made on March 1, 1887, on this floor, Mr. PAYNE exclaimed:

> Do you say the Speaker was arrogant? I grant it. Contemptuous of your rights? I grant it; and that which he proposed is without parallel in American politics or legislation.

I regret that no Republican in this House can now be found to vindicate the rights and privileges of the representatives of the people against the "arrogance" and tyranny of a Speaker whose usurpations and "contemptuous" treatment of the rights of the minority are without a parallel, so far as I know, in the history of parliamentary government anywhere, in ancient or modern times. If this state of affairs is permitted to continue, civil liberty in this Republic will be destroyed. Thank God, the people are still free; they have not yet been deprived of the right to deposit their ballots for the Representatives of their choice. This Congress is considering a Federal election law, and it is said that the decree has gone forth that such a law must be passed at this session to save the Republican party from defeat at the fall elections and to enable that party to obtain a majority of the members of the next House. I wish to sound a note of warning. If the Republican party attempts to control the election of members of this House by means of Federal election returning-board methods and machinery, the people will rise up in their wrath and will hurl that party from power and to everlasting destruction. No such law will be efficacious enough to answer the purpose of its framers, unless it is corruptly administered. The very object of proposing such a law is to have a false registration, false counting, and false returns at every precinct where the law is administered.

THE FORCE BILL.

The force bill introduced by Mr. LODGE, of Massachusetts, is a revolutionary, sectional, hateful, and infamous measure. It proposes to take away from the States all power over the election of Representatives in Congress. The meaning of it is that Federal officers are to control the registration of voters. Federal poll-holders and supervisors will receive the votes and count them, and make the returns of election. There will be a Federal board of canvassers to canvass the returns and issue certificates to the Members-elect. The commission of the governor will be disregarded. There is not a shadow of authority in the Constitution for this high-handed measure. "Congress may at any time make or alter" the regulations made by the State Legislatures, but they are to be enforced by State authority. No scheme so fatal to the rights of the States, so destructive of free constitutional government and civil liberty, has ever been devised or attempted before by any party or any faction in this country.

The motive for attempting to force through Congress a monstrous bill of this sort is the hope expressed by the Republican leaders that it will enable the Republican party to capture a majority of the Representatives in the next House. Our liberties, our society, and our civilization itself are all imperiled by this measure. If this Republican Congress shall enact a Federal election law, the horrors of a new reconstruction will be brought home to every community where the law shall be enforced, and we may all soon expect to see Federal troops at the polls, with bayonets in their hands, to drive free American citizens away from the ballot-box. This proposal of the Republican party to keep itself in power by surrounding the ballot-box with troops, supervisors, and deputy marshals is an insult to the people of the United States, and if persisted in it will destroy our Government itself.

RECOGNITION BY SPEAKER CARLISLE.

But to proceed with my argument. I call special attention to the fact that on March 3, 1887, Speaker CARLISLE recognized me to move to suspend the rules for the purpose of putting upon its passage "A bill to modify the internal-revenue system of legislation, and for other purposes." Two-thirds being required to suspend the rules, the bill failed to pass. But on a yea-and-nay vote there were 139 votes in favor of the motion and 112 against it. Of those voting for the bill 130 were Democrats and 9 Republicans and of those voting against the bill there were 106 Republicans and 6 Democrats. (See CONGRESSIONAL RECORD, volume 86, page 2681, Forty-ninth Congress, second session.)

This bill proposed to remove all restrictions upon the sale of leaf-tobacco and to relieve the people from the persecutions, annoyances, and odious and offensive espionage of the internal-revenue system. If the bill had become a law the services of the whole army of internal-revenue officials would not have been needed any longer to execute the internal-revenue laws. The spy, the informer, the revenue agent, and the midnight raider would have been compelled to seek other employment. After this vote no Republican can deceive the people in regard to the position of the Republican party in regard to the internal-revenue law. That party is opposed to the repeal of the law and is opposed to any modification of any of its obnoxious provisions. And this has always been the case.

SECRET OF REPUBLICAN OPPOSITION TO REPEAL OF INTERNAL TAXES.

The Republican leaders in this Congress are opposed to the repeal of the internal taxes because they are conscious that their infamous prohibitory system of tariff duties, embodied in the McKinley bill, will not yield sufficient revenue to meet the requirements of their equally infamous system of lavish and profligate expenditures.

In the last Republican national platform, as we have seen, is the following pledge:

If there shall still remain a larger revenue than is requisite for the wants of the Government we favor the entire repeal of the internal taxes rather than the surrender of any part of our protective system.

This was the Republican programme at the time the platform was adopted. There is great virtue in an "if." The platform commits the Republican party against any reduction of tariff duties and it declares for so many extravagant schemes of expenditure as to absorb any possible surplus, thereby preventing a decrease either of revenues or taxation. In other words, the Republicans have declared themselves to be in favor of high taxes and for extravagant appropriations in order to perpetuate high taxes.

EXCISE LAWS ALWAYS ODIOUS.

Internal-revenue (or excise) taxes have never been popular in any free country. No system of taxation is submitted to by the people with more impatience or is attended with as much hardship, vexation, and annoyance. One reason why the present law has been permitted to remain upon the statute-book for so many years is that the territory covered by the practical operations of the system is limited in extent. There are not more than ten or twelve Congressional districts in the United States where the burdens and the exactions of the internal-revenue law are brought home to the masses of the people. In North Carolina there is unanimity of sentiment in favor of the total repeal of the law. On this subject the sentiment of that State has remained unchanged for one hundred years. North Carolinians have always loved liberty and hated tyranny, and they have ever been opposed, on principle, to any tax law which requires an army of informers, spies, and hated officials for its enforcement. In December, 1790, the Legislature of North Carolina unanimously

Resolved, That they strenuously oppose every excise and direct taxation law, should any be attempted in Congress.

In the first Congress under the Constitution, the Representative from the same district which I now represent, Mr. John Steele, of Salisbury, made a speech in the House of Representatives, on January 6, 1791, against the passage of the first excise law. Considered in the light of the past and of our present experience, the speech is one which is calculated to arrest the attention of the thoughtful student of our political history. North Carolina ratified the Constitution and became a member of the Union on November 21, 1789. I quote from the Annals of Congress, volume 2, page 1895, without comment:

Mr. Steele stated his objections at large to an excise; he adverted to the particular situation of affairs of some of the Southern States, especially North Carolina. The assembly of that State had rejected the proposal of taking an oath to support the Constitution of the United States with scorn; they had also refused to admit Continental prisoners into their gaols; and another circumstance more hostile to the General Government than either of the foregoing had taken place, which he forbore to mention. He said such was the present state of public mind in various parts of the Union that he should dread taking any measures which might serve to increase the fermentation which the people are in. An excise he considered of this nature; it would in its operation produce the worst consequences. A more exceptionable mode of taxation could not be devised. A direct or poll tax would not be so odious, and, though for his own part he should prefer an excise to either of the former taxes, yet such was the aversion of the people to it that he should prefer almost any other alternative. He thought other objects might be found from which the necessary revenue could be raised. He instanced duties on inland navigation, land proceedings, legal conveyances, etc. He then adverted to the adoption of an excise, especially in the State of North Carolina, and said that the consumption of ardent spirits was so great that the duty would amount perhaps to ten times as much as in the State of Connecticut. On the whole, if the section is not struck out he hoped that the excise would be reduced.

And Mr. Timothy Bloodworth, of Wilmington, addressed the House in opposition to the bill. He said:

That if prejudices do exist, whether well founded or not, they produce all the mischiefs of a well founded opposition, until they are removed. He said a universal opposition to excises exists in North Carolina, and he dreaded the consequences of this measure being urged. North Carolina has been well disposed to the Government. What is the reason this is not at present the case? It is owing, sir, to the measures which have been pursued by the Government.

The bill on which the above remarks were made was passed and went into operation July 1, 1791. The Second Congress met in the following October, when a new bill was introduced, and on Monday, April 30, 1792, Mr. Steele again addressed the House on the subject. On which occasion—

Mr. Steele begged the House to recollect that this is the first attempt to introduce a system of excise into the United States; that it is, too, the first attempt to tax any article of American growth or manufacture; that the law requires a surrender of at least one-fourth of the value of the thing excised, and that not only the justice of the measure is denied, but its policy is doubted. * * * The opposition to this law has not proceeded from a restless and disorderly spirit among the people, but from an aversion which freemen in all countries have ever had, and perhaps ever will have, to this mode of taxation.

May 17, 1794, it being the Third Congress, Mr. William Smith, of South Carolina, from the committee to whom the subject was referred, reported a bill laying duties on manufactured tobacco and refined sugar.

Mr. McDowell (of North Carolina) hoped that the section would be struck out. He objected to the principle of the bill. He considered it as highly impolitic to tax the infant manufactures of America. * * * He could not help remarking upon some observations that fell from his friend (Mr. Baldwin, of Georgia) when this subject was before the committee some days ago. It had been objected that the bill was not well founded, as it established a new principle, and the member (Mr. Baldwin) replied that it was not new, as there was already an excise fixed on ardent spirits. He (Mr. Baldwin) opposed that law, but, since it was passed, he could not object to the present bill. Had the gentleman reflected, he would have seen that there was equal reason for resisting this bill, because it fixed that obnoxious principle more strongly, by giving a further sanction to an American excise. Mr. McDowell also considered the tax as unnecessary. The tax was contemplated on the prospect of a war which has now become less likely, the British having since the orders of the 8th of January released their depredations. Further, the tax was unnecessary, because it was asserted by several well informed merchants that the amount of the import this year would exceed that of the last.

In spite of all opposition, the First Congress passed the excise law, and it took effect July 1, 1791, as I have stated. Fearful results, however, followed in its train. The law was necessarily odious everywhere, and its enforcement produced riot and disorder in a number of the States. In Pennsylvania the people rose up in arms against the General Government. The feeling was so bitter that some of the greatest men of that day despaired of the preservation of the Union. In proof of this assertion, I quote from a letter of Thomas Jefferson to James Madison, dated Monticello, December 28, 1794:

The excise law is an infernal one. The first error was to admit it by the Constitution; the second, to act on that admission; the third and last will be, to make it the instrument of dismembering the Union and setting us all afloat to choose what part of it we will adhere to. The information of our militia, returned from the westward, is uniform that though the people there let them pass quietly they were objects of their laughter, not of their fear; that one thousand men could have cut off their whole force in a thousand places of the Allegheny; that their detestation of the excise law is universal, and has now associated to it a detestation of the Government, and that a separation which was perhaps a very distant and problematical event is now near and certain and determined in the mind of every man.

The first excise law was a partisan measure of the Federalists, and was entirely abolished by the democratic republicans shortly after they obtained control of Congress and elected their candidate for the Presidency. Mr. Jefferson, at the beginning of his second term, was able to congratulate his party and the country upon the abrogation of the odious law. I quote from his second inaugural, of March 4, 1805:

At home, fellow-citizens, you best know whether we have done well or ill. The suppression of unnecessary offices, of useless establishments and expenses, enabled us to discontinue our internal taxes. These, covering the land with offices, and opening our doors to their intrusions, had already begun that domiciliary vexation which, once entered upon, is scarcely to be restrained from reaching successively every article of produce and property. If among these taxes some minor ones fell which had not been inconvenient, it was because their amount would not have paid the officers who collected them, and because if they had any merit the State authorities might tax them instead of others less approved.

The second excise law was passed during the war of 1812-1815 and was repealed in the year 1817.

The present law was passed as a war measure in the year 1863. It was never intended that such a complicated and burdensome statute should become a permanent addition to any system of Federal taxation. The cry of all parties until recently has been that the internal-revenue tax is a war tax which should be abolished as soon as the revenues accruing from it could possibly be dispensed with. The people of North Carolina, for at least sixteen years, have been told by the leaders of all political parties to "Cry aloud, spare not, lift up your voice like a trumpet" against this arbitrary, onerous, and vindictive law.

From the bottom of my heart I thoroughly sympathize with my constituents in their anxiety and longing for the entire abolition of the internal-revenue law. I have done what I could since I have been a Representative in Congress to effect its repeal, and my record on this question needs no apology. I have labored incessantly everywhere and at all times to carry out the wishes of my constituents and of the

people of North Carolina in regard to this system. The people whom I have the honor to represent have possessed their souls in patience, and have quietly and hopefully waited for the dawn of a better day. When we look back over the past years, it seems almost incredible that so little has been done towards repealing and reducing the internal taxes and relieving the people from the oppressive and annoying features of the system.

PRESIDENT ARTHUR FOR REPEAL.

President Arthur, in two of his annual messages, earnestly recommended to Congress the abolition of all internal taxes except those on distilled spirits. I do him the justice to say that I believe him to have been a real friend of the tax-payer. He earnestly desired that the tariff taxes and internal-revenue taxes should be reduced, in order that the people might be relieved from unjust and unnecessary taxation. In proof of this I will make a brief citation from his last annual message of December 1, 1884. This extract is one among many which I could cite to the same purpose:
